The Finnish Commercial Banks in 1948, p. 20. Useful Minerals, Rocks and Earths in Finland, p. 26.

## THE FINNISH MARKET REVIEW.

The situation on the money market has maintained its favourable trend. April was, however, weaker than for instance March with a view to the accumulation of savings, but it is to :be noted that the latter was indeed a month more propitious than normal with regard to deposit savings. The final figures for May concerning the activity of credit institutions are not available yet, but according to the information on hand, there was a considerable influx of money into banks also in May. In April no considerable payments fell due tightening temporarily the money market, but May was the period for the quarterly payment of the sales tax which again brought in its wake difficulties to trade and industry and caused a certain amount of stringency on the money market. The demand for credit has shown a tendency to increase during the recent weeks, which is attributable perhaps not so much to the lowering of credit rates as to the increasing need of capital. This need is due to the growth of the difficulties encountered in business finance, and particularly to the adoption of the so-called ARAVA Bill accompanied by the revival of building activity also in towns.

The total deposits of the public in all credit institutions, with cheque accounts included, increased in April by 2,591 million marks. This advance lagged considerably behind the March increase of 5,496 million which is the record achievement up to now. Deposit accounts increased by 1,619 million marks in April, as against 2,034 million in. March. In January-April these accounts increased by 7,979 million
marks, the corresponding figure for 1948 , 3,353 million, falling short of the 1949 figure by more than a half. As to the activity of the Commercial Banks during the period under survey the deposit accounts of the public increased in April by not more than 483 million marks, or less than during the preceding three months. In April 1948 the accumulation of deposits was, however, less active, the increase totalling 415 milllion marks. In January-April, 1949, the deposits in the Commercial Banks increased by 2,421 million, whereas the corresponding total for last year was 1,193 million marks. Cheque accounts showed a sharper increase in April than the deposit accounts, the advance amounting to 759 million marks, but even this result was far weaker than the very favourable figure for March 3,189 million marks. The total deposits of the public in the Commercial Banks increased during January-April, 1949, by 4,244 million marks, whereas the corresponding increase for 1948 amounted only to somewhat over a third of that figure, or 1,502 million.

The lively trend of the first months of the year in the Commercial Banks' lending business continued in April. The loans to the public and other domestic credit institutions increased in April by 2,573 million marks while the March and February increases were 1,688 and 1,129 million marks respectively. The increase during January-April, 1949, amounted to 8,486 million, having totalled 4,610 million marks during the same period last year. Thus the amount of the credits advanced by the Commercial Banks was doubled as com-
pared with the result for 1948. Owing to the preponderance of advances over deposits, the Commercial Banks' cash reserves decreased from 4,539 million marks in March to 3,880 million at the end of April. At this juncture the total of cash reserves remained somewhat below the level attained at the close of the year.

The advances of the Bank of Finland both to business enterprises and to the State showed a considerable increase during March. The same trend prevailed in April, when the advances to business enterprises grew by 741 million marks to 18,495 million and those to the State by 1,500 million marks to 19,030 million At the beginning of May the amount of Treasury bills fell steeply, by more than 4,000 million marks in a single week, or to 14,930 million marks by May 7. This large-scale reduction at once was ascribed to the same factor as in February, i.e. the amount of tax receipts largely consisting of the sales tax which accumulated in the Treasury to a greater extent than normally. Later on in May the State was again obliged to increase its debt to the central bank and it amounted subsequently to 16,430 million. marks at the close of the month. In contrast to the other loans of the Bank of Finland, those to credit institutions decreased in April, as had already happened in March. In April they were reduced so much that the amount of rediscounted bills totalled only 130 million marks at the end of the month. However, in May they again showed marked increase, by over 3,000 million in the first week. The rise is attributable to the payment of the sales tax, as business concerns were not able to manage it unassisted and were therefore obliged to approach credit institutions, which for their part turned for aid to the central bank. At the end of May the Bank of Finland had in its possession rediscounted bills to the value of 2,523 million marks. The total advances of the Bank increased in April lby 1,444 million, amounting to 37,655 million marks at the end of the month.

## PRICES.

April denoted a change in the development of prices marked by a slight increase
in indices after the uninterrupted decline for seven months in succession. The official cost of living index (August 1938July $1939=100$ ) rose by 3 points to 775 . Thus the increase was of small extent only and, moreover, confined exclusively to the cost of living index; the wholesale price index $(1935=100)$ continued its declining trend, falling to 1,071 points in April. No essential importance can consequently be attached to the minute rise in the cost of living index.

## TRADE AND INDUSTRY.

The „Unitas" indices for industrial production are now available for the first quarter of the current year. The index for the total volume of industrial production ( $1935=100$ ) was 154 points in Jan-uary-Mareh, 1949, or over 50 per cent higher than during the corresponding period in 1935, and likewise distinctly above the level of the last pre-war year - 1938. The increase in the production of the home market industry has continued particularly vigorous - the index is 193 points - but also the output of Finland's export industry has expanded in comparison with the same period in 1948, the increase being 15 per cent. The volume index for the export industry now amounts to 98 points, remaining still below its pre-war level. Industrial employment, too, was good in the first quarter of 1949. The number of workers employed in the home market industries exceeded the figures for 1948 by 5 per cent. Export industry showed, however, a more adverse trend in this respect. It has been forced to reduce its activity owing to marketing difficulties, especially since the first three months of the current year. The situation is particularly tight in the cellulose industry.

Although some decrease has been observable in the export and import of some commodities in comparison with the past year, foreign trade shows, nevertheless, an increase on the previous year. In January —April, 1949, imports amounted to 17,723 million marks, while commercial exports totalled 14,696 million. The corresponding figures for 1948 were 16,728 and 13,313 million respectively.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET. <br> Bank of Finland:

1. Statement.
2. Note issue.
3. Notes in circulation, foreign correspondents and cover for the issue of notes.
4. Note reserve, home loans and rediscounted bills.
5. Treasury bills and balances of current accounts.
6. Rates of exchange.

Commercial Banks:

Tables 24-29 according to Finnish Official Statistios I, A, Foreign Trade of Finland, Monthly Reports.
The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Elxports covers all goods exported from the open market, inciuding re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as. calculated at the frontiers of the country.

* Preliminary figures subject to minor alterations.

## CERTAIN [PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1899; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6, 1917, when Finland declared its independence, which was acknowledged by all the Powers inoluding Soviet Russia. It became a republic in 1919. The legislative power of the country-is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President Juho Kusti Paasikivi is elected for the term March 11, 1946, to March 1, 1950.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1948 are at present as follows:

|  | Number |
| :---: | :---: |
| Agrarian party | 56 |
| Social-Democratic parts | 54 |
| Democratic League | 38 |
| Unionist party | 33 |
| Swedish party | 14 |
| Progressive party | 5 |

## 2. LAND.

THE AREA is 337113 square kilometres (Great Britain's area is $245000 \mathrm{sq} . \mathrm{km}$ and Italy's area $310000 \mathrm{sq} . \mathrm{km}$ ). Of the total area $9.4 \%$ are inland waters. On an average $13.5 \%$ of the land in the South of Finland is cultivated, $1.6 \%$ in the North, $7.5 \%$ of the whole land. Of the land area 21.7 mill. ha ( 53.5 mill. acres) or $70.9 \%$ are covered by forests.

