# BANK OF FINLAND MONTHLY BULLETIN 

No. 9
SEPTEMBER
1923

## THE FINNISH MARKET REVIEW.

## THE MONEY MARIKET.

The recent rise in the rates of exchange for foreign currency of about $3.0 \%$ and the raising of the Bank rate from 8 to $9 \%$ which followed shortly after, are the circumstances which at present attract most attention in regard to the position of the money market.

We have on previous occasions in our market reviews pointed out certain circumstances which compelledi us to some extent to abandon the very bright hopes as to the economic position during the latter half of the year for which there was still cause in the spring. Among such circumstances we mentiomed the reduction of foreigners' deposits (partuly' because they were utilised for payments for exported goods, partly for the reason that they were exchanged for foreign currency), the falling offinitimber transactions, and the worse crop prospects. For all these reaaons the Bank of Findand could only purchase small quantities of foreign currency during the latter part of the summer, whereas the demand continued lively. As the Bank of Finland'e supplies of foreign currency thus decreased more rapidly than was desirable, the Bank raised the rates of exchange for foreign currency on September 10th. The dolliar rate which had fluctuated since the beginning of June between 36:11 and 36:41, was 37:60 after the rise. Later, the nates of exchange declined slightly, so that, for instance, the dollar exchange from 11th to 18th September varied between 37:35 and

37:42. The level of the exchanges thus rose about 3.0-3.2 \%.

As it was evident that foreign exchange was bought also for future requirements and that credit was demanded for this purpose, and as the situation on the money market in other respects, too, showed signs of tension, the Bank of Finland deemed it necessary to raise the discount rate from September 13 th to $9 \%$, it having been reduced on October 17th, 1922, to $8 \%$.

In addition, a few figures may be given to illustrate the position of the money market. The total of deposits in the Joint Stock baniks fell off considerably, viz., by 6ib. 7 million marks or $1.4 \%$. It is a usuad seasonal occurrence that deposits decrease during harvest time, but the reduction during August must be considened larger than usuial. Loans increased to some extent, by 27.8 million marks, exalusively on loans and overdrafts. Bills, on the contrary, decreased. The indebtedness of the baniks to foreign countries again decreased, this time by 28.4 millions. The reduction since the end of April amounts to 154.4 million marks.

With regand to the position of the Bank of Finiland the supply of foreign currency arouses the greatest interest. As we have pointed out before, export firms accepted plentiful advances and loans abroad in the autumn of 1922, when the value of the Finmish mark was constantly rising. In this way payment for a great prart of the exports for 1923 was received in advance
and the Bank of Finland's supply of foreign currency rose to over 1 mildiand marks. But for this reason it was evident beforehand that the greater part of this supply of foreign currency would have to be applied during 1923 for paying for imports. This wars actually the case. Since April the supply of foreign currency decreased and was at ite lowest, via., 347.6 million marks, at the end of August. In spite of the lively demand during the finst two weeks in Sepptember, the supply could be kept up to about the same level and amounted to 348.7 millions on September 15th.

The note circulation which, if the monthly balances only are talken into account, had continuously decreased during several months, remained almost unchanged during August. In the preceding years the customary increase in the note cinculation, brought about by harvest time, had set in already in August. During the first fortnight in September the note circulation decreased to $1,370.5$ million marks on September 15th.

## TRADD AND INDUSTRY.

As in the last two months, the trade balance of Finland in August was also very faviourable. The value of exports was 193.7 million marks or $52.3 \%$ more than the value of imports, i. e. the latter rose to 370.0 million marks and the value of exports to 663.7 millions. The exports for August are among the largest that have occurred since the war.

The quantity of saw:n timber sold has, it is true, not increased much during the last few weeks, so that total sales by the middle of September scarcely exceeded $580 ; 000$ standards which is a little over $2 / 3$ of the year's production. The flatness of the market is probably due principally to the uncertain political situation in Europe, but partly, too, to a struggle over prices.

