# THE FINNISH MARKET REVIEW.

THE MONEY MARKET.

The temporary uneasiness on the money market in the middle of September which led to a slight increase in the rates of exchange and the raising of the bank rate, has now subsided. The rates of exchange have, however, so far remained at the same level as was attained owing to the rise referred to, but have been very steady. During the time from the middle of September to October 27th the quotations for dollars fluctuated between 37:23 and 37:55, for Swedish crowns between 983:50 and 992:--, and for pounds between 167:80 and 170:50. difference between these limits is thus only 0.7-1.0 %. As regards the position of the banks, this was rather strained, but a turn for the better seemed to have set in again by the middle of October.

The demand for credit during September was very active in the Joint Stock Banks. The total increase in loans amounted to 112.8 million marks, divided fairly evenly between bills and other loans. It is evident that the temporary stagnation in timber sales which continued from August to almost the end of September, provided the principal cause of this large demand for credit. A further circumstance which increased the burden of the banks lay in the fact that foreign deposits continued to decrease, this time by 67.5 million marks (compare table 10 p. 7). To the extent to which these deposits of foreigners in marks were not employed for paying for

Finnish export goods, the reduction in the deposits, naturally, indicates that they were sold in Finland for foreign currency. This circumstance that during the last few months large sums in marks have been repurchased from foreigners, has increased the difficulty of the position at the present juncture, but will, on the other hand, relieve the position for the future. This reduction in the foreign indebtedness of the country also explains, to a great extent, the fall in the Bank of Finland's supply of foreign currency and the tension on the money market.

Equilibrium in the position of the Joint Stock Banks was established partly by means of an increase in short-term deposits and partly by means of considerable re-discounts at the Bank of Finland which reached their highest point during the first week in October, but have since fallen off to some extent.

In the position of the Bank of Finland no other considerable changes have occurred in the last few weeks, beyond the increase to a marked degree in re-discounts owing to the causes indicated. The total loans of the Bank, however, only show a slight increase, as direct loans decreased by about the same amount by which re-discounts grew. The Bank's supply of foreign currency was at its lowest, viz., 282.6 million marks, at the end of September, but then began to grow and amounted to 301.3 millions on October 8th and to 372.7 millions on October 15th. This considerable increase is probably

due, above all, to increased sales of timber as well as to the timber merchants' advances on exports and customary short-term loans which have again begun to be taken up. At the same time this points to an easing of the money market. The note circulation was rather less during the last few weeks than during the corresponding periods in 1921—1922.

As in the latter half of October the rediscounts constantly decreased and the supply of foreign currency increased, the discount rate of the Bank of Finland was reduced to 8 % on October 27th. The reduced discount rate was applied from October 28th onwards.

# TRADE AND INDUSTRY.

Finland's exports during September were again in excess of imports, a state of affairs which has now continued for four months in succession. The surplus of exports was in this instance smaller than in the previous months, namely, 67.1 million marks, but taken in conjunction with the excess of exports for the preceding months it has, nevertheless, reduced the surplus of imports which arose in the first five months of the year, to 125.9 million marks. This result may be considered satisfactory especially in view of the fact that the balance of trade for October may be expected to be a favourable one, too. The reason for the surplus of exports in September being smaller than in the previous months and smaller than in the corresponding period in 1922 is, no doubt, due to the circumstance already referred to that the timber market was very dull during August and the beginning of September.

Finland's exports of sawn timber which, as

we have often pointed out, were very poor towards the end of the summer, began to be livelier at the end of September and in the course of October many further purchases were made. Besides, the prices for the special sorts most in demand have fallen to some extent. By the middle of October 650,000 standards of sawn timber had been sold from Finland for shipment this year, or about 74% of the whole year's production, if this is estimated at about 880,000 standards.

Buying of goods for shipment next year has also begun.

The market for unsawn timber is rather poor. Sales of plywood continue to advance. The exports during September amounted to 3.04 million kilogrammes which is the largest quantity exported from Finland in any one month.

The paper market has not even yet improved. It is already apparent that the exportation of paper this year will be slightly less than last year. The falling off is least in regard to newsprint paper. In the chemical pulp market the situation is still uncertain, as the struggle in prices goes on between buyers and sellers, it being as yet impossible to say who will come out the victor. Sales of mechanical pulp are satisfactory. Up to the end of September the exports of chemical pulp were 9.7% and the exports of mechanical pulp 15.9% greater than for the corresponding period last year.

#### THE LABOUR MARKET.

Labour conditions continue in all respects good and peaceful, there being no unemployment or labour disputes.

The figures in brackets [ ] indicate the position at the end of the previous year.