## 3. POPULATION

NUMBER OF INHABITANTS (1948): 3.9 millions (present popalation). Sweden (1947) 6.8, Switzerland (1947) 4.5 Denmark (1947) 4.1 and Norway (1947) 3.1 millions.

DENSITY OF POPULATION (1948): In South Finland 22.0, in North Finland 3.3 and in the whole oountry an average of 12.8 inhabitants to the square kilometre.

DISTRIBUTION (1948): 75.0 \% of the population inhabit the country, $\mathbf{2 5 . 0} \%$ the towns and urban distriots. The largest towns are (1948): Helsinki (Helsingfors), the capital, 357865 inhabitonts, Turku (Åbo) 95 446, Tampere (Tammerfors) 94402.

OCCUPATION (1940): agriculture $51.6 \%$, industry and manual labour $21.0 \%$, commerce $5.1 \%$, transport $4.6 \%$, other occupations $17.8 \%$.

LANGUAGE (1940): Finnish speaking $90.0 \%$, Swedish speaking $9.6 \%$, others $0.4 \%$.

RELIGION (1946): Lutheran $96.0 \%$, Greek-Orthodox $1.7 \%$, others $2.3 \%$.

FDUCATION (1947): Practioally all persons over 15 years of age are literate. There are three universities (the oldest founded in 1640) and 7 colleges of university standard.

INCREASE OF POPULATION (1947): Births $27.7 \%$, deaths $11.9 \%$ (deaths in France in $194713.0 \%$ and in the United Kingdom in 1947 12.1 \% \% natural increase $18.0 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOUROES (1949): The growing stock comprises 1370 million of solid cub. m. incl. bark ( 48379 million cub. feet), of which pine is 45.5 per cent, spruce 32.2 per cent, the rest 22.3 per cent being leaf-trees, chiefly birch. Of the growing stock 1031 million trees, 63. 6 per cent of them pines, are up to the standard required for logs (minimum for sawmill logs $18^{\prime} \times 6^{\prime \prime}$ and for plywood logg $14^{\prime} \times 7^{\prime \prime}$ ). The annual increment is about 41 million of solid cub. m. green wood exol. bark ( 1441 cub. ft). The total removal in $194 t$ calculated according to the
use of wood was 40 million cub. m. ( 1425 million cub. ft ). In the years 1923 to 1938 , in the then area of the country, it averaged 41 million oub. m. ( 1463 million cub. ft) per year, the corresponding yearly increment being 45 million cub. $m$. ( 1591 million cub: ft ).

AGRICULIURRE (1941): Cultivated land 2.3 million hectares, divided as follows: area under cultivation under 10 hectares $33.1 \%, 10-50$ ha $54.4 \%, 50-100$ ha $7.2 \%$, over 100 ha $5.3 \%$. Cultivated land (1948) is divided between the different kinds of crops as follows: $40.1 \%$ hay, $11.3 \%$ temporary grassland for grazing, $16.8 \%$ oats, $6.9 \%$ wheat, $6.0 \%$ rye, $5.5 \%$ barley, $4.8 \%$ potatoes, $9.1 \%$ other. The number of dairles in 1947 amounted to 517 .

OWNERSHIP OF LAND (1941): The land area is distributed among different classes of owners approximately as follows: private $49.2 \%$, State $41.6 \%$, Joint Stock Companies etc. $7.1 \%$, communities $2.1 \%$.

INDUSTRY (1946): Number of industrial concerns 5691 , workpeople 236 723, gross value of products of industry 112081 million marks.

LENGTH OF RAILWAYS (1949): 4986 km , of which 4713 km State railpays and 253 km private. The gauge is in general 1.524 m .

MERCHANT FIEET (1949): Steamships 385 (422 723 gross reg. tons), motor vessels 102 ( 67406 gross reg.tons), sailing-ships with auxlliary engine 154 ( 15151 gross reg. tons), othersailingships 12 (14 718 gross reg. tons). Total 653 (510 908 gross reg, tons).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860. Finland has its own monetary system. From 1877 up to 1914 the currency maintained its stable gold value, and after the disturbances caused by the war a gold standard was again introduced from January 1 , 1926. The unit of currency is the mark (Finnish omarkkan $=$ 100 penniä). According to the monetaxy law of December 21, 1925, a gold coin of 100 marks' value shall contain $3^{15} / 19$ gramas. of fine gold. Since October 12, 1981, the redemption of bank notes in gold is, however, suspended.

STATE FINANOES. According to the finance accounts for 1947 the State revenue was 94261 million marks, of which 70207 million marks were current revenue, and State expenditure 87811 million marks, of which $66578^{\circ}$ million marks were current expenditure. The principal sources of revenue were as follows: direct taxes 27855 , indirect taxes 9927 , sales tax 18288 , interest and dividends, etc. 6429 , State property and undertakings (net) 2502 , and capital revenue 24054 . For Public Debt see table 20 in this issue.

MUNICIPAL FINANCES. According to the finance accounts for 1946 expenditure amounted to 13509 million marks. Income from taxation was 6734 million marks, taxed income 79283 million marks. The municipal income tax (non-progressive) averaged 8.5 \% of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland (founded in 1811) is a State Bank. Its head office is in Helsinki (Helsingfors) with branohes in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleåborg), Kuopio, Joensuu, MikkelF (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskylä, Kotka and Lahti (Lahtis).

THE COMMERCLAL BANKS (1949): Number 7, possess 452 offioes, where all kinds of banking business is transacted. There is one banking establishment per 8687 inhabitants.

The largest banks are Kansallis-Osake-Pankki, of Pohjoismaiden Yhdyspankki - Ab Nordiska Föreningsbanken and' Helsingin Osakepankki - Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1949): Mortgage banks 5, Savings banks 447, Co-operative Credit Societes 767 and a Central Bank for the latter.

# THE FINNISH COMMERCIAL BANKS IN 1948. 

BY

PROFESSOR A. E. TUDEER.
HEAD OF THE INSTITUTE FOR ECONOMIC RESEARCH OF THE BANK OF FINLAND.

