## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

The temporary tightening of the Finnish money market, provoked at the end of September by the political situation abroad, gave way rapidly in October. It is evident, however, that the abundance of cash that has existed for a long time is now falling off as a consequence of the development of tendencies of depression. The accumulation of capital has declined and the indices of industrial production for the third quarter of this year record an appreciable drop. The index of the volume of industry was 173 as against 184 for the same period last year, while the index of the value of industrial production fell from 209 to 159 . The setback refers principally to the exporting industries, the output of the home market industries having for the present remained at the same level as a year ago.

The total deposits in the Joint Stock banks decreased in October by 115.8 million marks to $10,721.7$ millions. This reduction was chiefly due to deposits made by other credit institutions, which fell off by 165.4 million marks, an indication of their more stringent position. The actual deposits of the public were also slightly reduced, while on the other hand cheque accounts recorded an increase of 62.8 million marks: At the same time the credits granted by the Joint Stock banks increased by 37.2 million marks to $9,263.0$ millions. In this way the surplus of deposits was reduced by 153.0
million marks to $1,458.7$ millions. The position of the Joint Stock banks is still very easy and their cash is larger than is advantageous from the point of view of profit earning.

As usual at this time of year, the foreign balances of the Joint Stock banks decreased considerably in October. As their foreign indebtedness grew simultaneously, their net foreign balance fell off by 100.9 million marks to 179.0 millions.
In the position of the Bank of Finland the most striking feature is the reduction in credits granted. In October the total credits of the Bank decreased by 138.1 million marks and the decrease continued during the first fortnight in November by 37.4 millions. This reduction is partly due to usual seasonal phenomena, the repayment of export credits, and partly to the issue of some new bond loans. The total credits of the Bank amounted to $1,339.5$ million marks on November 15th and were thus still appreciably larger than in the previous years. The return flow of bank notes was larger than usual in October owing to the increase in the note circulation in the previous month evoked by the danger of war. The reduction in the note circulation amounted to 98.6 million marks in October and to 58.2 millions during the first half of November. Thanks to the comparatively favourable balance of trade during the autumn the balances of the Bank of Finland with its foreign correspondents increased in October by
48.8 and at the beginning of November by 34.5 million marks and were, at 2,146.1 millions, rather larger than a year ago. Finally, it should be mentioned that the note reserve, which had dropped during the summer to 205.0 million marks at the end of August, has since increased considerably, so that in the middle of November it amounted to 403.8 millions.

The level of prices did not experience any great change in October. The Finnish price indices recorded a small rise in general, though the level of prices is lower than last year. The price index for articles of import remained unaltered, but the index for articles of export recorded a drop of 1 point. As the latter index was 91 points as against 93 points for articles of import, the tendency of prices has become unfavourable to this country.

## TRADE AND INDUSTRY.

Foreign trade was slightly livelier in October than in September, though less than at the same time last year. The value of exports amounted to 881.7 million marks in comparison with 793.8 millions in September and 999.1 millions in October last year. The value of imports amounted to 760.2 million marks as against 755.5 millions in September, but 944.0 millions in October, 1937. The reduction in exports was mainly due to the fact that exports of timber and wooden articles dropped from 513.6 million marks in October, 1937, to 394.5 millions during the same month this year. However, the course of the value of exports of animal foodstuffs and paper and pulp products moved in the same direction. With regard to the reduction in imports, this was contributed to by imports of raw materials to the extent of 98.6 millions, imports of machinery and means of transport of 57.7 millions and imports of finished industrial articles of 29.3 millions. On the other hand imports of foodstuffs and luxuries were 1.8 million marks larger than in the same month last year.

The balance of trade proved unexpectedly favourable in October, there being a surplus of
exports amounting to 121.5 million marks as against 38.3 millions in September and 55.1 millions in October, 1937.

The position of the timber market did not undergo any great change. The demand is still small, but prices are firm and contracts were made at slightly higher prices. The prospects for next year are uncertain. Stocks in Great Britain have been reduced appreciably, but for psychological reasons the demand does not seem to be in conformity with the statistical position. Up to the end of October exports of sawn timber amounted to 661,300 standards, representing a reduction of 176,600 standards or 21 per cent since last year. At its meetings on November 16th and 17th the E.T.E.C. (European Timber Exporters' Convention) discussed the question of fresh restrictions of output, but at the time of writing a definite decision had not been arrived at.

The state of the market for cellulose and paper is unchanged. Stocks are heavy and demand is insignificant, so that competition is very keen. On November 1st representatives of the sulphite cellulose industry in Finland, Denmark and Sweden resolved to put the agreement they had concluded earlier into effect with regard to restricting output by allowing the mills to stand idle for 8 weeks during the latter half of 1938 and for 7 weeks during the first half of 1939.

As the sawmill and woodworking industry holds considerable stocks of raw materials, it is estimated that timber felling during the 1938-1939 season will only amount to about half the previous year's quantity, which was of record proportions.

## THE LABOUR MARKET.

The state of the labour market continues satisfactory. In some spheres there is even a shortage of skilled labour. However, the expected tendency towards a deterioration in the position is beginning to be evident, for the number of unemployed registered at the labour exchanges increased in October by 850 to 4,040 in comparison with 3,700 a year ago.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET.

Bank of Finland:

1. Weekly Statement.
2. Note issue.
3. Notes in circulation and foreign correspondents.
4. Ordinary cover, note reserve and home loans.
5. Re-discounted bills and balances of current accounts.
6. Rates of exchange.

Joint Stock banks:
7. Home deposits.
8. Home loans.
9. Position towards foreign countries.
10. Foreign Payment Position of all Banks.
11. Clearing.
12. Deposits in the Savings Banks.
13. Deposits in Post Office Savings Bank and in Cooperative Credit Societies.
14. Deposits in Consumers' Co-operative Societies.
15. Insurances in life assurance companies.
16. Changes in nomber and capital of limited companies.
17. Stock Exchange. Bankruptcies. Protested bills. 18. Stock Exchange index.
II. STATE FINANCES.
19. Public Debt.
20. State Revenue and Expenditure.
21. Collection of Customs and Excise dues.