The frosts which we referred to in our last monthly review and the incessant rain have spoilt the crop prospects, as is seen by the particulars below. These particulars which are supplied by the looal agricultural societies, are cal-
culated according to provinces in comparison to the size of the cultivated area and thus give an illustration of the crop prospects for the whole country. Of these figures 8 signifies very good, 7 good, 6 above medium, 5 medium, 4 below medivim, 3 poor crop, 2 alinost faildure of crops, 1 failure of crops.

|  |  | Wheat | Rye | Barley | Oats | Potatoes | Hay |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 15/6 | 1928 | 4.8 | 4.6 | 4.9 | 5.0 | 4.8 | 5.3 |
| 15/7 | " | -. 7 | 5.5 | -. 2 | อ. 2 | 4.9 | อ. 8 |
| 15/8 | " | 5.9 | 5.7 | 5.2 | 5.5 | 3. 1 | 6.1 |
| 15/8 |  | 5.4 | 5.0 | 4.0 | 4.1 | 4.4 | 6.1 |
| 15/9 | 1922 | 5.6 | 4.6 | 5.7 | 6.3 | 5.1 | 7.1 |

The above figures show that in spite of the destructive frost in Northern and Eastern Finland, a medium crop of wheat and rye is arrived at, if the whole country be taken into account. This is partly due to the fact that the crops in Southern and Western Finland have proved above medium, partly to the cultivated areas in the districts affected by frost being so small that the poor crop in those districts does not affect the average for the whole country much. This is of great importance for the country's balance of payment, as by this means the importation of grain for human consumption should not increase to any great extent.

The crops of barley and oats, according to the prospects on September 15th, are liakely to be below medium, especially as it looked as if the oats would not have time to ripen. But as these kinds of grain are used mainly for cattle food, and as oats, even if unripe, are suited to this purpose, in this respect, too, no great increase in imports should occur. Besides, the hay crop which has proved above the average, compensates in part the shortage of other fodder.

It may further be mentioned that the very fine weather which has continued since the middle of September has greatly improved the chances of the oats ripening in time even on unfavourable soil.

## THE LABOUR MARKET.

Labour conditions continue in all respects good and peacaful.

## CONTENTS OF THE TABLES.

I. MONEY MARKET.

1. Bank of Finland, balance sheet.
2. " " ", note issue.
3. " " ", note circulation and foreign correspondents. -
4. " " " , bome loans and note reserve.
5. " " " , balances of current accounts.
6. " " " , clearing.
7. " " ", rates of exchange:
8. Joint Stock banks, home deposits.
9. " " " , home loans.
10. " " " " , position with regard to foreign countries.
11. Deposits in the savings banks, bankruptcies and protested bills.
12. I'urnover of Helsingfors Stock Exchange.
13. Stock Exchange index.
14. National Debt.
15. Miscellaneous State receipts collected by Customs.
II. FOREIGN TRADE.
16. Value of imports and exports.
17. " " " " in different groups of goods.
18. Imports of the most important articles.
19. Exports
20. Foreign Trade with various countries.
21. Import-Price index.
22. Export-Price index.
23. Index numbers for quantities of imports and exports.
24. Value of imports and exports divided according to the purpose of the goods.

## III. TRAFFIC.

25. Foreign shipping.
26. Shipping with various countries and passenger traffic.
27. Railways, groods traffic and rolling stock.
28. Railways, revenue, expenditure and traffic profits.
IV. LABOUR MARKET.
29. Number of unemployed.

## V. LEVEL OF PRICES.

30. Index number of cost of living.

## ARTICLES IN EARLIER ISSUES OF BANK OF FINLAND MONTHLY BULLETIN.

1921. No $1-9$. The regular steamship lines of Fin- land.
1922. Finnish Government obligations held by the Bank of Finland.
1923. Amendment of the provisions affecting the Bank of Finland's note issue.
1924. Finland's foreign trade.

Bank of Finland's balance sheet, Dec. 31st, 1921.
1922.

According to figures published in the mercator .
This revised index series which differs somewhat from those we have given in the past, is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank. 12 industrial and 2 other kinds of shares. By multiplying the price bid for each security by the number of shares in the corresponding company the so-called vexchange values has been arrived at for the share capital of the company, the sum of which values has been calculated in $\%$ of the total nominal value of the share capital of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

The above table is based on the monthly report on the Public Debt published by the Treasury in the Official Gazette. Internal loans are given at their nominal value. Forelgn loans are given in Finnish currency according to the rate ruling on the date of the raising of the loan. As a result of this, loans of an earlier date than 1914 are set down at par.
${ }^{1}$ ) Calculated as follows: The loans raised in the country, have been calculated in dollars, according to the average rate of exchange of each month. The loans, negotiated abroad, which are all issued in different currencies, are grouped according to the proportion of currencies, shown by the coupons paid, and reduced to dollars at the rate of exchange just mentioned.
) Excluding the loan of the State Grain Office, amounting to 3.3 million dollars, which has not yet been transferred to the actual National Debt.