<sup>1)</sup> Loans on Security, Advances on Current Accounts and Inland Bills.
2) The sudden increase at this point is a result of the new ordinances concerning the note issue.
3) In these figures the amount deducted in Table 2 has been included in the note reserve, as this is in reality a conditional note reserve. The difference between these two forms of note reserve consists only in the fact that the deduction referred to may be utilised for the note issue only if set against such means as can be referred to the supplementary cover, while on the other hand no conditions are laid down with regard to the employment of the note reserve which the Bank publishes in its balances.

# 13. — STOCK EXCHANGE INDEX.

Year	Jan.	Febr.	March	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Year
1920 1921 1922 1923	178 128 145	160 132 148	150 127 142	145 122 142	148 122 144	141 124 141	145 125 147	147 127 149	138 140 144	130 144	175 129 142	173 127 143	1920 1921 1922 1923

According to figures published in the Mercators.

This revised index series which differs somewhat from those we have given in the past, is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank, 12 industrial and 2 other kinds of shares. By multiplying the price bid for each security by the number of shares in the corresponding company the so-called \*Exchange value\* has been arrived at for the share capital of the company, the sum of which values has been calculated in % of the total nominal value of the share capital of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

The above table is based on the monthly report on the Public Debt published by the Treasury in the Official Gazette. Internal loans are given at their nominal value. Foreign loans are given in Finnish currency according to the rate ruling on the date of the rating of the loan. As a result of this, loans of an earlier date than 1014 are set down at par.

1) Calculated as follows: The loans raised in the country, have been calculated in dollars, according to the average rate of exchange of each month. The loans, negotiated abroad, which are all issued in different currencies, are grouped according to the proportion of currencies, shown by the coupons paid, and reduced to dollars at the rate of exchange just mentioned.

2) Excluding the loan of the State Grain Office, amounting to 3.3 million dollars, which has not yet been transferred to the actual National Debt.

The term import covers all imported goods which have been placed on the market either immediately after importation or after storage.

Export covers all goods exported from the open market, including re-exports.

Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country. Consequently, imports are given according to their C. I. F. value and exports F. O. B.

<sup>•</sup> Preliminary figures subject to minor alterations.

# 17. — VALUE OF IMPORTS AND EXPORTS IN DIFFERENT GROUPS OF GOODS.

According to figures supplied by the Statistical Department of the Board of Customs.

Up to Dec. 31, 1917, the last port of shipment and the first port of discharge were used in determining the respective countries of import and export. In the case of transportation of goods over land frontiers, the country from which goods arrived or that to which they were transferred was used in a similar sense, with the exception of a part of the exchange of goods with Russia, which was not put down to that country, but to the actual countries of import or export. From January 1, 1918, the country of import indicates the land in which goods were purchased, and country of export the land to which goods were sold.

\* Preliminary figures subject to minor alterations.

The import- and export-indices have been calculated by the Statistical Dept, of the Board of Customs in the following manner: the quantities of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in question in 1913, after which the import (or export) value for the current year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods chosen for the setting-up of a total-index have been divided, according to their use, into the groups: foodstuffs, clothing, agricultural requirements and other goods. The three last-named have been further divided, according to their purpose into raw materials, machinery and industrial products.

This table, prepared from the weekly reports of the Labour Exchange Department of the Ministry of Social Affairs, shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very small part\*of the rural centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled industrial workers proper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.

<sup>&#</sup>x27;) From the beginning of 1921 onwards a new official index has been drawn up differing from that published in the Bulletin for 1922 in that the whole first half of 1914 forms the basis (= 100) for the same, and that the rise in taxation is also included;

The index is calculated by the Social-Statistical Department of the Central Statistical Office and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the income of which amounted during the years 1908—1909 to 1600—2000 Fmk., assuming that the average monthly consumption within the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.

# CERTAIN PARTICULARS ABOUT FINLAND.

#### 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; since 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its independence. It became a republic in 1919. The Diet together with the President possess the legislative power of the country. The highest executive power is held by the President chosen for a period of 6 years. The Diet, composed of 200 members, is elected by universal suffrage.

The proportions of the different parties in the Diet are at present as follows:

Right   Swedish people's party (Swedish speaking po-	Number	Per cent.	
pulation)	25 35 60	12.5 17.5 30	
Unionist party			
Centre Agrarian party Progressive party	45 15 60	22.5 7.5 30

#### 2. LAND.

THE AVERAGE TEMPERATURE in the coldest month is in S. W. Finland  $-5^{\circ}$  to  $-6^{\circ}$  C, in Lappland  $-15^{\circ}$  C. and during the warmest month  $+15^{\circ}$  and  $+13^{\circ}$  to  $+14^{\circ}$  C. resp. The average temperature in Helsingfors is  $+4.6^{\circ}$  (in Christiania  $+5.5^{\circ}$ , in London  $+9.9^{\circ}$ , in Montreal  $+5.5^{\circ}$ , in Chicago  $+9.1^{\circ}$ , in Vladivostock  $+4.4^{\circ}$ , in Moscow  $+3.6^{\circ}$ ). The ground is covered with snow in the South during about 100 days, in Central Finland during 150 to 180 days, in Lappland about 210 days.

