## THE FINNISH MARKET REVIEW.

## THIE MONEY MARKET.

As was the case in the previous month, the foreign deposits of the Joint Stook banks decreased in July, too, though not to the same extent as before, but only by 28.4 million marks. The tendency exhibited by the foreign Finnmark accounts is in so far advantageous as the obstacle which such liabilities payable on demand in Finnish currency naturally present to every attempt towards eliminating the fluctuations in the quotations of the mark, is reduced thereby. On the other hand, however, the withdrawal of these deposits produces a tension on the money market.

The total deposits in the Joint Stock banks remained entirely unaltered during July. Longterm deposits which had shown a pleasing increase during the whole of the previous year, rose in July, too, by about 23 million marks, but, seeing that the items on current account declined to the same amount, the available means of the banks were not increased.

Loans, on the contrary, continued to grow. The bill portfolio certainly had to record a decrease for the first time for the current year, but loans and overdrafts increased perceptibly, so that the total amount of loans rose by 43.6 million marks. Last year the easing of the money market caused by the influx of foreign currency for exports began to make itself felt already in July. The advances on exports taken in larger quantities than usual seem
likely to postpone the time, when the foreign currency received for exports begins to come into the banks to an appreciable degree, later tham it was fonmerly.

The indebtedness of the Joint Stock banks to the Bank of Finland was only increased by about 8 million marks, which goes to show that, in spite of home deposits not increasing and foreign deposits being reduced, the Joint Stock banks were able to extend their loans by employing their own reserves.

Of the alterations occurring in the position of the Bank of Finland it may be noted that foreign balances further decreased considerably during July by 118 million marks, thus showing a reduction at the end of July of 258.7 millions since the beginning of the year. The reduction still continued in the first half of August, this being chiefly due to the demand for foreign currency for meeting the interest and drawn bomids of a Government loan. It is probable that the reserves of the Bank of Finland in foreign currency will only start growing again in September.

The extensive sale of foreign currency resulted in the note circulation decreasing in the course of July by 47.4 million marks, in spite of the increased loans and the withdrawal of means from current accounts.

The value of the Finnish mark, so far as it is apparent from the quotations for foreign currency, kept at an unchanged level during

July and the daily fluctuations were again very insignificant.

## TRADE AND•INDUSTRY.

The result of Finland's foreign trade for July was a record in the sense that the value of exports, viz., 657.1 million marks, was greater than in any other month since the war. The excess of exports, too, 264.8 millions, must be regarded as an especially good result, for only once before, in June last year, was the surplus of exports larger. The excess of imports calculated since the beginning of the year, which had reached 760.1 million marks by the end of May, fell to 386.8 million marks at the close of July thanks to the favourable balance of trade for June and July. How the balance of trade for the whole year will turn out, it is as yet hard to predict.

The extent of exports during July, almost the best on record, was principally due to the powerful increase in exports of woodgoods, above all unsawn timber. During July about 630,700 cubic metres of unsawn timber were shipped or more than during any other month since the war. Of sawn woodgoods about 560,000 standards had been sold by the end of July or about $2 / 3$ of the estimated production for the year. This result should be considered satisfactory, but it is uncertain what turn the course of the timber market will take during the last months of the year. For the moment timber business is almost at a standstill, partly owing to the dockers' strike in England and partly to the general uncertainty of the political situation in Europe.

At the recent large State auctions of stocks timber companies paid prices which were, in the opimion of many, far too high. North-Swedish sawmillers, however, made higher bids than home buyers.
The unfavourable course of prices on the paper market apparently still continues, at any rate to judge by the fact that the price of cellu-
lose has now also begun to fall. The market for mechanical pulp. however, has remained unchanged.