## GENERAL SURVEY.

At the beginning of 1948 the stringency of the money mariket during the whole of the preceding year was somewhat relieved by the influx of money into the Commercial Banks in the last weeks of 1947 owing to rumours of an impending new exchange of notes. This easing was, however, only temporary. It was natural that the stringency continued because the demand for credit was almost unlimited and capital flowed slowly into the credit institutions. This was due to the same causes as in the precding years; the continuing inflation was especially responsible for the greatly increased need for credit and for the slow accumulation of capital in the financial institutions. During 1948 there was a check in the rise of prices, more goods were put on the market and the general stabilization of economic life progressed, so the fear of inflation began to recede and confidence to return. The raising of the interest rate - of which more will be said later - also contributed to reduce investment and to increase saving and the flow of capital into credit institutions. All these factors resulted in more and more pronounced signs of an easier money market in spring, but especially in the autumn.

Commercial Banks numbered seven in the beginning of the year, but before its close one of the small banks, Pohjolan Osake-Pankki, considered its profitableness so much reduced that it began to negotiate for amalgamation with the largest bank, Kansallis-Osake-Pankki, and in October an agreement to that effect was reached. Before the end of the year the branch offices of the former were incorporated in the Kansallis-Osake-Pankki, but the head office was still kept separate and on December 31 presented its own balance sheet.

As in this manner some branch offices were united, the total number of Commercial Banks' branch offices, which had been 464 at the end of 1947 , was 452 by the end of 1948. Of these 168 were in towns and 284 in rural districts.

## BALANCE SHEETS OF THE COMMERCIAL BANKA.

The following table conveys a general idea of the changes that have taken place from 1945 to 1948.

| Assets | $\stackrel{\text { Mill. } \mathrm{mk} 1}{ }$ | $\begin{gathered} 1946 \\ \text { Mili. } \mathrm{mk} \end{gathered}$ | $\stackrel{1947}{\text { Mili. } \mathrm{mk}}$ | $\begin{gathered} 1948 \\ \text { Mill. mk } \end{gathered}$ |

| Sundry assets | 2,570 | 3,246 | 3,745 | 4,234 |

## Liabilities

| Share Capital | 1,332 | 1,673 | 1,678 | 1,680 |
| :---: | :---: | :---: | :---: | :---: |
| Reserve funds | 1,153. | 1,147 | 1,180: | 1,201 |
| Other funds | 130 | 71 | 66 | 256 |
| Deposits | 16,558 | 17,564 | 19,982 | 24,468 |
| Cheque accounts | 11,567 | 13,695 | 17,754 | 19,577 |
| Bank of Finland |  | 2,896 | 3,502 | 1,533 |
| Other Finnish cred institutions: |  |  |  |  |
| Deposits | 5,102 | 2,773 | 3,611 | 3,795 |
| Cheque accounts | 2,081 | 1,398 | 2,990 | 2,285 |
| Foreign correspondents | 352 | 2,104 | 2,948 | 2,087 |
| Bank-Post-Bills | 629 | 1,246 | 1,512 | 1,296 |
| Sundry liabilities | 1,277 | 2,027 | 2,436 | 3,207 |
| Profits (less losses) | 208 | 254 | 336 | 469 |

Total 40,389 46,848 57,995 61,854

The balance sheet totals of the Commercial Baniks, which have grown rapidly in recent years as the value of money has deteriorated, were by 3,863 million marks or nearly 7 per cent higher than in 1947. Compared with the two preceding years, when the corresponding figures were 24 and 16 per cent, the capital at the disposal of the Commercial Banks increased rather slowly, partly at least owing to the checking of the inflation.

The activity of the banks expanded much more than the capital at their disposal increased: the cash turnover was 3,876 billion marks as against 2,951 billion in 1947 - an increase of 31 per cent.

## BANK FUNDS.

The following table shows the changes of the banks' own funds.

|  | $\begin{gathered} \text { Dec. } 31 \\ 1046 \\ \text { Mill, } \mathrm{mk} \end{gathered}$ | $\begin{aligned} & \text { Dec. } 81 \\ & \text { 1947 } \\ & \text { Mill. } \mathrm{mk} \end{aligned}$ | $\begin{aligned} & \text { Dec. }{ }^{31} \\ & \text { Mi114. } \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| Share capital | 1,673 | 1,678 | 1,680 |
| New shares issued | 1 |  | 123 |
| Reserve funds | 1,147 | 1,180 | 1,201 |
| Pensions funds | 33 | 25 | 25 |
| Undisposed profits | 37 | 42 | 108 |
| Profit and loss accounts | 254 | 336 | 469 |
| Total | 3,145 | 3;261 | 3,606 |

In recent years the banks' own funds have increased very slowly and thus their proportion to the banks' liabilities thas fallen year by year. However, during the year under review three banks increased their share capital; Suomen Maatalous-OsakePankki by 15 million marks by issuing new shares at par; these were paid for in the course of the year. In addition two banks decided to increase their share capital: Kansallis-Osake-Pankki by issuing $1,730,540$ new shares at 250 marks, the nominal value of the shares being 200 marks, and $\AA$ Ilands Aktiebank by offering 250,000 new shares at 130 marks. Payment for these shares continued during 1949 and the part paid in 1948, totalling 123 million marks, is entered in the balance sheet as New Shares Issued.

The banks kept a total of 75 million marks for their Reserve and other funds. Thus their own funds, including the sums on profit and loss account, were 3,606 million marks, or 345 million more than a year before.

## INTERNAL DEPOSITS.

The deposits received by the Commercial Banks from the public and from internal credit institutions are reviewed in the following table which also includes the supplementary advances from the Bank of Finland.

|  | Deposits Mill, mk | Cheque Mill mk Mill. mk | Finnish credit institutions Mill. mk | $\begin{aligned} & \text { Total } \\ & \text { Mill. } \mathbf{m k} \end{aligned}$ | Bank of Finland Mill. mk |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 7,549 | 1,944 | 1,262 | 10,755 | - |
| 1944 | 13,068 | 8,733 | 4,269 | 26,070 | 400 |
| 1945 | 16,558 | 11,566 | 7,183 | 35,307 |  |
| 1946 | 17,564 | 13,695 | 4,171 | 35,430 | 2,896 |
| 1947 | 19,982 | 17,754 | 6,601 | 44,337 | 3,502 |
| 1048 | 24,468 | 19,577 | 6,080 | 50,125 | 1,533 |

Total deposits increased by 5,788 million marks, or somewhat more slowly than in 1947, when the corresponding figure was 8,907 million marks. It should be noted that the rumours of a new note exchange stimulated the flow of capital into the banks in December 1947 which, on the other hand, reduced deposits in the first part of 1948.

The most important item in deposits those of the public - increased greatly last year, viz. by a total of 4,486 million marks as against 2,418 million in 1947. This was partly due to the public's greater confidence in the stability of the mark, partly to the higher interest rates. The increase was partly at the expense of the cheque accounts which rose by only 1,823 million marks as against 4,059 million in 1947. Deposits of other credit institutions, consisting chiefly of the cash funds of savings banks, were an exception: they actually decreased, naturally because loans exceeded deposits.

