

## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

During the first two months of the current year the money market experienced no substantial changes. Some temporary factors somewhat disturbed the general trend but in the main last summer's favourable development continued. The deposits increased greatly but it must be remembered that the influx of savings into the credit institutions is always largest at this time of the year. However, the bank deposits proper of the public this year so far exceeded those in January-February 1948 that this may be regarded as a sign of a change for the better. Cheque accounts showed great variations in that in January large sums accumulated but February brought a marked set-back, withdrawals greatly exceeding deposits. This was chiefly due to the quarterly payment of the Sales tax in February which compelled firms to use their sight deposits or to raise loans, but partly also to the unusually great demand for credit, caused by the seasonal lumbering work. Another important event on the money market is the lowering of the discount rate of the Bank of Finland by one half of one per cent as from February 1, 1949, the lowest discount rate being now $63 / 4$ per cent.

At the time of writing data regarding the money market are available only from the Commercial Banks. The deposits proper of the public increased substantially both in January and in February, by 549 and 646 million marks respectively or altogether 1,195 million, which noticeably exceeds the
corresponding figure for 1948,353 million marks. Cheque accounts increased greatly in January, by 1,262 million marks, but in February, owing to reasons already given, they fell by as much as 3,387 million marks. This very unfavourable result caused the sum total of deposits to show a considerable decline for February as well as for Janu-ary-February. In 1948 too total deposits fell off in January-February, but then the decrease was as much as 1,716 million marks, whereas this year it was 930 million. The heavy drop in the balance on cheque accounts also rendered the position of the commercial banks more difficult and this was reflected in a decrease of the cash and an increase of rediscounts.

As a result of seasonal and some other temporary circumstances, but also of more difficult business finance, the commercial banks granted much credit during the early part of the year. In January their credits to the public grew by 2,748 and in February by 1,286 million marks, the increase in the first two months of the year totalling 4,034 million marks, as compared with 2,130 million the year before. As usual, bills increased more than other forms of credit. Since the Bank of Finland lowered its discount rate, as stated above, a general reduction of interest rates has been discussed.

The statements of the Bank of Finland for the first two months of the year reveal two important facts, which are in a way related. As stated earlier, the Central Bank has been compelled in recent times to support other financial institutions by redis-
counting more of their bills than usual. Jannuary was still fairly quiet in this respect but February brought a sharp increase: the amount of rediseounted bills, which in the last week of January was only 764 million marks, rose in the first week of February to as much as 4,326 million - almost a record figure. During the following weeks rediscounts decreased slightly, but at the end of February were still $\cdot 3,634$ million marks. This rapid increase in rediscounted bills was chiefly due to the fact that the financial institutions were not able unaided to meet their customers' great demand for credit which was a result of the heavy tax payments in February. Another significant change in the position of the Bank was the great decline in the bill credits to the State since the beginning of February. These totalled 19,230 million marks at the close of 1948 and remained at about the same level during January, but in the first week of February they were suddenly reduced by 6,500 million marks to 13,030 million, or lower than at any time since the war. This reduction was made possible by the exceptionally large tax receipts in February. The fact that bill credits to the State have again begun to increase shows that this was only a temporary phenomenon: in the first week of March they totalled 16,730 million marks. The sum total of credits granted by the Bank of Finland was about as high at the end of February as at the end of 1948. This applies also to the amount of notes in circulation which was 27,353 million marks on February 28. On that date the note circulation was higher by 2,905 million than at the same time last year.

## PRICES.

Prices have continued to fall, the downward tendency having begun last autumn. Thus the cost of living index has decreased every month since August. In January it fell by three points and in February by as much as 15 points, to 780 (August 1938 July $1939=100$ ). The recent fall was mainly due to cheaper food but also to a reduction of taxes and some other costs. The wholesale price index $(1935=100)$ also declined, from 1,104 points in December 1948 to 1,088 points in January and 1,083 in February. Besides the fall in prices some other deflatory features may
be noticed, such as scarcity of money among the public, but at the same time there are several even very strong inflationary factors, such as the activity on the wages front which may spread in the course of the spring.

## TRADE AND INDUSTRY.

At the time of writing there are as yet no figures regarding industrial production in 1949. The figures for the last quarter of 1948 show that the decrease at the end of the year, referred to earlier, was maller than expected. The volume of production grew less in the last quarter than in the others, yet it was about 10 per cent higher than in the last quarter of 1947. The "Unitas" index for the total industrial production $(1935=100)$ was 125 in 1948 as against 105 in 1947 and 86 in 1946. The employment was also affected by this decline in trade and industry. There is now some unemployment instead of the previous full employment or even shortage of workers. Unemployment records last December gave the number of 13,778 workers, in January 26,262 and in February 38,556 ; the number of unemployed thus shows a rising tendency. In February 1939 the corresponding number was 24,263 . Lumbering, so important for the labour market in rural districts, has decreased considerably, as shown by the fact that 160,000 workers were employed in it at the end of February as against 234,000 a year ago. By the end of February 23 million cub. $m$. of timber had been cut, or only 0.5 million cub. m. less than at the corresponding time a year ago.

Because of the mild winter foreign trade has been brisk. In January both exports and imports exceeded the value figures recorded in January 1948. This is also true of exports in February, while imports were slightly lower compared with February of last year. The value of imports in January-February 1949 was 8,313 million marks as against 8,248 million in 1948. The value of free exports was 6,806 million marks as against 5,859 million in 1948. Foreign trade has been favourable also from the point of view that the surplus of imports for the first two months of the year - 2,389 million marks in 1948 has gone down to 1,507 million.

## CONTENTS OF THE TABLES.

I. MONEY MARKET.

Bank of Finland:

1. Statement.
2. Note issue.
3. Notes in circulation, foreign correspondents and cover for the issue of notes.
4. Note reserve, home loans and rediscounted bills.
5. Treasury bills and balances of current accounts.
6. Rates of exchange.

Commercial Banks:
7. Home deposits and the credits from the Bank of Finland.
8. Home loans.
9. Position towards foreign countries:
10. Foreign Payment Position of all Banks.
11. Deposits in Post Office Savings Bank.
12. Deposits in the Savings Banks.
13. Deposits in Co-operative Credit Societies and Consumers' Co-operative Societies.
14. Deposits in all Credit Institutions.
15. Insurances in life assurance companies.
16. Changes in number and capital of limited companies.
17. Bankruptcies.
18. Stock Exchange.
19. Stock Exchange index.
II. STATE FINANCES.
20. Public Debt.
21. State Revenue and Expenditure.
22. Collection of Customs.
23. Collection of Excise dues.