## III. TRADE AND INDUSTRY.

22. Value of imports and exports.
23. Value of imports and exports in different classes of goods.
24. Imports of the most important articles.
25. Exports * *
26. Foreign trade with various countries.
27. Value index of imports and exports.
28. Volume index of imports and exports.
29. Total sales of some wholesale firms.
30. Volume index of industrial production.
31. Building activity.

## IV. TRAFFIC.

32. Foreign shipping.
33. Passenger traffic between Finland and foreign countries.
34. State Railways.
F. LEVEL OF PRICES.
35. Wholesale price index.
36. Cost of living index.
37. Bank of Finland consumption price index.

## VI. LABOUR MARKET.

38. Index of working hours in industry.
39. Number of unemployed.
40. Cessation of work.

Calculated by the Central Statistical Office. The first group of indices refers to prices of goods appearing in local wholesale trade in Finland, whereas the indices for imported and exported goods refer to foreign trade prices. An indirect weighting has been applied, each class of goods being represented by the number of commodities corresponding to the calculated importance of this class in wholesale trade. The averages are arithmetical ones.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared Its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President Kyösti Kallio ls elected. for the term March 18t, 1937, to March 1st, 1943.

The Dlet, composed of 200 members. is elected by universal euffrage. The proportions of the different parties in the Diet elected in 1936 are as follows:

Number
Social-Democratic party .......................................... . . . . . 83
Agrarian party .......................................................... . . . 53
Swedish party
21
Unionist party
20
Patriotic National Movement's party ............................ 14
Progressive party
7
Small farmers' party
1
People's party
1

## 2. LAND.

THE AREA (excluding lake Laatokka) is 382,801 square kilometres $=147,761$ square miles (Great Britain's area is $89,047 \mathrm{sg} . \mathrm{m}$. and Italy's area 117,982 sq. m.). Of the total area $9.0 \%$ are inland waters. On an average $11.8 \%$ of the land in the South of Jinland is cultivated, $1.1 \%$ in the North, $6.6 \%$ of the whole land. Of the land area 25.3 mill. ha ( 62.5 mlll . acres) or $73.0 \%$ are covered by forests.

THE AVERAGE TEMPERATURE in the coldest month is In S. Finland - $3^{\circ}$ to $-8^{\circ} \mathrm{C}$. , In Lapland - $12^{\circ}$ to $-14^{\circ} \mathrm{C}$. and in the warmest month $+16^{\circ}$ to $+17^{\circ}$ and $+12^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki (Helsingfors) is $+4.6^{\circ}$ (in Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the South for abont 110 days, in Central Finland for about 150 days, in Lapland about 200 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1937): 3.8 millions (of whom 0.2 million emigrants), Sweden (1937) 6.3, Switzerland (1987) 4.2, Denmark (1937) 3.7 and Norway (1937) 2.9 millions,

DENSITY OF POPULA TION (1937): In South-Finland 18.8, in North-Finland 2.7 and in the whole country an average of 11.0 inhabitants to the square kilometre.

DISTRIBUTION (1837): $78.5 \%$ of the population inhabit the country, 21.5 \% the towns and urban districts. The largest towns are (1937): Helsinki (Helsingfors). the capital, 298,237 inhabitants, Tampere (Tammerfors) 74,736. Vilpuri (Viborg) 73,917, Turku (Abo) 72,981.

OCCUPATION (1930); agriculture $59.6 \%$, industry and manual labour $16.8 \%$, commerce $\mathbf{4 . 5} \%$, transport $3.8 \%$, other occupations $15.5 \%$.

JANGUAGE (1930): Finnlsh speaking $89.4 \%$, Swedish speaking $10.1 \%$, others $0.5 \%$.

RELIGION (1937): Lutheran 96.0 \%, Greek-Orthodox $1.8 \%$, others $2.2 \%$.

EDUCATION (1930): Amongst persons over 15 years of age only $0.9 \%$ are illiterate. There are three universities founded in 1640,1917 and 1920.

INCREASE OF POPULATION (1937): Births $18.9 \%$, deaths $12.3 \%$ (in France in 1936 15.3 $\%$ on and in England in $198612.1 \%$ ) natural increase $6.6 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOURCES. The growing stock of the forests is 1,620 million $m^{2}(57,214$ million cubic feet). The merchantable timber
(measuring 30 cm at breast hoight $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $60.7 \%$, spruce by $281 \%$, the conifers thus constituting $88.8 \%$ or 1,383 million trees; leaftrees, mostly birch, $11.2 \%$ or 174 million trees. The annual increment is 44.4 million $m^{3}(1,668$ million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{3}$ ( 1,413 million cub. ft.).

AGRICULTURE (1987): Cultivated land 2.2 million hectars, divided as follows: area under cultivation $0.3-10$ hectars $33.4 \%$. $10-5 u$ ha $52.1 \%, 50-100$ ha $8.4 \%$, over 100 ha $6.1 \%$. Cultivated land is divided between the different kinds of crops as follows: $51.7 \%$ hay $17.7 \%$ oats, $9.4 \%$ rye, $4.7 \%$ barley, $3.4 \%$ potatoes: 13.1 \% other. The number of dairies in 1937 amounted to 588.

OWNERSHIP OF LAND (1923): The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$.

INDUSTRY (1937): Number of industrial concerns 4,246, workpeople 207,506 , gross value of products of industry 21,076 million marks.

LENGTH OF RAILWAYS (1937): $5,907 \mathrm{~km}$, of which 5,651 km State railways and 256 km private. The gauge is in general 1.524 m .

MERCHANT FLEET (1938): Steamshipg 558 (304,738 reg. tons net), motor vessels 182 (21,577 reg. tons net), sailing ships 110 (34,288 reg. tons net). Total 850 ( 360,603 reg. tons net).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained Its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish markkan $=100$ penniā). According to the monetary law of December 21st, 1925, a gold coin of 100 marks' value shall contain $3^{15} / 18$ grams of fine gold. Since October 12th, 1931, the redemption of bank notes in gold is, however, suspended.