From the following figures, published by the Board of Agriculture, it will be seen what the average crop prospects were for the whole country in the middle of August and how they compared with the prospects in former months and in August last year. Of these, 8 signifies very good, 7 grood, 6 above medium, 5 medium, 4 below medium, 3 poor crop, 2 almost failure of crops, 1 failure of crops.

|  |  | Wheat | Rye | Barley | Oats | Potatoes |
| :---: | :---: | :---: | :---: | :---: | :---: | ---: | Hay

According to the above figrures, in the middle of August in general a medium crop or one slightly above medium could be expected. But since August 15th several places, especially in North Finiland, have been visited by frost which damaged the potatoes, barley and oats, but generally not rye or wheat. How far the crop prospects have been affected by this, has not yet been established. Haymaking, already completed, was carried on under comparatively unfavourable weather conditions. The harvesting of rye and wheat began in the middle of August. In some districts there is some uncertainty as to whether the oats will have time to ripen.

## THE LAABOUR MARKET.

The condition of the labour market may again be considered good. The lock-out in the building trade has practically come to an end, having lasted about a month. Work was resumed after small concessions had been made both by the masters and the men. There is no umemployment at all, on the contrary, in some places there is a shortage of labour.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET.

1. Bank of Finland, balance sheet.

| 1923 | 145 | 148 | 142 | 142 | 144 | 141 | 147 |  |  |  |  |  | 1923 | According to figures published in the $*$ Mercators.

This revised index series which differs somewhat from those we have given in the past, is based on the prices bid at the end of each month for 18 representative seourities, viz., 4 bank, 12 industrial and 2 other kinds of shares. By multiplying the price bid for each security by the number of shares in the corresponding company the so-called sExchange value has been arrived at for the share capital of the company, the sum of which values has been calculated in $\%$ of the total nominal value of the share capital of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

The above table is based on the monthly report on the Public Debt published by the Treasury in the Official Gazette. Internal loans are given at their nominal value. Foreign loans are given in Finnish currency according to the rate prevailing on the date of the ralsing of the loan. As a result of this, loans of an earlier date than 1914 are set down at par.
I) Calculated as follows: The loans raised in the country, have been calculated in dollars, according to the average rate of exchange of each month. The loans, negotiated abroad, which are all issued in different currencies, are grouped according to the proportion of currencies, shown by the coupons paid, and reduced to dollars at the rate of exchange just mentioned.
${ }^{2}$ ) Excluding the loan of the State Grain Office, amounting to 3.3 million dollars, which has not yet been transferred to the actual National Debt.

## 15. - MISCELLANEOUS STATE RECEIPTS COLLECTED BY CUSTOMS. <br> ( 000 's omitted.)

Tables 15-24 according to Finnish Official Statistics I. A., Foreign Trade of Finland, Monthly Reports.
The figures for 1022 in the tables 16,18 and 19 are finally adjusted.

The term import covers all imported goods which have been let out into the market either immediately after importation or after storage.

Export covers all goods exported from the open market, including re-exports.
Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country. Consequently, imports are given according to their C. I. F. value and exports F. O. B.

* Preliminary figures subject to minor alterations.

According to figures supplied by the Statistical Department of the Board of Customs.
Up to Dec. 31, 1917 the last port of shlpment and the first port of discharge were used in determining the respective countries of import and export. In the case of transportation of goods over land frontiers, the country from which goods arrived or that to which they were transferred was used in a similar sense, with the exception of a part of the exchange of goods with Russia, which was not put down to that country, but to the actual countries of import or export. From January 1,1918 the country of import indicates the land in which goods were purchased, and country of export the land to which goods were sold.

* Preliminary figures subject to minor alterations.

| Jan.-Sept. |  |  |  |  |  |  |  |  | Jan.-Sept. |
| Jan.-Nov. |  |  |  |  |  |  |  |  | Jan.-Nov. |

The import- and export-indices have been calculated by the Statistical Dept. of the Board of Customs in the following. manner: the quantities of imports and, respectively, exports for the current year have been multiplied by.the average price for the class of goods in question in 1913, after which the import (or export) value for the current year has been calculated in percentage of the sum thus sbtained for purposes of comparison.

