

## THE FINNISH MARKET REVIEW

## FOREIGN TRADE

A steady rise from the relatively low level of 1953 was recorded in 1954. The value of exports increased by 25,100 mill. marks to 156,600 million, which was about the same as in 1952, though still some 16 per cent below the Korean peak of 1951. The volume of exports, on the other hand, constituted a new all-time record. Imports, which had soared in 1952 in consequence of the extremely high export earnings of the preceding year, had been pressed down by 60,300 mill. marks to 121,900 million in 1953. They were now allowed to rise considerably and totalled 152,100 million (ineluding 1,155 millions' worth of monetary gold). The balance on trade account thus showed a surplus of about 4,500 mill. marks.

The bulk of the increase in exports fell, quite naturally, to the share of the forest industries and was fairly evenly divided among the different branches. The increase in imports was most marked in the groups of textile raw materials and products and base metals and articles therefrom. The most marked change in the country composition was the drop in the share of the USSR from 23.5 to 19.7 per cent of the total exchange of goods. The United Kingdom, the share of which rose from 19.0 to 20.7 per cent, thus became again the foremost trading partner of Finland. The share of the Eastern Bloc (incl. China) fell from 32.9 to 28.3 per cent.

The prospects for the current year are reassuring so far. The market for the Finnish staple export products still shows a
marked stability, and slight price increases have been recorded in the case of both chemical and mechanical pulp and some paper products. A basis for a steady increase in exports has been provided by the fresh capacity that was added to the Finnish paper industries last year, and these industries will continue to expand in the current year. Production of newsprint, e. g., is expected to grow by some 100,000 tons, which marks a rise of more than 20 per cent from the 1954 level.

A further drop in the share of the Eastern Bloc in Finnish foreign trade is predicted by the trade agreements concluded in January with the two predominant trading partners of Finland, the United Kingdom and the USSR (see Items).

## THE FOREIGN PAYMENTS POSITION

The net exchange reserves of the Bank of Finland and the commercial banks grew by 2,500 mill. marks over the last quarter of 1954. The dollar reserves, after having decreased during the third quarter, now increased by 700 mill. marks. The net reserve of EPU currencies grew by 4,900 mill. marks, mainly owing to a reduction of the clearing debt to Western Germany and an increase of balances in Norwegian and Danish crowns. The reserves of Eastern Bloc currencies continued to decrease - particularly the balances in the USSR, which paid another 10 mill. roubles in Western currencies to cover its trade deficit. As for other currencies, the clearing debt to Brazil was further reduced.

During 1954 as a whole the exchange po-
sition was considerably strengthened: the currency reserve increased by a net amount of 8,500 mill. marks to 36,400 million, while its composition improved. Gold and dollar reserves grew by 900 mill. marks to 14,100 million and the reserves of EPU currencies by 12,800 to 17,000 million. The latter net increase was partly due to a clearing debt that amounted to 5,600 million at the beginning of the year - being almost completely settled. Thus, by the end of the year the clearing debt in EPU currencies had dropped to less than 600 mill. marks, the main part of which consisted of French francs. Balances in Eastern Bloc currencies decreased by 3,100 mill. marks to 8,100 million; 2,300 million of the decrease was due to the payments by the USSR in gold and Western currencies. Apart from the growth of the clearing debts to Argentina and Brazil, the reserves of other currencies were practically unchanged. The net indebtedness in this group increased from 700 to 2,800 mill. marks.

The development of the exchange situation during 1954 was thus nearly as favourable as in the year before. Admittedly, the net reserves grew more in 1953, by 11,800 mill. marks, but on the other hand imports from the West had to be strictly controlled in that year in order to improve the payments position, this resulting in the depletion of previously accumulated stocks of import goods. In 1954, on the contrary, the strengthening of exchange reserves was no more the dominant factor for the foreign exchange policy, but the increase in export receipts was devoted - in consideration of the supply situation and the expansionary tendencies on the money market - in the first place to relaxing import controls.