THE AREA (the new province of Petsamo included) is 387, 565 square kilometres (=149, 651 square miles, Great Britain's area is 89,047 sq. m. and Italy's area 110,632 sq. m.). Of the total area 348,279 sq. km. (88.6%) consist of land, while 44,286 sq. km. (11.4%) are lakes. On an average 10.8% of the land in the south of Finland is cultivated, 0.8% in the North, 6.1% of the whole land.

#### 3. POPULATION.

NUMBER OF INHABITANTS (1921): 3.4 millions, of which 0.2 million emigrants, [in Sweden (1921) 6.0, in Switzerland (1920) 3.9, in Denmark (1921) 3.3 and in Norway (1920) 2.6 millions].

DENSITY OF POPULATION (1920): In South-Finland 17.2, in North-Finland 2.3 and in the whole country an average of 10.1 inhabitants to the square kilometre.

LANGUAGE (1920): Finnish speaking 89%, Swedish speaking 11%.

BELIGION (1920): Lutheran 98 %, Greek-Orthodox 2 %.

DISTRIBUTION (1921): 83.9 % of the population inhabit the country, 16.1 % the towns. The largest towns are (1921): Helsinki (Helsingfors), the capital, 200,208 inhabitants, Turku (Åbo) 58,694, Tampere (Tammerfors) 48,475, Viipuri (Viborg) 30,748.

EDUCATION (1920): Amongst persons over 15 years of age only 0.8% are illiterate. Three universities founded 1640, 1917 and 1920.

INCREASE OF POPULATION (1921): Births 24.3  $\%_{00}$ , deaths 14.0  $\%_{00}$  (in France in 1919 15.0  $\%_{00}$ , and in England in 1920 12.4  $\%_{00}$ ), natural increase 10.8  $\%_{00}$ .

#### 4. INDUSTRIAL AND BUSINESS CONDITIONS.

PROPORTIONS OF OCCUPATIONS OF THE POPULATION (1920): agriculture 65.1 %, industry and manual labour 14.8 %. commerce 3.4 %. other occupations 17.7 %. AGRICULTURE (1920): Cultivated land 2.0 million hectars, divided as follows: area under cultivation 0.5—10 hectars 33.8 %. 10—50 ha. 48.9 % 50—100 ha. 9.3 %. over 100 ha. 8.0 % The above mentioned surface of cultivated land was divided between the different kinds of crops as follows: 45.8 % hay, 19.6 % oats, 11.2 % rye, 5.8 % barley, 3.5 % potatoes, 14.1 % other. The number of dairies in 1920 amounted to 455.

INDUSTRY (1922): Number of industrial concerns 3,294, hands 132,797, gross value of products of industry 8.079.5 million marks.

LENGTH OF BAILWAYS (1923): 4,458 km., of which 4,162 km. State railways and 296 km private.

COMMERCIAL FLEET (1921): Sailing ships 683 (102,111 reg. tons net.) steamships 781 (92,032 r. t.), motor boats 124 (18,649 r. t.), lighters 3,229 (274,505 r. t.). Total 4,817 (486,797 r. t.).

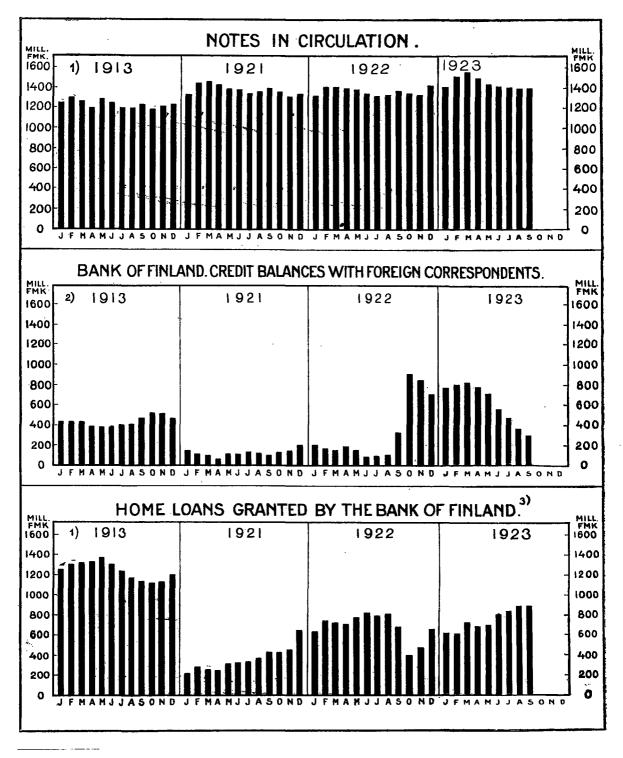

FINANCES: Since 1860 the currency unit is the Finnmark (= 100 pennies) = 1 French franc. The redemption of bank notes in gold was cancelled on April 15th, 1915.