As the money market was stringent for the greater part of the year the Commercial Banks required support from the Bank of Finland. The amount rediscounted varied greatily during the year: in the first week of June it rose to 4,944 million marks to fall again to 78 million at the end of October. The fact that the credits obtained by the Commercial Banks from the Central Bank were almost two billion marks less at the end of 1948 than a year earlier, can be considered a result of the easing that had occurred in the money market.

## INTERNAL LOANS.

The advances proper made by the Commercial Banks are illustrated loy the following figures.

|  |  | $\begin{gathered} \text { Tniand } \\ \text { bills } \\ \text { Mill. mak } \end{gathered}$ | Loans | Cheque Mill. mk | $\begin{aligned} & \text { Total } \\ & \text { Mill. mk } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 268 | 1,770 | 4,584 | 2,590 | 9,212 |
| 1944 | 363 | 15,976 | 7,786 | 2,696 | :16,821 |
| 1945 | 964 | 7,248 | 11,213 | 2,868 | 22,293 |
| 1946 | 755 | 10,176 | 14,598 | 4,000 | 29,529 |
| 1947 | 1,782 | 16,589 | 14,957 | 4,332 | 37,660 |
| 1948 | 2,141 | 23,999 | 15,215 | 5,103 | 46,458 |

The advances of the Commercial Banks showed a total increase of 8,798 million marks, or well over 23 per cent, as against 8,131 million, or 28 per cent, in 1947. This was chiefly accounted for by inland bills which increased by 7,410 million marks, or nearly 45 per cent, whereas all other forms of advances grew by only 1,388 million marks, or $6 \frac{1}{2}$ per cent altogether. The above table shows, in fact, that the structure of credits has changed greatly. In 1938 loans dominated, representing nearly 50 per cent of the total advances,
whereas bills accounted for only 19 per cent. In 1947 the proportion of loans fell to 40 per cent and that of bills increased to 44 per cent. Finally, at the end of 1948, bills were almost 52 per cent of credits but the proportion of loans had been reduced to 33 per cent.

Besides granting advances proper the Commercial Banks have invested money in bonds. This was done especially in the war years with the result that in the autumn of 1944 more than half of the advances were bond holdings, which then; according to adjusted figures, amounted to 10,973 million marks - chiefly State bonds. The banks have since tried to reduce these holdings and at the end of the year under review they were only 4,157 million marks. - In the same way the Commercial Banks have been repaid for other advances to the State made in the war years and these are now practically nil.

## CASH AND CASH RESERVES.

The changes in the liquidity of the Commercial Banks are illustrated in the table below.

|  | $\begin{aligned} & \text { Cash } \\ & \text { Mill. mk } \end{aligned}$ | $\begin{gathered} \text { Cash } \\ \text { reserves } \\ \text { Mill. mk } \end{gathered}$ | $\begin{aligned} & \text { Total }{ }_{\text {Mill. mk }} \end{aligned}$ | Sight liabilities Mill. m | Ratio of cash and cash reser ves to sight liabilities, \% |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 1,234 | 1,241 | 2,475 | 4,285 | 57.8 |
| 1944 | 1,367 | 10,655 | 12,022 | 14,172 | 84.8 |
| 1945 | 6,055 | 8;834 | 14,889 | 19,085 | 78.0 |
| 1946 | 3,756 | 7,268 | 11,024 | 21,939 | 50.2 |
| 1947 | . 6,280 | 6,735 | 13,015 | 29,001 | 44.9 |
| 1948 | 3,933 | 5,004 | 8,937 | 30,739 | 29.1 |

The cash and cash reserves include the cash of the banks, funds deposited on current accountt in the Bank of Finland, extraneous bank-post-bills and cheques and the banks' net credit balances in other banks, commercial bills in foreign currency payable abroad, bonds in Finnish currency issued or guaranteed by the State, and bonds listed on foreign Stock Exchanges. The liabilities payable on demand include all the indebtedness of the banks payable at sight and the undrawn amount of credits granted on cheque accounts.

The amount of cash which at the end of 1947 was exceptionally high owing to incidental factors - especially false rumours of an impending new exchange of banknotes - has again fallen to its earlier level. As in previous years, the cash reserves
have constantly diminished, owing in the main to the attempt to reduce the bond holdings as already stated.

The result of these changes is that the proportion of the cash and cash reserves to the liabilities payable on demand has diminished every year, and the liquidity of the Commercial Banks has, at least formally, decreased. It should be noted, however, that the ratio prescribed by the Bank Law is 20 per cent, and thus the present ratio, 29.1 per cent, is more than sufficient.

## RELATION TO FOREIGN COUNTRIES.

When business with foreign countries gradually revived after the war operations had ended, the international relations of the Commercial Banks also became livelier and foreign claims and indebtedness increased. During the year under review there was a change in this respect: both claims and indebtedness fell off. As the balance of trade was definitely unfavourable, claims decreased much more than indebtedness. In consequence, the Banks' net balance of payments with foreign

countries, which after the war had shown a progressive increase in net claims, underwent a change in that the net claims dropped steeply. This movement is illustrated in the taible below.

|  | Claims <br> Mill. mk | debtedness Mill mk | $\begin{aligned} & \text { Net claims ( }+ \text { ) } \\ & \text { or Indebted. } \\ & \text { ness }(-) \text { ) } \\ & \text { Mill mk } \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| 1938 | 455 | 310 | + 145 |
| 1944 | 125 | 247 | - 1222 |
| 1945 | 385 | 352 | + 33 |
| 1946 | 2,460 | 2,104 | + 356 |
| 1947 | 4,085 | 2,948 | + 1,137 |
| 1948 | 2,194 | 2,087 | + 107 |

RATES OF INTEREST.
Although the rates of interest had been slightly raised in 1947 no equilibrium was reached between the demand and supply of capital: saving was too slow and the money market tight. For this reason the question of a new increase of rates became of current interest early in 1948.

To reduce the inflatory tendency to invest and to increase saving, and so strengthen the monetary value, the Bank of Finland decided on February 6 to increase all its interest rates by 2 per cent, which meant that the lowest discount rate rose to $7 \frac{1}{4}$ per cent. On February 9 the joint delegation of the financial institutions decided to raise rates generally: the deposit rate by 2 per cent, viz. to $6,61 / 4$ and
$61 / 2$ per cent in the different groups of credit institutions, and interest on cheque account to 2 per cent. It was also decided to allow credit rates to rise by $21 / 2$ per cent and interest on first rate mortgage loans at a maximum to 9 per cent.

This action caused the average interest rates of the Commercial Banks to increase sharply. At the end of 1948 the average deposit rate was 4.25 per cent as against 2.32 per cent one year before; the average credit rate rose to 9.13 per cent from 6.75 per cent, the rate applied at the end of 1947.