In October-December licensing in Western currencies, at 28,000 mill. marks, remained on the level of the two preceding quarters. Licensing in these currencies thus rose to 108,000 mill. marks for the whole year, which was 43,000 mill. more than in 1953. Licences issued in dollars increased by 77 per cent, in EPU currencies by 70 per cent and in other Western currencies by 45 per cent. - As for the Eastern Bloc, no currency restrictions were necessary. Import licences were granted to the value of 47,000 mill. marks or 7 per cent less than in 1953.

As payments for imports began to grow during the last quarter of 1954 and an exceptionally high amount of licences expired at the turn of the year, the stock of outstanding licences decreased by 20,000 mill. marks in October-December. It amounted to 42,400 mill. marks at the end of the year or only some 2,000 million more than a year earlier. The share of outstanding licences in Western currencies nevertheless rose from 27,600 to 34,900 mill. marks over the year. As the latter amount, however, included over 9,000 mill. marks in forward licences stipulated by long-term payments schedules, the relation between foreign payments obligations and the payments position may be considered fairly satisfactory in view of the present export conditions.

The recent improvement in the exchange position has made it possible to intensify efforts to get rid of bilateralism in foreign trade and payments. Last September the clearing agreement with Western Germany, providing a swing credit of $\$ 20$ million, was replaced by a decentralized payments agreement, under which all payments are made in D-Marks with limited convertibility. According to a trade agreement of the same date, only about one fourth of Finland's estimated export receipts are tied to import quotas. The rest of the receipts are freely disposable, whereas under the previous agreement all export earnings had to be used for imports from Germany. - Similarly, the clearing agreement with Norway was replaced, at the beginning of January, by a decentralized payments agreement, according to which any trade balances are to be covered by third country currencies.

The clearing agreements are intended to be systematically terminated as soon as agreement on this point is reached with the trade partners in question. The employment of swing credits for levelling fluctuations in payments is to be abandoned in favour of normal bank credits supplemented - when necessary - for instance with central bank arrangements of stand-by nature. As for trade agreements, the aim is to reduce the fixed import quotas and widen the margin between export earnings and import obligations.

January 31, 1955.

## CERTAIN PARTICULARS ABOUT FINLAND

## 1. FORM OF GOVERNMENT

Finland formed a part of the kingdom of Sweden from 1154 to 1809; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The President for the current period, March 1, 1950, to March 1, 1956, is Juho Kusti Paasikivi who has been in office since March 11, 1946.

The Diet, composed of 200 members, is elected by universal suffrage. The number of seats of the different parties in the Dlet elected in 1954 are as follows: Soclal Democrats 54, Agrarians 53, People's Democrats 43, Conservatives 24, Swedish Party 13, Finnish People's Party (former Liberal Party) 13.

## 2. LAND

THE AREA is 337,009 square kilometres (Great Britain's area is $245,000 \mathrm{sq}$. km and ltaly's area $301,000 \mathrm{sq} . \mathrm{km}$ ). Of the total area $9.4 \%$ are Inland waters. On an average $14.4 \%$ of the land in the South of Finland is cultivated (1949), $2.0 \%$ in the North, $8.2 \%$ of the whole land. Of the land area 21.7 mill. ha ( 53.5 mill. acres) or $70.9 \%$ are covered by forests.

## 3. POPULATION

NUMBER OF INHABITANTS (1953): 4.1 millions. Sweden (1952) 7.1, Switzerland (1953) 4.8, Denmark (1952) 4.3 and Norway (1952) 3.3 millions.

DENSITY OF POPULATION (1953): In South Finland 23.4, in North Finland 37 and in the whole country an average of 13.7 inhabitants to the square kilometre.

DISTRIBUTION (1953): $66.8 \%$ of the population inhabit the country, 33.2 \% the towns and market towns. The largest towns are (1953): Helsinki (Helsingfors), the capital 394,500 inhabitants, Turku (Åbo) 106,800, Tampere (Tammerfors) 105,000 .