STATE FINANCES. According to the finance accounts for 1937 the State revenue was $5,984.5$ million marks of which $4,315.6$ million marks were current revenue, and State expenditure 5 ,898.1 million marks, of which $3,557.2$ million marks were current expenditure. The principal sources of revenue were as follows: State property and undertakings (net) 525.8, direct taxes 743.0, indireet taxes 2,199.4, stamp duty 268.3, charges 109.6, interest and dividends 296.3 and capltal revenue $1,668.9$. The value of State property in 1922 was estimated at $11,150.6$ million marks. For Public Debt see table 19 in this issue.

MUNICLPAL FINANCES. According to the Budget for 1938 expenditure amounted to $1,808.4$ million marks. Income from taxation was calculated at 608.1 million marks, taxed income at 7,963.9 million marks. The municipal income tax (non -progressive) averaged $7.7 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku ( $\AA$ bo), Porl (Björneborg), Vaasa (Vasa), Oulu (Uleáborg), Knopio, Joensutu, Sortavala, Vilpuri (Viborg), Mikkell (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyvāskylä and Kotka.

THE JOINT STOCK BANKS (1988): Number 9, possess 464 offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,200 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Oy. Pohjoismaiden Yhdyspankki and Helsingfors Aktlebank, all with head offices in the capital.

OTHER BANK (1938): Mortgage banks 5, Savings banks 482, Co-operative Credit Societies 1,158 and a Central Bank for the latter.

# THE FINNISH STATE RAILWAYS IN 1932-1937. 

BY
JUSSI VARPELA, M. A.
HEAD OF THE STATISTICAL DEPARTMENT OF THE BOARD OF RAILWAYS.

## RAILWAY LINES.

The Finnish railway system is still to a great extent incomplete, large districts are still far distant from the railways, especially in the central and northern parts of the country, and they do not possess the close connection with the coast and the leading districts which is necessary for their material and spiritual development and which only a railway can establish. It is therefore quite natural that the construction of new lines should have been considered of such importance, especially since Finland became independent, that not even the period of depression was able to affect it to any extent worth mentioning. While the length of our railways was altogether $4,089 \mathrm{~km}$ in 1917, of which $3,828 \mathrm{~km}$ belonged to the State Railways, their total length in 1937 was $5,907 \mathrm{~km}$, of which $5,489 \mathrm{~km}$ were State-owned, representing a capital of $6,204.7$ million marks. Our railway lines have thus increased during the past twenty years by almost half. The following figures, referring to the end of each year, indicate, in what measure this extension of our railway system has been oarried out during the period of prosperity that set in during 1933.

| Year | Total length of railways | Staterailways |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Annual | Annual |
|  |  | Length | increase | expenditure |
|  | Km | Km | Km | Mill. mk |
| 1932 | 5,479 | 5,101 | 82 | 59.2 |
| 1933 | 5,573 | 5,192 | 91 | 81.5 |
| 1934 | 5,711 | 5,320 | 128 | 81.1 |
| 1935 | 5,757 | 5,367 | 47 | 70.4 |
| 1936 | . 5,766 | 5,371 | 4 | 88.6 |
| 1937 | . 5,907 | 5,489 | 118 | 78.9 |

Of the railway lines of $5,907 \mathrm{~km}$, therefore, $5,489 \mathrm{~km}$ belonged to the State Railways at the end of $1937,162 \mathrm{~km}$ of privately owned lines were also used by the State Railways and 256 km were private light railways. During the last $\breve{5}$ years our railway lines have increased by 428 km and their construction has cost 400.5 million marks or over 80 millions a year on an average. The most important of the lines completed during this time are the ElisenvalaraLappeenranta line, which has become a lively route for the industry of Karelia and the Upper Vuoksi, and the Rovaniemi-Kemijärvi line, which has considerably improved the means of communication in Lapland. In addition the following are under construction at present: the Viinijärvi-Varkaus line, which will shorten the transport of goods from Northern Karelia to the shipping ports considerably in the winter, and the Taivalkoski-Kontiomäki line, which, as it will probably be extended as far as Kemijärvi, will appreciably increase the value of the forest resources of North Finland by enabling these districts to become the suppliers of the woodworking industries in Central and South Finland. The Pori-Haapamäki line has quite recently been opened to traffic. It has greatly improved transport conditions in Northern Satakunta and connects Karelia with the Gulf of Bothnia as a continuation of the HaapamäkiElisenvaara and Varkaus-Viinijärvi lines. As the western terminus of this line, Mäntyluoto, is, perhaps, the best port in the country as regards ice conditions, it will presumably now

become the import and export harbour during winter for the districts to the north of Tampere, Mikkeli, Elisenvaara and Värtsilä. The winter traffic of Central Finland and Ostrobothnia will certainly be concentrated principally at Mäntyluoto. The fact that this is appreciated and that efforts are being made by the Government to encourage the development of such traffic, is proved by the construction of the Suolahti-Haapajärvi line at present, which will besides be able to connect the hitherto isolated Central-Finnish districts with other more highly developed regions, and also by the passing of an act last spring, by which it was decided to construct lines connecting Saarijärvi station on the latter line with Haapamäki as well as Seinäjoki with Parkano. This act also contains provisions for building the Jämsä
-Orivesi line connecting the shores of Lake Päijänne with the Vaasa railway, the JoensuuIlomantsi line, of great importance to BorderKarelia, and the Sysmäjärvi-Alapitkä line that will connect Northern Karelia and Northern Savo with each other. It has thus been decided to construct altogether about 419 km of new lines.

## TRAFFIC.

The present period of prosperity is clearly reflected in the traffic on the State Railways.