## THE YEAR'S RESULTS.

The economic results of the Commercial Banks' business are illustrated by the following table of income and expenditure for recent years.

| Income | $\begin{gathered} 1945 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} \text { 1946 } \\ \text { Miil. } \mathrm{mk} \end{gathered}$ | $\stackrel{\text { Mill. } \mathrm{mk}}{ }$ | $\begin{gathered} 1948 \\ \text { Mill. mk. } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: |
| Interest | 1,048 | 1,689 | 2,029 | 3,396 |
| Income on bonds and shares .... | $451$ | 287 | 283 | 256 |
| Agio | 46 | 54 | 94 | 174 |
| Recovered on claims previously written off $\qquad$ | - 15 | 4 | 6 | 3 |
| Income from bank premises ...... | - 5 | 2 | 7 | 9 |
| Sundry earnings .. | 64 | 153 | 211 | 336 |
| Total | 1,629 | 2,189 | 2,630 | 4,174 |

| Expenditure | Mill. ${ }^{1945}$ | ${ }_{\text {Mill, }}^{1046}$ | 1947 | ${ }_{\text {Mill }}^{1048} \mathrm{mk}$ |
| :---: | :---: | :---: | :---: | :---: |
| Interest | 807 | 1,043 | 1,228 | 2,202 |
| Taxes | 212 | 356 | 339 | 348 |
| Salaries | 250 | 347 | 501 | 740 |
| Other expenses | 95 | 153 | 187 | 368 |
| Amounts written off | 55 | 33 | 34 | 39 |
| Transferred to pensions funds .... | 2 | 3 | 5 | 8 |
| Net profits ...... | 208 | 254 | 336 | 469 |
| Tota | 1,629 | 2,189 | 2,630 | 4,174 |

Livelier banking business and the rise of the interest rates involved a marked increase in the total income of the Commercial Banks. The increase on the preceding year's figure was 1,544 million marks, or nearly 59 per cent. On the other hand, expenditure also increased much, primarily because of the rise in prices and salaries and extended business. Profits from interest :(the balance of interest income and expenditure) increased by 393 million marks, or 49 per cent. Salaries rose by 239 million marks, or nearly 48 per cent, and other expenditure by 181 million, or 97 per cent. On the other hand, the increase of taxes was slight, partly because the taxes paid in 1946 by one bank were returned in large part.
The total net profits of the Commercial Banks, less the losses of one small bank, were 469 million marks. The increase on the 1947 figure was 133 million marks, viz. nearly 40 per cent. In addition, the Commercial Banks had 108 million marks in profits carried over from previous years.

Thus the Annual Meetings had at their disposal a total of 577 million marks. Of this 262 million marks were distributed to shareholders, over 8 million were devoted to various public objects, well over one million was transferred to pensions funds, and $11 / 2$ million used for other purposes. The remainder was reserved for the strengthening of the banks' position; 9 million of it were transferred to permanent reserve funds, 100 million to other funds, and nearly 200 million were left on the profit and loss account.
The following table shows the dividends paid in recent years.

|  | Dividends Mill. mk | \% of share capital | \% of own funds |
| :---: | :---: | :---: | :---: |
| 1938 | 100.2 | 12.16 | 6.58 |
| 1944 | 151.5 | 11.20 | 5.85 |
| 1945 | 156.2 | 11.72 | 5.97 |
| 1946 | 196.1 | 11.72 | 6.78 |
| 1947 | 220.0 | 13.11 | 7.52 |
| 1948 | 261.9 | 15.59 | 8.35 |

Seeing that the value of money during and since the war has fallen to about one eighth of the 1938 value, it is evident that the dividend paid in depreciated money is actually very low for those who paid for their shares with pre-war currency.

The general development of the Commercial Banks since 1938 through the war and post-war years and up to the year 1948 is shown in the appended diagrams. Finally some general information regarding each bank is given.

[^0]
# USEFUL MINERALS, ROCKS AND EARTHS IN FINLAND AND THEIR UTILIZATION. 

BY<br>AARNE LAITAKARI.<br>director of the geologioal survey.

## INTRODUCTION.

The rock ground of Finland is almost wholly composed of crystalline rocks, of which the granitic form about 75 per cent. This rock ground does not contain the non-metallic mineral deposits peculiar to sedimentary formations but does contain useful minerals, earths and rocks characteristic of such rock ground: limestone, soapstone, asbestos, quartz, felspar and different granites as well as useful earths.

## USEFUL MINERALS.

Graphite. Graphite is found in many places in Finland, mostly in small quantities. In this century graphite has been extracted at Tyrvää, where a grinding-mill operated for some time, and also at Kärpälä in Mäntyharju and at Rääpysjärvi in Tuusniemi. The Kärpälä deposit is the largest and best in quality. The raw graphite periodically mined there was exported as such, and also sold at home.

Asbestos. The fibrous varieties of two minerals, the serpentine and anthophyllite, are called asbestos. In Finland serpentine asbestos does not occur in sufficient abundance and purity to be commercially profitable - but in the Carelian Schists in many places on the borders of Savo and Carelia there is asbestos originated from olivine or serpentine rocks. It contains felted masses of fibrous anthophyllite; when loosened from the rock they are flexible and tough.

In Finland asbestos rock is worked only to a limited extent. The Suomen Mineraali Oy (The Finnish Minerals, Ltd) has open quarries and mills for separating the fibres from the asbestos rock at Paakkila in Tuusniemi, and near it, at Maljasalmi in Kuus-
järvi. About 30 per cent of the worked rock is asbestos. The fibrous mass as such is a valuable product and is exported and also taken to Suomen Mineraali Oy's factory at Tapanila to be manufactured into various asbestes products, such as card-, roofing- and wall-boards, heat insulating masses, packing and so on. In 1946 the production of this factory was valued at about 100 million Finnish marks.

Talc. Tale is a hydrous magnesium silicate. Its extreme softness and its greasy feel are characteristic. The colour is white. Talc associated with serpentine rocks occurs in the Carelian Schist zone. Tale is to be found in Talvivaara in Sotkamo and Haaralanniemi in Polvijärvi. Only insignificant quantities of tale have hitherto been extracted in Finland and millions of Finnish marks' worth of tale has been imported. Plans are, however, being made to work the deposit in Polvijärvi the object being to separate by flotation the talc from the talc-dolomite-magnesite rock, thus producing two valuable products at once.

Kaolin. Kaolin is a hydrous aluminium silicate, and occurs in the Carelian Schists associated with quartzites. The only deposit of economic value is that at Pihlajavaara in Puolanka where the Paraisten Kalkkivuori Oy extracts raw kaolin, which is there in much larger quantities than was presumed, and of useful quality. The site being at a considerable distance from a railway a kaolin washing-plant has been built on it. Washed kaolin is used in making porcelain and fine fire-bricks. The aim is to produce $5,000-10,000$ tons of washed kaolin annually.