## III. TRADE ANB INDUSTRY.

24. Value of imports and exports.
25. Value of imports and exports in different classes of goods.
26. Imports of the most important articles.
27. Exports of the most important articles.
28. Foreign trade with various countries.
29. Unit value index of imports and exports.
30. Total sales of wholesale firms.
31. Index of industrial production.
32. Building activity.

## IV. TRAFFIC.

33. Foreign shipping.
34. State Railways.
V. LEVEL OF PRICES.
35. Wholesale price index.
36. Cost of living index.
37. Bank of Finland building cost index.

## VI. LABOUR MARKET.

38. Index of working hours in industry.
39. Number of unemployed.
40. Cessation of work.

Tables 24-29 according to Finnish. Official Statistics I, A, Foreign Trade of Finland, Monthly Reports.
The term imports covers all Imported goods which are placed on the market either immediately after importation or after storage. EFrports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

* Preliminary figures subject to minor alterations.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Einland formed a part of the kingdom of Sweden from 1154 to 1809; from 1809 it was an antonomous Grand Duchy connected with Russia up to December 6, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1910. The legislative power of the country is vested in thie Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President Juho Kusti Passikivi is elected for the term March 11, 1946, to March 1, 1950.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the dlfferent parties in the Diet elected in 1948 are at present as follows:

Number
Agrarian party ............................................ 56
Social-Democratic party . . . . . . . . . . . . . . . . . . . . . . . 54
Democratic League ....................................... 38
Unionist party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 38
Swedish party ........................................... . . . 14
Progresslive party .......................................... 5

## 2. LAND.

THE AREA is 337113 square kilometres (Great Britain's area is $245000 \mathrm{sq} . \mathrm{km}$ and Italy's area $310000 \mathrm{sq} . \mathrm{km}$ ). Of the total area $9.4 \%$ are inland waters. On an average $13.5 \%$ of the land in the South of Finland is cultivated, $1.6 \%$ in the North, $7.5 \%$ of the whole land. Of the land area 21.7 mill . ha ( 53.5 mill. acres) or $70.9 \%$ are covered by forests.

## 3. POPULATION.

NUMBER OP INHABITANTS (1948): 3.9 millions (present population). Sweden (1947) 6.8, Switzerland (1947) 4.5, Denmark (1947) 4.1 and Norway (1947) 3.1 millions.

DENSITY OF POPULATION (1948): In South Finland 22.0 , in North Finland 3.3 and in the whole country an average of 12.8 Inhabitants to the square kilometre.

DISTRIBUTION (1948): 75. $0 \%$ of the population inhabit the country, $25.0 \%$ the towns and urban districts. The largest towns are (1948): Helsinki (Helsingfors), the capital, 357865 inhabitants, Turku (Abo) 95 446, Tampere (Tammerfors) 94402.

OCCUPATION (1940): agriculture $51.5 \%$, industry and manual labour $21.0 \%$, commerce $5.1 \%$, tranisport $4.6 \%$, other oceupations $17.8 \%$.

LANGUAGE (1.940): Finnish speaking $90.0 \%$, Swedish speaking $9.6 \%$, others $0.4 \%$.

BELIGION (1946): Lutheran 96.0 \%, Greek-Orthodox $1.7 \%$, others $2.3 \%$.

EDUCATION (1947): Practically all persons over 15 years of age are llterate. There are three univeraities (the oldest founded in 1610) and 7 colleges of university standard.

INCREASE OF POPULATION (1947): Births 27.7 \%o, deaths $11.9 \%$ (deaths In France in $194713.0 \%$ and in the United Kingdom in $104712.1 \%$ ) natural increase $16.0 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RENSO URCRS (1949): The growing stock comprises 1370 million of solld cub. m. incl. bark ( 48379 million cub. feet), of which pine is 45.5 per cent, spruce 32.2 per cent, the rest 22.3 per cent being leaf-trees, chiefly biroh. Of the growing stock 1031 million trees, 63.6 per cent of them pines, are up to the standsard required for logs (minimum for sawmill logs $18^{\prime} \times 6^{\prime \prime}$ and for plywood logs $14^{\prime} \times 7^{\prime \prime}$ ). The annual increment is about 41 miliion of solld cub. m. green wood exol. bark (I 441 cub. ft). The total removal in 1946 calculated according to the
use of wood was 40 million cub, m. ( 1425 million cub. ft). In the years 1923 to 1938 , in the then area of the country, it averaged 41 million cub, m. ( 1463 million cub. ft) per year, the corresponding yearly increment being 45 . million cub. $m$. ( 1591 million cub. ft ).

AGRICULTURE (1941): Cultivated land 2.3 million heetares, divided as follows: area under cultivation under 10 hectares $33.1 \%, 10-50$ ha $54.4 \%, 50-100$ ha $7.2 \%$, over 100 ha $5.3 \%$. Cultivated land (1948) is divided between the different kinds of crops as follows: $40.1 \%$ hay, $11.3 \%$ temporary grassland for grazing, $16.8 \%$ oats, $6.9 \%$ wheat, $6.0 \%$ rye, $5.5 \%$ barley, $4.3 \%$ potatoes, $9.1 \%$ other. The number of dairies in 1947 amounted to 517 .

OWNERSHTP OF LAND (1941): The land area is distributed among different classes of owners approximately as follows: private $49.2 \%$, State $41.6 \%$, Joint Stock Companies etc. $7.1 \%$, communities $2.1 \%$.

INDUSTRY (1946): Number of industrial concerns 5691 , workpeople 236 723, gross value of products of industry 112081 million marks.

LENGTHI OF RAILWAYS (1949): 4966 km , of which 4713 km State rallways and 253 km private. The gange is in general 1.524 m .