The lively train traffic is illustrated by the following figures indicating the length of the journeys made by trains on the one hand and the truck-axle-kilometres on the other in each year and the increase in these journeys in percentage of the previous year.

| Ycar | Train kilometres |  | Truck-axle-kilometres |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Millions | $\begin{gathered} \text { Incroase } \\ \% \% \end{gathered}$ | Passenger Millions | coaches Increase $\%$ | $\begin{gathered} \text { Good } \\ \text { Millions } \end{gathered}$ | trucks Increase $\%$ | Millions | Increase $\%$ |
| 1932 | 24 | 3.6 | 264 | 0.7 | 554 | 2.0 | 818 | 2.0 |
| 1933 | 25 | 3.6 | 261 | -1.2 | 605 | 9.2 | 866 | 5.9 |
| 1934 | 26 | 5.8 | 270 | 3.4 | 681 | 12.6 | 951 | 9.8 |
| 1935 | 27 | 3.9 | 294 | 5.0 | 686 | 2.3 | 980 | 3.1 |
| 1936 | 29 | 6.6 | 310 | 5.6 | 735 | 7.2 | 1,045 | 6.7 |
| 1937 | 32 | 8.9 | 328 | 5.8 | 824 | 12.0 | 1,152 | 10.2 |

A great growth is noticeable in train traffic during the last five years. When economic life began to revive after the depression and a period of lively improvement set in, the transport of goods increased very much.from year to year and so did passenger traffic, when earnings increased. Consequently it became necessary to make a corresponding increase in the frequency of trains and their speed and, above all, in the weight of trains, i.e. in the number of truckaxles. This growth, which was also due in part to new lines being opened for traffic, was, however, not quite even from year to year. The increase in 1935, e. g., was much smaller and in 1936 and 1937 considerably larger than in the other years. This is due to the fact that timber, which is very susceptible to cyclical fluctuations, is decidedly the principal class of goods carried by the railways.

Passenger traffic is illustrated by the following table:-

| Year | Journeys |  |  |  | Average length of journeys |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\underset{\text { class }}{\mathbf{I}}$ | $\underset{\text { class }}{\text { II }}$ | $\begin{gathered} \text { III } \\ \text { class } \end{gathered}$ | Total |  |
|  | Number, 000's omitted |  |  |  | Km |
| 1932 | 3 | 940 | 17,583 | 18,526 | 44.2 |
| 1933 | 3 | 813 | 16,404 | 17,220 | 46.8 |
| 1934 | 3 | 798 | 17,469 | 18,270 | 48.0 |
| 1935 | 3 | 824 | 18,112 | 18,939 | 49.3 |
| 1936 | 5 | 871 | 18,851 | 19,727 | 50.3 |
| 1937 | 5 | 724 | 20,404 | 21,133 | 52.5 |

It will be seen from these figures and from the truck-axle-kilometres of passenger coaches referred to earlier that the trough of the depression was only passed in 1933 as regards passenger traffic. As, however, people's earnings increased slowly at first after the depression, the consequence was that, although the number of passengers increased, the quantity of II class passengers only began to grow in 1935 and the
number of I class passengers in 1936. It was only the number of III class passengers that increased evenly, this being due in the first instance to the working people living in the neighbourhood of towns and other centres of population obtaining work, when economic life revived, and to local traffic increasing. This is evident from the fact that the number of passengers increased proportionately more than the average length of journeys.

The position of such traffic in the Northern countries and in Germany is shown by the following figures, which indicate, how many passengers were calculated to have been carried annually on an average in each country per kilometre of line in use.

Passengers

| Year | Finland | Sweden Norway Denmark Germany 000's omitted |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1932 | 159 | 214 | 145 | 447 | 594 |
| 1933 | 152 | 211 | 149 | 412 | 581 |
| 1934 | 162 | 226 | 145 | 460 | 672 |
| 1935 | 168 | 249 | 147 | 496 | 757 |
| 1936 | 177 | 268 | 163 | 542 | 832 |

The trough of the depression in passenger traffic was passed in other countries in 1933 , but in Norway only the following year. Except Norway, passenger traffic on the railways in our other neighbouring countries is many times larger than in Finland, indeed in Germany there are almost five times as many passengers per kilometre of line, in Denmark four times as many as in this country, in Sweden about $1 / 3$ more than here and in Norway only slightly fewer. At the same time it is evident that passenger traffic revived in other countries excep.t Norway much more rapidly after the depression than in Finland. In Germany the number of passengers travelling per kilometre of line in 1936 was almost $1 / 2$, in Denmark almost $1 / 3$, in Sweden over $1 / 4$ more than in 1933, but in Finland the number of passengers only increased by 16.4 per cent and in Norway by 12.5 per cent. This is very natural, however, for our proportionate figures include the traffic results of our new lines in undeveloped regions, which will remain poor for several decades,
while the railway systems of our neighbours consist almost entirely of old lines.

Goods traffic is far more susceptible to cyclical fluctuations than passenger traffic owing to the influence exerted by timber. Its development during the present period of prosperity is illustrated by the following figures:-

| Year | All goods | Agricultural <br> produce | Timber | Other <br> industrial <br> products | Foodstuffs <br> and <br> anuries |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | Tons, ooo's omitted |  |  |  |  |
| 1932 | 8,761 | 1,055 | 4,032 | 3,183 | 214 |
| 1933 | 10,491 | 1,203 | 5,284 | 3,442 | 223 |
| 1934 | 12,554 | 1,290 | 6,596 | 4,244 | 261 |
| 1935 | 12,334 | 1,315 | 5,869 | 4,712 | 273 |
| 1936 | 13,671 | 1,454 | 6,048 | 5,699 | 282 |
| 1937 | 15,710 | 1,506 | 6,986 | 6,644 | 305 |

The increase ( + ) or decrease ( - ) from the previous year was as follows in percentage:-

| Year | All goods <br> $\%$ | Agricultural <br> produce <br> $\%$ | Timber <br> $\%$ | Other <br> ndustrial <br> products <br> $\%$ | Foodstuffs <br> and <br> luauries |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1933 | +19.8 | +14.0 | +31.1 | +8.1 | +4.2 |
| 1934 | +19.7 | +7.2 | +24.8 | +23.3 | +17.0 |
| 1935 | +1.8 | +1.9 | +11.0 | +11.0 | +4.6 |
| 1936 | +10.8 | +10.6 | +3.1 | +21.0 | +3.3 |
| 1937 | +14.9 | +3.6 | +15.5 | +16.6 | +8.1 |

Goods traffic grew very much during this time, indeed to such an extent that at times there was actually a serious shortage of goods trucks. In 1937 traffic in all goods was 79.3 per cent, in agricultural produce 42.7 per cent, in timber 73.0 per cent, in other industrial products 108.7 per cent and in foodstuffs and luxuries 42.5 per cent larger than in 1932. In general, traffic in industrial products and in timber increased most, i. e., in those goods that form the preponderating share of the total goods traffic on the railways, the former now representing 42.3 per cent and the latter 44.5 per cent of it. The total goods traffic fell off to some extent in 1935 in comparison with the previous year on account of traffic in timber having decreased by over $1 / 10$ owing to reduced sales abroad. The rapid growth of different, branches of our industry during this period of prosperity is evident from greatly increased railway traffic in their raw materials and
finished products. E.g., traffic in paper and pulp products increased by 61.6 per cent, while traffic in minerals, chiefly sand, limestone, lime and cement, coal and ore, metal goods and bricks was much more than doubled. The growth of traffic in agricultural produce was curiously uneven, this traffic having increased very much in 1933, 1934 and 1936, but comparatively little in 1935 and 1937. In the first two years this was, of course, due to the demand for cereals, cattlefood and fertilizers and to imports of them, and in 1936 to the rapidly increasing output of Finnish grain.

