

## THE FINNISH MARKET REVIEW.

THE MONEY MARKET.
The summer months did not bring about any, change on the money market, but the favourable tendency has continued for about a year. Thus the situation has slightly improved in the summer, partly because deposits have increased and partly because less bank advances have been granted, in both cases under the influence of seasonal circumstances. Export funds are collected particularly in Summer, increasing the influx of money into the banks, especially to cheque accounts. Trade and industry need less loans at this time of the year owing to their slackening activity, reduced purchases of raw material and other reasons. On the other hand, the season is generally unfavourable to saving, as the public then saves less than for instance in Spring. This has been the case also this summer, although in comparison with last year saving has improved very much. At least so far the reduction in the deposit rate as from July 1 has not unfavourably influenced saving.

The deposits of the public in all credit institutions including the cheque accounts increased in June by 2,854 million marks and in July by 4,270 million thereby reaching 116,996 million. Last year the increase was much smaller, only 755 million marks in June and 2,961 million in July. Of the increase deposit accounts recorded 634 million marks in June and 1,878 million in July this year, as against 316 and 1,437 million last year. From the beginning of the year to the end of July the deposit
accounts of the public increased by 11,417 million marks this year as against only 5,194 million in 1948 . The depository movement has thus grown much stronger showing a change in people's attitude towards saving, mostly in consequence of inflation having stopped. - Considering the Commercial Banks separately, the influx of money was still lively in July, cheque accounts receiving the greater part, as in June. They increased by 1,903 million marks and deposit accounts by 618 million. Last year the corresponding figures were 1,173 and 457 million marks. In JanuaryJuly all deposits increased by 7,435 million marks as against 3,029 in the same period of last year.

The Commercial Banks and other credit institutions granted many loans in the spring, but, for reasons mentioned above, less in the summer. The advances of the Commercial Banks were reduced by 549 million marks in. June, but again increased in July ${ }_{4}$ Yet the increase, 854 million, was much less than in the spring months. In the first seven months of the year the increase was 9,021 million marks as against 6,109 million in 1948. In consequence of the deposits in the Commercial Banks having lately increased more than their advances, their cash reserves have increased too and their liquidity has improved much since the turn of the year. At the end of July the cash reserves totalled 6,644 million marks.

The advances of the Bank of Finland have increased only slightily in the summer,
in June by 379 million marks and in July only by 10 million. On the other hand the Treasury bills have increased very much, in June indeed by 300 million only, but, in July by 3,500 million, bringing the total up to 20,230 million. The summer months; particularly July, are poor in State income necessitating an intensive borrowing from the central bank. In the beginning of August the advances of the Bank of Finland were not subject to any important change. Rediscounting has been low all through the summer owing to the easy position of the banks.

## PRICES.

July was an exception from the quiet price movement of late, the indices rising considerably. On July 1 bread and all cereal products were freed from price regulations and the subsidies for them removed. This meant a great increase in prices. In order to counteract the effect of this the prices of milk products were reduced as from the beginning of August, and the sales tax was reduced from July 1. In spite of these price-reducing influences price indices rose in July owing to the increases in cereal prices referred to, but also to the rise in import prices caused by the devaluation of the mark in the beginning of July. The official cost of living index (August 1938July $1939=100$ ), which in May had risen 1 and in June 6 points, in July rose 32 points or about 4 per cent to 814 , but still fell below the previous peak of 816 in August 1948. In July all other sub-indices were reduced, but the food index rose 80 points. The wholesale price index ( $1935=$ 100) also increased rather much in: July, by 44 points to 1,102 . This year the cost
of living has increased only by 2 per cent, while wholesale prices häve slightly fallen. Since the beginning of August unrest on the labour market and an extensive wage activity again seriously hazard prices and the value of money.

TRADE AND INDUSTRY.
Industrial production is now known for the second quarter of the current year according to the "Unitas" index. The total volume was $144(1935=100)$ or somewhat less than in the first quarter when it was 154, but more than in the second quarter of 1948 when it was 137. The index for the home market industry was still much above last year, 182 :as against 168. The index for the export industry, on the other hand, had fallen to 91 from 95 in 1948. The home market industry employed about the same number of workers as before, while the number in the export industries has been constantly decreasing. Unemployment has been negligible in the last few months.

Foreign trade has been favourable in the summer, exports exceeding imports both in June and July. Trade figures indeed show a definite surplus of imports in the first seven months of $1949,3,879$ million marks, but in the same period of last year it was much greater, 7,114 million. Imports amounted to 33,417 million marks and commercial exports to 29,538 million as against 35,673 and 28,559 million a year ago. The favourable result of this year has partly been brought about by the reduction of imports, but also by the increase in exports. Thus the difficulties experienced by exports have not as yet restricted this trade as a whole.

## CONTENTS OF THE TABLES.

I. MONEY MARKET.

Banlc of Finland:

1. Statement.
2. Note issue.
3. Notes in circulation, foreign correspondents and cover for the issue of notes.
4. Note reserve, home loans and rediscounted bills.
5. Treasury bills and balances of current accounts.
6. Rates of exchange.

Commercial Banks:
7. Home deposits and the credits from the Bank of Finland.
8. Home loans.
9. Position towards foreign countries.
10. Foreign Payment Position of all Banks.
11. Deposits in Post Office Savings Bank.
12. Deposits in the Savings Banks.
13. Deposits in Co-operative Credit Societies and Consumers' ${ }^{2}$-operative Societies.
14. Deposits in all Credit Institations.
15. Insurances in life assurance companies.
16. Ohanges in number and capital of limited companies.
17. Bankruptcies.
18. Stock Exchange.
19. Stock Exchange index.
II. STATE FINANCES.
20. Public Debt.
21. State Revenue and Expenditure.
22. Collection of Customs.
23. Collection of Excise dues.
III. TRADE AND INDUSTRY.
24. Value of imports and exports.
25. Value of imports and exports in different classes of goods.
26. Imports of the most important articles.
27. Exports of the most important articles.
28. Foreign trade with various countries.
29. Unit value index of imports and exports.
30. Total sales of wholesale firms.
31. Volume index of industrial production.
32. Building activity.
IV. TRAFFIC.
33. Foreign shipping.
34. State Railways.
V. LEVEL OF PRICES.
35. Wholesale price index.
36. Cost of living index.
37. Bank of Finland building cost index.