OCCUPATION (1950): Agriculture and forestry $42 \%$, industry $29 \%$, commerce $7 \%$, transport and communication $6 \%$, services $8 \%$, other economically active persons $1 \%$, economically inactive persons $0 \%$.

LANGUAGE (1950): Finnish speaking $91.1 \%$, Swedish speaking $8.6 \%$, others $0.8 \%$.

EDUOATION (1952): Practically all persons over 15 years of age are literate. There are three universities (the oldest founded in 1640) and 12 colleges of university standard.

INOREASE OF POPULATION (1952): Births $23.0 \%$, deaths $9.5 \%$, increase $12.8 \%$. Deaths in France (1952) $12.3 \%$ and in Great Britain (1952) $11.4 \% / 00$

## 4. TRADE AND COMMUNICATIONS

NATIONAL INCOME (1953, in thousand million marks): Gross national income at market price 805. Net national product at factor cost, by origin: agriculture 81 (13 \%), forestry and fishing 61 ( $10 \%$ ), manufacturing 195 ( $32 \%$ ), construction $60(10 \%)$, transport and communications 41 ( $7 \%$ ), commerce, banking and insurance 77 ( $13 \%$ ), public activities 59 ( $10 \%$ ), other services 34 ( $5 \%$ ), total 608. Volume index 122 (1948 $=100$ ).

FOREST RESOURCES (1950): The growing stock comprises 1,370 milliton of solid cub. m. incl. bark ( 48,384 million cub. $\mathrm{ft})$, of which pine is $45.5 \%$, spruce $32.2 \%$, the rest $22.3 \%$ being leaf-trees, chiefly birch. Of the growing stock 7,471 million cab, $\mathrm{ft}, \mathbf{6 5 . 0} \%$ of them plnes, are up to the standard required for logs (minimum for sawmill logs $18^{\prime} \times 6^{\prime \prime}$ and for veneer logs $18^{\prime} \times 7^{\prime \prime}$ ). The annual growth is about 41 million of solid cub. m. green wood excl. bark ( 1,448 mill. cub. ft). The
total removal in 1949 calculated according to the use of wood was 40 million cub. m. ( 1,413 million cub. $f t$ ). In the years 1923 to 1938 in the then area of the country, it averaged 41 million cub. m. ( 1,448 million cub. ft) per year, the corresponding yearly growth being 46 million cub. m . ( 1,624 million cub. ft).

AGRICULTURE (1950): Cultivated land 2.5 million hectares, divided as follows: area under cultivation under 10 hectares $41.2 \%, 10-50 \mathrm{ha} 53.6 \%, 50-100 \mathrm{ha} 3.6 \%$, over 100 ha $1.6 \%$. Cultivated land (1953) is divided between the different kinds of crops as follows: $43.4 \%$ hay, $7.7 \%$ temporary grassland for grazing, $19.0 \%$ oats, $5.0 \%$ wheat, $3.7 \%$ rye, $6.7 \%$ barley, $3.7 \%$ potatoes. $10.8 \%$ others. Dairy units in operation in 1953 amount to 459.

OWNERSHIP OF LAND (1950): The land area is distributed among different classes of owners approximately as follows: private $56.9 \%$, State $35.0 \%$, joint stock companies etc. $6.4 \%$, communities $1.7 \%$.

INDUSTRY (1952): Number of industrial concerns 5,994 , workpeople $\mathbf{2 7 0 , 4 5 3}$, gross value of products of industry 508,355 million marks.

LENGTH OF RAILWAYS (1954): $5,046 \mathrm{~km}$, of which $4,859 \mathrm{~km}$ State railways and 187 km private. The gauge is in general 1.524 m .

MERCHANT FLEET (1. 4. 1954): Steamers 327 (419,890 gross reg. tons), motor vessels 145 ( 236,320 gross reg. tons), sailing vessels with auxiliary engines 124 (11,797 gross reg. tons). Total 596 ( 668.007 gross reg. tons).