The goods chosen for the setting-up of a total-index have been divided, according to their use, into the groups: foodstuffs, lothing, agricultural requirements and other goods. The three last-named have been further divided, according to their purpose into :aw materials, machinery and industrial products.

| September | 708 | 661 | 1369 | 394 | 397 | 791 |  |  |  |  | September |
| October | 919 | 774 | 1693 | 562 | 560 | . 1122 |  |  |  |  | October |
| November | 1590 | 762 | 2352 | 786 | 634 | 1420 |  |  |  |  | November |
| December | 1605 | 522 | 2127 | 836 | 458 | 1294 |  |  |  |  | Deceember |

This table, prepared from the weekly reports of the Labour Exchange Department of the Ministry of Social Affairs, shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very small part of the raral centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled industrial workersproper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.

${ }^{1}$ ) From the beginning of 1921 onwards a new official index has been drawn up differing from that published in the Bulletin for 1922 in that the whole first half of 1914 forms the basis $(=100)$ for the same, and that the rise in taxation is also included.

The index is calculated by the Social-Statistical Department of the Central Statistical Office and is based on monthly reports from 21 different centres;iit shows the rise in the cost of living for a workingman's family of normal size, the income of which amounted during the years $1908-1909$ to $1600-2000$ Fmk, presupposing that the average monthly consumption within the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809 ; since 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its independence. It became a republic in 1919. The Diet together with the President possess the legislative power of the country. The highest executive power is held by the President chosen for a period of 6 years. The Diet, composed of 200 members, is elected by universal suffrage.

The proportions of the different parties in the Diet are at present as follows:

| Right | $\left\{\begin{array}{c}\text { Swedish people's party } \\ \text { (Swedish speaking po- } \\ \text { pulation) } . . . . . . . . .\end{array}\right.$ | Number |  | Percent. |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 25 |  | 12.5 |  |
|  | Unionist party. . . . . . | 35 | 60 | 17.5 | 30 |
| C | Agrarian party | 45 |  | 22.5 |  |
|  | Progressive party | 15 | 60 | 7.5 | 30 |
| Left | f Social-Democrats. | 53 |  | 26.5 |  |
| Left | ( Communists ${ }^{\text {1 }}$ ) |  | 80 | 13.5 | 40 |

## 2. LAND.

the average temperature in the coldest month is in S. W. Finland - $5^{\circ}$ to $-6^{\circ} \mathrm{C}$, in Lappland - $15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ}$ C. resp. The average temperature in Helsingfors is $+4.6^{\circ}$ (in Christiania $+5.5^{\circ}$, in London $+9.9^{\circ}$, in Montreal $+\bar{\sigma} .5^{\circ}$, in Chicago $+9.1^{\circ}$, in Vladivostock $+4.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered with snow in the South during about 100 days, in Central Finland during 150 to 180 days, in Lappland about 210 days.
the area (the new province of Petsamo included) is 387 , 565 square kilometres ( $=149,651$ square miles, Great Britain's area is $89,047 \mathrm{sq}$. m. and Italy's area $110,632 \mathrm{sq} . \mathrm{m}$.$) . Of the total area 343,279 \mathrm{sq} . \mathrm{km}$. $(88.6 \%)$ consist of land, while $44,286 \mathrm{sq} . \mathrm{km}$. ( $11.4 \%$ ) are lakes. On an average $10.8 \%$ of the land in the south of Finland is cultivated, $0.8 \%$ in the North, $6.1 \%$ of the whole land.

## 3. POPULATION.

number of inhabitants (1921): 3.4 millions, of which 3.2 million emigrants, [in Sweden (1921) 6.0, in Switzerland (1920) 3.9, in Denmark (1921) 3.3 and in Norway (1920) 2.6 millions].
density of population (1920): In South-Finland 17.2, in North-Finland 2.3 and in the whole country an average of 10.1 inhabitants to the square kilometre.