The term import covers all Imported goods which have been placed on the markè either immediately after importation or after storage.

Export covers all goods exported from the open market, including re-exports.
Goods are declared to the Customs by their owner, who must at the same time state the value of the gocds as calculated at the frontiers of the country. Consequently, imports are given according to their C. I. F. value and exports F. O. B.

* Preliminary figures subject to minor alterations.

| Jan.-Nov. |  |  |  |  |  |  |  |  | Jan.-Oct. |
| Jan.-Dec. |  |  |  |  |  |  |  |  | Jan.-Dec. |

The import- and export-indices have been calculated by the Statistical Dept. of the Board of Customs in the following manner: the quantities of imports and, respectively, exports for the current year have been multipiled by the average price for the class of goods in question in 1913, after which the import (or export) value for the current year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods chosen for the setting-up of a total-Index have been divided, according to their use, into the groups: foodstuffs, clothing, agricultural requirements and other goods. The three last-named have been further divided, according to their purpose into raw materials, machinery and industrial products.

| April | 1142 | 881 | 2023 | 1487 | 773 | 2260 | 562 | 397 | 959 | - 283 | April |
| May | 849 | 520 | 1369 | 609 | 463 | 1072 | 368 | 331 | 699 | - 260 | May |
| June | 606 | 331 | 937 | 514 | . 285 | 799 | 251 | 261 | 512 | - 187 | June |
| July | 610 | 423 | 1033 | 346 | 281 | 627 | 289 | 235 | 524 | + 12 | July |
| August | 735 | 623 | 1358 | 332 | 420 | 752 | 270 | 353 | 623 | + 99 | August |
| September | 708 | 661 | 1369 | 394 | 397 | 791 |  |  |  |  | September |
| October | 919 | 774 | 1693 | 562 | 560 | 1122 |  |  |  |  | October |
| November | 1590 | 762 | 2352 | 786 | 634 | 1420 |  |  |  |  | November |
| December ${ }^{\text {\| }}$ | 1605 | 522 | 2127 | 836 | 458 | 1294 |  |  |  |  | December |

This table, prepared from the weekly reports of the Labour Exchange Department of the Ministry of Social Affairs, shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very small part of the rural centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled industrial workers proper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.

${ }^{1}$ ) From the beginning of 1921 onwards a new official index has been drawn up differing from that published in the Bulletin for 1922 in that the whole first half of 1914 forms the basis $(=100)$ for the same, and that the rise in taxation is also included.

The index is calculated by the Social-Statistical Department of the Central Statistical Office and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the income of which amounted during the years 1908-1909 to $1600-2000$ Fmk., presupposing that the average monthly consumption within the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809 ; since 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its independence. It became a republic in 1919. The Diet together with the President possess the legislative power of the country. The highest executive power is held by the President chosen for a period of 6 years. The Diet, composed of 200 members, is elected by universal suffrage.

The proportions of the different parties in the Diet are at present as follows:

## 2. LAND.

the ayerage temperature in the coldest month is in S. W. Finland - $5^{\circ}$ to - $6^{\circ} \mathrm{C}$, in Lappland - $15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ}$ C. resp. The average temperature in Helsingfors is $+4.6^{\circ}$ (in Christiania $+5.5^{\circ}$, in London $+9.9^{\circ}$, in Montreal $+5.5^{\circ}$, in Chicago $+9.1^{\circ}$, in Vladivostock $+4.4^{\circ}$, in Moscow +3.6 ${ }^{\circ}$. The ground is covered with snow in the South during about 100 days, in Central Finland during 150 to 180 days, in Lappland about 210 days.
tae area (the new province of Petsamo included) is 387 , 565 square kilometres ( $=149$, 651 square miles, Great Britain's area is $89,047 \mathrm{sq} . \mathrm{m}$. and Italy's area 110,632 sq. m.). Of the total area 343,279 sq. km . $(88.6 \%)$ consist of land, while $44,286 \mathrm{sq} . \mathrm{km}$. $(11.4 \%$ ) are lakes. On an average $10.8 \%$ of the land in the south of Finland is caltivated, $0.8 \%$ in the North, $6.1 \%$ of the whole land.