## 5. FINANCE AND BANKING

CURRENOY. Since 1880 Finland has its own monetary system. From 1877 up to 1914 the currency maintained its stable gold value, and after the disturbances caused by the war a gold standard was again introduced from January 1, 1926. The unit currency is the mark (Finnish omarkkas $=100$ penniai). Since October 12, 1931, the redemption of bank notes in gold is, however, suspended. In 1948 Finland joined the International Monetary Fund and on June 27, 1951, the official par value of the mark was established at 230 marks per one U.S. dollar, the selling rate of the Bank of Finland being 231 marks and its buying rate 229 marks.

STATE FINANCES. According to the finance accounts for 1953 the State revenue was 223,795 million marks, of which 185,969 million marks were current revenue, and State expenditure 221,167 million marks, of which 141,943 million marks were current expenditure. See tables 21-23 in this issue.

MUNICIPAL FINANOES. According to the finance accounts for 1952 expenditure amounted to 08,483 million marks. Total revenue was 100,367 million marks, of which income from taxation was 57,395 million marks. The munioipal income tax (non-progressive) averaged $10.9 \%$ of the ratepayers income.

THE BANK OF ISSUE. The Bank of Finland (founded in 1811) is a State Bank. Its head office is in Helsinki (Helsingfors) with branches in Turku (Abo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleåborg), Kuopio, Joensuu, Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus). Jyväskylia, Kotka and Lahti.

THE COMMERCIAL BANKS (1954): Number 6, possess 511 offices, where all kinds of banking business is transacted, There is one banking establishment per 8.200 inhabitants.

The largest banks are Kansallis-Osake-Pankki, Oy Pohjoismaiden Yhdyspankki - Ab Nordiska Föreningsbanken and Helsingin Osakepankki - Helsingiors Aktiebank, all with head offices in the capital.

OTHER BANKS (1954): Mortgage Banks 5, Savings banks 431, Co-operative Credit Societies 604 and a Central Bank for the latter.

# THE BANK OF FINLAND IN 1954 

BY

PROFESSOR A. E. TUDEER,

## HEAD OF THE INSTITUTE FOR ECONOMIC RESHARCH OF THE BANK OF FINLAND

## THE MONEY MARKET

Economic life during the past year was characterized by the favourable tendencies that prevailed in Europe and were, in turn, strengthened by the fact that the much foretold and feared depression in the. United States did not set in. These circumstances also had a favourable influence on Finland's economy, most spheres of which flourished to an extent that partly surpassed the peak of 1951. Without dwelling further on the phenomena that are discussed in the next article, it need only be said that the growth of productive activity led to the disappearance of the considerable unemployment that occurred early in the year. As a result, there was a powerful increase in both consumption and investment, an expansion of the volume of credit, continued stringency on the money market and some increase in inflationary pressure.

While primarily endeavouring to keep the expansion in check, the Bank of Finland, on the other hand, also availed itself of the favourable export conditions to strengthen its reserve of foreign currency in order to be in a position to meet the seasonal and cyclical fluctuations in foreign trade. Building up the reserves had, however, to be kept within strict limits, for otherwise, by increasing the flow of means of payment, it would have outweighed the anti-inflationary measures of the Bank.

In these circumstances the central bank was unable to support the demands for lowering the rates of interest. But in order to enable the Bank of Finland to pursue a more flexible interest policy the Bank Supervisors of the Diet decided, on the proposal of the Board of Management of the Bank, to lower the minimum lending rate to 5 per cent and raise the maximum rate to $71 / 2$ per cent. The main object was to
afford the Bank greater opportunities for varying the interest according to the length and purposes of credits. The proposal of the central bank that the cash reserve requirements of financial institutions should be amended to the effect that they would provide a weapon against excessive lending, was under discussion throughout the year. This did not, however, yield any result before the year ended.