[^1]LANGUAGE (1920): Finnish speaking $89 \%$, Swedish speaking $11 \%$.

ReLigion (1920): Lutheran $98 \%$, Greek-Ortho$\operatorname{dox} 2 \%$.
distribution (1921): $83.9 \%$ of the population inbabits the country, $16.1 \%$ the towns. The largest towns are (1921): Helsinki (Helsingfors), the capital, 200,208 inhabitants, Turku (Åbo) 58,694, Tampere (Tammerfors) 48,475, Viipuri (Viborg) 30,748.
eddeation (1920): Amongst persons over 15 years of age only $0.8 \%$ are illiterate. Three universities founded 1640,1917 and 1920.

INGREASE OF POPULATION (1921): Births $24.3 \%$, deaths $14.0 \%$ (in France in $191915.0 \%$, and in England in $192012.4 \%$, natural increase $10.3 \%$.

## 4. INDUSTRIAL AND BUSINESS CONDITIONS.

proportions of ocoupations of the popdlation (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $3.4 \%$. other occupations $17.7 \%$.
agriculture (1920): Cultivated land 2.0 million hectars, divided as follows: area under cultivation $0.5-10$ hectars $38.8 \%, 10-50$ ha. $48.9 \%$, $50-100$ ha. $9.3 \%$, over $100 \mathrm{ha} .8 .0 \$.$% . The above mentioned surface$ of cultivated land was divided between the different kinds of crops as follows: $45.8 \%$ hay, $19.6 \%$ oats, $11.2 \%$ rye, $5.8 \%$ barley, $3.5 \%$ potatoes, $14.1 \%$ other. 'The number of dairies in 1920 amounted to 455.
industay (1922): Number of industrial concerns 3,294, hands 132,797, gross value of products of industry 8.079 .5 million marks.
levett of railways (1923): $4,458 \mathrm{~km}$., of which $4,162 \mathrm{~km}$. State railways and 296 km . private.
commerolal fleet (1921): Sailing ships 683 (102,111 reg. tons net.) steamships 781 ( 92,032 r. t.), motor boats 124 ( 18,649 r. t.), lighters 3,229 (274,505 r. t.). Total 4,817 (486,797 r. t.).
finanees: Since 1860 the currency unit is the Finnmark ( $=100$ pennies) $=1$ French franc. The redemption in gold of bank notes was cancelled on April 15th, 1915.
the central bank. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleåborg), Kuopio, Joensuu, Sortavala, Viipuri (Viborg), Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskyläa and Kotka.
the joint stock banks (1923): Number 20, possess 396 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,900 inhabitants.
the savings banks (1922): Number at the ond of the year 466.

# ELECTRIFICATION OF THE COUNTRY DISTRICTS IN FINLAND. 

BY

OSKARI TERHI, CIVIL ENGINEER, CHIEF OF THE ELECTRICAL DEPARTMENT OF THE AGRICULTURAL CO-OPERATIVE WHOLESALE-SOCIETY „HANKKIJA".

ELECTRIFIOATION BEFORE THE WAR.
The electrification of Finland is much more difficult than thrat of many other countries. In relation to the area of the country the population is comparatively small - only ten persons to a square kilometre. Of the entire area only an: insignificant part, or $6 \%$, is under cultivation. In spite of these conditions, - upon which the profitableness of electrification chiefly depends, - indicating unfavourable proportions, large districts in the country in Finland have, nevertheless, been electrified. Already in 1912-1913 some twenty parishes in the best cultivated parts of Finland were electrified. The war put a stop to all activity in this line.