MERCHANT FLRET (1949): Steamships 385 (422 723 gross reg. tons), motor vessels 102 ( 67406 gross reg. tons), sailing ships with auxiliary engine 154 ( 15151 gross reg. tons), other sailing ships 12 (14 718 gross reg. tons). Total 653 (510 998 gross reg. tons).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to 1914 the currency maintained its stable gold value, and after the disiturbances caused by the war a gold standard was again introduced from January 1, 1926. The unit of currency is the mark (Finnish markkai = 100 penniä). According to the monetary law of December 21, 1925, a gold coin of 100 marks' value shall contain $3^{15} / 1$, grams of fine gold. Since October 12, 1931, the redemption of bank notes in gold is, however, suspended.

STATE FINANCES. According to the finance accounts for 1947 the State revenue was 94261 million marks, of which 70207 million marks were current revenue, and State expenditure 87811 million marks, of which 66578 million marks were current expenditure. The prinoipal sources of revenue were as follows: direct taxes 27855 , indirect taxes 9 927, sales tax 18288 , interest and dividends, etc. 6429 , State property and undertakings (net) 2502 , and capital revenue 24054 . For Public Debt see table 20 in this issue.

MUNICIPAL FINANCES. According to the finance accounts for 1946 expenditure amounted to 13509 million marks. Income from taxation was 6734 million marks, taxed income 79283 million marks. The munioipal income tax (non-progressive) averaged $8.5 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland (founded in 1811) is a State Bank. Its head office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleåborg), Kuopio, Joensuru, Mikkeli ( $\mathrm{B}: \mathrm{t}$ Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), JyvÄskylä, Kotkia and Lahti (Lahtis).

THE COMMERCIAL BANKS (1949): Number 7, possess 452 offices, where all kinds of banking business is transaoted. There is one banking establishment per 8687 inhabitants.

The largest banks are Kansallis-Osake-Pankki, Oy Pohjoismaiden Yhdyspankki - Ab Nordiska Föreningsbanken and Helsingin Osakepankki - Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1949): Mortgage banks 5, Savings banks 447, Co-operative Credit Societes 767 and a Central Bank for the latter.

# THE BANK OF FINLAND IN 1948. 

BY
PROFESSOR A. E. TUDEER,
head of the institute for moonomio researge of the bank of finland.

## CREDIT POLICY.

The stringency of the money market which has characterized post-war conditions in Finland also left its imprint on the activities of the Bank of Finland in 1948. Yet in the course of the year, especially in the autumn, the stringency lessened noticeably, though it still prevailed at the end of the year.
To promote the stabilization of the money market and, at the same time, to strengthen the value of the mank the Bank of Findand - in co-operation with other credit institutions - maintained the credit control introduced earlier, particulary with a view to discouraging such investments as were not absolutely essential. As such a voluntary control cannot be fully exercised, the Central Bank at the beginning of the year considered it necessary to achieve this aim by a return to the classical policy of increasing the discount rate: On February 6, the rate for commercial bills was increased by 2 per cent, or to $71 / 4$ per cent, and the other credit rates in proportion. As was intended, the commercial banks and other credit institutions followed the lead a few days later, increasing their deposit rate by 2 per cent and their credit rates by 2 to $21 / 2$ per cent. These measures lessened the public's fear of inflation and increased the confidence in the value of the mark, which confidence was also strengthened by the checking of soaring prices and a general stabilization of economic conditions. . This psychological effect, together with the immediate result of the higher interest rates, increased the flow of deposits into credit institutions and, on the other hand, reduced the demand for credit. Thus the first signs of easing appeared in the money market and in the changes in the Bank's. position.

## BALANCE SHEET

The following table gives a general idea of the position and of the changes recorded in the various accounts.

| Profit and Loss Account | 604 | 834 |
| Total | 37,505 | 40;021 |

On the assets side the gold reserve, which during the war had shrunk almost to a minimum, had again increased to some extent. Gold was obtained in the beginning of the year primarily with a view to paying the membership fees to the International Bank for Reconstruction and Dëvelopment and the Monetary Fund. The foreign currency reserve which during the year had varied considerably with the changes in imports and exports and in capital transfers,
reached a peak at the close of the year chiefly as a result of a foreign loan obtained by the Bank. The foreign currency reserve thus. increased from 621 to 2,027 million marks, or well over three-fold.

The amount of discounted inland bills varied noticeably, reaching the highest point, 38,441 million marks, in October. At the end of 1948 the sum total of discounted bills was 32,821 million marks, or 1,838 million marks more than a year before. For comparison it may be mentioned that the corresponding increase in 1947. was considerably greater, or 5,563 million marks. As then, the increase was in 1948 largely due to credits granted to trade and industry. This share of the Bank of Fintand's bill holdings rose from 12,482 . to 13,591 million marks, or by about 9 per cent, as against an increase of 48 per cent in 1947, indicating a considerable advance towards stability. The amount of State bills, too - 19,230 million marks at the end of 1948 - was slightly (4 per cent) higher than in 1947. It is noticed that the State's bill credits from the Bank of Finland, so harmful for the stabilization of the monetary value but naturally unavoidable during the war, remained at the same level as in 1947, varying from 13,800 to 23,700 million marks.

The smaller figure for rediscounted bills can be regarded as a sign of the decreased stringency of. the money market. . Rediscounts, which totalled 3,496 million marks at the beginning of 1948, fell during the year to 1,697 million marks, or about one half. In this respect very great variations are observed in the course of the year owing to seasonal and other factors: on June 8 the amount of rediscounts rose to 4,944 million marks to fall again to 78 million at the end of October.

The Bank of Finland's total bill holdings, which in 1947 had increased by about 20 per cent, continued to grow in 1948, especially markedly during the summer months, but declined again in the autumn. At the end of the year it was $34,518 \mathrm{mil}-$ lion marks, a figure which practically equalled the 1947 figure, 34,478 million marks.

The other forms of credit are of minor importance. Mortgage loans and advances on current account totalled 419 million
marks at the beginning of the year and rase at its close to 505 million. In the same category were the bond credits, which had more the character of investments than of ordinary credits. The book value of the bonds was 382 million marks at the beginning of the year and about the double, or 887 million, at its end.

As'regards the Bank's liabilities the mueh slower increase in the note circulation compared with previus years should be primarily noted. In 1948 ,this increase was 2,207 million marks, or less than 9 per cent, as against 6,929 million, or 38 per cent in 1947, and 4,635 million, or about 34 per cent in 1946. These figures also indicate that conditions grew more stable during 1948, particulary in view of the fact that the note circulation did not increase during the latter half of the year.