## THE BALANCE SHEE'I

The changes that occurred in the position of the Bank of Finland are illustrated by the following table and by the diagram on page 27, which shows the movement of the principal accounts week by week in 1953 and 1954.

| ASSETS |  |  |
| :---: | :---: | :---: |

## THE FOREIGN CURRENCY POSITION

The greatest change in the position of the Bank of Finland consisted in the growth of the foreign currency reserve as a result of the favourable export conditions and the cautious import policy pursued. The increase in foreign currency amounted to 11,325 mill. marks. At the same time the gold reserve grew by 1,072 million. Besides, the debt to foreign correspondents decreased by 2,114 mill. marks and to the International Monetary Fund by 1,037 million. On the other hand, the Bank's balances on clearing accounts were reduced by 5,650 mill. marks. Thus, the net short-term foreign balances of the Bank increased from 22,884 mill. marks at the beginning of the year under review to 32,782 million at its end. The increase represented 9,898 mill. marks or fully 43 per cent.
In the long-term foreign debt of the Bank a growth of 791 mill. marks occurred, but this was very nearly balanced by the investments in foreign bonds increasing by 648 million. If, in addition, the slight change in notes and coupons in foreign currency is taken into account, the final result is that the net foreign balances of the Bank of Finland, which amounted to 17,505 mill. marks at the end of 1953, increased by 9,708 mill. marks according to the booked values and totalled 27,213 million on the
last day of 1954. The corresponding rise in 1953, achieved mainly by import restriction, had been 6,984 million.

The position in regard to foreign currency was strengthened not only by the considerable increase in the foreign balances, but also by the composition of the foreign currency reserve having improved. Thus, in addition to the gold reserve and clearing balances, there was freely - or at any rate fairly freely - convertible foreign currency on the Bank's books to the value of 20,900 mill. marks, whereas the corresponding figure a year before amounted to 14,200 million. Even the present reserve is not, however, very ample, but it should suffice to meet the normal seasonal fluctuations. It also provides a better support for the efforts to relax the control of foreign trade.

## LENDING OHERATIONS

As rising activity and the economic policy of the Government threatened the value of the currency by increasing demand, the Bank of Finland, in order to avert the danger, endeavoured to restrict an expansion of credits. This was most directly visible in the Bank's own grants of loans to the business world, grants which remained throughout the year at a lower level than in the previous year. At the end of 1954 these loans amounted in all to 11,973 mill. marks in comparison with 14,243 million a year before. Thus the reduction attained in the course of the year was 2,270 mill. marks or almost 16 per cent. The amount of rediscounted bills also remained for the greater part of the year at a lower level than in the previous year, but in December it rose and on the last day of the year totalled 8,465 mill. marks or 197 million more than at the end of 1953.

The third category of loans granted by the Bank of Finland does not depend to any particular extent on the policy of the Bank, but on the Treasury's cash requirements. In the statements of the Bank, loans to the Treasury figure at a sum of 20,000 mill. marks, while the changes in the Treasury's net borrowing from the Bank appear among the Bank's liabilities, on current account. Taking this into account, it may be said that the indebtedness of the

Treasury to the Bank of Finland stood at an appreciably lower level during the past year than in 1953. It amounted to 12,719 mill. marks at the beginning of the year under review and only to 4,530 million at the end, the decrease being 8,189 million or about two thirds. This has been a very healthy reaction to the increased money supply. The figures quoted above exclude the Treasury bill of 1,662 mill. marks covering the Finnish subscription payment to the IMF and IBRD, which officially is included in the Treasury's debt to the Bank of Finland.

## LTABILITIES

Reference has already been made to some of the more important items among the liabilities and the changes in them. In addition, some other facts should be mentioned.

The note circulation increased to some extent, as will be seen in the table given above. The increase amounted to 2,883 mill. marks or fully 6 per cent. This growth is a natural consequence of the greater activity of the economy, though it cannot be denied that it may be partly a sign of an excessive increase in the supply of money.

The capital of the Bank remained unaltered, but, as usual, the reserve fund was increased. The transfer of half of the profits for 1953, or 836 mill marks, to the reserve fund at the beginning of the year raised it to 3,683 mill. marks.