## DIFFICULTY OF PROCURING ARTIFICIAL LIGHT IN 1918.

It was not until 1918 that the work of electrification began again, but it was then taken up with extraordinary enthusiasm. The business relations of Finland with foreign countries had been almost broken off, and, consequently, there was a very great scarcity of the different materials which Finland is obliged to import. One of the most important of these was petroleum. Since the most usual means of artificial light was kerosene, the soarcity of petroleum threatened to leave the greater part of the country in darkness during the autumn and winter. It is easy to understand the significance of such a state of things in a country, where in midwinter there is daylight for only 6 hours in the south, and the night in the northernmost part, Lappland, lasts for 51 days.

Enormous efforts were made to combat the darkness. Everywhere, where it was at all possible, electric lighting was installed regardless of expenise. But as there was only little electric machinery and very few materials in the country, and as very little of a suitable kind could the manufactured here at that time, most of the population had to content themselves with acetylene and turpentine light, with candles and torches of pinewood.

The electric works, built in 1918, were all small local plants for a village or a larger house only. The power generator generally consisted of a portable steam engine or a waterwheel. One can get an idea of the cost of these installations in that time of dearth, seeing tihat ordinary twisted lamp cord, which before the war had cost 25 penni a metre, had risen to 10-12 marks, while copper was 15 to 20 times dearer than during normal times, all this at a time, when the Finmarlk had not yet fallen to half its par value.

## ELECTRIFIOATION AFTER 1919.

What was built in 1918 was, in general, only temporary. But at the same time many lange electrical undertakings were also embarked on. The plans were made, the economic organisation was undertaiken, and the schemes were carried out later on, in the course of the succeeding years.

From the spring of 1919 the most enthusiastic efforts for building extensive lines of electric wires were made in the southern. parts of the country. Electric power plants were built to a
lesser extent. The electric current for the needs of the countryside was obtained mostly from towns and industrial establishments. Many power stations, both steam- and particularly waterpower plants, for the needs of the countryside were also erected, but they were in general small, of only a few hundred horse-power.

If one recalls the fact that scarcely twenty country parishes were electrified in 19.18 and that their number now amounts to 200 , or $40 \%$ of all the country parishes, it will be seen that the electrification of the country in Finland has been almost wholly accomplished in the course of the last four years.

In spite of the fact that power stations have not been built to a corresponding extent, the cost may be estimated at over 300 million marks.

## FINANOING THE ELEOTRIC UNDERTAKINGS.

Most of these electric undertakings are jointstock companies, but there are also many cooperative societies. There are fewer communal installations. The necessary capital for construction was obtained chiefly by means of subscriptions generally about 100 marks per lamp and 1,000 marks per motor horse-power. Each farmer, who wanted electric light and power, thus paid $10,000-15,000$ marks towards the expense of the outdoor network of electric wires. Besides this, they had the outlay of the interior installation, lamps and motors. Thus those, who employ electric current, are generally shareholders, and the number of shares is proportionate to the number of lamps and the amount of motor horse-power used, in some cases, too, to the area cultivated. As a rule, the farmers took the money needed for the electrification from their own savings. Where the expenses of construction were not covered by these subscriptions, loans had to be negotiated. The necessary loans were obtained from the local savings banks and from insurance companies; to a lesser degree from the banks in the towns. These rural electric undertakings are consequently mostly in the nature of co-operative societies.

The large amount of capital which has been tied up by electric undertakings during recent years, has had a visible influence on the tightening of the money marker.

## THE POWER PLANTS.

As mentioned above, most of the electrified rural communitias received the necessary power from the central power stations of the industrial establishments and the electric power plants of the towns. In this manner it was possible to carry on the electrification more rapidly, because the erection of a network of electric wires is generally completed in a shorter time than the construction of an electric power plant. The financing of the electric undertakings in the rural districts was in this way, too, rendered very much easier, as the central power station for the supply of a country community is often more expensive than the erection of the distribution system.

Many new power stations have, however, been built during the last few years in order to supply electric energy. Most of them are waterpower stations. In this way many waterfalls, unfavourably situated and heretofore not utilised, have been made use of for the common good. During recent years, too, several hundired waterfalls or rapids have been surveyed and plans drawn up for utilising them. No doubt, within a few years many of these will be utilised, as the need of power in some places continues to be great. The peasants of Finland are averse to constructing any but water-power stations.