The following table shows the progress in goods traffic in the neighbouring countries per kilometre of line in use:-

| Year | Finland | Goods trafic |  |  | Germany |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Ton-kilometres, 000 's |  |  |  |
| 1932 | 285 | 232 | 126 | 223 | 727 |
| 1933 | 319 | 222 | 128 | 186 | 779 |
| 1934 | 367 | 267 | 127 | 198 | 938 |
| 1935 | 360 | 323 | 161 | 207 | 1,058 |
| 1936 | 399 | 389 | 172 | 202 | 1,173 |

Although we have new lines with little traffic, our goods traffic has, on an average, been much livelier than in the other Northern countries and in Germany. This is apparently due to our lower freight rates and to the structure of our goods traffic enabling the railways to compete more successfully with motor traffic.

## FINANCIAL RESULTS.

From the description of the development of traffic it can be concluded that the financial results of the State Railways have proved fairly satisfactory.

The receipts, expenditure and surplus for each year were as follows:-

| Year | Receipts Mill. mk | Working expenses Mill. mk | $\underset{\text { Mill. } \mathrm{mk}}{\substack{\text { Total }}}$ | plus <br> \% of average capital value |
| :---: | :---: | :---: | :---: | :---: |
| 1932 | 677 | 668 | 9 | 0.1 |
| 1933 | 726 | 655 | 71 | 1.1 |
| 1934 | 830 | 674 | 156 | 2.5 |
| 1935 | 853 | 719 | 134 | 2.2 |
| 1936 | 926 | 755 | 171 | 2.8 |
| 1937 | 1,066 | 825 | 241 | 3.9 |

Owing to traffic, especially goods traffic, having become livelier during the period of prosperity the receipts of the State Railways have increased considerably from year to year. The greatest increases in receipts occurred in 1934, 14.3 per cent in comparison with the previous year, and 22.6 per cent in comparison with 1932, and in 1937, 15.1 per cent above 1936 and 57.5 per cent in comparison with the trough of the depression. In 1935, when goods traffic fell off, the receipts nevertheless increased by 2.8 per oent thanks to lively passenger traffic. Working expenses, of course, also increased owing to the growth of traffic, more fuel and other articles were consumed and the extra personnel, in particular, had to be increased. The considerable rise in the price of fuel, coal and wood, caused an appreciable increase. However, the working expenses grew much more slowly than the receipts, the expenditure in 1937 being only 23.5 per cent heavier than in 1933, i.e., the year in which expenditure was lowest. Consequently the surplus proved to be very large, especially during the latter half of the period. In fact, its ratio to the average capital value in 1937 was so high, 3.9, that it had only been exceeded on three occasions during the existence of the railways, viz., in 1874, 1915 and 1916, when the ratios were $4.23,5.91$ and 4.62 per cent respectively.

What was the state of the financial results in the neighbouring countries? It will be found that the receipts per kilometre of line were as follows:-

| Year | Finland <br> mk | Sweden <br> Sw. Cr. <br> ooo's | Norway <br> N. Cor. | Denmark <br> D. Or. | Germany <br> $\mathbf{R m k}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1932 | 130.4 | 24.4 | 18.4 | 41.3 | 54.5 |
| 1933 | 138.5 | 23.4 | 18.3 | 35.8 | 54.2 |
| 1934 | 154.7 | 24.5 | 18.9 | 38.9 | 61.7 |
| 1935 | 155.2 | 26.1 | 19.2 | 39.7 | 66.1 |
| 1936 | 167.9 | 27.8 | 19.8 | 43.0 | 73.3 |

A comparison of these average figures with the traffic figures quoted above shows that the trough of the depression was passed in the neighbouring countries only in 1933, whereas in

Finland it was passed already in 1932. Here the change was due mainly to goods traffic, but in the neighbouring countries princinally to passenger traffic.
The following table illustrates the working expenses per kilometre of line in use:-

| Year | Finland <br> mk | Sweden <br> Sw. Cr. <br> oco's | Norway <br> N. Cr. | Denmark <br> D. Cr. | Germany <br> Rmk. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1932 | 128.7 | 22.5 | 21.6 | 43.4 | 55.7 |
| 1933 | 125.0 | 21.1 | 20.4 | 40.9 | 56.7 |
| 1934 | 123.5 | 20.7 | 19.5 | 40.9 | 61.3 |
| 1935 | 130.9 | 21.4 | 19.7 | 40.8 | 63.3 |
| $193(3$ | 135.3 | 22.6 | 20.3 | 42.8 | 64.6 |

Our expenditure per kilometre of line was many times less than that of our neighbours, which is very natural, seeing that such a large part of our railway system consists of new lines carrying little traffic, the staff of which is therefore less and the number of train journeys and the working expenses of the trains smaller. But, if it is considered that our total receipts are also smaller owing to this and to the much lower tariffs, and as our working expenses are nevertheless only $80-90$ per cent of the receipts, as in Sweden, while in the neighbouring countries, with the exception of Germany for the last three years, they generally exceed the receipts, one must come to the conclusion that by means of strict economy the Finnish State Railways have achieved more satisfactory financial results than the countries referred to.

