## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

Owing to winter setting in early this year and already drawing towards its close in March, the seasonal trade fluctuations have been accentuated in Finland. As a natural consequence of this the usual increase in the demand for credit and in the note circulation was very pronounced during February and the beginning of March this year.

All the credits granted by the Joint Stock banles both to the public and to other credit institutions increased in February by no less than 300.1 million marks as against 233.6 and 75.6 million marks respectively in February, 1937 and 1936. It is typical of the recent development that after a rather slow, but similar increase in bills and other credits during 1936, the increase in credits granted in the form of bills has been about 30 per cent for the past twelve months, whereas other credits have risen by only a little above 10 per cent. Taking into account the credits granted to other credit institutions as well, the total credits amounted to $9,042.4$ million marks at the end of the month under review, while the corresponding amount was 7,738.8 and 7,541.2 million marks respectively at the end of February, 1937 and 1936. At the corresponding date the total deposits in the Joint Stock banks amounted to $10,281.3$ millions in 1938, 8,839.6 millions in 1937 and $7,979.7$ million marks in
1936. Thus, the margin of deposits over credits, amounting to $1,238.9$ million marks at the end of the month under review, is still larger than a year ago and considerably more than double the amount two years earlier.
In spite of the balance of trade moving against this country during this season, there has been a marked influx of foreign currency into Finnish banks during the opening months of the current year. In February the net credit balances held abroad by the Joint Stock banks increased by 98.0 million marks as against only 9.6 millions last year, and during JanuaryFebruary the net amount of the foreign holdings of all the banks, including the Bank of Finland, rose 420.5 millions to $2,543.2$ million marks. In 1937 the corresponding increase was 264.7 million marks and the total net amount at the end of February $2,058.5$ millions.

Among the changes in the position of the Bank of Finland during February the rapid increase in the notes outstanding, which amounted to 173.6 million marks as against 156.6 millions in 1937 and 103.2 millions in 1936, is striking. Just as it influenced the figure first mentioned, the precipitation of the seasonal variations referred to also explains the relatively slower development during the following fortnight. During that period the note circulation rose 23.1 million marks, while the corresponding increase last year was 58.4
millions. On March 15th, 1938, the notes outstanding totalled $2,211.8$ million marks and were consequently still almost 400 millions above last year's level. The great demand for ready cash is also reflected in the increase of credits granted by the Bank of Finland. The rising tendency, usual at this time of the year, made itself felt very early in this respect, too, thus raising the figure for total home loans by no less than 175.0 million marks in February, 1938, as against an increase of 75.1 and 63.4 million marks correspondingly in 1937 and 1936. After totalling $1,331.8$ million marks at the end of the month under review, they rose still further to $1,362.3$ million marks on March 15th and thus exceeded the corresponding amount last year by more than 300 million marks. - As a consequence of the rising demand for credit in the Joint Stock banks, too, those banks drew rather heavily on their current accounts in the Oentral bank. Seeing that the Treasury increased its balance at the same time, the total liabilities of the Bank of Finland payable on demand developed in the main along the same lines as the notes in circulation and the note reserve showed a decrease from 425.0 millions at the end of January to 389.2 million marks at the end of February, 1938.

In February the movement of prices in Finland clearly reflected the weakening foreign trade prices. The wholesale price index (1926 $=100$ ) dropped 1 point to 101 and thus came down to exactly the same figure as a year ago.' Retail prices which are, besides, subject to a slight seasonal decline at this time of the year, are falling, too. Thus, the sensitive consumption price index (July $1931=100$ ) dropped from 116.0 in January to 115.0 in February and to 113.9 on March 26 th; it is nevertheless still 1.6 points above last year's figure.

## TRADE AND INDUSTRY.

The value of imports during February, viz. 578.1 million marks, fell short of imports in

January by more than 100 millions, but their value was nevertheless 73.3 million marks higher than in February, 1937. The value of exports, amounting to 473.9 million marks, was about 50 million marks less than during the preceding month and 90.2 millions higher than for the corresponding month last year. In the circumstances the surplus of imports of 104.2 million marks that arose for the month under review was considerably lower than in January and also smaller than in February, 1937. For the first two months of the current year the value of imports totalled $1,264.4$ million marks and the value of exports 996.1 millions as against $1,020.4$ and 868.5 million marks respectively during the same period last year. So far the growing tendency of imports that has been a characteristic consequence of the increased purchasing power in this country is still quite obvious, while exports - although increasing in conjunction with the enlarged productive capacity of our exporting industry - have not expanded at the same pace of late. The balance of trade has therefore moved against us, showing a surplus of imports for January-February of 34.6 million marks in 1936, 151.9 millions in 1937 and 268.3 million marks in 1938. - In the trade returns for individual goods the high figures for sulphate cellulose exported should be noted. During January-February these exports amounted to 68,500 tons this year as against 42,300 and 51,600 tons respectively in 1937 and 1936.