## 3. POPULATION.

nomber of inhabitants (1921): 3.4 millions, of which 0.2 million emigrants, [in Sweden (1921) 6.0, in Switzerland (1920) 3.9, in Denmark (1921) 3.3 and in Norway (1920) 2.6 millions].
density of population (1920): In South-Finland 17.2, in North-Finland 2.3 and in the whole country an average of 10.1 inhabitants to the square kilometre.

[^5]language (1920): Finnish speaking $89 \%$, Swedish speaking $11 \%$.

RELIGION (1920): Lutheran $98 \%$, Greek-Ortho$\operatorname{dox} 2 \%$.
distribution (1921): $83.9 \%$ of the population inbabits the country, $16.1 \%$ the towns. The largest towns are (1921): Helsinki (Helsingfors), the capital, 200,208 inhabitants, Turku (Åbo) 58,694, Tampere (Tammerfors) 48,475, Viipuri (Viborg) $30,748$.
education (1920): Amongst persons over 15 years of age only $0.8 \%$ are illiterate. Three universities founded 1640,1917 and 1920.

INCREASE OF POPULATION (1921): Births $24.3 \%$, deaths $14.0 \%$ (in France in $191915.0 \%$, and in England in $192012.4 \%$, nataral increase $10.3 \%$.

## 4. INDUSTRIAL AND BUSINESS CONDITIONS.

PROPORTIONS OF OCCUPATIONS OF THE POPULATION (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $3.4 \%$, other occupations $17.7 \%$.
agbiculture (1920): Cultivated land 2.0 million hectars, divided as follows: area under cultivation $0.5-10$ bectars $33.8 \%, 10-50$ ha. $48.9 \%, 50-100$ ha. $9.3 \%$, over $100 \mathrm{ha} .8 .0 \%$. The above mentioned surface of cultivated land was divided between the different kinds of crops as follows: $45.8 \%$ hay, $19.6 \%$ oats, $11.2 \%$ rye, $5.8 \%$ barley, $3.5 \%$ potatoes, $14.1 \%$ other. 'The number of dairies in 1920 amounted to 4505.

INDUSTRX (1922): Number of industrial concerns 3,294, hands 132,797, gross value of products of industry 8.079 .5 million marks.

LENGTH OF RAILWAYs (1923): $4,458 \mathrm{~km}$., of which $4,162 \mathrm{~km}$. State railways and 296 km private.

COMMERCLAL FLEET (1921): Sailing ships 683 (102,111 reg. tons net.) steamships 781 ( $92.032 \mathrm{r} . \mathrm{t}$.), motor boats 124 ( 18,649 r. t.), lighters 3,229 ( $274,505 \mathrm{r}$. t.). Total 4,817 ( 486,797 r. t.).

FINANGES: Since 1860 the currency unit is the Finnmark ( $=100$ pennies) $=1$ French franc. The redemption in gold of bank notes was cancelled on April 15th, 1915.
the central bank. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleåborg), Kuopio, Joensuu, Sortavala, Viipuri (Viborg), Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskylä and Kotka.

THE JOINT sTOCK BANKS (1923): Number 20, possess 396 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,900 inhabitants.
the safings banks (1922): Number at the end of the year 466.

# THE PEAT BOGS OF FINLAND AND THEIR DEVELOPMENT. <br> в 

E. A. MALM, orvili enginber director of the finnish bog society.

## AREA AND DISTRIBUTION OF PEAT BOGS.

The peat bogs of Finiland have never yet been fully surveyed, but according to estimates based on the statistics of the Board of Survey, the combined area of the peat bogs in the country represents 10,$222 ; 800$ hectares or $30.8 \%$ of the whole land-area.

Those peat bogs which were already cultivated, when rights of ownership were established, are not included in this estimate, but, on the other band, a large part of the peat lands consists of swamps devoid of any peat deposits worth mentioning.

From the accompanying map it will be seen that the southern and south-western parts of the country are considerably poorer in peat bogs than the northern and eastern parts. The country lying highest above sea-level is generally also richest in peat bogs, and wide expanses of peat bog are always spread out along the ridges of moraines which form the watersheds between the large river systems of the country.

It is striking that the peat bogs of Finland seldiom form large, undivided tracts, but are usually cut up by projecting capes and small islands of firm ground.