THE CENTRAL BANK. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleåborg), Kuopio, Joensuu, Sortavala, Viipuri (Viborg), Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskylä and Kotka.

THE JOINT STOCK BANKS (1923): Number 20, possess 396 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,900 inhabitants.

THE SAVINGS BANKS (1922): Number at the end of the year 466.

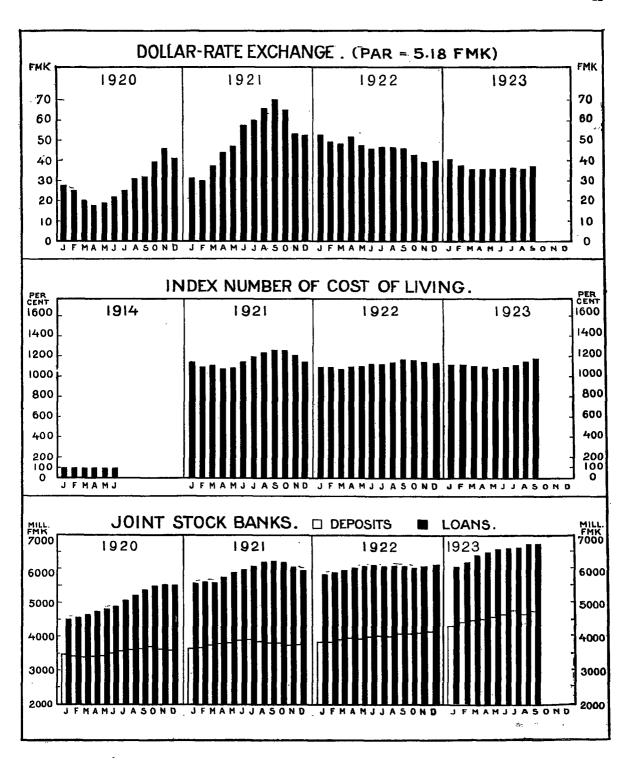

<sup>&#</sup>x27;) Owing to the Communist party having been dissolved at the beginning of August this year in consequence of its illegal activities, the newspapers of the party having been closed and its leaders, including the greater part of the members of the Diet belonging to the party, having been imprisoned and prosecuted, the size of the Communist party in the Diet cannot at present be given exactly.

# FINLAND'S BALANCE OF INTERNATIONAL PAYMENTS FOR THE YEAR 1922.

BY

NIILO KÄRKI, M. A.

ACTUARY AT THE CENTRAL STATISTICAL OFFICE.

# EXTENT AND METHOD OF INVESTIGATION.

Finland's Central Statistical Office has made a calculation of the balance of Finland's international payments for the year 1922. In this calculation, the result of which is given below, 1) neither foreign loans contracted during the year, nor paid up instalments, except redemption and interest on bonds, have been taken into consideration. In this investigation, generally speaking, no effort has been made to estimate the real exchange of currencies between Finland and foreign countries during the time in question, but only an attempt to explain, how the balance of international payments of Finland would have formed itself, if all the payments had been made in cash. In pursuance of this principle the value of exports, for instance, has been considered as corresponding to the value of the goods, which have been exported during the course of the year, without regard to how great a part of the goods was possibly paid for during the preceding calendar year, or how much money entered the country during 1922 as payment in advance against exports of a later date. This principle has been followed, both because more reliable information has been thus acquired and on account of the fact that accidental causes would thus be of much less influence.

In order to explain the details of the investigation the following may be stated.

## A. CREDIT. PAYMENTS TO FINLAND.

1. Exports. The fob value of the official commercial statistics has been taken as the value of exports and is based on the declarations of the owners of the goods. As during the year

under review ad valorem customs duties were not enforced in Finland for those rare classes of goods, which had to pay an export duty, the owners of the goods had no reason to try to declare less than the real values in order to reduce the duty. Nevertheless, the value figuring in the official statistics is too low as regards some classes of goods, especially timber, since timber is generally sold in the ship's hold and since it has been shown, that the officials have not always added the cost of loading to the declared value, as they should have done. Seeing that timber forms the most important article of export from Finland, the value of exports declared may consequently be somewhat lower than its real fob value. As it has, nevertheless, been considered preferable that the credit side should rather be too low than too high, it was not thought desirable to attempt any increase under this head.

- 2. Harbour-, lighthouse-, pilotage- and other dues. In this group the many different dues paid by foreign vessels have been included, which do note enter into the fob value of the statistics. The calculation of these items has been made with care, for the greater part by calculating the share of foreign vessels in proportion to the dues paid by all vessels, which entered the harbours in direct trade, according to their tonnage.
- 3. Shipping freights. According to trust-worthy official statistics the gross income in 1922 of Finland's own commercial fleet in foreign trade, i. e. trading between Finland and foreign countries or between foreign countries only, amounted to 221.1 million marks. On the strength of calculations made by experts, the share to be credited to the country may be put at 65 % of the gross receipts mentioned above.