The surplus ( + ) or deficit ( - ) per kilometre of line was as follows in the different countries:

| Year | Finland <br> mk | Sweden <br> Sw. Cr. <br> ooo's | Nomitted <br> N. Cr. | Denmark <br> D. Gr. | Germany <br> Rmk. |
| :--- | :--- | :--- | :---: | :---: | :---: |
| 1932 | +1.7 | +1.9 | -3.2 | -2.1 | -1.2 |
| 1933 | +13.5 | +2.3 | -2.1 | -5.1 | -2.5 |
| 1934 | +29.0 | +3.8 | -0.6 | -1.0 | +0.4 |
| 1935 | +24.3 | +4.7 | -0.5 | -1.1 | +2.8 |
| 1936 | +32.6 | +5.2 | -0.5 | +0.2 | +8.7 |

This indicates that, in comparison with the neighbouring countries, our railways have worked very satisfactorily, only the Swedish railways during the whole period and the German lines in 1935-36 having yielded better financial results, if the difference in the value of the currency is taken into account. The results of the Norwegian and Danish railways are quite surprisingly poor, which is, no doubt, due to severe competition with motor vehicles both in passenger and goods traffic.

It is evident from the above that the period dealt with was one of prosperity for the Finnish State Railways, too, and that 1937 proved a veritable record year. During the current year a change appears to have set in. Up to the end of September this year over 995,000 journeys more were made, but about $1,298,000$ tons of goods less were carried than during the corresponding period in the previous year. And although the receipts during that time were over 47 million marks in excess of the figure for the corresponding period in the previous year thanks to the large increase in the number of passengers, the working expenses increased even more, so that the surplus was 37.5 million marks less than for the same period in 1937.

# REVISION OF THE FINNISH STATE RAILWAY TARIFF. 

BY<br>K. A. VANAMO, PH. D.<br>AOTUARY OF THE BOARD OF RAILWAY ADMINISTRATION.

## THE OLD TARIFF SYSTEM ANTIQUATED.

On March 1st this year new tariff regulations for the Finnish State Railways came into force with a new tariff both for passenger and goods traffic. Thus at last a reform has been accomplished, of which there has been talk for many years and for which much more preparatory work has been done than for any previous reform of the tariff of the Finnish railways.

The tariff regulations that have now been superseded were not very old, for they came into use in 1929. Nor were the preceding tariffs of long standing, having been adopted in 1924. Nevertheless, the tariff system that was in use had become antiquated. Both these tariffs were based on the tariff adopted in 1897, which was thus in force for over 40 years in its main features. Naturally, many changes had been made in the course of time in these pre-war tariff regulations and their rates of freight had had to be raised very much, if only for the reason that the value of the Finnish currency had dropped to a fraction of its former value. But the tariff system itself and the structure of the tariffs remained unaltered in broad lines. Since 1897 goods were divided into six tariff classes and rebates for quantity, whenever gnanted, were calculated in a fixed proportion to the rate for the dearest weightgroup. Rebates on goods tariffs for long distances were also calculated in a fixed proportion to certain intermediate distances. Especially the fiixing of rates on goods was more or less tied to a system which may have
suited the requirements of 40 years ago, although complaints against it were made even then. If the length of time since then and the radical changes in economic conditions are taken into consideration, it will be realised that it was high time to subject the whole tariff system to a thorough examination and reform.

## THE NEW PASSENGER TARIFFS.

The changes in the passenger tariffis are not very great, but some alterations have nevertheless been made in them. One important change consists in the fact that the rebate on long journeys is now calculated on a different basis than before. The new passenger tariff is a regnessive scale tariff, and the rate per km is calculated according to the following scale:-

Up to 50 km the rate is the same as before. For longer journeys the rates are slightly raised, though so little that for a journey of 800 km , for which the rise is highest, a third-class ticket only costs 11 marks more than formerly. For journeys exceeding 990 km , on the other hand, the new tariff is lower than the old one, so that, e.g., a journey of $1,000 \mathrm{~km}$ now costs 161 marks or 1 mark less than before. The price of a second-class ticket is 50 per cent and of a first-class ticket 150 per cent dearer than the price of a third-class ticket.

Of the other changes made in the passenger tariffs it is worth mentioning that return tickets, on which a reduction of 20 per cent was formerly allowed up to 80 km , are now issued for journeys not exceeding 50 km , while no reduction is granted on return tickets for longer journeys, their price being the same as for two single journeys. Some reductions have also been made in the cost of monthly tickets. According to the new tariff the price of a third-class monthly ticket per km is as follows for various distances:-

The price of a monthly ticket is calculated for every 2 km up to 100 km and for every 5 km for longer journeys. Thus the price of a monthly ticket, e.g., for a journey of 6 km is 60 marks or 30 marks cheaper than before. The full price is only payable for the first two months. The following months only cost half and the tickets can be bought either for one or several months at a time.

These are the principal alterations made in the passenger tariffs. Without going into further details it can be said that travelling on the Finnish State Railways is still very cheap especially in comparison with prices in other countries. Travel in Sweden, Norway and Denmark, e. g., is twice as dear as in this country, in Germany almost four times and in Great Britain almost seven times as dear. If it is considered, how exceedingly cheaply it is now possible to travel round the greater part of Finland and see her celebrated sights with a circular ticket, it must be admitted that at any rate the cost of railway tickets should not prevent anyone from enjoying the pleasure and advantages provided by such journeys.

## THE NEW GOODS TARIFFS.

Much more far-reaching reforms have been made in the goods tariffs than in the passenger tariffs, as they have been revised completely.

The old division into fast goods and ordinary goods and into piece-goods and truckloads still remains in force, but in an amended form. Goods in fast trains now belong to three classes according to the quantity of goods despatched. Goods in freight trains belong to three classes in the same way as goods in fast trains, on the basis of the size of the consignment: piecegoods (freight classes A, B, C and D), if the weight is below $5,000 \mathrm{~kg} ; 5$ ton truckloads (freight classes I, II, III, IV, V and VI), if the weight is not less than $5,000 \mathrm{~kg}$ and below $10,000 \mathrm{~kg}$; and 10 ton truckloads (freight classes 1, 2, 3, $4,5,6,7,8,9$ and 10 ), if the weight of the consignment is $10,000 \mathrm{~kg}$ or more. As the rate per unit (per 100 kg and per km ) is higher for the same goods in the piecegoods classes than for 5 ton lots, and the rate for the latter is higher than when the same goods are despatched in lots of not less than 10 tons, the freight on larger quantities is comparatively lower. Rebates on quantity, which were formerly in general use on the Finnish State Railways, but were abandoned during the war and were subsequently only reintroduced to a limited extent, have therefore again begun to be applied in the same way as formerly, though the limits of the weight-classes are now different from former times.