The balances of current accounts due to the Treasury and to others; i. e. ehiefly to the commercial banks, varied as usual very steeply from week to week, according to payments of taxes and other seasonal factors. Both were considerably lower at the end of the year than at its beginning, as seen from the preceding table.

The mark accounts of holders abroad increased many times over, from 136 to 1,122 million marks. The increase was due to the membership fee to the IBRD having been booked to this account.

The net balance of foreign clearing accounts, which was 2,269 million marks in the beginning of the year, gradually rose and reached a peak - 4,139 million marks - early in July. After that it dropped again to its earlier level, being 2,199 million marks. on the last day of the year. Yet, although the net amount was then practically the same as one year earlier, or only 70 million marks less, an important change had taken place in its structure. These accounts consist of two main elements. The commercial clearing accounts proper showed a net claim of 757 million marks at the beginning of the year. During the year this net claim became a net liability amounting on December 31 to 1,069 million marks. The total change was thus 1,826 million marks and was a result of the great surplus of imports.

The other main element is the clearing debt to the Soviet Union arising from the
transfer of German property to the Soviet Union by virtue of the Peace Treaty. This debt totalled 3,027 million marks in the beginning of the year but dropped, when the agreed payments were made, to 1,130 million marks on December last.

On the liabilities side the changes occurring in the Bank's own funds also deserve notice. At the suggestion made by the Bank the Diet in 1948 consented to certain changes in the regulations of the Bank of Finland, Accordingly the capital was raised from 1,250 to 5,000 million marks on June 30. The sum required for this increase was obtained by transferring 1,600 million marks from the reserve fund and 2,150 million marks from the regulation accounts. The result was that the reserve fund, which was 1,433 million marks in the beginning of 1948 and to which profits were later transferred to a value of 304 million marks, declined to 137 million marks by the end of the year. Correspondingly the regulation accounts, which in the preceding table are included under "Sundry liabilites", decreased from 3,308 to 1,327 million marks in spite of the increases during year.

The last item in the balance sheet shows that the Central Bank booked a net profit of 834 million marks for 1948. The increase on the preceding year's figure was 230 million marks, or 38 per cent.

## THE RIGHT OF NOTE ISSUE.

The following table shows the 1947 and 1948 figures of the right of note issue of the Bank of Finland, the amount of issue used, and the note reserve.

| Right to issue notes | $\begin{gathered} 1947 \\ \text { Dec. } 31 \\ \text { Mill. } \end{gathered}$ | $\begin{gathered} 1948 \\ \text { Dec. } 31 \\ \text { Mill.mk } \end{gathered}$ |
| :---: | :---: | :---: |
| Gold reserve and foreign correspondents. | 623 | 2,295 |
| According to the Law of Dec. 13, 1939 | 34,821 | 34,969 |
| Additional right of issue .: | 1,800 | 1,800 |
| Total right to issue notes | 37,244 | 39,064 |
| Amount of issue used |  |  |
| Notes in circulation. | 25,162 | 27,369 |
| Other liabilities payable on demand | 5,623 | 5,206 |
| Undrawn amount of advances on current accounts ...... | 533 | 526 |
| Total amount used | 31,318 | 33,101 |
| Note reserve | 5,926 | 5,963 |
| Total | 37,244 | 39,064 |

The right of note issue increased by 1,820 million marks, or less than 5 per cent, whereas in 1947 owing to a substantial rise in bill holdings, this increase had been 4,548 million, or 14 per cent, and in previous years even higher. Here, too, stabilization is observed. It is especially noteworthy that this increase was chiefly due to the growth of the gold reserve and the foreign currency reserve.

The amount of note issue used which according to the regulations of the Bank of Finland - comprises all liabilities payable on demand, increased almost as much as the right of issue. In this way the unused right of issue, or note reserve, which. had grown considerably in 1947, increased but slightly, i. e. from 5,926 to 5,963 million marks.

## PROFIT AND LOSS ACCOUNT.

The following table shows the Bank's Profit and Loss Account for 1948 with comparative figures for 1946 and 1947.

|  | $\begin{gathered} 1946 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} 1947 \\ \text { Mill. mk } \end{gathered}$ | $\begin{aligned} & 1948 \\ & \text { Mill. } \mathrm{mk} \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| Credit |  |  |  |
| Interest on home credits | 252 | 517 | 706 |
| Interest on current accounts |  |  |  |
| Interest on bonds | 39 | 36 | 49 |
| Interest on shares | 6 | 11 | 12 |
| Agio | 2 | 59 | 112 |
| Commission | 59 | 153 | 216 |
| Total | 359 | 779 | 1,096 |
| Debit |  |  |  |
| Salaries | . 55 | 84 | 115 |
| Pensions | 2 | 6 | 7 |
| Cost of manufacturing bank notes | 16 | 51 | 65 |
| Sundry expenses ........... | 18 | 22 | 33 |
| Written off building costs | 24 | 8 | 38 |
| Depreciation of furniture . . | 2 | 4 | 4 |
| Total | 117 | 175 | 262 |
| Net profit | 242 | 604 | 834 |
| Total | 359 | 779 | 1,096 |

As seen from the above, interest returns increased substantially. This was a natural consequence of the higher rates, and increased lending contributed to the same result. As in previous years part of the interest returns were transferred to the regulation accounts to strengthen the position of the Bank. The visible interest return thus increased from 517 to 706 million marks, or by 37 per cent.

The interest on bonds increased likewise as a result of the growth of the bond holdings.

Agio profits from trade in currency increased greatly owing to livelier banking business, according to the balance sheet from 59 to 112 million marks. In reality the agio profits were still larger, but part of them was transferred to the agio equalization account. Commission profits also advanced for the same reason, according to the books from 153 to 216 million marks. Commissions arose especially from documentary credits business and clearing business, but smaller items were also brought in through other activities of the Bank.

The books showed a total income of 1,096 million marks, the increase on the preceding year's figure being 317 million marks, or well over 40 per cent.