<sup>1)</sup> The particulars which follow are finally adjusted, excepting for a few points of minor importance, in which the corrections which may be necessary, will have no influence on the final result.

- 4. Emigrants' remittances. According to information collected by the Central Statistical Office in 1922 emigrants sent to the country through the Joint Stock Banks and through the Finska Angfartygs A. B. (The Finnish Steamship Co. Ltd.) 71.6 million marks and to their accounts with the Joint Stock Banks 55.6 million marks in dollar notes and cheques, or a total of 127.2 million marks. For obvious reasons this figure cannot be exact, but should not in any case be too large, as only remittances in dollar notes are taken into account and as the emigrants evidently sent considerable amounts also in other currencies.
- 5. Remittances by sailors. In 1922 sailors sent through the Sailors' Mission 4.5 million marks in foreign currency to their own country. For the balance of payment this amount has been rounded off to 5 million marks. On account of a great part of the sailors' remittances being sent direct to their relatives without the intermediary of the Sailors' Mission, the 500,000 marks' increase by the rounding off should be considered too low rather than too high.
- 6. Foreign tourists and travellers. The influence of the travellers' and tourists' traffic on the balance of payment has been calculated on the basis of their numbers, it being estimated that every foreigner visiting Finland leaves on an average 5,000 marks in the country. According to calculations based on the police registers a total of 15,969 foreigners arrived in Finland during 1922.
- 7. Foreign insurance. This calculation is based on a special inquiry made among the Insurance Companies. This group includes almost without exception the reinsurance premiums paid by foreign Insurance Companies to Finnish Insurance Companies. Claims settled in Finland by the foreign Companies have been taken into account only approximately on account of the paucity of information on this subject. but, as the activity of foreign companies in Finland is insignificant, this does not affect the figures very much.
- 8. Postal revenue from abroad has been put down according to the returns of the Post-Office Department.

9. Interest from abroad. The data as to the revenue in the shape of interest from abroad received by the Government is quite accurate and based on the accounts of the Government. The revenue in the form of bank interest is in turn calculated according to the average extent of the foreign credits of the banks according to official statistics.

# B. DEBIT. PAYMENTS FROM FINLAND.

1. Imports. The cif value of the commercial official statistics has been taken as the value of imports, based on the declarations of the owners of the goods. As ad valorem customs duties on imports were for the most part imposed in Finland during 1922 only on means of communication and on most machines, it was, generally speaking, not in the interests of importers to declare the value of the goods lower than it was in reality.

The share of insurance premiums, which remains with the marine and transport insurance companies at home, has been deducted from the cif value of imports. The estimate of this share has been made in the following way, based on calculations made by an expert. The total amount of premiums paid on these insurances has been estimated at 0.7% of the value of imports and 70% of the imports have been estimated to be insured by companies in the country. The deduction made came to 20 million marks.

At this point it should be mentioned, that the value of imports, grouped according to their use, was as follows.

#### CIF VALUE OF IMPORTS IN 1922.

	Mill. Fmk.
Raw materials	1,271.9
Machinery	446.6
Industrial produce	801.7
Foodstuffs	1,449.7
Total	3,969.9

2. Smuggling. The amount of smuggling is naturally very difficult to determine. The calculation made here is based upon the generally accepted assumption that 10% of

smuggled goods are seized. The value of seized goods in 1922 was 8.s million marks according to official information. The greater part, 5.s million marks, represented alcohol. In this calculation the amount, which went to foreign countries on account of smuggling, has been rounded off to 90 million marks. In order that a possible error in this respect should not occur in Finland's favour, the smuggling, which takes place from Finland to Sweden, has been left out of consideration on the credit side.

We should mention, too, that the value of the smuggling calculated on another principle gives almost the same result.

- 3-5. Telegraph. railway and postal fees paid to foreign countries have been set down according to the returns of competent offices.
- 6. Foreign representation. These figures are based on the Government's balance sheets for 1922. The country, naturally, also has some income through the expenditure by foreign representatives in Finland (for instance, the numerous representatives of Soviet Russia with their many-sided activity), but as these profits are difficult to calculate and as the error under this head is not in favour of Finland, a corresponding income group has not been entered on the credit side.
- 7. Finland's share in the cost of the League of Nations has been given according to government figures.
- 8. Travel abroad. The calculation has been made in such a way, that every Finnish traveller has been assumed to spend 6,000:— marks on his travelle abroad. In 1922 the number of Finnish citizens, who travelled abroad, was 17,012 persons according to the police registers.
- 9. Insurance premiums and claims. This is made up almost entirely of reinsurance premiums paid by the Finnish insurance companies to foreign companies. The ordinary premiums, paid to foreign companies, have here been taken into account only in a very few cases, but as the ordinary premiums paid from Finland to foreign companies are equally incomplete on the credit side and as the sums to be taken into account would be quite small, the accuracy of the calculation would not be diminished by this fact.