## VI. LABOUR MARKET.

38. Index of working hours in industry.
39. Number of unemployed.
40. Cessation of work.

## SOME ARTICLES IN EARLIER ISSUES OF BANK OF FINLAND MONTHLY BULLETIN.

 1947.

7-8 Finland's Balance of Payments for 1947.

- Ore Resources in Finland and the use of them.
9-10 Building in Finland during and after the War.

Tables 24-29 according to Finnish Official Statistios I, A, Foreign Trade of Finland, Monthly Reports.
The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

* Prellminary figures subject to minor alterations.

25.     - VALUE OF IMPORTS AND EXPORTS IN DIFFERENT CLASSES OF GOODS.

The above particulars which are of a preliminary nature, are compiled by the Research Office of the Ministry for Social Affairs.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President Juho Kusti Paasikivi is eleoted for the term March 11, 1946, to March 1, 1950.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1948 are at present as follows:

Number

| Agrarian party | 56 |
| :---: | :---: |
| Social-Demooratic party | 54 |
| Democratic League | 38 |
| Unionist party | 33 |
| Swedish party | 14 |
| Progressive party | 5 |

## 2. LAND.

THE AREA is 337113 square kilometres (Great Britain's area is $245000 \mathrm{sq} . \mathrm{km}$ and Italy's area $310000 \mathrm{sq} . \mathrm{km}$ ). Of the total area $9.4 \%$ are inland waters. On an average $13.5 \%$ of the land in the South of Finland is cultivated, $1.6 \%$ in the North, $7.5 \%$ of the whole land. Of the land area 21.7 mill . ha ( 53.5 mill . acres) or $\mathbf{7 0 . 9} \%$ are covered by forests.

## 3. POPULATION.

NUMBER OF INHABITANTS (1948): 3.9 millions (present population). Sweden (1947) 6.8, Switzerland (1947) 4.5 Denmark (1947) 4.1 and Norway (1947) 3.1 millions.

DENSITY OF POPULATION (1948): In South Finland 22.0 , in North Finland 3.3 and in the whole country an average of 12.8 inhabitants to the square kllometre.

DISTBIBUTION (1948): 75.0 \% of the population inhabit the country, $\mathbf{2 5 . 0} \%$ the towns and urban distriots. The largest towns are (1948): Helsinki (Helsingfors), the capital, 357865 Inhabitants; Turku (Abo) 95446, Tampere (Tammerfors) 94402.

OCCUPATION (1940): agriculture $51.5 \%$, industry and manual labour $21.0 \%$, commerce $5.1 \%$, transport $4.6 \%$, other occupations $17.8 \%$.

LANGUAGE (1940): Finnish speaking $90.0 \%$, Swedish speaking $9.6 \%$, others $0.4 \%$.

RELIGION (1946): Lutheran $96.0 \%$, Greek-Orthodox $1.7 \%$, others $2.8 \%$.

RDUCATION (1947): Practically all persons over 15 years of age are literate. There are three universities (the oldest founded in 1640) and 7 colleges of university standard.

INCREASE OF POPULATION (1947): Births $27.7 \%$, deaths $11.9 \%$ (deaths in France in $194713.0 \%$ and in the United Kingdom in $194712.1 \% / 00$ ) natural increase $18.0 \%$ oe.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESO UROES (1949): The growing stock comprises 1370 million of solid cub. m. incl. bark ( 48379 million cub. feet), of which pine is 45.5 per cent, spruce 32.2 per cent, the rest 22.3 per cent being leaf-trees, chiefly birch. Of the growing stock 1031 million trees, 63.6 per cent of them pines, are up to the standard required for logs (minimum for sawmill logs $18^{\prime} \times 6^{\prime \prime}$ and for plywood logs $14^{\prime} \times 7^{\prime \prime}$ ). The annual increment is about 41 million of solid cub. m. green wood excl. bark ( 1441 cub. ft). The total removal in $1:+4$ ! calculated according to the
use of wood was 40 million cub. m, ( 1425 million cub. ft). In the years 1923 to 1938 , in the then area of the country, it averaged 41 million cub. m. ( 1463 million cub. ft) per year, the corresponding yearly increment being 45 million cub. m . (1. 591 million cub. ft).

AGRICULIURE (1941): Cultivated land 2.3 million heotares, divided as follows: area under cultivation under 10 hectares $33.1 \%, 10-50$ ha $54.4 \%$, $50-100$ ha $7.2 \%$, over 100 ha $5.3 \%$. Cultivated land (1948) is divided between the different kinds of crops as follows: 40.1 \% hay, 11.3 \% temporary grassland for grazing, $16.8 \%$ oats, $6.9 \%$ wheat, $6.0 \%$ rye, $5.5 \%$ barley, $4.3 \%$ potatoes, $9.1 \%$ other. The number of dairies in 1947 amounted to 517.

OWNERSHIP OF LAND (1941): The land area is distributed among different classes of owners approximately as follows: private $49.2 \%$, State $41.6 \%$, Joint Stock Companies etc. $7.1 \%$, communities $2.1 \%$.

INDUSTRY (1946): Number of industrial concerns 5691 , workpeople 236 723, gross value of products of industry 112081 million marks.

LENGTH OF RAILWAYS (1949): 4966 km , of which 4713 km State railways and $\mathbf{2 5 3} \mathrm{km}$ private. The gauge is in general 1.524 m .