The tone of the timber market is uncertain and Finnish shippers have adopted a waiting attitude. At the end of February the sales of sawn goods from Finland were estimated at about 200,000 standards.

## THE LABOUR MARKET.

The seasonal supply of employment has been plentiful and the state of the labour market is satisfactory.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET.

Bank of Finland:
Weekly Statement.
Note issue.
Notes in circulation and foreign correspondents. Ordinary cover, note reserve and home loans. Re-discounted bills and balances of current accounts.
6. Rates of exchange.

Tables 22-29 according to Finnish Official Statistics $I_{\text {, }}$ A, Foreign Trade of Finland. Monthly Reports.
The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Exports covers all goods exported from the open market, including re-exports, Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

- Preliminary figures subject to minor alterations.

23.     - VALUE OF IMPORTS AND EXPORTS IN DIFFERENT GROUPS OF GOODS.*

[^2]24. - IMPORTS OF THE MOST IMPORTANTI ARTICLES.

Calculated by the Central Statistical Office. The first group of indices refers to prices of goods appearing in local wholesale trade in Finland, whereas the indices for imported and exported goods refer to foreign trade prices. An indirect weighting has been applied, each class of goods being represented by the number of commodities corresponding to the calculated importance of this class in wholesale trade. The averages are arithmetical ones.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Hinland formed a part of the kingdom of Sweden from 1154 to 1809 ; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared Its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President Kyösti Kallio is elected for the term March 1st, 1937, to March 1st, 1943.

The Diet, composed of 200 members, is eiected by universal suffrage. The proportions of the different parties in the Diet elected in 1936 are as follows:

Number
Soclal-Democratic party ........................................... . . . 83
Agrarian party .......................................................... . . 53
Swedish party ............................................................ 21
Unionist party ........................................................ . . . 20
Patriotic National Movement's party ............................ . . . 14
Progressive party .................................................... 7
Small farmers' party ....................................................... 1
People's party ........................................................... 1

## 2. LAND.

THE ARNA (excluđing lake Laatokka) is 382,801 square kilometres $=147,761$ square miles (Great Britain's area is $89,047 \mathrm{sq} . \mathrm{m}$. and Italy's area 117,982 sq. m.). Of the total area $9.0 \%$ are inland waters. On an average $11.8 \%$ of the land in the South of Finland is cultivated, $1.1 \%$ in the North, $6.6 \%$ of the whole land. Of the land area 25.3 mill. ha ( 62.5 mill. acres) or $73.6 \%$ are covered by forests.

THE AVERAGE TEMPERATURIL in the coldest month is in S. Finland $-3^{\circ}$ to $-8^{\circ} \mathrm{C}$., In Lapland $-12^{\circ}$ to $-14^{\circ} \mathrm{C}$. and in the warmest month $+16^{\circ}$ to $+17^{\circ}$ and $+12^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki (Helsingfors) is $+4.6^{\circ}$ (in Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the Sonth for about 110 days, in Central Finland for about 150 days, in Lapland about 200 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1936): 3.8 millions (of whom 0.2 million emigrants), Sweden (1986) 6.3, Switzerland (1935) 4.2 . Denmark (1936) 3.7 and Norway (1936) 2.9 millions.

DENSITY OF POPULATION (1936): In South-Finland 18.7, In North-Finland 2.7 and in the whole country an average of 10.9 Inhabltants to the square kilometre.

DISTRIBUTION (1036): $79.1 \%$ of the population inhabit the country, $20.9 \%$ the towns and urban districts. The largest towns are (1036): Helsinki (Helsingfors), the capital, 283,508 inhabltants, Vilpurl (Wiborg) 73,227, Turku (Åbo) 70,685, Tampere (Tammerfors) 61,208.

OCCUPATION (1930): agriculture $59.6 \%$ industry and manual labour $16.8 \%$, commerce $4.3 \%$, transport $3.8 \%$, other occupations $15.5 \%$.