Last year four water-power stations, and for Finnish conditions rather large ones, were completed: in the Kumo river one of $7,000 \mathrm{H}$. P., in the Kymmene one of 12,000 and one of 16,000 H. P., and in Central Finland one of $4,000 \mathrm{H}$. P. These are built, it is true, chiefly for industrial purposes, but, at the same time, the demand for power in the surrounding country districts is also satisfied. In central Ostrobothnia several smaller water-power stations, 200 500 H. P., are in course of erection, solely for the purpose of meeting the needs of the rural

districts. The Government has also begun preliminary work in harnessing the Imatra rapids, so far only with an initial installation of $70,000 \mathrm{H}$. P. in view.

The amount of electric power used in the country districts of Finland is still relatively small. In the 200 parishes that are electrified at present the effective consumption of electricity only amounts to about 12 million kilowatt-hours a year. As the greater part of this is used for lighting purposes, it is easy to explain the fact, - pleasing from the point of view of the balance of trade, - that the use and import of petroleum has considerably diminished. In 1913, $36 ; 071,344 \mathrm{~kg}$. of petroleum were imported, in 1922 only $20,619,981 \mathrm{~kg}$. Had the provinces not been electrified, the import of petroleum since 1913 would have increased very considerably, for the number of petroleum engines has grown very much during recent years.

## ELECTRIFICÃTION AND HOME INDUSTRIES.

The machines and transformers necessary for electrification are to a great extent already manuffactured in Finland, although considerable quantities are still imported. High-tension insulators, needed for the erection of the main lines, are almost all imported, whille dowtension insulators are for the greater part manufactured in the country. Copper and ironwires are mostly imported. From the rich mines of Outokumpu, half of which belong to the State, considerable amounts of copper have been obtained, and, later on, probably, the entire needs of the country will be supplied by them for decades to come.

The materials required for interior installation, with the exception of insulated wires, are almost all imported. There are two cable manufactories in Helsingfors, which are capable of supplying the entire demand of the country for
thinner wires. Two factories for electrical machinery produce motors for agricultural purposes in considerable quantities, although the keen foreign competition has limited their production.

In 1922, the two cable factories referred to produced insulated wires to the value of 11.4 million marks, or $80 \%$ of the needs of the country. The production of the bigger one of the manufactories of electrical machinery above mentioned amounted in value to 24 million marks or about $30 \%$ of the value of all the electric machinery supplied to the country.

## SIGNIFICANOE OF THE ELECTRIFICATION OF FINLAND'S COUNTRYDISTRICTS.

Electrification is the greatest economic enterprise of recent years in the country districts of Finland. The farmers throughout the country have worked with enormous enthusiasm in order to secure electricity. The result is already very noticeable and, as the efforts are still going on, those parts of Finland which can be electrified at all with economic advantage, may also be expected to be supplied within a few years' time.
The most easily cultivated part of the country in Finland has thus received a practical and cheap power-supply which makes agricultural work easier and less dependent on the supply of farmhands. The great financial sacrifices claimed by the electrification, will, no doubt, be compensated by a considerable decrease in the costs of production. The power-supply available will probably also revive the small industries in the rural districts.

The circumstances last mentioned may to some degree, too, counteract the migration of the rural population into the towns, an undesirable phenomenon which is noticeable in Finland, too, to a great extent.

## SUBSCRIPTION TO THE BULLETIN.

The Bulletin may be subscribed to at the Akademiska Bokhandeln, Helsingfors, or the Helsingin Suomalainen Kirjakauppa, Helsingfors. The price per annum including postage is 40:-Fmk in Finland and 1:- Dollar in foreign countries. Single copies may be had at a price of Fmk 4: - or 10 cents respectively.

HELSINGFORS 1928.