10. Redemption of bonds and interest. The figures relating to interest and redemption paid to foreign countries are based on the investigation carried out in the winter of 1923 by the Statistical Department of the Bank of Finland (see Bulletin No. 3, 1923). They embrace all the obligation loans of the Government, the municipalities, Joint Stock Companies etc., the foreign debts of the banks, as well as debts guaranteed by the banks, of business concerns and private persons or, in short, all the debts of Finland to foreign countries with the exception of unsecured loans without bank guarantee, the number of which is insignificant.

#### RESULTS OF THE INVESTIGATION.

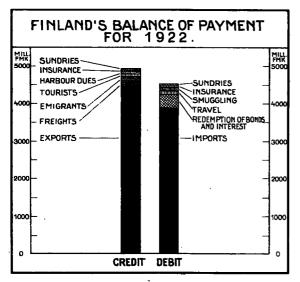

The results of the calculation are seen in the following tables:

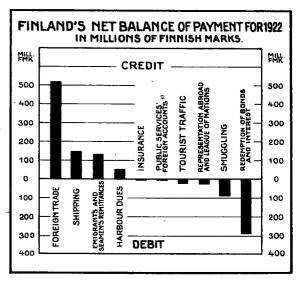

# FINLAND'S BALANCE OF INTERNATIONAL PAYMENTS IN 1922.

#### Credit. Mill. Fmk. 4.467.6 Harbour-, lighthouse-, pilotage- and other dues ...... 50.<sub>0</sub> Shipping freights (65 % of gross receipts)..... 145.0 Emigrants' remittances ...... 127.0 Sailors' remittances ...... 5.0 Foreign travellers ..... 80.0 Foreign insurance ...... 45.0Postal revenue from abroad ...... 3.8 Interest from abroad: a) Government ...... b) Banks ..... 10.4 Total 4.933.8Debit.Imports ..... 3.969.9less insurance premiums remaining in the country .... 20.0 3,949.9 Smuggling ...... 90.0 fees paid abroad (debit Telegraph 4.5 balance) ..... Railway fees paid abroad (debit balance) 1.4 4.6 Postal fees paid abroad ......

Representation abroad ......

21.9

Post Office, Railway and Telegraph Office accounts with foreign countries.

Finland's share in cost of League of	1
Nations	3.3
Travel abroad	102.0
Insurance premiums and claims	50.o
Redemption of bonds and interest:	
a) Government 176.7	
b) Banks (especially on Finn-	
mark deposits) 55.5	
c) Others (municipal loans and	
loans of industrial and other	
Joint Stock Companies) 71.2	303.4
Total	4,531.0
Surplus of credit	402.8

To what extent the net results of the different items were to Finland's advantage, and to what extent to the advantage of foreign countries is seen in the table below.

# NET BALANCE OF INTERNATIONAL PAYMENTS OF FINLAND IN 1922.

		Debit
	Mill.	Fmk.
Foreign trade	517.7	
Shipping	145.0	
Harbour dues	<b>50.</b> 0	
Emigrants' and sailors' remittances	132.0	

Tourist traffic		22.0
Smuggling		90.υ
Insurance premiums and claims		
paid		5.0
Postal, railway and telegraphic		
communication with foreign		
countries		6.7
Foreign representation and costs		
of League of Nations		<b>25.2</b>
Redemption of bonds and interest		293.0
Total	844.7	444.9
Net credit balance	402.8	

In the calendar year 1922 the amount of Finland's receipts from abroad, consequently, according to the investigation, totalled 4,933.8 million marks and the sums paid by Finland to foreign countries 4,531.0 million marks. The balance of international payments of Finland was consequently favourable and the credit 402.8 million marks greater than the debit. The calculation having been made very conservatively it seems probable that the balance in reality was still greater. This favourable result was mostly due to the exports being nearly 500 million marks greater than imports.

## FINLAND'S CROPS IN 1923.

RV

#### J. JYSKE, AGRICULTURALIST.

#### SECRETARY TO THE CENTRAL UNION OF FINLAND'S AGRICULTURAL SOCIETIES.

In addition to the information given in the last number of this publication the following complementary information concerning Finland's crops this autumn may be furnished.

As was the case in the most northern parts of Europe, this year's autumn crops in Finland were somewhat inferior both in quality and quantity. This was caused by the unfavourable meteorological conditions, the extraordinarily late spring, the frosts in August and September in the northern and central parts of the country, as well as the excessive rains prevalent throughout almost the whole autumn. From the middle of September the rainfall decreased, but by that time the hay and rye were for the most part already harvested.

A great improvement was brought about through the better weather, as the barley and oats, contrary to expectation, were thus given time to ripen.