LANGUAGE (1930): Finnish speaking $89.4 \%$, Swedish speaking 10.1 \%, others $0.5 \%$.

REIIGION (1936): Lutheran $96.0 \%$, Greek-Orthodox $1.8 \%$, others $2.2 \%$.

EDUCATION (1930): Amongst persons over 15 years of age only $0.9 \%$ are illiterate. There are three undversities founded in 1640, 1917 and 1920.

INCREASE OF POPULATION (1956): Births $18.1 \%$ \% deaths 13.1\% (in France in 1935 15.7 \% and in England in $193511.7 \%$ \% , natural increase $5.0 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOURCES. The growing stock of the forests is 1,620 million $\mathrm{m}^{2}$ ( 57,214 million cubic feet). The merchantable timber
(measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) a mounts to 1,557 million trees. Of this number pine is represented by $60.7 \%$, spruce by $281 \%$, the conifers thus constituting $88.8 \%$ or 1,383 million trees; leaftrees, mostly birch, $11.2 \%$ or 174 million trees. The annual increment is 44.4 million $m{ }^{3}$ ( 1,568 million cub.ft.). The annual fellings accordlng to earier calculations are 40 million $\mathrm{m}^{3}$ ( 1,413 million cub. ft.).

AGRICULTURE (1036): Cultivated land 2.2 million hectars. divided as follows: area under cultivation $0.3-10$ hectars $33.4 \%$, $10-50$ ha $52.1 \%$, $00-100$ ha $8.4 \%$, over 100 ba $6.1 \%$. Cultivated land is divided between the different kinds of crops as follows: 51.4 \% hay 17.6 \% oats, 9.1 \% rye, 5.1 \% barley, 3.4 \% potatoes, $13.4 \%$ other. The number of dairies in 1936 amounted to 598.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$.

INDUSTRY (1036): Number of Industrial concerns 4,078, workpeople 184,441 , gross value of products of industry 16,122 million marks.

LENGTH OF RAILWAYS (1936): $5,757 \mathrm{~km}$, of which 5,501 km State railways and 256 km private. The gange is 1.524 m .

MERCHANT FLEET (1937): Steamships 557 (291,104 reg. tons net), motor vessels 172 ( 19,080 reg. tons net), sailing ships 137 ( 38,702 reg. tons net). Total 866 ( 348,886 reg. tons net).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish markkas $=100$ pennis). According to the monetary law of December 21st, 1925, a gold coin of 100 marks' value shall contain $3^{15} / 1 \mathrm{~g}$ grams of fine gold. Since October 1:2th, 1931, the redemption of bank notes in gold is, however suspended.

STATE FINANCES. According to the finance accounts for 1936 the State revenue was $4,870.8$ million marks of which $3,725.2$ million marks were current revenue, and State expenditure 4,861.6 million marks, of which $2,983.6$ million marks were current expenditure. The principal soarces of revenne were as follows: State property and undertakings (net) 358.3, direct taxes 619.3, indirect taxes 2,020.1, stamp duty 199.1, charges 102.6, interest and dividends 234.8 and capital revenue 1,145.1. The value of State property in 1922 was estimated at 11,150.6 million marks. For Public Debt see table 19 in this issue.

MUNICIPAL FINANCES. According to the Budget for 1937 expenditure amounted to $1,681.1$ million marks. Income from taxation was calculated at 548.6 million marks, taixed income at 6,547.6 million marks. The municipal income tax (non -progressive) averaged $8.4 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleaborg), Kuopio, Joensua, Sortavala, Vipuri (Wiborg), Mikkell (S:t Michel), Tampere (Tammerfors), Hemeenlinna (Tavastehus), Jyväskylă and Kotka.

THE JOINT STOCK BANKS (1937): Number 9, possess 467 offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,200 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska Föreningsbanken and Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1937): Mortgage banks 5, Savings banks 482, Co-operative Credit Societies 1,191 and a Central Bank for the latter.

# INDUSTRIAL PROFITS IN FINLAND. 

BY<br>A. E. TUDEER, PH. D.<br>STATISTICLAN TO THE BANK OF FINLAND.

## INTRODUCTIION.

The industrial statistics of most countries concern themselves only with questions that illustrate production and its growth. They usually provide figures relating to the number of workpeople employed, the value of production, possibly its volume, the power used and similar matters. As a rule, however, particulars are not available that would give an idea of the capital employed in production and the financial results, i.e., the profits of industrial undertakings. The latter, however, is the cornerstone of all economic activity. It would therefore be of the utmost importance to obtain some conception of the profit-earning conditions in industry and of the changes that occur in them.