## RIGHT OF NOTE ISSUE

The changes in the position of the Bank of Finland that are described above in their turn caused changes in the Bank's right of issuing notes and in the note reserve. These are illustrated in the following table.

| HT TO ISSUE |  | $\begin{gathered} 1954 \\ \text { Dec. } 81 \\ \text { Mill. mk } \end{gathered}$ |
| :---: | :---: | :---: |
| Gold reserve and foreign bal-$\text { ances . . . . . . . . . . . . . . . . . . . } 26,136 \quad 40,006$ |  |  |
| Additional right of issue | 50,000 | 50,000 |
| Total right to issue notes | 76,136 | 90,006 |
| AMOUNT OF ISSUE USED |  |  |
| Notes in circulation | 45,019 | 47,903 |
| Other liabilities payable on demand | 18,219 | 23,147 |
| Undrawn amount of advances on current accounts ........ | 625 | 1,009 |
| Total amount used 63,863 <br> Note reserve 12,273 |  | 72,058 |
|  |  | 17,948 |
| Total | 76,136 | 90,006 |

The considerable growth of the right to issue notes, 13,870 mill.marks, was naturally due to the increase in the gold and foreign currency reserve. The amount of issue used also increased, but considerably less or by 8,195 million. As a result, the note reserve increased by 5,675 mill. marks or about 46 per cent and amounted to 17,948 million at the end of 1954.

## PROFIT AND LOSS ACCOUNT

The following table gives a general idea of the receipts and expenditure of the Bank for the year under review compared with the corresponding figures for the two previous years.

The most appreciable change is the decrease in the receipts in interest. The reason is, of course, the reduction of loans referred to above, as the level of rates of interest remained unaltered. Although the amount written off from the interest account before the books were closed was less than in the previous year, the receipts in interest fell off by 210 million marks. The receipts in interest on foreign balances also declined to some extent. Altogether the amount of booked receipts was 228 mill. marks less than in 1953, yet about 200 million larger than in 1952.

On the expenditure side the changes were quite small. The principal change was a drop in the cost of printing bank notes consequent on the increasing withdrawal of small notes from circulation in favour of metal

| CREDIT |  |  |  |
| :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { Mill. mk } \end{aligned}$ | $\begin{gathered} 1953 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} 1954 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ |
| Interest on internal loans | 1,108 | 1,373 | 1,163 |
| Interest on current accounts abroad | 129 | 208 | 146 |
| Interest on bonds | 108 | 163 | 204 |
| Sundry income | 71 | 72 | 61 |

| Total | 2,132 | 2,569 | 2,341 |
| DEBIT |  |  |  |
| Salaries | 289 | 294 | 294 |
| Pensions | 23 | 24 | 26 |
| Cost of manufacturing bank notes | 157 | 132 | 118 |
| Sundry expenses ...... | 73 | 80 | 70 |
| Written off building costs | 355 | 353 | 305 |
| Depreciation of furniture | 23 | 15 | 7 |
| Total | 920 | 898 | 820 |
| Net profit | 1,212 | 1,671 | 1,521 |
| Total | 2,132 | 2,569 | 2,341 |

coins. The sums written off the building costs of the Bank were also smaller than in the previous year. The largest item among them concerned the new building for the printing works.

The net profit of the Bank of Finland amounted to 1,521 mill. marks or in other words 150 million less than for 1953. In accordance with the regulations half of this has been placed at the disposal of the Government, while the other half has been transferred to the reserve fund, which now amounts to 4,444 mill. marks.

# THE FINNISH ECONOMY IN 1954 

BY

PROFESSOR A. E. TUDEER

## HEAD OF THE BANK OF FINLAND INSTITUTE FOR ECONOMIC RESEARCH

During the course of 1954, Finnish economy developed more favourably than had been expected at the beginning of the year. Unemployment, after having been considerable early in the year, declined in the later months as activity rose, and in the autumn the overall situation was marked by fu:ll employment. The expansionary trend was a direct consequence of the development in the world market for forestry products, the stimulating effects of which spread to all spheres of production. Internal demand received a further impetus from the realization of the Cabinet Programme of October which involved considerable price reductions and subsidies. In spite of these fresh inflationary impulses the value of the currency remained stable. National income increased, according to preliminary estimates, by about 6 per cent over the year and reached a peak of approximately 650,000 million marks.