The number of goods classes has, however, not been increased in the new tariff only by dividing goods according to their weight into more classes than before, but also by classifying the goods according to kind in more classes than in the 1897 tariff. There are, it is true, only 4 classes for piecegoods in the new tariff, but 6 classes for 5 -ton truckloads, and 10 classes for 10 -ton truckloads. This makes it possible to classify goods more precisely than before according to their value and paying power in those very classes, in which such a detailed classification is most necessary. Thus 10 -ton lots consist mostly of such low-priced mass articles, to the price of which even a small difference in transport charges may mean a great deal. This has now been taken into con-
sideration. For instance, pulpwood, which formerly belonged to one class, is now divided into two classes, barked pulpwood being placed in class 9 , while unbarked pulpwood is included in class 10. In this way a slightly higher freight is charged for more valuable barked wood than for unbarked wood of lower value, and the freight for the former is 10 per cent higher for all distances than for the latter. The fact that the difference between these rates remains the same for all distances, is due to the method of drawing up the tariffs, for the different tariffs have been made uniform and consonant with the desired aims of economic and tariff policy by selecting some freely planned tariffs as basic tariffs, from which the other tariffs have been subsequently obtained by means of certain coefficients that were found suitable.

For long-distance freightage the Finnish State Railways granted rebates from the very first and continue to do so, as was seen in connection with the passenger tariffs. These rebates on long distances are, however, calculated in a different way in the new tariffs than formerly. Then the rebate was calculated by reducing the rate per unit, usually by 10 per cent, up to a certain distance. In the new tariff, however, an additional rate per km is charged over and above the basic rate for a distance of $1-10 \mathrm{~km}$, this extra charge being gradually reduced, the longer the distance, until it remains the same for any part of the distance above 600 km . A comparatively larger rebate is still granted on lower-class goods than on dearer goods, for which reason the proportion between the freight on closed trucks and open trucks varies for different distances.

In order to show the difference in freight for the same commodity in different weightclasses and the manner, in which the freight charges increase with the length of the distance, the following rates are given per unit (per 100 kg ) on newsprint for various distances. The second column indicates the rate in the piecegoods class D , the third in the 5 -ton truckload class IV and the fourth in the 10 -ton truckload class 5.

| $\underset{\mathrm{Km}}{\substack{\text { Distance }}}$ | $\begin{gathered} \text { Piecegoods } \\ \text { class D } \\ \text { Penni } \end{gathered}$ | $\begin{gathered} \text { 5-ton } \\ \text { truckiond } \\ \text { class IV } \\ \text { Penni } \end{gathered}$ | $\begin{gathered} \text { 10-ton } \\ \text { truckload } \\ \text { class } 5 \\ \text { Penni } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| 50 | 565 | 495 | 330 |
| 100 | 860 | 760 | 505 |
| 150 | 1,140 | 1,005 | 670 |
| 200 | 1,360 | 1,200 | 800 |
| 300 | 1,760 | 1,555 | 1,035 |
| 400 | 2,100 | 1,855 | 1,235 |
| 500 | 2,410 | 2,125 | 1,415 |
| 600 | 2,695 | 2,380 | 1,585 |

The rates of the new tariffs are in general more or less higher than those of the old tariffs, as one object of the new tariffs is to improve the profits of the railways. The rates have, however, not been raised throughout, as in many cases it has been necessary to lower the rates in the higher classes owing to the competition of motor traffic. For the same reason the increases for short distances are smaller than for medium distances, for which the rates have in general been raised most. The goods tariffs have been raised 10.8 per cent on an average and rates for goods carried in full truckloads 14 per cent on an average. The changes made in the rates on the same goods vary considerably in different weight-classes and for different distances. Space, however, forbids a detailed description of them.

It should be mentioned, in addition, that some special tariffs, such as the tariffs for means of transport and the tariffs containing the rates for live animals, have also been revised. For firewood and various kinds of wood waste, too, there are special tariffs H1, H2 and H3 and the freight is charged according. to space. The luggage tariff has also been altered, the rates being slightly higher than before except for the very longest distances. For express goods 50 per cent more is charged than the rate for the same kind of goods as luggage. The three-zone parcels tariff has been changed by introducing a new zone, between the 100 and 500 km zones, for parcels to be carried not more than 200 km . As the rates referring to this zone are the same as for parcels sent a distance of not more than 500 km according to the former tariff, the rates for parcels carried a distance of over 200 km have now been increased.

THE ADVANTAGES OF THE REVISION.
The new tariffs of the State Railways represent a uniform system and the calculation of their rates is considerably easier and simpler than those of the tariffs that have been abolished. The changes made in the rebates for long distances are due, as already stated, especially to the growing competition of motor traffic. Though such rebates may seem very small, they are of great importance, judged by Finnish conditions. Although Finland is small as regards population, her area is comparatively large, much larger, e. g., than Britain's area in Europe. Distances of transport are therefore fairly long, especially in the winter, when goods that are to be exported, have to be carried to those few ports in the south of the country, at which navigation is open throughout the winter. It is worth mentioning that, e.g., of paper and pulp products 27.9 per cent were transported a distance of over 300 km in 1936, 22.6 per cent over 350 km and 12.3 per cent over 400 km , though the average distance for such goods on the Finnish State Railways is by no means very great. It is very
desirable therefore that the changes now made in the rebates for long journeys should prove to be well adapted. Besides the distances of transport being comparatively long, it should be noted that the greater part of the goods are such low-priced articles of mass production as timber, woodpulp, cheap paper, ore, stone, lime, cement, gravel, coal etc., i.e. in general goods that cannot stand a high rate of freight. As such goods can be forwarded in large quantities, the present development of the system of rebates on quantity should be greeted with satisfaction by the larger customers of the railways, seeing that the large quantities can obtain all possible rebates. Efforts have been made to apply the increases in the rates, which it has been found necessary to make in order to increase the receipts of the railways, principally to such deliveries as are considered able to bear them with the least detriment. This has been made possible partly by dividing goods into a larger number of freight-classes than formerly, in order that the rates should be adjusted more closely than before to the value and paying ability of the goods.