Felspar. Industry uses almost exclusively potash felspar and only exceptionally soda-lime felspar. Felspar is quarried from
coarse-grained pegmatites in which it occurs so that it can be easily separated from the other mineral constituents. The most important of these is quartz, but also other minerals are obtained now and then as by-products. In separating felspar it is important that no dark minerals are mixed with it. Finely ground felspar is used in the manufacture of porcelain, enamel and glass.
Felspar quarries are situated in SouthWest Finland (Kemiö, Hiittinen, Kisko etc.), in Häme (Eräjärvi, Kangasala etc.), in Soutth Bothnia (Kuortane, Ähtäri etc.) and in Kainuu (Kainuunmäki, Koutaniemi etc.). The most important deposit at present is at Kaatiala in Kuortane from which Suomen Mineraali Oy yearly extracts about 10,000 tons of felspar and 1,000 tons of quartz.

Pegmatites with felspar and quartz inseparably intermingled can be used in the china industry provided no dark minerals are mixed with them. Such pegmatites have not yet been quarried in Finland.

Quartz. Quartz is obtained as a byproduct when quarrying felspar but it is also obtained from quartz veins and from quartzites almost exclusively composed of quartz. The quartz used in the glass and china industry must be very pure and, above all, contain no iron. Quartz mixed with minerals containing some quantities of iron can, however, be used as an addition in smelting ores poor in silicic acid and it is even advantageous if the quartz used for lining in smelting-works contains kaolin or sillimanite (minerals containing aluminium). At present quartz is obtained not only from felspar quarries but also from various quartz veins. These deposits are generally very small and rapidly exhausted. Quartzite-quartz is being extracted from the Reittiö.and Lasikallio deposits in Nilsiä, where the greater part of it crumbles into sand. About 12,000 tons are produced annually. The largest consumer is the porcelain factory Arabia. The quartzite obtained from Nilsiä is also used for making grinding-blocks for woodpulp mills, enough not only for Finland's requirements but also for war reparations - about 2,000 blocks annually. About 2,000 thons of kaolin bearing quartzite are extracted from Ruma
in Sotkamo and about 4,500 tons of sillimanite bearing quartzite from Tiirismaa near Lahti. The last two are used chiefly for lining the cupola furnaces of smeltingworks, but the quartzite from Tiirismaa is used also for the manufacture of grind-ing-blocks.
The largest quartz quarrying firm is Rudus Oy, which also owns a grinding and sorting mill.

The pure quartz sand needed in the glass industry is almost exclusively imported. The quartz sand used in foundries is partly supplied by Viasvesi near Pori.

Mica. Only the colourless mica, muscovite, is used in industry. It is obtained as a by-product from pegmatite quarries. Mica is found as large sheets in Koutaniemi, the rural commune of Kajaani, in Varpupää in Sodankylä and in Kiteenlahti in the parish Kitee, but the mica obtained from other quarries is also utilized. Mica sheets are used as electric insulation material, other kinds are ground and used either for terrast-mortar or in the wallpaper industry and so on.
Good mica deposits of economic value have not, as yet, been found in Finland.

Limestone and Dolomite Stone. In Finland limestone and dolomite stone are included with useful minerals and not with useful rocks, because their use is due to the chemical properties of their chief minerals. Limestone, when pure, consists essentially of calcite $\left(\mathrm{CaCO}_{3}\right)$ and the magnesian limestone, dolomite, $\mathrm{Ca}_{\mathrm{MgC}}^{2} \mathrm{O}_{6}$. The calcareous rocks in South and SouthWest Finland are almost exclusively calcite rock, while those in East and North Finland are chiefly dolomite rocks. Both of them occur in vertical or inclined strata. On the surface of the rock they appear as long and narrow strips. Their width is dozens of metres, occasionally more, and in the direction of the strata they may run to a length of kilometres. Downwards they reach to unknown depths.

Limestone is used for making quick-lime and cement, as an additional material for forming slag in metal smelting-works, for making limestone grits and limestone meal used in agriculture, ground feed for animals, in the cellulose industry and in very many other industrial branches.

Dolomite is used for smelting, lime-burning and agricultural purposes, and pure dolomite is burnt to form sinter-dolomite for lining furnaces in smelteries.

The limestone industry is carried on in Finland at the following places: Parainen (the quarries of Limberg and Skräbböle), Lohja (Ojamo mine, Tytyri and LohjaKotka Oy's quarry), Lappeenranta (the quarry of Ihalainen), Vestanfjärd (the quarry of Illo), Särkisalo (Förby mine), Virtasalmi (Loukolampi mine), Kerimäki (the mine of Ruskealan Marmori Oy), Sipoo (Nevas mine), Kurikka (the quarry of Myllykylä) and Alatornio (Kalkkimaa quarry). It is very likely that in the near future new limestone works will be established at Alajärvi and other places, as the use of limestone continually increases. It is also possible that some works now at a standstill will be re-started.

In 1938, the last normal year prior to World War II, limestone used in industry rose approximately to the following quantities: cement factories 745,000 tons, lime factories 450,000 tons, sulphite mills 140,000 tons, lime-sand brick factories 11,000 tons, raw sugar factories 6,500 tons, glass factories 2,700 tons, Martin establishments 2,000 tons, soap factories 180 tons and techno-chemical industry 65 tons. In 1938
the production of the limestone quarries and lime factories in Finland was valued at 70 million marks and the quarried amount was 1.3 million tons.

In quantity the lime and cement industry is the most important of Finland's mineral industries and satisfies the needs of the whole country. Cement factories are situated at Parainen, Lohja and Lappeenranta and, moreover, lime-burning kilns, limestone and lime slaking and refining establishments and grinding mills are usually built near the limestone deposits. At Thalainen the limestone of the cement factory is purified in a flotation plant, where the refuse, chiefly wollastonite $\left(\mathrm{CaSiO}_{3}\right)$, is smelted and blown into stone-wool.

USEFUL ROCKS.
Talc-magnesite rock occurs here and there in the Carelian Schist zone associated with the coarse-grained serpentine rocks. Because it is soft and easy to carve it is used as building stone, especially for decorative purposes. However, the chief significance of talc-magnesite rock is that it is fireproof, and at present it is used chiefly for lining the sodium furnaces of cellulose mills and as fireproof furnace. bricks in general. Long ago durable fire-
places were made of this stone where it was available.

Although various tale-magnesite rock deposits are known, a special industry has arisen only at Nunnanlahti in Juuka. The talc-magnesite rock industry satisfies domestic needs and a certain quantity is exported.
Granite. All silicate rocks used for building and monuments are called granites. The majority of these are granites, but the so-called black granites, for instance, are either diorites, gabbros or peridotites.
Despite the abundance of granites in Finland, those of high quality, suitable for industry, are fairly rare. Stone industry demands durable, solid and beautiful granite, but at the same time such as cleaves easily at right angles. Moreover it must be even in quality. The quarries should also lie near traffic routes, as this heavy, comparatively cheap product cannot bear high freights.