In Finland all the larger limited companies are bound by law to publish a statement of their balance sheets and profit and loss accounts at the end of each business year, but considerable difficulty is encountered in working up these materials in practice, partly on account of the large number of small companies and of the particulars not being commensurable. However, in order to obtain some idea of the earnings of industry the balance sheets of 143 companies, representing close on two-thirds of the total industrial production, have been analysed and the results are given below. For all these companies data have been obtained covering the whole period from 1928 to 1936 and these figures have been examined in detail.

## INVESTED CAPITAL.

To begin with it is appropriate to deal with the capital invested in industry, which is illustrated in the diagram on page 25. At the end of 1928, when the peak of a cycle was reached, $9,783.5$ million marks had been invested in the industrial companies. During the following year this amount increased to $10,150.1$ millions, but then the depression caused a reduction of the total capital. In 1932 the lowest point was reached at $9,467.8$ million marks. In the next year, however, a recovery in economic conditions set in which expressed itself, among other things, in fresh investments. As the diagram shows, the increase was small at first. It was only in 1935 and 1936, when a more pronounced cyclical improvement in trade began to be felt, that investment activity became more extensive. By the end of 1936 the capital invested had grown to $11,306.0$ million marks. The increase from the trough amounted to 19.4 per cent, but during the whole of the period examined the proportionate increase only represented 15.6 per cent. The increase was thus not even 2 per cent per year and consequently appreciably less than the 3 per cent per year which should, according to Cassel, be the normal average increase in economic conditions.

In view of the great increase in industrial production and the appreciable erection of new mills that actually occurred in Finland during this period, the yearly increase referred to
seems small. Several circumstances should, however, be borne in mind which explain the low ratio of new investment. In the first place the fresh investments should be considered that were made in the form of new companies and that are outside the scope of the materials dealt with here. In the second place the figures quoted are based on book values which - as far as possible - the companies endeavour to keep at a lower level than the actual values. In the third place, the companies write off considerable sums yearly off their plant, stocks and other investments. These sums are, as a rule, invested again in the business and are employed for renewing and partly, too, for extending the plant. If these circumstances are borne in mind, it will be found that fresh investments in Finnish industry have been considerably larger in recent years than the proportionate figures quoted indicate.

A little more than half the capital invested in industry, 52 to 56 per cent, is fixed capital, i. e., mills, machinery, buildings etc., while the rest represents stocks, credit balances, shares and other short-term investments. Space forbids our enlarging on this subject.

It is necessary, however, to say a few words regarding the provision of the required capital, i. e., principally its division into the companies' own funds and borrowed capital. In 1928 the investigated industrial companies' own funds amounted to $5,051.0$ million marks or 51.6 per cent of the total capital, while the borrowed capital amounted to $4,732.5$ millions or 48.4 per cent of the total capital employed in
these companies. When the depression set in, this position was changed in an unfavourable direction, because some companies suffered losses, while at the same time the companies had to complete with borrowed funds the extensions they had begun. Soon, however, there was a change for the better. The companies' own funds decreased, indeed, up to the end of 1932, but gradually the companies were able to collect outstanding claims and reduce their stocks, so that they could pay off part of their debts. The decrease in the borrowed capital continued until 1933. During the last few years, when fresh investments were made and more efficient work was done, industrial capital grew again. The increase in the companies' own funds was comparatively larger than the growth of borrowed funds. At the end of 1936 the companies' own funds amounted to $6,109.4$ million marks or 54.1 per cent of the total capital, while the borrowed capital amounted to $5,196.6$ millions or 45.9 per cent.

It should be mentioned in addition that the industrial companies' own funds were distributed as follows:-

|  | $\underset{\text { Mill. }}{1928}$ | \% | $\text { Mill. }{ }_{\text {mk }}^{1936}$ | \% |
| :---: | :---: | :---: | :---: | :---: |
| Share capital | 2,952.0 | 58.4 | 3,413.2 | 55.9 |
| Reserve and other funds | 1,675.3 | 33.2 | 2,115.5 | 34.6 |
| Profit and Lass Account | 423.7 | 8.4 | 580.7 | 9.5 |

It would be extremely interesting to quote detailed figures illustrating the supply of capital in the principal branches of industry. For want of space, however, we must confine ourselves to the following condensed statement.