The largest single peat bog in the country is Pelso, with an area of about $14,000 \mathrm{ha}$. Bogs covering several thousand hectares are also to be found in several places, and in Ostrobothnia and Clarelia in particular peat bogs are prevalent over extensive districts.

## CHAARACTER AND UTILLSATION.

The character of Finland's peat bogs is very varied and of differing value for various purposes.

For cultivation open marshes covered by sedge as well as swamps covered by leaf-trees are the most suitable. The sphagnum bogs which frequently occur in the south-western part of the country as well as in southern Ostrobothnia and contain enormous supplies of unmouldering sphagnum peat, are excellently adapted for the production of moss litter, better than, for instance, the bogs in Germany or Holland. For the production of peat fuel our peat deposits are as a rule less suitable owing to their state of mouldering often being slight and to the plentiful presence of stumps and roots in the peat. In the central, and especially in the eastern parts of the country, however, firstclass bogs for peat fuel are also to be found with peat to a great depth.

The depth of our peat formations is rather variable, usually from 1 to 3 metres, but frequently even attaining 5 to 6 metres and more.

The chemical composition of our various kinds of peat is illustrated by the table below which gives their contents of ash and the most important substances for plant life in the form of average analyses made by the Finnish Bog Society. For the sake of comparison the average German analyses of the experimental station in Bremen are added in brackets. The figures indioate the proportion of dry substances.

|  | Sphagnum | Mixed peat | Sed | e peat |
| :---: | :---: | :---: | :---: | :---: |
| Ash | 1.6 (2.0) | 4.5 | 5.5 | (15.0) |
| Nitrogen (N) | 0.8 (1.0) | 1.75 (2.0) | 2.5 | (2.5) |
| Potash ( $\mathrm{K}_{2} \mathrm{O}$ ) | 0.04 (0.04) | $0.04{ }^{-(0.1)}$ | 0.05 | (0.1) |
| Phosphoric |  |  |  |  |
| acid ( $\mathrm{P}_{2} \mathrm{O}_{5}$ ) | 0.07 (0.07) | 0.15 (0.2) | 0.15 | (0.25) |
| Lime ( CaO ).. | 0.4 (0.25) | 0.9 (1.0) | 1.4 | (4.0) |

The composition of the sphagnum peat is very naturally similar to what it is elsewhere. The sedge peat is conspicuous in general for its low contents of ash - which is of importance for the production of peat fuel; - a normal proportion of nitrogen compared to peat bogs in other countries, and an unusually low percentage of lime. Curiously enough, however, the cultivation of marshy soil has often proved not to require the assistance of lime, even when soil fertilisers have not been added.

It is very common to improve the cultivation of bogs by means of an admixture of sand or clay. A number of analyses carried out by the Finnish Bog Society from peat lands cultivated with or without clay give the following average contents of substances for plant life, calculated per hectare to a depth of 20 cm .

These figures give a general idea of the chemical composition of peat soil, as of its needs of fertilising. The great importance of the addition of clay in increasing plant life in the soil is also clearly demonstrated.

## OULTTVIATION OF BOGS.

The peat bogs of Finland are unquestionably of the utmost importance to the country from
the point of view of cultivation. The cultivation of bogs has been practised in the country since immemorial times. More recently the cultivation of this kind of soil has been gaining in importance and is generally admitted to be the easiest and most economical form of cultivation. The cultivation of new. ground carried out during the last few decades has, for the greater part, been concerned with peat soil. Besides, a considerable portion of the country's cultivated soil already consists of peat soil. How large a part of the country's total cultivated area is occupied by cultivated peat lands is not known exactly, but a detailed investigation instituted by the Finnish Bog Society a few years ago in 14 parishes in different parts of the country, gave an average of $25 \%$ of cultivated bogs for the whole area under cultivation. As it seem's possible that the same proportion of the entire cultivated area - which amounts to 2 million hectares is peat soil, we should now almeady have 500,000 hectares of cultiva:ted peat lands.

Although we are unable to give the area of culltivated peat soill, which is still in its natural state, it is evident from the figures quoted at the beginning of this article with reference to the area of the country's peat bogs, that this area may be reckoned in millions of hectares and that only a fnaction of the peat bogs of the country suitable for cultivation has so far been reclaimed for cultivation.