Expenses also rose materially, partly owing to extended business, partly to increased prices and salaries which latter still affected all expenditure during the early part of the year. Salaries rose by 31 million marks, or 37 per cent, note manufacturing costs by 14 million or 27 per cent, and sundry expenses by 11 million or 50 per cent. The regular expenditure of the Bank was thus 220 million marks as against 163 million in 1947. The increase was 57 million marks, or 35 per cent, i. e. considerably less than in the preceding year when the corresponding figures were 72 million marks and 79 per cent.

Besides the regular expenditure, considerable sums were written off. As, according to the regulations, the value of the real property and furniture owned by the Bank is not to be included in the reserve fund, new acquisitions were written off in connection with the closing of the books. The total amount written off - 38 million marks - was partly derived from the buying of a house and building site in Helsinki, partly from certain alterations and repairs to old premises. In addition, the value of furniture purchased during the year was written off.

The net profits were larger than ever before but are expressed in more depreciated money than the corresponding figures for previous years. The booked net profit was 834 million marks as against 604 million in 1947 and only 242 million in 1946.

In accordance with the regulations of the Bank, half the annual profits, or 417 million marks, were transferred to the reserve fund which thus increased to 554 million marks, and 400 million marks were reserved for the State's needs and will be used for covering general State expenditure. The balance of 17 million marks will for the present remain on the undistributed profits account until the Diet in due course passes a resolution, probably - as is customary - to the effect that they are to be transferred to the reserve fund.

# THE ECONOMIC POSITION I FINLAND IN 1948. 

BY

K. O. ALHO, DOCT. PHLL.

FELLOW OF THE BANK OF FINLAND INSTITUTE FOR RCONOMIO RESEARCH.

## INTRODUCTION.

The year 1948 differed decisively from the preceding post-war years: it brought a definite turn for the better in Finland's economic position whereas earlier there had been only some slight signs and promises of improvement. Thus 1948 was a turningpoint in the post-war development of economic life in Finland. The improvement did not affect real economy alone, but also - although to a less extent - finances. One example of it is the fact that the estimated real national income in 1948 exceeded slightly the 1938 figure. Among wide sections of the population consumption had not in every respect reached the prewar level owing to the increase in population and also to the necessity of surrendering part of the national product without compensation, i.e. as war reparations.

Productive activity expanded in 1948 in nearly all branches and in certain sections pre-war figures were reached and even surpassed. Besides the brisk imports, the substantial increase in agricultural production was important in the improvement of supplies, which was noticeable chiefly in foodstuffs, bat also in textiles and footwear. Monetary conditions were brighter too. The money market, which had been very stringent for many years, was greatly eased, in the main owing to increased savings. As regards the inflationary trend, 1948 meant a turn towards normal conditions and monetary stability; and this contributed to restore security and confidence. Towards the end of the year prices began to fall and there were some other signs of deflation. Exports met with difficulties and in some other branches business was quieter; the result was unemployment which increased somewhat at the end of the year. Largely because of the same factors money became scarce at the close of 1948 - a change from the
previous abundance - both in business and among the general public, and the consequences were widely felt.

## AGRICULTURE.

The substantial increase in domestic agricultural production in 1948, the first since 1939, was of very great importance for the improvement of the economic position; in the preceding years production had remained unchanged or increased but little. This good result was due chiefly to a more extensive use of fertilizers and to favourable weather conditions in the greater part of the country. The total harvest in 1948 is estimated at 3,267 million fodder units as against 2,331 million in 1947; an increase of 40 per cent. In 1938 the harvest was 4,212 million fodder units of which figure last year's harvest represented 78 per cent. The crop of bread grain was 680,100 tons in 1948 - considerably larger than that of the preceding year, 551,400 tons. For comparison, the yield of bread grain in 1938 was 849,600 tons, or about 170,000 tons in excess of the figure for 1948. This shows that the pre-war level is not yet reached, but the 1948 figure nevertheless meant a marked advance. Last year's oats yield amounted to 624,400 tons as against 431,200 tons in 1947, and the potato crop to $1,955,000$ tons as against $1,113,700$ tons in 1947. From the point of view of cattle-farming it was very important that the hay crop was much better than the year before - 2,425,000 tons as against 1,720,100 tons.

In spite of the marked reduction in livestock in the winter 1947/48 the output of dairy-farming increased materially. during 1948, chiefly as a result of the good fodder crop and the large imports and use of concentrated fodder. Final figures for last year's production are not
yet available but, according to preliminary estimates, that of milk and butter increased very much as compared with 1947. This was especially noticeable at the end of the year when it began to approach prewar standards. In consequence the derationing of dairy-products is under discussion. During 1948 these rations and some others were increased, and some products were entirely derationed. There has been plenty of meat and meat products on the manket since their derationing in Autumn 1947. The good harvest and the increase of other agricultural and cattlefarming products have been extremely important for the general revival in Finland's economy, the improvement of supplies, and the restoration of normal conditions.

In spite of the great increase in agricultural production foodstuffs were still imported on a fairly extensive scale during 1948, as the domestic production was not fully sufficient to meet the demand. Imports of bread grain totalled 235,300 tons in 1948, or about 40,000 tons less than the preceding year. The deficit of bread grain thus shows a clear tendency to diminish. On the other hand, imports of sugar increased from 48,500 tons in 1947 to 92,400 tons in 1948 and imports of butter correspondingly from 982 to 8,100 tons. Meat was also brought into the country in rather large quantities, totalling 6,255 tons, but this was done chiefly with a view to reducing the domestic price level.

## INDUSTRY.

Although the recovery of industry was still hampered by many factors, such as the very great rise in production costs, difficulties of finance, and some uneasiness on the labour market, yet it expanded compared with the preceding years. Particularly during the first half-year very brisk progress was noticed in nearly all branches of industry; but towards the autumn, and eapecially at the close of the year, there were signs of a check in this and even a set-back, owing partly to external, and partly to internal factors. According to preliminary estimates, total industrial production rose slightly above the 1938 level, having been in 1947 about 5 to 10 per cent below it. However, great
changes have taken place in the structure and working conditions of the industries.