Bearing in mind both quantity and quality and indicating the crops by numbers, — viz. 8 = very good, 7 = good, 6 = above medium, 5 = medium, 4 = below medium, 3 = poor crop, 2 = almost failure of crops, 1 = failure of crops, — and comparing the figures of the different crops in the different government districts to the area of each plant cultivated, the crop figures of the different cultivated plants would be as follows on the 15th of September 1923, and the same date in 1922.

	1923	1922
Wheat	5.4	5.6
Rye	5.0	4.6
Barley	4.0	5.7
:Oartis	4.1	6.3
Mixed corn	4.2	6.1
Pulses	4.7	5.9
Potatoes	4.4	5.1
Other roots	5.0	<b>5.5</b>
Sown hay	6.1	7.1
Wild hav	5.2	6.2

As is shown by the figures above, the crop of the most important cereal, rye, is very nearly medium for the whole country. On the contrary the crops of barley and oats which are of importance both as human food and especially for animals, were below medium. Also the potato crop is somewhat below medium. The crop of hay is again fairly satisfactory.

Compared to the previous year the crops, with the exception of rye, were worse. By comparing the crops of the present year with the average crops for the years 1920—1921, which were more abundant than usual, it has been found that the crop of rye amounts to 89 % and the crop of barley and oats each to 71 % of the average of the years mentioned. It lies in the nature of things that all these figures are only estimated on broad lines and must be judged accordingly. With regard to the whole country it may, nevertheless, generally be said that the crops this year are certainly not bad, although somewhat below medium.

Again, if we dook at the different parts of the country, the picture is mot quite so comforting. If we calculate the percentage of parishes in which the crops of the most important cultivated plants were 1—8, we arrive at the following table.

CROP NUMBERS, PERCENTAGE OF PARISHES, IN WHICH THE PLANTS MENTIONED BELOW HAVE YIELDED CROPS 1-8.

	Rye	Barley	Oats	Potatoes	Sown hay
8	0.5				5.7
7	5.9	4.7	2.1	2.6	22.7
6	22.4	10.o	8.9	11.6	42.0
ŏ	33.7	34.2	16.8	28.9	26.7
4	18.2	20.0	21.6	30.5	1.2
3	7.5	16.3	25.3	17.4	1.7
2	9.1	7.9	14.2	7.9	
1	2.7	6.9	11.1	1.1	
	100.a	100.գ	400.0	100.0	100.0

As the table shows, in a large number of parishes the crops were very good, but, on the other hand, in many parishes there was a failure (1) or almost a failure (2), especially of barley and oats, occasioned chiefly by night frosts. These parishes are situated in the northern and eastern parts of the country. The failure of the crops was naturally a great loss to the population of these districts who already from the very beginning of the autumn had to fall back upon bought corn. Nevertheless, the Government does not need to help these pour districts in any other way than by granting loans to certain parishes, to be advanced in turn to the farmers, and by executing more roadmaking and other public works in these districts.

The failure of the crops in the districts referred to is not such a great loss to the country as might be supposed at a first glance at the table above, including rather a large number of parishes in which the crops were bad. In the first place corn is cultivated on rather a small scale in those districts. The whole area of cultivated fields is, namely, comparatively small in the districts suffering from the dearth and even of this area the greater part is reserved for hay. The cultivation of fodder for cattle farming is the most general just on account of the danger of frost. For this reason the corn crops of these regions have scarcely sufficed to meet half the supply of cereals required even in normal years. Amongst the northern parishes suffering from shortage there are even some in which in ordinary times almost all the cereals were imported. Further, the number of inhabitants in the districts affected is small, which is seen by the fact, that in the most northern government district, where the shortage is most felt, the density of population per square kilometre is only 2.3 persons, whereas it amounts to 17.2 in the other parts and 20-37 in the most important agricultural districts.

More detailed statistics have been drawn up of the 34 parishes which were stricken most heavily by the shortage and of which 30 belong to the most northern districts.

	In these 34 parishes.	Percentage of Finland's entire rural districts.
Number of inhabitants	115,000	4.4
Number of farms	10,667	4.2
Cultivated area, hectars	42,000	21
Normal crop: Tons:		
rye	4,605	1.8
barley	8,285	7.1
oats		0.9
potatoes	15,690	2.8

These figures show, as has been explained above, i. e. that agriculture in the parishes stricken hardest by the shortage is so insignificant, that even the failure of the entire crops would not signify much in comparison to the crops of the whole country. And not even in the greater part of these parishes was the failure of the crops complete. It is true that there are more parishes than these 34, which have suffered more or less from the frost, but as they escaped with smaller damage, they have not been taken into account.

Considering these facts as well as the circumstance that the crops in the truly agricultural districts in the south of Finland were satisfactory, it is clear that the damage caused by the frost should not be estimated too highly. It is obvious, of course, that imports of corn will increase to a certain degree, but on the other hand there is reason to believe, that the part of the population which has experienced a bad year's crops, will reduce the consumption in other spheres and consequently also the imports from abroad.