CAPITAL INVESTED IN FINNISH industry.

| Branch of Industry | $\begin{aligned} & \text { Total capital } \\ & \text { in } 1936 \end{aligned}$ | Increase ( + ) or decrease ( - ) from 1928 to 1936 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Companies' own funds |  | Borrowed capital |  | Total capital |  |
|  | Mill. mk | Mili. mk | \% | Mill. mk | \% | Mill. mk | \% |
| General exporting industry | 6,510.3 | + 531.7 | + 18.9 | + 273.7 | +9.5 | + 805.4 | +14.1 |
| Sawmill industry . . . . . . | 653.5 | - 41.4 | -26.0 | + 0.3 | + 0.1 | - 41.1 | - 5.9 |
| Iron and machinery industry.. | 931.9 | +134.6 | + 39.8 | + 92.2 | + 25.1 | + 226.8 | +32.2 |
| Stone, glass and clay industry | 447.1 | +129.0 | + 59.1 | - 57.8 | - 36.6 | + 71.2 + | $+18.9$ |
| Textile industry . ............ | 1,300.5 | + 41.9 | + 5.4 | +101.2 | + 26.8 | +143.1 | +12.4 |
| Leather and rubber industry. | 486.8 | + 96.6 | + 54.1 | + 38.2 | + 22.0 | +134.8 | + 38.3 |
| Foodstuff industry . . . . . . . | 842.6 | +158.2 | + 32.0 | $+\quad 0.2$ | -0.1 | +158.0 | + 23.1 |
| Chemical industry ......... | 133.3 | + 7.8 | + 12.5 | $+16.5$ | $+35.6$ | + + +24.3 | + 22.3 |

It should be mentioned in explanation that a number of companies owning different kinds of mills, papermills, cellulose and mechanical pulp mills, plywood mills, sawmills etc., are grouped under the heading of general exporting industry. The second group only includes actual sawmills. It should also be pointed out that the companies represented in this examination are not divided according to branches in exactly the same manner as in the Finnish Official Statistics.

The above table shows us that the increase in capital invested was largest in absolute figures in the general exporting industry, but that the relative increase was considerably larger in several other branches of industry, chiefly in the leather and rubber industry and the iron and machinery industry.

## TURNOVER.

The annual turnover provides a very good idea of the development of industry. The changes that occurred in it are illustrated in the diagram. We see that the decline in trade resulted already in 1929 in the value of the industrial companies' turnover beginning to fall off. As the depression gained ground and became intensified, the turnover decreased still more, and in this connection it should be noted that the decrease was partly due to a reduced volume of sales, but also to falling prices. From an amount of $6,938.3$ million marks in 1928 the turnover dropped to $5,413.7$ millions in 1931, the reduction being 22.0 per cent. In the following years there was a recovery which was principally due to larger sales at unaltered prices. A rise in prices only set in later and accelerated the growth of the figure for the turnover, so that the latter amounted to 8,712.2 million marks in 1936, when the increase from the lowest point was 60.9 per cent and from the peak of the previous boom 25.6 per cent.

These considerable changes in the value of the turnover naturally exercised a great influence on the profits of the industrial companies in different years.

## PROFITS.

In the following we will devote ourselves to the earnings of industry, especially the ratio of profits to the companies' own funds. It must be premised, however, that, as both the net profits and the amounts of the companies' own funds are based on bookkeeping data, they. may differ in certain respects from the actual values. We have already pointed out that in old companies the capital is usually booked at comparatively low values. With regard to the net profit it is common knowledge that in good years industrial companies write off appreciable sums and build up various invisible reserves, so that the net profits shown are less than the actual profits. In bad years weak companies are unable to undertake any depreciation and many companies draw on the reserves they may have accumulated in better times. In this case the profits shown are larger than the actual profits, or the losses appearing in the books are less than the actual losses. In this way companies undertake a considerable measure of profit adjustment in drawing up their annual balance sheets. Nevertheless, the net profits vary very much according to cyclical fluctuations. The diagram shows that these variations are far greater than the fluctuations in the amount of total capital invested and in the annual turnover. The changes in the absolute amount of the net profits and in their ratio to the companies' own funds are shown in the following table:-

| Year | Net profits Mill. mk | Ratio of profit to companies own funds \% |
| :---: | :---: | :---: |
| 1928 | 344.6 | 7.3 |
| 1929 | 251.2 | 5.2 |
| 1930 | 84.4 | 1.7 |
| 1931 | 91.6 | 1.9 |
| 1932 | 223.2 | 4.8 |
| 1938 | 313.2 | 6.6 |
| 1934 | 408.6 | 8.5 |
| 1935 | 385.8 | 7.4 |
| 1936 | 515.8 | 9.2 |