The year began under favourable conditions for the export industries: demand was considerable and prices were high. In the autumn there was a turn for the worse: prices dropped and demand declined. On this account the year's result for the woodworking industries was not so favourable as the beginning of the year seemed to promise. Yet the output of their principal products was higher in 1948 than in 1947. On the basis of available estimates, the production of sawn timber was 770,000 standards against 735,000 standards in 1947. In spite of the marked increase, the production of sawn timber is at present still much below the pre-war level: in 1938 the output of sawn timber* was $1,031,000$ standards. Cellulose production rose from 954,400 tons in 1947 to 1,080,100 tons in 1948; the corresponding figure for 1938 was $1,470,000$ tons. The output of sulphite was 619,100 tons and that of sulphate 461,000 tons against 542,800 and 411,600 tons respectively in 1947. Paper production rose from 518,000 to 560,000 tons, that of plywood from 193,000 to 212,000 cubic metres, and mechanical pulp from 495,300 to 595,200 tons in 1948.

Lumbering - of such importance to the woodworking industries - did not progress during the last felling season so favourably as in previous years when the required amounts were even exceeded. The target for the felling season $1947 / 48$ was 45 million cubic metres; though considerably less than the previous one - 53 million cubic metres - this figure was not reached; only 34.5 million cubic metres was cut. There was a large deficit of heavy timber and fuel wood, whereas practically the same amount of round timber was cut as during the previous felling season. This deficit did not cause any serious consequences because stocks of round timber were ample owing to the large quantities felled earlier and the deficit of fuel wood was made up by large imports of coal and coke, totalling $2,415,000$ tons in 1948 as against nearly one million tons less in 1947. For this reason the fuel situation was better than at any time since the beginning of the war. Last autumn's lumbering was
affected by many adverse factors but yet about 14 million cubic metres had been felled by the end of the year, or somewhat more than during the corresponding period in 1947, when fellings totalled 13.5 million cubic metres. There was also a change for the better in the power situation owing partly to the much more abundant flow in the chief waterways, partly to the completion of new power plants. Though much easier, the rationing of electricity was maintained until the end of the year. At the turn of the year it was decided to abolish rationing as from February 1, 1949.
No exact figures are available of the output of the home market industries. According to preliminary estimates, the first half of 1948 exceeded the 1947 figure by about one third and the pre-war level by about 25 per cent. In the latter half of the year this production also decreased to some extent, remaining, however, higher than in 1938. The increase during 1948 was greatest in the textile, leather and building materials industries, but compared with the level of 1938 the production of the metal and engineering industries increased most. The production capacity of the latter has about doubled since pre-war years, largely thanks to extensions and reequipment required by war reparations.

Last year Finland fulfilled the very heavy obligations of the war reparations satisfactorily. In this respect her position was considerably eased when the Soviet Union decided to reduce the balance of these payments by one half, so that from the amount due on July 1, 1948, - 147.0 million dollars - was deducted 73.5 million dollars, or 24.5 per cent of the amount originally stipulated.

## BUILDING OPERATIONS.

Although there was still a shortage of building materials, and some other factors - such as difficulties of finance hampered building activity, yet it was fairly brisk in 1948. and much more active than in 1947: Cement production increased from 421,000 to 527,000 tons during the year, being higher in 1948 than in any other year since the war, and even any pre-war year.

Exact figures as to building in 1948 are not yet available. Permits were granted
for 24.3 million cubic metres. Of this, dwelling-houses accounted for about 33 per cent, industrial buildings for 10 per cent, and farm buildings for 40 per cent. All this was not built during 1948; the buildings completed are estimated at about 70 to 80 per cent of the permits granted. Most of the building was for rural districts, as shown also by the fact that of the permits granted for dwelling-houses 2.4 million cubic metres were in towns and other centres of population but 6 million cubic metres in the countryside. The housing situation still gave much cause for concern especially in the largest towns and other centres owing to the slowness of building, to a fairly noticeable movement of the population from country to towns, and to the natural increase of population. High costs were another obstacle to building acitivity. The building costs index $(1935=100)$ was 1210 points during the last quarter of the year as against 935 in 1947 - an increase of 29 per cent in one year.

It should be noted that buildings completed under the Land Expropriation Act totalled over 22,000, excluding Northern Finland, while the buildings still unfinished at the end of the year numbered 15,000. Reconstruction in Northern Finland was largely completed last year: about 2,000 houses were built in 1948 and about an equal number were in process of building at the turn of the year.

## THE LABOUR MARKET.

As in previous years, the labour market was characterized by full employment, even a shortage of manpower in many departments. During the year this situation changed and some unemployment began to appear, partly owing to seasonal factors but intensified by the fall in exports and certain other difficulties. However, unemployment was not yet widespread. At the end of the year under review 12,500 unemployed were registered and occupation was provided for about 7,500 of these by the State. or local governments. For comparison it may be mentioned that in the early part of 1939 - by no means a period of serious depression in Finland the number of unemployed was 25,000 , or twice the present figure.

In other respects the labour market was more peaceful than in previous years. Open disputes were fewer, and there was no such unrest and agitation as was quite common in 1947. The autumn showed some signs of an acute crisis but in the end the conflicts remained local. The comparative calm of the labour market is largely due to the stabilization of prices and wages; political factors also contributed. The efficiency of labour again approached pre-war standards.

## FOREIGN TRADE.

The exchange of commodities with foreign countries was very active in 1948, more so than in the preceding year. Exports and especially imports increased and this was made possible by the recovery of domestic production and credits received from abroad, which were mainly used to finance imports. According to preliminary figures the value of the total foreign trade in 1948, excluding reparations, was 121,692 million marks, an increase of 31,525 million, or about 35 per cent, on the figure for 1947. A considerable part of this was accounted for by the rise in prices, but trade increased aloo in volume, as shown by the fact that it was in 1948 about 93 per cent of the volume pre-war $(1935=100)$ as against 78 per cent one year earlier and 49 per cent in 1946. The volume index for imports was 121 and that for exports 65 points; thus exports were still far short of pre-war standards.

In spite of this favourable movement the balance of trade was passive last year, as it has been every year since the beginning
of the war. Free exports were 55,253 million marks in value and imports 66,439 million, the surplus of imports being 11,186 million marks as against only 3,775 million marks in 1947. If, on the other hand, the total exports, i.e. including war reparations, are compared with the imports, a favourable balance of 1,613 million marks if obtained. Reparations were delivered during 1948 to a value of 11,546 million marks as against 10,405 million in the previous year.