MERCHANT FLEET (1949): Steamships 385 (422 723 gross reg. tons), motor vessels 102 ( 67406 gross reg. tons), sailing-ships with auxiliary engine 154 ( 15151 gross reg. tons), othersailingships 12 (14 718 gross reg. tons). Total 653 (519 998 gross reg, tons).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to 1914 the currency maintained its stable gold value, and after the disturbances caused by the war a gold standard was again introduced from January 1, 1926. The unit of currency is the mark (Finnish smarkkan $=$ 100 penniä). According to the monetary law of December 21, 1925 , a gold coin of 100 marks' value shall contain $3^{13} / 19$ grams of fine gold. Since Ootober 12, 1931, the redemption of bank notes in gold is, however, suspended.

STATE FINANOES. According to the finance accounts for 1948 the State revenue was 113692 million marks, of which 99434 million marks were current revenue, and State expenditure 104587 million marks, of which 75175 million marks were current expenditure. The principal sources of revenue were as follows: direct taxes 33 788, indirect taxes 16880 , sales tax 27676 , interest and dividends, etc. 7903 , State property and undertakings (net) 3686 , and capital revenue 14258 . For Public Debt see table 20 in this issue.

MUNICIPAL FINANCES. According to the finance accounts for 1946 expenditure amounted to 13509 million marks. Income from taxation was 6734 million marks, taxed income 79283 million marks. The municipal income tax (non-progressive) averaged $8.5 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland (founded in 1811) is a State Bank. Its head office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleâborg), Kuopio, Joensuu, Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskylä, Kotka and Lahti (Lahtis).

THE COMMERCLAL BANKS (1949): Number 7, possesp 452 offices, where all kinds of banking business is transacted. There is one banking eatablishment per 8687 inhabitants.

The largest banks are Kansallis-Osake-Pankki, Oy Pohjoismaiden Yhdyspankki - Ab Nordiska Föreningsbanken and Helsingin Osakepankki - Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1949): Mortgage banks 5, Savings banks 447, Co-operative Credit Societes 767 and a Central Bank for the latter.

# THE DEVALUATION OF THE MARK. 

BY<br>SAKARI TUOMIOJA, GOVERNOR OF THE BANK OF FINLAND.

GENERAL REASONS FOR ALTEERING THE RATES OF EXCHANGE.
On: July 4 the Board of Management of the Bank of Finlamid decided to raise all the foreign rates of exchange andi thus to devalue the mark abroad.

Finnish experts had for a long time been unanimous in thinking that the mark was appreciably overvalued and that it was merely aquestion of time, when the natural conclusion woulld have to be drawn: to raise the rates of foreign exchange. The fundamental reason, of course, is the fact that prices, wages and other costs have risen so much more in Finland during the war and especially in the post-war period than in the principal markets for Finnish exports as well as in other countries that export the same products. The alterations in the rates of exchange undertaken in 1945 were therefore no longer sufficient to restore an equilibrium. The price level obtaining in May 1949 in different countries is illustrated by the following price indices, for which the prices in 1937 form the basis:

|  | $\begin{gathered} \text { Wholesale price } \\ \text { index } \end{gathered}$ | Cost of living index |
| :---: | :---: | :---: |
| United States | 180 | 165 |
| Great Britain | 213 | 179 |
| Switzerland | 199 | 162 |
| Sweden | 189 | 160 (March) |
| Finland | 866 | 805 |

As the Finnish rates of exchange had risen simultaneously to scarcely treble their pre-war level - the index would be about 276 points - there was a considerable disproportion between the internal and foreign value of the mark. This disproportion, the general consequence of which in normal circumstances is to curtail exports and increase imports, did not at first, when
foreign trade began to flourish after the war, exert any influence worth mentioning, because the general shortage of commodities created a so-called seller's market and Finland was in the happy position that the prices of her export goods rose more on an average than the prices of the goods she requined from abroad. Thus, the price index for exports in 1948 averaged 1278 points, while the corresponding index for imports was only 996 points. So long as the terms of foreign trade were so favourable and sales at such lucrative prices were assured, the question of readjusting the rates of exchange did not arise, although the leading circles realised the latent existence of the disproportion referred to. But as soon as signs of a change in conditions began to appear in the world market, when demanid decreased and prices were lowered, the Finnish exporting industries experienced trouble. Demands began to be put forward in: various quarters that the rates of foreign exchange should be raised and the overvaluation of the mark abroad should thus be remored.

The authorities were, however, for a long time reluctant to alter the rates of exchange, because they were afraid that such a change would upset the equilibrium that had gradually, and especially since the summer of 1948, been achieved in Finnish economy. It was feared that the rise in the price of imports due to the changed rates might lead to a fresh rise in wages, which would have meant a rise in the cost of exports, too, so that the advantage of higher rates appeared doubtfull also in regard to the exporting industries, when taking a slightly longer view. It was also hoped that, by means of rationalization, industry would succeed in reducing its costs under
the force of necessity. It was further considered desirable to await the general adjustment of exchange rates in Europe, the necessity of which was indicated by many signs.

However, the fall in the prices of several important Finnish articles of export on foreign markets in the last few months was so severe that it was no longer possible to postpone a decision without exposing the Finaish exporting industries and thus the whole economy of the country to very great trouble and danger. There was considerable unemployment already towards the end of the winter - partly, indeed, an ordinary seasonal phenomenon - chiefly owing to the reduction of lumber work and building, and this summer some factories working for export have found it necessary to olose down for a time on account of their profitableness having deteriorated so much and their stocks already being so heavy. There were thus two alternatives: either to restore the competitive ability of the exporting industries by determined action or to reduce production greatly and paralyse the entire economic life with all the disastrous consequences. As ai sufficient reduction of costs of production was beyond the bounds of possibility - e.g., the lowering of wages could not be thought of on social and political grounds - the only reasonable choice was to reduce the foreign value of the Finnish' mark as shown in the rates of exchange. This decision was all the more natural, seeing that, as already mentioned, the mark was considerably overvalued abroad, so that in any case it was merely a question of time, when this change would have to be made.