In 1928, the peak year of the boom in the 1920's, when the change in trade conditions set in, the net profits of the industrial companies examined amounted to 344.6 million

marks or 7.3 per cent of their own funds. When we consider that the deposit rate in that year was 6-6 $1 / 2$ per cent in the Joint Stock banks and $7-71 / 2$ per cent in the Savings banks and that the rate on credits granted by the former varied from 8 to $11 \frac{1}{2}$ per cent, the earnings cannot be considered particularly high.

In the following year the net profits began to fall and in the worst years of the depression, when several of the companies recorded a loss, their combined net profits were reduced to 84.4 and 91.6 million marks. The profits were therefore only 1.7 and 1.9 per cent of the companies' own funds. In 1932, when the turnover increased again, the annual results of the companies also improved. The net profits increased year by year and in 1934 they surpassed the results for 1928. In 1935 there was a setback once more, largely due to the weakness of the timber market. In 1936, however, both the absolute net profits and their ratio to the companies' own funds reached a record level. The net profits amounted to 515.8 million marks or 171.2 millions more than in 1928. The ratio was 9.2 per cent which must be considered a good result, especially in view of the general level of rates of interest being appreciably lower than in 1928. The deposit rate had gone down to $31 / 2-4$ per cent and the credit rate of the Joint Stock banks to
about $41 / 2-71 / 2$ per cent. If earnings could be maintained at the same level as in 1936, the situation would be favourable to industrial companies, but that is not the case. It is certain that with a downward cyclical tendency the earnings will again decrease.

If we take the average ratio of profits to the companies' own funds for 1928-1936, we will obtain an idea of the yield that the industrial companies' own funds may be expected to provide over a longer term. This average figure, 5.8 per cent, is fairly satisfactory. It should be remembered, however, that this only refers to the companies examined and not to Finnish industry in general. If we consider that the examination refers mainly to large companies which had been able to consolidate their position during a long period, it may be taken for granted that the earnings of the numerous small companies that could not for practical reasons be included in the examination were generally less than in the former. In other words the picture that has been given above of the profits of Finnish industry is rather too favourable.

The figures given, of course, represent averages, the components of which, the corresponding ratios of the individual companies, record great divergences. Although we cannot examine the earnings of the individual in-
dustrial companies in this connection，it is of general interest to see，how the principal bran－ ches of industry stand and how their earnings have been affected by the trade cycle．These points are illustrated in the following table．

RATIO OF PROFITS（ + ）OR LOSSES（ - ）TO COMPANIES＇ OWN FUNDS．

| Year |  |  |  |  | 旁里产 |  |  | 譄薥 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Percent |  |  |  |  |  |  |  |
| 1928 | ＋6．3 | ＋ 3.3 | ＋7．0 | ＋10．0 | ＋8．6 | ＋8．4 | ＋10．9 | ＋13．2 |
| 1929 | ＋5．1 | －8．7 | ＋5．6 |  | ＋5．9 | ＋3．7 | ＋ 7.9 | $+10.6$ |
| 1930 | ＋2．6 | －67．3 | ＋2．8 | ＋ 6.7 | ＋4．1 | ＋6．4 | ＋ 7.3 | ＋6．5 |
| 1931 | ＋1．2 | －43．6 | ＋1．4 | ＋ 4.5 | ＋4．5 | ＋2．4 | ＋ 7.9 | ＋ 4.9 |
| 1932 | ＋4．8 | ＋2．8 | ＋4．0 | ＋ 5.3 | ＋5．0 | $-1.5$ | ＋6．7 | － 0.3 |
| 1933 | ＋6．4 | ＋20．0 | ＋5．8 | ＋6．1 | ＋7．1 | ＋4．6 | ＋ 7.6 | ＋ 1.5 |
| 1934 | ＋8．2 | ＋20．8 | ＋8．4 | ＋9．3 | ＋8．2 | ＋6．6 | ＋8．7 | ＋8．8 |
| 1935 | ＋6．8 | $-4.9$ | ＋7．8 | ＋9．4 | ＋8．5 | ＋8．7 | ＋8．7 | ＋11．6 |
| 1936 | ＋8．9 | ＋23．8 | ＋9．5｜ | ＋10．0 | ＋8．2 | ＋8．3 | ＋9．3 | ＋11．7 |