Brog cultivation thus holds out enormous prospects of development for the counitry's fundamental occupation - agriculture - especially with regard to the cultivation of provender and a consequent extension of cattlefarming. Properly fentilised ranid managed, bog. cultivation usually easily produces larger crops than other kinds of soil, a fact confirmed by dividual farms. On these experimental farms of the Finnish Bog Society and even of individual farms. On these experimental farms. crops . of oats from peat soil of 3,000 to $4,000 \mathrm{~kg}\left(60\right.$ to $\left.80^{\circ} \mathrm{hl}\right)$ per lhectare are quite common and much bigger crops of oats
(up to 5,000 to $6,000 \mathrm{~kg}$ per ha ) have been attained. Orops of turnips have reached 50 to 60 tons ( 800 to $1,000 \mathrm{hl}$ ) and even over 190 tons ( $1,500 \mathrm{hl}$ ) per hectare. Crops of hay on good peat soil have amounted to 6 to 8 tons per ha, at times more. Including residue hay crops have been obtained even exceeding 12 tons per ha.

During recent years interest has been awakened in Finland, too, in starting pasturage on peaty soil. At the experimental stations of the Finnish Bog Society good results have already been attained, and this form of cultivation opens the way for fresh possibilities for utilising those peat bogs, such as sphagnum bogs, which are less adaptable for purposes of cultivation.

## AFFORESTATION OF PEA'TY SOIL.

A big part of the peat boge is well suited for afforestation and part of such peat formations can be employed for this purpose as are less suitable for cultivation. The Government and especially the large timber companies have already drained swampy peat bogs to quite a large extent in order to promote forest growth.

## INDUSTRIAL USE OF PEAT BOGS.

Industrial products have so far been derived from our peat bogs to a very omall extent. However, they contain both moss and peat fuel in huge quantities.

Up to the present the production of peat fuel has been carried on with some success to quite s modest extent only by a few paper and glass fectories and ironworks which had a use for such fuel. The production of peat fuel for sale has at various times been started in different parts of the country, but these undertakings have met with little success and have often been given up after a few years' work.

The slight success of the peat fuel industry is probably due chiefly to the circumstance that the metheds adopted hitherto in manipulating and drying the peat required a great deal
of labour and could be employed in our climate during only a very short time, at most three months in the year. Raw material of good quality is, however, to be found, particularly in the East of Finland, where several explored bogs have been estimated to yield some millions of tons of airdry peat fuel.

The moss litter industry has, on the contrary, turned out well, although as yet it has not been practised to any great extent owing to the very limited demand for building purposes and for litter on farms. In the raw state, ummouldered sphagnum peat of exceptional quality is available in practically unlimited quantities, as is proved, for instance, by the fact that a single bog in South Finland is calculated to contain 30 million cubic metres of moss peat, a quantity which should be sufficient for a whole century for the present small production of all Finland's moss litter factories. The number of trading moss litter factories in the country at present amounts to 20 or 30 , most of them with an annual production of les than 10,000 bales. In addition, there are below 200 co-operative moss litter concerns which produce litter for the needs of their members.

Formerly - prior to the World-War - mose litter was exported to Russia to some extent and during recent years one or two small parcels have gone to Sweden. The exportation of moss litter on a large scale and to more distant lands has not been possible so far owing to the cost of transport; such exportation should, however, not be inconceivable, especially in view of Finland's wealth in raw material.

## MEASURES FOR DEVELOPING THE UTLLISATION OF PEAT BOGS.

The Finnish Bog Society ${ }^{1}$ ), founded in 1894, with its head office in Helsingfors, aims at furthering the rational development of the peat bogs of the country for purposes both of cultivation and industry. The principal activities of the Society comprise:

[^6]1) the survey of peat bogs, carried out scientifically and practically;
2) the carrying out of experiments in cultivation of peaty soil; and
B) consultation on all questions connected with the utilisation of our peat bogs.

The Society arranges courses of instruction and meetings and publishes an annual which usually runs to $300-400$ pages (in 2 to 3 parts yearly).

The Society owns three permanent experimental stations, one in Tavastland, one in South Ostrobothnia, and one in Caretia. At the experimental station in Ostrobothnia there is also a moss litter factory, founded in 1915 and intended to act as a model factory. The position of these experimental stations is indicated on the map.