## THE MONEY MARKET.

The money market at last showed a more cheerful aspect after many years of stringency. In the early part of the year it was still strained owing to the same factors as before, viz. a steady demand for credit on the one hand, and a slow accumulation of capital in credit institutions on the other. The easing since Spring has been principally due to increased saving. The raising of the interest rate by 2 per cent agreed on in the beginning of February, the considerable tax relief granted to depositors, and the lessening of the fear of inflation amongst the general public were some of the factors which created favourable conditions for the revival of saving. This increase of the interest rates also exerted a restricting influence on the demand for credit and investments as a whole, although no definite change in this respect was ceen last year as the latent demand for credit was so great. The changes in deposits last year appear from the following table showing the deposits of the public in the principal financial institutions.

DEPOSITS BY THE PUBLIC.

|  | 31/12 1948 | 1948 |  |  | Fluctuations |  |  | 1946 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Mill, mk |  | . mk | \% |  | I. mk | \% | Mill. mk | \% |
| Commercial Banks | 44,045 | $+$ | 6,310 | + 16.7 | + | 6,477 | + 20.7 | + 3,135 | + 11.1 |
| Savings Banks | 29,340 | + | 4,416 | . +17.7 | $+$ | 4,159 | $+20.0$ | + 1,951 | + 10.4 |
| Post-Office Savings Bank $\qquad$ | 9,560 | $+$ | 1,166 | + 13.8 | + | 1,181 | + 16.4 | + 1,796 | $+33.2$ |
| Co-operative Credit Societies ........... | 13,992 | $t$ | 2,619 | + 23.0 | $+$ | 2,969 | $+35.4$ | $+1,465$ | + 21.2 |
| Central Bank for the Co-operative Credit Societies ........... | 214 | - | 22 | 9.3 | + | 130 | $'+122.6$ | + 27 | + 34.2 |
| Consumers' Co-opera tive Societies $\qquad$ | 3,665 | $\pm$ | 909 | $+33.0$ | $+$ | 493 | + 21.8 | + 226 | + 11.0 |
| Total | 100;816 |  | 15,398 | + 18.0 | + | 15,409 | + 22.0 | +8,600 | + 14.0 |

The table shows that the absolute increase in deposits was about equal in 1948 and 1947, but the relative increase was much less in 1948. This result was due to the slow saving during the early part of the year, for - as stated already - the actual change did not occur until the summer. After that saving advanced considerably compared with the year 1947, though not enough to improve the whole year's result. However, in spite of increased deposits the real value of the saved capital is still much less than the capital available in 1938.

The demand for credit was so great during the year that - in spite of the fairly favourable movement of deposits the credit institutions had to have recourse to special measures, as in previous years. The bond-holdings were reduced and the cash funds; which were large in the beginning of the year owing to incidental factors, were also used to meet the need for credit. In addition the commercial banks had to get help from the Bank of Finland by rediscounting bills there. Great changes took place during the year in the amount of bills rediscounted. In the beginning of 1948 they totalled 3,496 million marks, rising in June to 4,944 million - the year's peak; then they began to decline and fell in the autumn to 78 million, but then rose again and at the end of 1948 amounted to 1,697 million marks; or 1,799 million less than a year earlier.

## PRICES.

The year 1948 was particularly noteworthy in one respect: the inflation which had been increasing for many years came to a standstill. In the early part of the year prices were still rising, although much more slowly than in 1947, the year of a steep rise. The rise continued to the end of the summer when there was a check, and then a slight fall began to be
observed in the price indices. This change from an upward to a downward trend was the result of many factors. First, the Government had tried by certain measures, for instance by importing cheap consumer goods, to force down the price level, and with success. The increased supplies of commodities contributed to the same end in some branches there was even an excess - as did the scarcity of money among the general public, and the stabilization of wages. The weakening of the fear of inflation and the strengthening of confidence in the mark also furthered the stabilization of the price level. Although the danger of continued inflation was essentially reduced during 1948, it is still too early to say that this danger is completely eliminated. Yet the year 1948 gave good hopes that inflation may be finally overcome.

The favourable movement on the prices front was reflected also in the price indices. The cost of living index (August 1938July $1939=100$ ) rose gradually from 720 points in December 1947 to 816 points in August 1948, but then fell month by month, reaching 798 in December. The rise during the year was thus 78 points; or 10.8 per. cent, compared with 252 points and 53.8 per cent in 1947. A similar trend was observed in wholesale prices: the wholesale price index : $(1935=100)$ increased between December 1947 and December 1948 from 1010 to 1104 points, or by 94 points and 9.3 per cent, as against 285 points and 39.3 per cent in 1947.

The checking of soaring prices and the change from a rising to a falling tendency was not only important financially, it was of prime significance for Finland' national economy as a whole which is now again on a much firmer basis. In this way the prospects were much brighter as the year 1949 started than at any time since the beginning of the Second World War.

## ITEMS.

Budget for 1949. The kudget for 1949 which was passed on January 14, 1949, does not as a whole differ very much from the Government's proposals referred to in this Bulletin, Nos. 9-10, 1948, though the Diet made some important changes, for instance, by revoking the 337 million marks' grant for establishing a nitrogen factory. The Diet increased both revenue and expenditure by about 1,700 million marks and thus the final sums of the Budget for the first time exceeded the 100,000 million limit.

A general idea of the Budget as compared with that for 1948 is given by the following figures.

| Revenue | $\stackrel{\text { Milli. }}{\text { mk }}$ | 1948 Mill. mk |
| :---: | :---: | :---: |
| Current | 93,517 | 67,827 |
|  | 6,739 | 4,667 |
|  | Total 100;256 | 72,494 |
| Expenditure |  |  |
| Current | 69,828 | 52,892 |
| Capital | 30,415 | 19,553 |
|  | Total 100,243 | 72,445 |

The high figure for the total revenue and expenditure in 1949 does not in itself imply that State finance is expected to expand greatly during the current year compared with 1948. As already stated in the article "Public Finances in 1947" (Bulletin Nos. 11-12, 1948), preliminary figures indicate that State revenue and expenditure in 1948 were much higher than estimated in the Budget and about as high as they are expected to be in 1949.