According to these figures，the depression caused the earnings to decrease in all branches of industry．The latitude of the changes，how－ ever，is very different and the branches of industry may be divided into three groups on the basis of their susceptibility to trade con－ ditions．

The first consists of the sawmill industry which recorded exceptionally heavy losses dur－ ing the years of depression and unusually good profits in good years．The great fluctuations of the ratios are，of course，partly due to the fact that the sawmills＇own funds are com－ paratively small，but they indicate very clearly at the same time，how susceptible this industry is to trade conditions，when it is not combined with other industrial activity．On an average for the whole period the sawmill industry worked at a loss．

The second group is formed by the general exporting industry，the iron and machinery industry，the leather and rubber industry and the chemical industry，which are also very susceptible to trade conditions，though not to the same extent as the sawmill industry pure
and simple．On an average the ratio of profits to the companies＇own funds in these branches of industry was $7.6-5.3$ per cent，but during the depression they either recorded a loss or very low earnings．

The third group embraces those branches of industry that are least susceptible to trade fluctuations，viz．，the stone，glass and clay in－ dustry，the textile industry and above all the foodstuff industry．The earnings of the latter averaged 8.3 per cent；in the case of the other branches the ratio was 7.6 and 6.8 per cent． In none of these branches did it drop to 4 per cent even during the worst years．

The differences referred to may be partly due to accidental causes，such as the choice of companies and their principles of accountancy， the varying importance of their own funds and fixed capital，the different relative size of the annual turnover etc．，but at all events it seems evident that the earnings of the in－ dustrial companies is greatly influenced by the degree，in which their sphere of activity is susceptible to the trade cycle．

Finally，it may be worth while to compare the figures for the profits in the last few years with the corresponding ratios for 1928 and endeavour to establish the causes of the improve－ ment from 7.3 to 9.2 per cent．Partly this difference may probably be ascribed to the circumstance that the last few years represent a decided improvement in trade，while 1928 re－ presented the last phase of a boom and the beginning of a downward process．In other words，in 1928 the earnings had already begun to decrease，as costs of production had also attained their highest level．This was not yet the case，however，in 1936.

In addition to this cause，which is of a transitory nature，there are，however，certain circumstances indicating that the level of profits over a longer period has improved．In the first place rates of interest have fallen，so that borrowed capital is obtained more cheaply now than in 1928．Besides，the industrial com－ panies have improved their financial position
and become less dependent on borrowed capital, especially bank credits and foreign loans. The improvement in this respect is certainly greater than the change in the proportion of the companies' own capital to borrowed capital indicates. The increased employment of long-term borrowing militates in the same direction.

Finally the rationalisation that has been effected in the principal industries during the last ten years must have contributed towards improving the competitive position and the profitearning capacity of Finnish industrial companies.

## I T E M S.

The State Finances in 1937. The finance accounts of the Finnish State for 1937 have now been completed. Both current revenue and current expenditure show increased figures, this having been the case during recent years, too. As, moreover, large loan conversions and other capital transactions have been carried out, the total amount of the finance accounts, too, has been steadily growing. This is seen in the table below:-

Expenditure:

| Current expenditure | 3,557.1 | 2,983.6 | 2,872.7 |
| :---: | :---: | :---: | :---: |
| Redemption of loans | 623.3 | 915.0 | 815.3 |
| Transfer to the Budget |  |  |  |
| Equalisation Fund | 709.7 | 31.0 | 65.0 |
| Other capital expenditure | 1,008.0 | 932.0 | 780.5 |
| Total | 5,898.1 | 4,861.6 | 4,533.5 |
| Surplus | 86.4 | 8.7 | 25.9 |
| Grand total | 5,984.5 | 4,870.3 | 4,559.4 |

The considerable increase in current revenue from 1936 to 1937 is due to increased receipts from both direct and indirect taxation as well as from State undertakings and should, of course, be looked upon as a result of the favourable trade conditions during 1937. The heavy
increase in other capital revenue than loans issued, is for the greater part due to the fact that 625.0 million marks of certain State assets, viz., loans formerly granted for various purposes, have been included in the capital revenue and transferred to the Budget Equalisation Fund among the capital expenditure according to an earlier decision of the Diet. As during the last few years, the finance accounts closed with a surplus of revenue over expenditure amounting last year to 86.4 million marks. - The State Finances in 1937 will be dealt with in greater detail in one of the next issues of this Bulletin.