Qualities differ according to the purpose for which the stone is intended. A finegrained, tough and easily cleavable granite, such as is found on islands near Uusikaupunki, is most suitable for pavingblocks. The beautiful, evenly red, black and blue-grey granite qualities are used for building and monuments. Many stones, which have a good demand in Finland, find no market abroad, where the standard is high.
Granite for export is chiefly produced at Vehmaa, the islands of Uusikaupunki, Taivassalo, Mikkeli, Hyvinkää, Jyväskylä, Kökar and Kuru.
Quarries which supply granite for the home market are scattered all over the country. Near the larger towns they are often of considerable size, as it is customary to use it in its natural state for important buildings and monuments. Pav-ing-blocks; stone for bridges, curbings and dimension stones are quarried in numerous places.
Schists of phyllite and quartzite as well as easily splitting mica-gneiss are suitable for flagging gardens and similar purposes. Whetstones also are made of phyllite and quartzite. The most important quarries are in Kemi, Kuusamo, Nilsiä and Helsinki.

The limestone quarries and mines of Finland. The ones in use are marked with a big circle.

The export of granite reached its maximum - 43 million marks - in 1936. In the same year the value of the total production was about 100 million marks, During the war it was only exported occasionally and since then it has not reached its pre-war level.

## USEFUL EARTHS.

Rapakivi i. e. „rotten stone", also called „moro", is gravel and crumbles, chiefly
by mechanical disintegration. It occurs specially in the „rapakivi". regions of Kotka and Laitila, but elsewhere also. The gravel is good for making roads.

Till, the commonest surface deposit in Finland, is used for road-making, though only when nothing better is available. Till mixed with clay is used to some extent as a binding material for roads.

Gravel and Sand. Assorted gravel and sand, washed of all fine substances in one way or another, are widely distributed over the country and are found in connection with eskers and shore deposits, but nevertheless there are some wide areas to which they must be brought from a distance of dozens of kilometres.

There is a great demand for gravel and sandy soil and it is healthy ground for houses. Springs, and wells with plenty of good water, are found on the sides of eskers. Gravel and sand are used for many technical purposes. Roads, railways, concrete and masonry, the brick industry etc. need large quantities of various gravels and sand. If the gravel direct from the pit is not suitable it must be sorted and washed.
If no natural gravel is available, the roads may be macadamized, i. e. covered with crushed stone, either alone or mixed with natural gravel. Gravel for concrete must, above all, be clean, and the grains vary in size as much as possible, that is from sand to stones of fingertip size.

The best material for mortar is clean sand with grains no bigger than 2 mm . Mortar sand must be screened.

Common sand is still used for numerous other purposes e.g. in the earthenware and glass industries. Common sand can be used as it is instead of quartz sand for making coloured bottle-glass.

Clay. Clay is the finest of all assorted sediments. Part of the ingredients of clay are in a very finely divided, so-called colloidal, state which accounts for its peculiarities: it is plastic, retentive of moisture, impermeable to water and so on. Finland's clay districts are of major importance for agriculture, and clay is also of great economic value as raw material for the earthenware and brick industries. The brick industry in Finland dates back to
the Middle Ages but it was not until the latter half of the 19th century that proper brick factories were built. In 1938 the total production of the brick factories of the country, numbering about 100, rose to about 150 million ordinary red and lightcoloured bricks. In addition to this about 10 million drain-pipes were made at that time. During the war the production decreased, and has not, as yet, regained its pre-war level. Plans for building several large new brick factories are being made. During the last pre-war year the brick factories employed more than 3,000 workers.

The chief raw materials of fire bricks are ka.olin and quartz. Cambrian clay and kaolin constitute the most important raw materials for clinker products. The manufacture of fireproof products is rather new in Finland, as we have only some of the requisite raw materials. At present ground: sericite schists also are being used as raw material for fire bricks. About 20 million lime-sand bricks are annually produced in Finland.

Peat. Peat is a natural fuel in a country where about 30 per cent of the total area is bog. Tests have shown that although most of Finland's peat is poorly-decomposed and unsuitable as fuel, yet considerable quantities of well-decomposed peat, quite suitable as fuel, exist near traffic routes. Humus matter present in this latter gives it colloidic properties so that when dried and compressed it loses all its capacity for absorbing moisture.

In Finland fuel peat is being lifted in almost 100 places and nearly 200 peat machines are in use. The railways, factories and central heating equipment are the principal consumers. In 1947 about 300,000 tons of mechanically treated peat fuel was produced, but the intention is to further extend and develop this industry it being a natural one to the country.

Fuel peat for home use is lifted by hand in places that are poor in forests.
Peat, not decomposed, is used for making moss litter. It is used as litter in barns and sheds for animals and as filling for floors and walls in buildings etc.

The lifted and dried moss litter is torn and screened in small factories and pressed
into bales. Moss litter is used in considerable quantities in the country and is in some demand abroad.

Diatomaceous earth. Diatomaceous earth. contains frustules of diatoms. It is used chiefly for making heat insulating masses, and the chemical industry and factories producing building materials, polish, purifiers and filters use it as a raw material. Diatomaceous earth is widely distributed over the country. It is hoisted and refined by the Suomen Mineraali $0 y$. Among localities where it is produced are: the Komu peat bog at Pyhäjärvi O.l., Kuona at Haapajärvi and the peat bogs in Sippola, Kilo and Ihotti. Production reached its maximum in 1937 amounting to 1,500 tons, valued at about one million marks. The raising of kieselguhr could be greatly increased and the refining thereof developed and varied.

## CONCLUSION.

Finland is self-supporting with regard to the raw material of the limestone and cement industries which are therefore very important for the economy of the country. There are enough suitable raw material for the brick industry to satisfy the
internal demand. The Finnish asbestos is relatively short in fibre and therefore import of the long fibrous quality is necessary, while asbestos fibre mass and asbestos products are exported. Finland's felspar quarries satisfy the internal demand as well as the export industries. Unrefined felspar is also exported. The quartz deposits satisfy the demands of industry except the glass factories which require another kind of quartz sand. Enough soapstone is produced to satisfy the home demand and also for export if necessary.

Finland's building-stone is especially good and entirely unweathered material in consequence of the country's geological conditions. They can acquire a beautiful, bright polish and therefore have been exported far away over the ocean, and in Finland, too, are used on a comparatively larger scale than natural stone in the world in general.

In a country with no coal resources the peat of the numerous and vast bogs ought to be of greater economic importance than it is, but a good beginning has been made and the peat industry may soon develop greater significance.

## ITEMS.

Reduction in bank rates. As mentioned in the previous Market Review, the Bank Supervisors on May 4, 1949 decided to reduce the interest rates of the Bank of Finland by one per cent as from July 1, 1949. Thus the minimum discount rate will fall to $5 \mathbf{3} / 4$ per cent.