## THE EXTENT OF THE CHANGE.

When it was decided that the time was ripe for alltering the rates of exchange, the extent of the change had to be decided. A calculated parity of purchasing power would, naturally, not serve as a guide, for the decisive factor was not the mutual proportion between the general price levels, but the importance of rendering profitable production and exportation of the principal articles of export. The aim was to make the increase great enough to assure normal conditions of effective production, but at
the same time small enough not to create such an expansion in business enterprise as would exceed the resources of the country and again impose an inflationary burden on economic life. Besides, the increase had to be restricted to such an extent that it would not endanger the equilibrium already established.

Starting from this basis a new, suitable dollar rate was selected and the other foreign currencies were raised to a corresponding degree. In this way the rates of exchange were raised about 17.7 per cent. The new rates for the principal foreign currencies, compared with the former rates, are as follows:

|  | 1938 Dec. | $\stackrel{1949}{\text { old rate }}$ | $\begin{gathered} 1949 \\ \text { new rate } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| U.S. dollar | 48:74 | 136: - | 160: - |
| Pound sterling | 227: - | 547: - | 646: - |
| Swedish crown | 11: 71 | 37: 90 | 44: 50 |
| Danish crown | 10: 14 | 28: 29 | 33: 30 |
| Norwegian crow | 11: 41 | 27: 45 | 32: 30 |
| Guilder | 26:47 | 51: 20 | 60: 50 |
| Swiss franc | 11: 03 | 31: 75 | 37: 25 |

The raising of the rates of exchange was generally, and especially by exporters, recognised as an expedient measure, though some quarters have commented that the adjustment was not sufficient. Indeed, it is evident that it has not yet made all branches of the exporting industry profitable and that Finland's competitive capacity, especially in the United States market, has not yet thereby been made normal. The future alone can show, what measure of success has been attained in the selection of the new rates. At all events it is obvious that, by altering the rates of exchange, the disproportion has been removed to a very great extent which existed between the internal and foreign value of the mark, and so in this respect, too, the foundation for a secure economy has been fortified.

THE POSITION IN REGARD TO THE INTERNATIONAL MONETARY FUND.
It is worth mentioning here that the alteration in the rates of exchange was made in agreement with the International Monetary Fund.

Already at the time Finland joined this international organisation, it was considered natural that the rates current at that time could not be taken as a basis in determining
the final parity of the mark. In response to a request from Finland the Board of the Fund agreed in December 1948 to extend until January 1950 the period for agreement between Finland and the Fund upon an initial par value for its currency. On June 28 the Bank of Finland informed the Fund that it intended to depreciate the mark by about 20 per cent. Two days later, on June 30, the Board of the Fund dealt with the matter and agreed to the measure.

THE INFLUENCE OF THE ALTERED RATES ON THE LEVEL OF PRICES.
A rise in the rates of foreign exchange, of course, tends in ordinary circumstances to raise the prices of imported goods and thus, too, the general level of prices. On this occasion, however, the downwand tendency in the world market is inclined to compensate, at any rate in part, for the rise in prices that would otherwise occur. It should be noted, in addition, that a considerable proportion of foreign trade is based on compensation treaties, in which it was taken into account in advance that the mark was overvalued. For these reasons, and as it has now been possible to reduce taxation in some respects, the alteration in the rates of exchange will probably on this occasion influence the internal price level less than was expected. One can agree in broad lines with the following opinion of the expert, Professor Klaus Waris:
,"The alteration in the rates of exchange will not affect the prices of the greater part of the usual consumption goods at all. The price of home-grown grain, as well as the prices of grain products, has been recently fixed at a level which amply exceeds the price of foreign grain and which there is no need to alter. Besides, the prices of products of domestic animals, imported from abroad, will remain lower than the present local prices, nor is there any cause to expect a rise in the latter. With regard to building and housing costs, the reduction in rates of interest from the beginning of July this year outweighs the rise in rates of exchange. The retail price of sugar and coffee remains unchanged. The rise will affect the prices of textiles and leather goods in time, but only as regards foreign raw materials, so that in
the price of the finished article the rise will be proportionately far less than the rise in the price of the raw material. Further, in so far as the purchase prices of imported goods drop, this decrease will also counteract the tendency towards higher prices created by the alteration in the rates of exchange.

In general, the influence of higher rates of exchange on the new cost of living index will be considerably less than the influence of the rise that has already occurred in the price of grain. Both these factors together may possibly raise the index approximately to the same level as a year ago, i. e., to a level at which wages have already been adjusted for more than a year. The alteration in the rates of exchange will thus not cause a rise in the wages tied to the index.

The benefit of this measure will not generally be apparent as a rise in wages etc., but in the opportunity of putting in a full working week, of selling timber etc. and thus achieving total earnings, which would otherwise be impossible in the present situation. From the point of view of supply and price tendency it is important that exports should be maintained at a level which ensures the supply of imported goods and their competition in the home market to such an extent that profiteering prices, which were still general a couple of years ago in spite of all regulations, should not be possible.

By this rise in rates of exchange trade is by no means released from the necessity of endeavouring to reduce costs in order to attain conditions of profitable production. But it means a great relief to so large a part of our production that we have good reason to believe that we will avoid too severe a crisis."

## CONLUSIONS.

In conclusion it is worth quoting the final part of the statement issued to the press by the Bank of Finland in connection with the alteration of the rates of exchange.
,"The misfortune felt in the life of our whole nation, which the fall in export prices signifies, can be shared most evenly and expediently between all classes of the population by means of raising the rates of exchange, while at the same time this
measure safeguards the possibilities to maintain our vital exports and preserve the standard of living at as high a level as possible.

It is also to be hoped, and even probable, that the fall in import prices which has already started, and will evidently continue, will to a large extent compensate for the rise in the level of prices which the raising of the rates of exchange signifies as regards imported goods.