Central co-operative organisations in Finland in 1937. The enhanced trade activity in Finland during 1937 was reflected in a considerable increase in the total turnover of the central co-operative organisations in the country. The turnover of the various organisations during the last few years has been as follows:-

|  | $\begin{gathered} 1937 \\ \text { Mili. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} 1936 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} 1935 \\ \text { Mill. } \mathbf{m k} \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Finnish Co-operative Wholesale Society (S.O. K.) .. | 1,520.1 | 1,211.8 | 1,101.2 |
| Co-operative Wholesale Association (O. T. K.) . . . | 1,094.8 | 872.0 | 776.7 |
| Central Co-operative Butter Export Association Valio | 808.0 | 678.4 | 562.2 |
| Hankkija Central Agricultural Supply Co-operative |  |  |  |

The combined sales of all the central cooperative organisations thus totalled $3,876.3$ million marks in 1937 and the increase from the preceding year was 24.8 per cent as against a corresponding increase in 1936 of 14.0 per cent. In 1936 and 1935 the sales amounted to 3,106.4 and 2,724.0 million marks respectively.

The financial position of the central cooperative organisations was also strengthened still further during the year under review. As their net profits were in all cases better than in 1936, their own funds were considerably increased. This is shown by the following series of figures:-

|  | Net profits |  | Own funds after disposing of annual profits |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 1937 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} 1936 \\ \text { Mill. mk } \end{gathered}$ | $\begin{gathered} 1937 \\ \text { Mill. mk } \end{gathered}$ | $\begin{gathered} 1936 \\ \text { Mill. mk } \end{gathered}$ |
| S.O. K. | 35.0 | 27.1 | 199.9 | 188.4 |
| O. T. K. | 24.2 | 18.3 | 168.5 | 151.5 |
| Valio | 5.3 | 4.1 | 47.5 | 42.6 |
| Hankkija | 10.0 | 6.8 | 54.1 | 46.6 |

The combined net profits of all the central co-operative organisations were 74.5 million marks in 1937 as compared to 56.3 and 46.2 million marks in 1936 and 1935 respectively, and after transferring part of the profits to the reserve and other funds, the total amount of the central organisations' own funds increased from 429.1 million marks in 1936 to 470.0 million marks in 1937.

New bond loan. The big industrial combine Tampereen Pellava- ja Rautateollisuus Oy. Tammerfors Linne- och Jern-Manufaktur Ab. has come to an agreement with the Bank of Finland and Nordiska Föreningsbanken Ab. Pohjoismaiden Yhdyspankki $O y$. to issue a bond loan dated March 1st, 1938, in the home market. The amount of the new loan has been fixed at 60 million marks, the rate of interest is $4 \frac{1 / 2}{2}$ per cent and the right of conversion comes into force after a lapse of 5 years.

New issues of shares. Oy. Suomen Trikootehdas $A b$., a Finnish hosiery firm that is extending its mills at present, has decided to raise its capital from 40.5 to 54 million marks by issuing 135,000 new shares of a nominal value of 100 marks each at a price of 150 marks.

Oy. Ford Ab. in Finland has decided to raise its capital from 20 to 30 million marks by issuing 10,000 new shares at their nominal value of 1,000 marks each.
*
State concession. Petsamon Nikkeli Oy. has recently concluded an agreement with the Finnish Government enabling it to start work for erecting a power station at the Jäniskoski rapids in the river Paatsjoki in the extreme north of Finland. Petsamon Nikkeli Oy. is affiliated to the Mond Nickel Company Ltd. in London and already in 1935 the company started prospecting in the Petsamo fells, where nickel ore had been discovered. In order to facilitate the further development of its activity the company has now decided to build the power station referred to, which comprises the installation of two turbines of altogether 37,000 HP. The work is expected to be completed in 1940 and the costs are estimated to amount to approximately 120 million marks.
*
Banking Statistics. The Bank Inspectorate's Report on banks and banking in Finland during 1937 has recently been published. The Report contains information about the Joint Stock banks and the Mortgage institutions, the letterpress is published in the Finnish and Swedish languages, the headings being also printed in French. A review of the business of the Joint Stock banks in accordance with the Report will be inserted shortly in this Bulletin. - Orders for the Report should be addressed to the Statistical Department of the Bank of Finland.