The joint delegation of the financial institutions on May 11, 1949, decided to follow suit and recommended a reduction by one per cent of adl rates of interest. Accordingly, as from July 1, 1949, the commercial banks, the savings banks, the cooperative credit societies and other credit institutions granting loans will charge $71 / 2$ per cent at the most for first-class mortgage loans and similar advances; with regard to other loans the maximum rate will be 8 per cent for new loans while in
the case of loans granted before July 1, the respective agreements concerning length of notice will be in force and the same principles applied as when the rates were raised. The deposit rates will be 5, 51/4 and $5 \frac{1}{2}$ per cent in the different credit institutions and the interest paid on cheque accounts will be lower by one per cent.

Trade agreements. A trade agreement between Finland and France, signed on May 20, 1949, provides for a considerable increase of the commercial intercourse between these countries. On the basis of the agreed quota the exchange of goods during one year beginning May 1, 1949, can be estimated at about 11,000 million franes in either direation. Finland's exports to

France will include 135,000 tons of cellulose, 35,000 tons of mechanical pulp, 4,300 tons of cardboard, about 16,000 tons of various kinds of paper, 1,000 tons of insulating board, 100,000 cub. m. of pulpwood, 150,000 cub. m. of pitprops, 37,000 stds of sawn timber, various machinery and apparatus, and oheese. The most important French exports to Finland will be oilcake 5,000 tons, phosphates 170,000 tons, potassium salts 8,000 tons, wool 700 tons, woollen yarn 800 tons, woollen, cotton, silk and rayon cloth, wines and spirits, and fruit; further iron and steel and articles made from them 97,000 tons, of which concrete steel 20,000 tons, rolled wire 5,000 tons, ship plates 3,000 tons, other plates 3,000 tons and heavy rails 10,000 tons; and in addition, various machinery, electrical appliances and cars. In the French exports the quota for iron and steel especially have been considerably increased since last year.

On May 10, a strade agreement was signed between Finland and India. for one year beginning June 1, 1949. According to this Finland will deliver 10,000 stds of sawn softwood, 6,000 tons of cellulose, 12,000 tons of newsprint, 15,000 tons of printing and writing paper, 100 tons of cigarette paper, 100 tons of raw carbon paper and 500 tons of soft wall-boards and, in addition, without fixed quota, paper products, acid proof valves, bobbins, prefabricated houses, machinery and sanitary-ware. The Indian exports will include 1,500 tons of linseed, 1,000 tons of jute goods, 200 tons of tobacco, and vegetable oils, chellac, tea, spices, !tanned kips, coir yarn, chemicals and medicines.

On June 1, 1949, Finland and the Netherlands signed a trade agreement to be in force one year from that day. Finland's exports will amount to about 93 million guilders and her imponts to about 90 mildion guilders. Among the most important goods to be exported are chemical pulp 25,000 tons, mechanical pulp 3,000 tons, newsprint 4,000 tons, greaseproof and sulphite paper 5,900 tons, kraft-paper 6,300 tons, cardboard 7,000 tons, gipsonite wallboards 7,300 tons, plywood 17,500 cub. ft, sawn timber 70,000 stds, pulpwood 39,000 fathoms, pitprops 17,000 fathoms and further prefabricated houses, special kinds of paper and paper products. The Finnish
imports will include 25,000 tons of coke, 1,100 tons of cocos oils, 1,000 tons of lin-seed-oil, 750 tons of blood albuminen, 1,000 tons of nitrogenous fertilizers, 25,000 tons of superphosphates, 1,000 tons of various turbine and other oils, 5,000 tons of pig iron, 2,000 tons of welded water and gas pipes, 2,550 tons of various wire products, and besides, rayon, and woollen and cotton cloth.

On May 20, Finland and Iceland signed a trade agreement covering the period May 20, 1949, to June 30, 1950. The exchange of goods is estimated at about $£ 500,000$ in either direction. Finland will export sawn goods, newsprint, cardboard, plywood and other woodworking industry products, etc., and import from Iceland sheepskins, herring, herring meal, herring oil, and other fishery-products.

The report of the general economic programme committee. The report of the committee headed by Mr. Sakari Tuomioja, Governor of the Bank of Finland, and appointed in February to prepare the general economic programme was handed over to the Cabinet at the end of May.

On account of the urgent nature of its task the committee has restricted itself mainly to introducing some short-term schemes and recommendations pertaining to different spheres of economic policy. It has paid special attention to the adjustment of some disequilibrating factors in the price structure and observed in general the gradual adaptation of economic life to normal conditions. With a view to this the committee has proposed among other things the abolition of the system of corn subsidies, the raising of cereal prices so as to correspond to the domestic production costs and the raising of the rents in houses built before the war to the level required by the present maintenance costs. In the sphere of public finance proposals have been made bearing upon the lowering of the sales tax and the income and property tax. At the same time emphasis has been laid upon the importance of contracting the volume of public finance in the next few years within the scope provided for this purpose.

In the opinion of the committee the regulation of prices and distribution as well as the system of wage control can be
abandoned in Finland in the near future. On the other hand, import restrictions must still be adhered to. Despite the latent need of an adjustment of the exchange rates apparent also in Finland, the committee does not consider the present conditions auspicious to the accomplishment of this measure.

The support of residential building. At its session held on March 18, 1949, the Diet finally adopted three acts forming a complete whole - the so-called ARAVA Bill in order to support the lbuilding of dwellings in urban districts. These acts were presented to the Diet by the Government in November 1948.

In accordance with the act for the support of residential building in urban distriots, which is valid until the end of 1953, a special body - The Housing Committee - was founded to remove the shortage of dwelling accommodation and to support the building of suitable houses. Above all its duty is to plan, to instruct and to control the building activities financially supported by the State and to grant within the means at its disposal the loans, guaranties and subsidies of the State.

In the act concerning the financial aid of the State it is ordered that at least 4,000 million marks are to be included in the budget for 1950 for this purpose and in the years 1951, 1952 and 1953 a transferable appropriation of at least $5,000 \mathrm{mil}$ lion a year,

The act concerning housing loans, guaranties and subsidies, which came into force on April 1, 1949, includes all legislation dealing with the financing of building activities. The loans can be granted to communities, parishes, building societies, dwellings companies and to private persons. According to this act secondary credits in the main are granted. The builders have to try to obtain the primary credit for the time of building from credit instiitutions. Until further notice the interest on secondary loans is one per cent. Primary loans - only granted exceptionally - are to be at the current rate of interest.

The carrying out of the ARAVA plan of course means a considerable relief to residential building which is struggling with great financial difficulties, but it is not capable of bringing about a decisive change in the acute dwelling situation in the urban districts. At the end of 1948 the need for dwellings was approximately 60,000 and in addition to that there will be a yearly extra shortage of $7,000-8,000$ dwellings. In order to get some kind of balance within ten years, $13,000-14,000$ new dwellings should be built every year, and therefore the building of new houses should be increased to more than twice last year's achievement. According to the estimates made by the Research Office of the Ministry for Social Affairs 5,494 new dwellings were built in the principal towns and country towns in 1948, while the corresponding amount in 1947 was 7,210 .