After the decision that has now been made, which will, it is hoped, create favourable conditions for the continued adrance of our economic life, for satisfactory employment and for the increased welfare of all classes, it is of the utmost importance that in all spheres great self-discipline
should be practised and efforts directed to preventing costs of production, either as regards wages or other factors, increasing again and undermining the basis for the development of our production. A fresh wave of inflation would destroy much of what we have been able to build up during the last few years and do away with the comparatively great degree of welfare which the nation has attained by its efforts.

By observing patience and moderation in our demands we are fully entitled to assume that, with a continued increase in production and a decrease in the burden of war indemnities, we will advance towards a higher standard of living and economic progress in all respects."

# FINLAND'S NATIONAL INCOME AFTER THE WAR. 

BY<br>EINO H. LAURILA, CHIEF AOTUARY OF THE CENTRAL STATISTICAL OFFICE.

## INTRODUCTION.

As in other countries, the calculation of the national income was formely entirely dependent in Finland on the efforts of individual scientists. The most important achievement of that period were Professor Valter Lindberg's researches into the national income of Finland in 1926-19381) which were carried out with the help of grants from the Bank of Finland and the Rockefeller Foundation. In this investigation the calculations were based on the value added method and the national income at market prices was employed as the basic concept. As the researches were mainly based on statisties of production referring to different trades, it is possible on the basis of them to obtain an exact

[^0]analysis of the contribution of different trades to the national income.

At the beginning of 1948 calculations of the national income were initiated on a new basis in the Central Statistical Office and since then the national income statistics have formed an important branch of the official statistics in Finland. The task of the National Income Unit established in the Central :Statistical Office consists on the one hand in drawing up current estimates for recent years for the benefit of the Government's economic policy and on the other in making a final inquiry into the fluctuations of the national income and its constituent components, at any rate from 1938 onwards, but, if passible, also for earlier years, in order to obtain sufficiently long time series for the purposes of economic research.

## CONCEPTS AND METHODS.

The definitions of National Aggregates adopted in Finland are approximately the
same as in the other Northern countries. The basic concept, the net national product, is defined as the aggregate of the net values added originating in all branches of economic activity in the country during a year, excluding net income from abroad. The national income, again, is defined as the aggregate of income payments accruing to the country's factors of production with the addition of net income from abroad (interest and dividends). Both these aggregates are measured at factor cost. As unilateral transfers abroad (war indemnities) have been of considerable importance in Finland in recent years the further concept of disposable national income has been used. This concept is defined as the national income in the sense referred to with the addition of unilateral transfers from abroad. It is measured in gross figures at market prices, and when it is employed it might be called national expenditure. Gross national product signifies the net national product in the sense quoted above with the addition of allowances for depreciation and maintenance. The gross national product is measured both at market prices and at factor cost.

The value added method is still the basic method of estimating the national income in Finland according to which the net value of goods and services produced is established for different trades. The net value is the gross value of production less the value of the goods and services purchased from other trades and consumed in production, and less the consumption of capital. This method is based on statistics of production which are slightly better than other statistics generally. In those trades for which the net value added cannot be obtained in the manner referred to, the income payments going to the factors of production have formed the basis of calculation. By means of the net value added of the different trades the net national product at factor cost is arrived at. In determining the national income at factor cost as the sum of distributive shares, i.e., as wages, capital income etc., the balance sheets of companies and taxation statistics have had to be used, as the direct information regarding these
components is very scanty. An investigation of the national income from the point of view of expenditure presents still greater difficulties, because no usable statistics regarding consumption and investment are actually available at all. Consumption and investment have therefore had to be determined on the basis of the statistics of production and foreign trade, starting from the final product.
The real national income has been measured by combining the indices of production, calculated for the different trades, the net value added in the base year (1938) for the different trades being employed as the weighting measure. The different indices of production again have been calculated by various methods.

## THE NET NATIONAL PRODUCT AT FACTOR COST.

As a result of the calculations of the national income Table 1 gives particulars of the contribution of different trades to the national product. These particulars, like those given later, are still preliminary data. The following non-monetary items have been included in the calculations: the farmers' consumption of their own produce valued at prices paid to producers, the imputed rent of owner-occupied houses, and payments in kind to domestic servants and others. On the other hand, the unpaid services of housewives have not been taken into account. State-owned enterprises have been referred to the different trades and treated in the same way as private enterprises, whereas the contribution of general government is measured by wages and salaries. Payments of employers and employees to social insurance and pension schemes have been included.

The figures in the table show that the net national product, expressed in current prices, has risen considerably since the war. It will be noted further on, what part of this rise consisted of a rise in prices and what part of an increase in the volume of production. To a considerable extent the figures in the table are self-explanatory. It need only be mentioned that the share of industry and handicrafts in the national product has further increased since the war and was about 32 per cent in 1948

Table 1. Net national product at factor cost (thousand million marks)

|  | 1938 | $1 ¢ 45$ | 1¢.46 | 1047 | 1948 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Agriculture | 5.73 | 21.28 | 27.76 | 51.91 | 64.94 |
| Fishing and hunting | 0.20 | 0.71 | 1.79 | 2.11 | 2.54 |
| Forestry | 4.89 | 11.06 | 26.33 | 28.19 | 38.90 |
| Manufacturing and handicrafts | 7.87 | 29.00 | $\pm 7.34$ | 67.12 | 100.81 |
| Building and construction | 1.46 | 3.80 | 7.87 | 14.55 | 20.70 |
| Transport and communications | 1.72 | 4.82 | 8.86 | 13.37 | 18.78 |
| Trade, banking, insurance, etc. | 3.68 | 12.24 | 19.22 | 26.24 | 39.21 |
| Domestic service | 0.31 | 1.10 | 1.72 | 2.22 | 3.01 |
| Other services | 2.50 | 3.49 | 3.89 | 4.75 | 5.47 |
| Government | 1.93 | 8.50 | 10.32 | 15.26 | 20.60 |
| Deductions 1) | $-0.62$ | $-1.55$ | -2.10 | -2.99 | $-4.20$ |
| Net national product at factor cost | 29.67 | 94.45 | 153.00 | 222.73 | 310.76 |
| Net income from abroad | $-0.15$ | -0.27 | -0.91 | -1.27 | -1.09 |
| National income at factor cost | 29.52 | 94.18 | 152.09 | 221.46 | 309.67 |