The peat bogs in the southern and western parts of the country have already been partly explored by the Finnish Bog Society and described in their annual. In the last few years the Society has begun a survey of all peat bogs along the railways within a distance of $\check{o}$ kilometres on either side of the railway line. This work has up to the present only dealt with a part of the lines in southern and central Finland. The greater part of Finland's extensive peat bogs is therefore still unexplored.

The Finnish Bog Society which at present enljoys a yearly subsidy of Fmik. 300,000 from the State, numbers a little over 1,000 members.

The Government makes considerable annual contributions towards draining swampy soils with a view to their cultivation. The considerable sums granted during recent years by the Diet for the purpose of cultivating fresh soil have mostly been applied to bog cultivation,
as this is the most profitable soil for cultivation.

## FUTURE PROSPEOTS.

The cultivation of peaty soil in the country has already advanced so far that the peat bogs are generally recognised as our greatest and most paying soil for cultivation which opens up extraordinary possibilities for the development of agriculture and particularly for the production of provender. With splendid soil for cultivation available there are therefore no difficulties in the way of increasing the cultivated area of the country several times over and multiplying its stock of cattle. Such developments are only hampered ify shortage of the necessary capital and labour.

The moss litter industry has access to an excellent raw material in well-nigh unlimited quantity. but the development of this industry is hindered by a very small demand on the home market and by the difficulty of exporting such a bulky article as peat. In the unmouldered deposits of moss peat which cover our bogs in the southern and western parts of the country great treasures for the future undoubtedly lie hidden.

- The peat fuel industry does not hold out prospects, in our land of forests and with our short summers, of becoming of much importance until fully safe and economic methods are discovered for producing a suitable peat fuel from stubbly and less well mouldered peat, independently of weather and cold. In the meantime this industry can only possess a local interest for industrial concerns in the proximity of peat fuel bogs. We must probably not hope for some time for a steady advance $\mathrm{in}_{1}$ this industry in spite of raw material being available in large quantities in our amazingly extensive peat bogs.

## SUBSCRIPTION TO THE BULLETIN.

The Bulletin may be subscribed to at the Akademiska Bokhandeln, Helsingfors, or the Helsingin Suomalainen Kirjakauppa, Helsingfors. The price per annum including postage is $40:-$ Fmk in Finland and 1:- Dollar in foreign countries. Single copies may be had at a price of Fmk 4:- or 10 cents respectively.

HELSINGFORS 1923.
GOVERNMIRNT PRINTING OFFICE

[^0]:    group II) sorving as supplementary cover for the note issue (see note 3 to table 4).

[^1]:    Deposits in the Savings Banks, including long-term deposits and current accounts, according to figures supplied by the Savings
    Banks Inspector's Office
    Namber of bankruptcy petitions filed during the corresponding month which will lead in due course to actual bankruptey. The reports for 1913 and 1921 are given according to the notices in the Official Gazette, those since 1922 according to the reports sent in to the Central Statistical Office by the various Courts.

    Protested bills according to figures published in the $\boldsymbol{s}$ Report of Bills Protested in Finland.

    * Preliminary figures subject to minor alterations.

[^2]:    * Preliminary figures subject to minor alterations.

[^3]:    ${ }^{1}$ ) Fresh meat, excluding pork.

    - Preliminary figures subject to minor alterations.

[^4]:    According to figures supplied by the Statistical Department of the Board of Customs.
    Up to Dec. 31, 1917, the last port of shipment and the first port of discharge were used in determining the respective countries of import and export. In the case of transportation of goods over land frontiers, the country from which goods arrived or that to which they were transferred was used in a similar sense, with the exception of a part of the exchange of goods with Russia, which was not put down to that country, but to the actual countries of import or export. From January 1, 1918, the country of import indicates the land in which goods were purchased, and country of export the land to which goods were sold.

    * Preliminary figures subject to minor alterations.

[^5]:    ${ }^{1}$ ) Owing to the Oommunist party having been dissolved at the beginning of August this year in consequence of its illegal activities, the newspapers of the party having been closed and its leaders, including the greater part of the members of the Diet belonging to the party, having been imprisoned and prosecuted, the size of the Communist party in the Diet cannot at present be given exactly.

[^6]:    ${ }^{1}$ ) The name of the Society in Finnish is: Sumen Suoviljelysyhdistys, in Swedish: Finska Mosskulturföreningen.