## ITEMS.

Regulations of the Bank of Finland. The Bank of Finland has, in accordance with a statute of November 18th, 1938, been authorised to continue to set aside the stipulations contained in clause 1 of paragraph 8 of its regulations until the end of 1939 . Thus the Bank will be released from having to redeem its notes in gold during next year, this having now been the case for the past seven years.

On the initiative of the Supervisors of the Bank of Finland the Government has submitted proposals to the Diet regarding certain changes in the regulations of the Bank, which provide for a revaluation of the stock of gold and
foreign exchange. As soon as the new Law has been passed, a report on the changes made will be presented in this Bulletin.
*
The Board of Management of the Bank of Finland. On November 18th, 1988, the President of the Republic appointed Mr. A. K. Kivialho, Ph. D., and Mr. K. T. Jutila, Ph. D., to be members of the Board of Management of the Bank of Finland. Mr. Kivialho is at present the Chief Accountant of the Bank, whereas Mr. Jutila is a Professor of Agrarian Politics at the University of Helsinki (Helsingfors).
*

The Public Debt. The foreign indebtedness of the Finnish State has been continuously decreasing during the last few months, as it has done for several years. On October 31st the booked value of the Public Debt included the following items, compared with the corresponding amounts on the last day of June, 1938, and December, 1937.

| Funded debt: | $\begin{aligned} & \text { 1937 } \\ & \text { Dec. } 31 \\ & \text { Mill. mk } \end{aligned}$ | $\begin{gathered} 1938 \\ \text { June } 30 \\ \text { Mill. mk } \end{gathered}$ | $\begin{gathered} 1938 \\ \text { Oct. } 31 \\ \text { Mill. mk } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Foreign | 921.3 | 822.9 | 793.3 |
| Internal | 2,355.3 | 2,286.5 | 2,451.8 |
|  | 3,276.6 | 3,109.4 | 3,245.1 |

| Short-term debt: |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Foreign <br> Internal |  | - | - |  |
|  |  | 175.9 | 199.4 | 25.8 |
|  | Total | 175.8 | 199.4 | 25.8 |
| Total P | Debt | ,452.5 | 3,308.8 | 270.9 |

During the first ten months of this year the booked value of the foreign debt was reduced by 128.0 million marks, though the actual change was much greater. Converted at current rates of exchange it equalled 3.5 million dollars. Most of the internal short-term debt was funded during October.

The Wärtsilä Concern. Ab. Wärtsilä Oy. has lately changed its name to the Wärtsilä Concern. It is our largest combine in the metal industry and has in recent years purchased the majority of shares of a number of ironworks embracing a variety of branches of metal working. Now it has extended its activities still further by acquiring more than 90 per cent of the shares of Ab. Dalsbruk. These ironworks were founded as early as 1686 , the annual output of their modernised mills being 33,000 tons of iron. The annual sales of Dalsbruk amount to 88 million marks and it has a capital of 30 million marks. Wärtsilä has a capital of 72 million marks, its annual sales amounting to 380 millions. At the end of 1937 this firm employed about 6,300 workpeople.

The combine has been formed chiefly with a view to rationalised production of the mills
concerned, as they are now producing about the same articles. The steel foundry of Dalsbruk will supply the shipyards and machine shops of the concern with its products.

New factories. A new beet sugar factory was started recently in Antrea in Eastern Finland. A similar factory has been working in the southwest of the country for a couple of decades, its capacity being fully utilised. The cultiv " T of beets will now be promoted in an extensive new area suited to this subsidiary branch of agriculture. The capacity of the factory is 600 tons of beets a day and it can be increased to 1,200 tons. This will mean about $40-50$ million kg of beets in the working season, demanding an area of cultivation of about 2,500 hectares and providing about 250,000 working days for the cultivators. At the present level of prices it will give an income of about 7.5 million marks divided among 3,000 farmers.

The limited company which owns the factory has a capital of 15 million marks and the State has granted a subvention of 10 millions for the building costs.

In this connection mention should be made of the fact that steps are being taken for the erection of a third beet sugar factory in the middle south of the country. Shares of the new company are being offered for sale to a total value of 20 million marks.
In Åetsä a chlorine factory has been completed and will start at the end of this year, the owners being the Finnish Ohemical Oy. founded on the initiative of Imperial Chemical Industries with English, German and Belgian capital. The annual output of the factory will be 3,000 tons, but it can be increased to 6,000 tons. It will be disposed of entirely in the home market.

Issues of bond loans. The Olympic Games which are to be organised by Finland in 1940 demand various arrangements, such as an extension of the Stadium, increased rolling stock
for the railways, new air lines and roads, improved telephone, telegraph and radio communications, the erection of a number of buildings intended for permanent and necessary service afterwards, burt to be employed for the housing of visitors during the Games. A new State loan has been proposed for financing these and similar measures. The loan is intended to be a premium bond loan of :300 million
t'he city of Helsinki (Helsingfors) has decided to issue a new bond loan of 100 million marks at a rate of interest of $4 \frac{1 / 2}{2}$ per cent. It is intended to be redeemed within 30 years. The proceeds of the loan are to be used for purchasing the assets of a suburb in the immediate vicinity of the city.

Enso-Gutzeit Oy. A year ago mention was made in this Bulletin of the fact that the Enso-Gutzeit Oy. woodworking combine was about to build a new power station at the EnsoVallinkoski rapids on the river Vuoksi. The erection of the power station has now proceeded so far that the necessary machinery has been ordered. The turbines have been ordered from a Finnish firm, Tampereen Pellava- ja Rautateollisuus Oy. - Tammerfors Linne- och Jernmanufaktur Ab., whereas the generators are to be furnished by the Metropolitan-Vickers Electrical Co. Ltd. in Manchester. This is the first time a British firm is to deliver electrical machinery of such a size to Finland. The power of the rapids concerned is $100,000 \mathrm{~kW}$.

## THE BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department,

Helsinki (Helsingfors), Finland.

[^0]:    ${ }^{\text {a }}$ ) Included in home loans, see table 4. Re-discounted Bills according to the monthly statements of the Bank of Finland.
    The figures in brackets [ ] indicate the position at the end of the previous year.