(about 26 per cent in 1938). The rise noticeable in the case of agriculture from 1946 to 1947 is due to some animal products having been decontrolled in 1947, whereupon their prices advanced greatly. The prices of agricultural produce have, besides, generally been relatively higher than those of other products since the war: from 1938 to 1948 the prices of industrial products rase 8.2 fold, of forestry products 10.3 fold, but of agricultural produce 11.9 fold. (Black market dealings have not been taken into account in calculating the national income.)

THE REAL NATIONAL INCOME.
Measured at prices for 1938, the net national product has been as follows since the war:

|  | Thousand million | Index |
| :---: | :---: | :---: |
| 1938 | 29.67 | 100.0 |
| 1945 | 24.74 | 83.4 |
| 1946 | . 28.08 | 94.6 |
| 1947 | 29.64 | 99.9 |
| 1948 | 31.64 | 106.6 |

The increase in production in the postwar period, when there was full employment all the time, has been fairly large. However, the number of people engaged in productive work has also grown at the same time. If this growth is taken into account, it may be said that the real

[^1]national income in 1948 was approximately on the same level as in 1938, a year that had until then recorded the highest economic activity.

Considerable changes have occurred since the war in the share of the different trades in the net national product at constant prices. In particular, the great rise in industrial production should be noted in estimating the quick recovery since the war. The Central Statistical Office's index for industrial production already rose higher in 1946 than it had been in 1938 and was 117 in 1947 and 134 in 1948, if the level in 1938 is taken as 100 . Thus the share of industry in the real national income has increased from about 26 per cent in 1938 to nearly 33 per cent in 1948. Agricultural production, on the other hand, is still - on account of its greatly reduced productive capacity - at a lower level than before the war. Its index in 19451947 was still below $70(1938=100)$, but rose to 84 in 1948. The increase in production from 1947 to 1948 was largest in agriculture, a fact that exerted an appreciable steadying influence on economic life. Forestry production was especially high in 1946-1947 owing to the heavy fellings in the seasons of $1945 / 46$ and $1946 / 47$ I(the possible reduction of forest capital has not been taken into account in these preliminary estimates). This circumstance has been of considerable significance to the woodworking industries, the stocks of raw materials of which were very small just as the war came to an end. Transpont and commerce have been on a higher level in

all the post-war years than before the war; their share in the real national income in 1948 was appreciably larger than in 1938. Finally, as regards the share of the public sector, it is natural that during the war it was much higher than after the war. Its contribution to the real national income was, however, still about 60 per cent higher in 1948 than in 1938.

THE FLOW OF INCOME.
In Table 2 the changes will be seen which have occurred since the war in the distribution of income by major types of income. It should be noted that the data given are based on rather poor material, so that they primarily only show some tendencies.

Table 2. National income at factor cost (thousand million marks)

|  | 1938 | 1945 | 1946 | 1947 | 1948 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Wages and salaries | 14.95 | 54.15 | 93.59 | 131.98 | 189.33 |
| Income of unincorporated enterprises | 7.67 | 25.75 | 35.00 | 59.32 | 77.11 |
| Rent and interest | 4.03 | 5.10 | 10.35 | 12.41 | 18.04 |
| Direct taxes of companies | 0.90 | 5.79 | 6.92 | 9.23 | 12.36 |
| Profits of companies after taxation | 1.97 | 3.39 | 6.23 | 8.52 | 12.83 |
| National income at factor cost | 29.52 | 94.18 | 152.09 | 221.46 | 309.67 |
| Indirect taxes less subsidies | 3.04 | 15.81 | 29.00 | 35.13 | 60.09 |
| National income at market prices | 32.56 | 109.98 | 181.09 | 256.59 | 369. |

In the first place, since the war a considerably larger part of the national income (at factor cost) has gone in compensation of employees, i.e., in wages and other labour income, than before the war. In 1938 wages constituted about 50 per cent of the national income, but in 1948 about 60 per cent. The wages of the different classes of wage-earners have risen very unevenly: the wages of industrial workers were 11.8 times as high in 1948 as in 1938, lumbermen's wages 12 times as high, farm labourers' wages nearly 14 times as high, while, for instance, the salaries of public servants were only 6.6 times as high. Naturally, such a development has led to a more even distribution
of incomes. The fact that capital income (which does not include interest on State loans) was about 14 per cent of the national income in 1938, but only 5-7 per cent in 1945-1948, has also tended in the same direction. Farmers' income represents the largest sub-section among the income of those engaged in private enterprise. This income has, on an average, moved in the same proportion as the total national income. The year 1946 forms an apparent exception. This is due to larger quantities of agricultural produce than before having gone in that year to the black market. Table 2 shows that the direct taxation of companies has been many times heavier since the war than in 1938. This

Table 3. Net national product and related aggregates
(thousand million marks)

|  | 1938 | 1945 | 1946 | 1947 | 1948 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Net national product at factor cost | 29.67 | 94.45 | 153.00 | 222.73 | 310.76 |
| Indirect taxes less subsidies | 3.04 | 15.81 | 29.00 | 35.13 | 60.09 |
| Net national product at market prices | 32.71 | 110.26 | 182.00 | 257.86 | 370.85 |
| Depreciation and maintenance | 2.83 | 8.34 | 13.66 | 18.17 | 27.55 |
| Gross national product at market prices | 35.54 | 118.60 | 195.66 | 276.03 | 398.40 |
| Net income from abroad | -0.15 | -0.27 | -0.01 | $-1.27$ | -1.09 |
| Gross national income at market prices | 35.39 | 118.33 | 194.75 | 274.76 | 397.31 |
| Net unilateral transfers | $1+0.08$ | -9.05 | -7.60 | -12.03 | -12.17 |
| Disposable (gross) national income | 35.47 | 109.28 | 187.15 | 262.73 | 385.14 |

has, of course, restricted the net profits of companies considerably. In 1948 taxation was lowered to some extent, and the net profits of companies showed a corresponding rise. However, their share in the national income in 1948 was no more than 4 per cent, whereas in 1938 it had been 7 per cent.