General economic programme committee. On February 4, 1949, the Government decided to appoint a committee to draw up a general economic programme with a riew to coping with many current economic problems. With this aim the most import-
ant are the measures to maintain the profitableness of agriculture, the rent question, the position of industry, and the wages problem. This State committee represents different spheres and is headed by the Governor of the Bank of Finland, Mr. Sakari Tuomioja, the deputy chairman being Mr. Klaus Waris, Head of the Division for National Economy of the Ministry of Finance. The Secretary to the Committee is Mr. Reino Rossi from the Bank of Finland Institute for Economic Research.

The rates of interest. At the suggestion of the Board of Management of the Bank of Finland the Bank Supervisors of the Diet on January 27, 1949, decided to reduce the Bank's discount rates by one half of one per cent as from February 1. Thus the present rates are as follows:

|  | \% |
| :---: | :---: |
| For purely commercial bills at not more than three months' date . .... | $63 / 4$ |
| For other bills, according to the class and maturity date | 7 1/4-7 3/4 |
| For loans on security and advances on current accounts, according to the nature and security of the credit .. | $63 / 4-78$ |

At the same time the Bank Supervisors approved the proposal made by the Board of Management to the effect that, if credit institutions wish to rediscount bills on which $81 / 2$ per cent or less interest has been paid, the Bank of Finland will rediscount them at one-half per cent less, but not at less than the Bank's discount rate for its customers. - The Board of Management has also decided, as from April 1, 1949, not to rediscount any bills on which the commercial bank in question has received more than $83 / 4$ per cent. - These measures aim at making the commercial banks more willing to reduce the difference
between deposit and credit rates, which has grown so markedly in recent years, by lowering the credit rate slightly and keeping the deposit rate mainly at its present level.

Trade agreements. In the trade negotiations between Finland and the United Kingdom agreement was reached on January 26, 1949, providing for the amount of goods to be exchanged during the current year, whereas price negotiations are still unsettled. The following quotas were agreed for the most important Finnish export articles: sawn timber 190,000 standards, pit props 280,000 to 400,000 cub. m., cellulose 325,000 to 400,000 tons, plywood $115,000 \mathrm{cub}$. m. and newsprint 24,000 tons. In return the United Kingdom undertakes to deliver considerable quantities of coal, coke, iron, steel, petrol and other liquid fuel, wool and textile goods, as well as chemicals and many manufactures of the engineering industry. - The development of trade between Finland and the United Kingdom in 1948 was very gratifying: it showed a considerable increase compared with the preceding year. The negotiations now carried on give good hopes that Fin-nish-British trade will further expand in 1949.

A trade agreement was signed on February 3 with the Triple Zone of Western Germany by which goods to a total value of nearly 3,000 million marks will be exchanged during 1949. - Finland will deliver chiefly mechanical pulp, timber, newsprint and certain chemicals, and the Western Zone will deliver iron and steel, machinery, chemicals, textile goods and electrical materials.

Increase in the share capital of a Commercial Bank. At the suggestion of the administrative board of the Oy Pohjoismaiden Yhdyspankki - Ab Nordiska Föreningsbanken, the shareholders' meeting decided to increase the share capital of the bank from $626,200,000$ to $1,000,000,000$ marks. The new shares offered at a nominal value of 100 marks total $3,738,000$. Of this number $3,131,000$ are offered to shareholders and 607,000 to
depositors. The price of the new shares is 140 marks.

The National Pensions. According to statistics compiled by the National Pensions Institution, there are at present about 2.2 million wage-earners under obligation to contribute to its funds. In 1948 these payments, together with the employers' contributions, amounted to over 3,000 million marks. The total of annual pensions paid by the Institution in 1948 was over 300 million marks. Until last year pensions were paid only to persons unable to work, but in 1949, under the National Pensions Act, persons who complete 65 years of life will, as the first age clasis, benefit from old age pensions. The number of people entitled to a pension, which was about 25,000 in 1948, will consequently rise in 1949 to over 55,000 and it is calculated that the total amount of pensions paid in 1949 will be about 500 million marks and in 1950 about 1,000 million.

Motor vehicles in use. At the close of 1948 the total number of motor vehicles in use was 49,135 of which 18,640 were cars, 24,400 lorries and 2,455 buses. Thus, in number, motor vehicles have almost reached the pre-war level - they totalled 51,771 in 1939 - but their transport capacity is still considerably below pre-war standards owing to lack of repairs and renewals. On the other hand, it should be noticed that there are more utility vehicles among the present stock: the number of cars has decreased by nearly 10,000 but that of lorries increased by about 7,000 since 1939.

Gypsum Board Factory. The latest addition to Yhtyneet Paperitehtaat Oy (The United Paper Mills) is the Myllykoski Gypsum Board Factory, of which the construction was begun in 1946 and which started production at the beginning of 1949 .

The machinery has been supplied by an American firm - United States Wallboard Machinery Ltd - and its annual capacity is about 3 million sq. m., or about 20,000 tons, of fire-resisting gypsum board. The factory is the only one in the Nordic
countries in which the manufacture of gypsum board is entirely mechanized and it also has the monopoly of such production in the whole of Scandinavia.

The publications of the Bank of Finland. In the Series B of ,Suomen Pankin taloustieteellisen tutkimuslaitoksen julkaisuja Publikationer utgivna av Finlands Banks institut för ekonomisk forskning" (Publications issued by the Institute for Economic Research of the Bank of Finland) the following new publications have been issued:
8. T. Junnila, Inflaatio. Ensimmäinen osa. Inflaatioiden esiintyminen ja niiden rahanarvoteoreettinen selitys. Suomen inflaatio vuosina 1939-1946. (Inflation. Part one. Inflation, its History, and how it is explained by the Theory of the Value of Money. The Inflation in Finland 1939-1946.) 304 p.
9. Mikko Tamminen, Valuuttakurssit ja valuuttapolitiikka. I osa (Foreign Exchange Rates and Currency Policy. Vol. I) 218 p . Table of contents in English.

Labour Market Statistics. The statistical section of this Bulletin again includes tables illustrating labour market conditions (Tables 38-40), last published in 1939. On the left side of Table 39 are figures showing the number of applications for work to the Municipal Labour Exchanges during the last week of each month, the applicants being - besides the unemployed - people who wished to change their jobs. On the right side are figures from the Municipal Labour Chiefs of the unemployed who, after a prescribed period of waiting, have been accepted and entered in the unemployment records.