# FINLAND'S NEW FOREIGN LOANS.

In May, 1922, the Finnish Parliament empowered the Government to take up a foreign loan not exceeding 4 million pounds or the equivalent in dollars in amount. In view of the need for foreign capital in the country and the state of the money market abroad, the Government considered the present moment opportune for carrying its plans with regard to the loan into effect. As it was thought to be of importance that Finland, which was now in reality appearing for the first time since the war as a borrower in the largest markets, should float the loan as satisfactorily as possible and as the successful placing of so large a sum as 4 million pounds in a single market might not be so easy, the loan was divided into two parts of which one part was placed in the United States, the other in England and Sweden. With regard to the objects of the loan the following may be stated: ---

From the point of view of Finland's State finances the new loan need not have been negotiated, for the public revenue has increased to such an extent during the last few years that it now amply suffices for covering not only the ordinary, but even the extraordinary expenditure made once for all. It may be mentioned, in order to illustrate this point, that in its Budget proposals recently laid before Parliament the Government proposed to reduce both the indirect and the direct taxes by, altogether, about 150 million marks or about 9 % of the present revenue from taxation. Nor is there any need of short-term credits. The so-called Reserves of the Treasury which consist partly of cash, partly of stocks of materials belonging to the Government services (e. g. railways, army etc.), are quite sufficiently large to enable the business of the State to be carried on without occasional loans. Already by the end of last year these reserves amounted to 683 million marks and, according to all indications, they are likely to increase this year. In cash the Treasury possessed at the end of September on current account alone in various banks a sum of 405.3 million marks.

For a number of other reasons, however, it has been deemed desirable to obtain long-term foreign credit for the country. Private concerns have considerable floating debts in foreign currency and the banks carry large deposits in Finnish currency made by foreigners. Experience has shown that the alterations occurring in these floating debts, increases as well as reductions, exercise a disturbing influence on attempts at stabilising the Finnish mark. For this reason and because the Government has now better prospects than private concerns of obtaining foreign credit, it has been thought necessary by means of a Government loan to obtain for the country foreign currency loaned for a lengthy period with which, as required, part of the floating foreign debts of individual concerns may be replaced. The loans have therefore been negotiated principally for reasons of currency policy in order- to convert the country's floating debt into a funded loan.

These circumstances have been kept in view in regard to the employment of the foreign currency secured by means of the loans. With regard to the amount in Finnish marks, however, which the Government receives by the sale of this foreign currency - presumably to the Bank of Finland — no decision has so far been made in this respect, as no foreign loans have been included in the Budget for the coming year. But it may be mentioned here that the Budget for 1924, for instance, according to the plans of the Government, is to include expenditure for productive purposes (railways etc.) amounting to about 550 million marks, which has hitherto been met almost entirely out of Treasury funds. In whatever way the loans are used, it cannot be said that they are to be used for unproductive purposes.

The other of the new loans which amounts to 10 million dollars, is floated by the National City Bank of New York through its affiliated institution, the National City Company. The interest on the loan is 6% and the price of issue 90%. The loan is redeemable in the course of 1926—1945. The loan has already been floated in the United States and the issue has turned out extremely well. The amount of the loan is receivable immediately against temporary undertakings.

Respecting the other part of the loan negotiations were entered into with Hambros Bank Limited in London which soon established a consortium including, in addition to the bank mentioned and the London firm of Messrs J. Henry Schröder & Co., the Svenska Obligations Kredit Aktiebolaget in the capacity of representative of several Swedish banks. The Londoners in the consortium underwrote 1 million pounds of the loan for their own account and the Obligations Kredit Aktiebolaget

2,280,000 dollars, the consortium reserving an option on a further 2,280,000 dollars up to November 5th. The loan was issued in London on October 29th. The part of the loan underwritten by the Obligations Kredit Aktiebolaget will not be offered to the public at all, this company having taken it up itself in its entirety. The company will, however, probably issue its own obligations for a corresponding amount on the Swedish money market. This loan issued in Europe bears interest at 6 % and is to be amortised in the course of 40 years, the issue price being 90 %.

No security has been demanded for the loan
— as is customary in connection with Government loans.

As already stated, it is likely that in one form or another the Bank of Finland will have to buy up the foreign currency obtained by means of the loan which will thus increase the Bank's supply of foreign currency.

#### SUBSCRIPTION TO THE BULLETIN.

The Bulletin may be subscribed to at the Akademiska Bokhandeln, Helsingfors, or the Helsingin Suomalainen Kirjakauppa, Helsingfors. The price per annum including postage is 40: — Fmk in Finland and 1: — Dollar in foreign countries. Single copies may be had at a price of Fmk 4: — or 10 cents respectively.