As exact taxation statistics are not yet available later than for 1945, it is not possible here to examine the post-war changes in the size distribution of income nor the impact of taxes on the distribution of income. It is therefore also impossible to supply data concerning the course of disposable personal income. Table 3, however, in which particulars are given of the national income aggregates, illustrates the development of the disposable national income defined as above.

As is well-known, Finland has had to carry a heavy burden of indemnities since the war which, naturally, has tied down the productive forces of the country to a considerable extent. In the present investigation the value of the war indemnity payments has been taken in accordance with the statistics of exports, for reasons connected with the methods of calculation. In reality the State expenditure on war indemnities in 1946-1948 was still larger, namely:

|  | Thousand million mark |
| :---: | :---: |
| 1945 | 8.27 |
| 1946 | 11.32 |
| 1947 | 15.03 |
| 1948 | 16.13 |

In addition to the actual war indemnities there have been various costs imposed by the Armistice Treaty. In proportion to the national income at market prices the actual
war indemnities were: 7.5 per cent in 1945, 6.2 per cent in 1946, 5.9 per cent in 1947 and 4.4 per cent in 1948.

## THE FLOW OF PRODUCTION.

Some data have already been given above concerning the development of the volume of production in different trades since the war. Special attention was drawn to the great growth of industrial production. Considerable structural changes have, besides, occurred in industry during and after the war. The output of capital goods has grown very much more than the output of consumer goods. The production index for consumer goods was 112 in 1948 and the index for capital goods 186 (1938. $=100^{\prime}$ ). This is also illustrated by the following fact: while the gross value of production of all industry rose to 12.0 times its former amount from 1938 to 1948, the gross value of production of consumer goods rose during the same period to 9.7 times, but the production of capital goods advanced to 17.6 times. The volume of production in the building trade was also on a higher level in 1947-1948 than in 1938: index 107 and $111(1938=100)$; as building costs have also risen very much, the value of output in building increased to 17.8 times from 1938 to 1948.

The share of capital goods in the gross national product, the market value of the nation's output of goods and services, has been considerably larger in all the postwar years than prior to the war. Yet, at the same time the share of capital goods in the war indemnities has increased from year to year and was as much as 80 per cent in 1948. The share of capital goods in imports from abroad has, indeed, in-

Table 4. Disposable national income and its utilization (thousand million marks)

creased in the same proportion as the total imports - their volume is still slightly below the 1938 level - but in any case the country had at its disposal in 19461948 more capital goods than in 1938, at a rough estimate quite 10 per cent more. Table 4 shows that the part of the disposable national income which was employed for gross investment has constantly increased since 1945. The gross investment in 1938 was about 22 per cent and in 1948 about 30 per cent of the total of consumption and gross investment. (Consumption was correspondingly about 78 per cent and about 70 per cent, though changes in stocks have not been taken into account.) Owing to incomplete statistical material it is impossible to make precise calculations of investment activity in different trades. It can only be stated that investments in industry producing war indemnity goods, in settlement activity and in reconstruction in Northern Finland have swallowed up large funds.

It has already been mentioned that the output of consumer goods has proceeded considerably more slowly than the output of capital goods, primarily because of the limited productive capacity of agriculture. On the other hand, in industry the output of consumer goods was already 12 per cent larger in 1948 than in 1938, while in 1947 - when the shortage of raw materials still continued - it was below the 1938 level. Both the exports and imports of consumer goods have been relatively less important in the post-war years than before the war. However, considerable structural changes have occurred in them which have to some extent influenced the composition of the nation's total expenditure on consumer goods: exports of livestock products almost completely ceased, and grain imports greatly increased, while the imports of
several durable consumer goods were considerably reduced. An exact distribution of consumption into classes according to purpose has not yet been made in the preliminary figures quoted in this inquiry. The primary material, indeed, enables this to be done, but on the other hand there are no such statistics of consumption according to the subjective method as would make it possible to determine the total consumption and check the results obtained lby the final product method. As regards that part of the national product which official organs buy for their own purposes, it is particularly difficult to investigate on the basis of available statistics. The State balance sheet and the statistics of municipal finances do not make this fully possible. This part is, however, much smaller than it is generally believed to be. For the present inquiry it has been estimated at about 14 per cent for 1947 without the war indemnities and about 20 per cent including them.

In order to obtain a conception of the real movement of the total consumption since the war, a rough estimate of the volume of different classes of the final product has been made. The volume indices obtained have then been combined into a total index by a weighting system based on the gross values of production (the result of the gross investment then obtained has already been referred to). If 1938 is taken as 100 , the volume of consumption was 105 in 1948. Taking the growth of the population into account, consumption in 1948 would thus have been on about the same level as in 1938. This gives a price index of $970(1938=100)$ for the total consumption. For the same year the official wholesale price index (reduced to $1938=100$ ) was 956 , and the cost of living index 793 or considerably lower.

## ITEMS.

War indemnity. At the end of June the fifth year of reparations payments came to a close. In that year the alleviations granted by the Soviet Union were applied for the first time: the yearly deliveries of 35.5 million reparations dollars (of pre-war purchasing power) were reduced to an average of 17.5 million dollars' worth of goods. The program of the year was succesfully fulfilled in spite of slight. delays as to some machinery. The deliveries, which totalled about 19.4 million reparations dollars, consisted of machinery and equipment (about 10.4 million dollars) and vessels (about 8.1 million dollars). In the first five reparations years the deliveries amounted to about 172.5 million dollars. Thanks to the achievements of the machine industry and shipbuilding, the amount stipulated for these year was thus exceeded by 2 million dollars. In the next three years about 54 million dollars have to be paid.

In spite of the good result of the year recently ended, the delays caused considerable penalties, about 441,000 reparations dollars. As in previous years the Soviet Union has cancelled these penalties at the Finnish Government's request, in consideration of the surplus in total deliveries.

New foreign credits. On August 1, 1949, a contract was signed in Washington whereby the International Bank for Reconstruction and Development granted a loan of 12.5 million dollars to the Bank of Finland. The loan is intended to finance Finnish purchases of machinery and implements for the reconstruction and renovation of the woodworking industry, new power stations and the enlargement of the production of limestone meal for agriculture. Woodworking will get about 10 million dollars of the loan, the power stations 2 million and the limestone industry about $1 / 2$ million. The loan will
primarily be used for the importation of special machinery and such products as are difficult to obtain and will therefore be of great importance to Finnish economy. The purchases will mostly be made in the United States.

The loan, which has a Finnish State guarantee, runs for 15 years at an interest of 3 per cent and an annual commission charge of 1 per cent to be paid to the reserve fund of the IBRD under the stipulations of the Bank's regulations. Amortization begins on February 1, 1953, and the loan will be fully repaid by August 1, 1964.

Increase in the share capital of a Commercial Bank. On Augast 11, 1949, the administrative board of the Helsingin Osakepankki - Helsingfors Aktiebank decided to suggest to the shareholders' meeting that the share capital of the bank be increased by 120 million marks. The present shareholders and the depositors will be offered $1,200,000$ new shares at a nominal price of 100 marks. Hereby the share capital will be increased to 340.6 million marks and the bank's own funds to 444.7 million marks.

Trade agreements. Two separate tripartite agreementss between Finland, the Soviet Union and Poland, and between Finland, the Soviet Union and Czechoslovakia were signed on June 29, 1949. Under the former agreement Finland will deliver 80 million roubles' worth of goods before July 1, 1950, to the Soviet Union and under the latter 20 million roubles' worth, or a total of about 2,500 million marks. The most important export goods are 345,000 sq. $m$. of wooden houses representing about half of the total export value fixed, and 25,000 stds of sawn timber, and piles, lake and river tugs,
wooden fishing trawlers, copper cable and copper products. The Soviet Union again delivers goods for the corresponding amounts to Poland and Czechoslovakia, while from Poland Finland gets coal for 80 million roubles and from Czechoslovakia chiefly sugar, machinery and chemicals for 20 million roubles.

On July 11, 1949, Finland and Polamd signed a statement which established that, in the first half of the current year, Finland has delivered goods to Poland in excess of the quota of the trade agreement which were valued at about 2.6 million dollars. In addition Finland will deliver 3,000 tons of rayon cellulose and 1,000 tons of rayon in 1949, amounting to about 4.9 million dollars. Also Polish exports will be supplemented this year by 4.5 million dollars' worth of goods, primarily various chemicals, cloth and yarn, iron wire, textile? and agricultural machinery, cast iron pipes, zink sheets, and fruit.

Finland and Rumania signed an agreement on 'July 13, 1949, obliging Finland to pay back an earlier wheat loan of about 19 million Swiss francs, in goods, within one year of that date. Rayon, tugs and other vessels, machinery and implements for the wood and paper industry, and electrical cable are the chief articles concerned.

Finland and the Japanese occupation authorities signed a payments and trade agreement on June 21, 1949, providing for Finnish exports of rayon cellulose, kraftpaper, gun turpentine, pine oil, animal glue, chains, and felspar to Japan until June 30, 1950. Japanese exports will include textile fabrics and yarns, fish nets, steel strips, drugs, oils and waxes, bamboo, sponges, zinc oxide, and celluloid. Trade is estimated at about 2.5 million dollars in either direction during the contracted period.

Finland and the occupation authorities in Western Germany signed a supplementary trade agreement on July 11, 1949, which will be in force until the end of the year and cover a total trade of about 8.5 million dollars in either direction. Finnish exports will include goods such
as nature hard cheese, red whortleberries, Iceland moss, square timber, structural timber, sawn timber, wooden reels, pulpwood, fibre boards, cardboard, various kinds of paper, and furs. The most important Finnish imports again are rolled steel products, industrial, agricultural and electrical machinery and equipment including spare parts, electrical installations, fine mechanios and optics, office machines and cash registers, hand tools, technical glassware, automobiles, motorcycles, textile products, miscellaneous chemicals and dyestuffs, farmaceutical specialties, and nursery plants.

Forestry Congress. At the wish of the Food ond Agricultural Organization of the United Nations the Finnish Government had invited the Third World Forestry Congress to Helsinki on July 7-19, 1949. The Congress, which was preceded by various tours to different parts of the country, was attended by some 500 persons, about half of them foreigners from 28 countries. Professor Eino Saari '(Finland) was appointed President of the Congress. In its last session the Congress unanimously passed a general report including a statement of the most important discussions carried on in the different sections and the recommendations of the Congress.

The publications of the Bank of Finland: In the Series B of the ,,Suomen Pankin taloustieteellisen tutkimuslaitoksen julkaisuja - Publikationer utgivna av Finlands Banks institut för elkonomisk forskning" (Publications issued by the Bank of Finland Institute for Economic Research) the following new publication has appeared:
10. Heikki Valvanne, Valtion tulot ja menot sekä kassaliike. Ehdotus tu:tkimusmenetelmäksi ja tämän sovellutus voosiin 1945-1947. (State income and expenditure and turnover on cash account. A research plan and its application on the years 1945-1947.) Published only in Finnish.