## FOREIGN TRADE

Within foreign trade, a change for the better had already occurred during the latter half of 1953, and the revival continued with greater force during the year under review. The value of exports increased by 19 per cent, from 131,555 million marks in 1953 to 156,618 million in 1954. This increase was mainly due to a growth in volume that was made possible by expanding production and livelier demand. The volume index of exports $(1935=100)$ grew from 102 in 1953 to 118. Prices for Finnish exports advanced throughout the year, but the rise was mostly a slow one and did
not make itself fully felt in the year's shipments. The average price index for exports was 2,123 in comparison with 2,074 in 1953. In volume exports were larger than in any previous year, but in value they were 16 per cent below the peak of 1951.

The volume of exports grew last year in almost all spheres, the main exceptions being prefabricated houses and various joinery products. The most striking increase related to chemical pulp and paper products. Exports of sawn and round timber surpassed the quantities of 1953 , but did not reach those recorded in 1951.

The value of imports amounted to 152,137 million marks last year (incl. 1,155 million of monetary gold) or 25 per cent more than in the year before. In comparison with the figures for 1952 - the highest attained so far - last year's value was about 17 per cent lower. The volume of imports grew slightly more; the index was 177 as against only 137 for the previous year, the increase being about 30 per cent. On the other hand, prices of imported goods were on an average slightly lower than in 1953.

The growth of the volume of imports related particularly to raw materials and semifinished goods in the textile and metal trades. Imports of machinery and other technical apparatus as well as finished consumer goods also recorded a slight increase. There was an appreciable drop in imports of grain and other foodstuffs.

As in the previous year, exports exceeded imports, but the surplus was considerably smaller, chiefly owing to unexpectedly heavy imports in December. In spite of the
improvement in the terms of trade, the surplus only amounted to 4,481 million marks or less than half the surplus for 1953, 9,695 million.

No particular changes occurred last year in the country distribution of foreign trade. The leading buyers were the United Kingdom and the USSR, to each of which about 22 per cent of the total exports were despatched, whereas in 1953 the share of the USSR was rather higher, about 25 per cent. Western Germany and the United States came next last year, as in 1953. In regard to imports, too, there was a considerable increase in the case of the United Kingdom, about 19 per cent of the total imports being purchased there as against 16 per cent in the previous year. The USSR occupied the second place with 18 per cent. Next in order of importance came the Netherlands, the Federal Republic of Germany, France and Brazil.

## AGRICULTURE

The weather conditions were unfavourable during the last growing season. At the end of June an almost uninterrupted period of rain set in that continued up to the second half of September. The excess of rainfalls, as compared with normal conditions, varied from 30 to 200 per cent in different parts of the country. The excessive humidity, particularly during the harvesting season, lowered the quality of the crops from the previous year, besides reducing the yield per hectare.

Total crops have been estimated at 3,700 million fodder units which is 4.4 per cent less than in 1953. However, bearing in mind that crops were exceptionally large in 1953, the present result cannot be considered very small. The output of bread grains was larger than in the previous year or 386 million kg as against 348 million in 1953. The increase was due to the greater area of cultivation, the average yield per hectare being slightly reduced. The crops of oats and barley fell off, of oats by about 16 per cent and of barley by 8 per cent, mainly owing to the yield per hectare having decreased. The potato crop amounted to 1,079 million kg or about 22 per cent less than in the previous year. The fodder crop was also poor. Although, e.g., the hay crop was
estimated in kilogrammes at about the same quantity as in 1953, the quality was worse.

On account of the poor fodder crop and the unfavourable weather during pasturage the output of milk, which had recorded high figures in the initial months of the year, fell towards the end of the year below its normal seasonal level. According to preliminary estimates the output of millk amounted to 2,900 million kg as compared with 2,850 million produced in 1953.

The output of butter showed tendencies similar to those of millk production. It is estimated to have risen from 48.4 million kg to 51.2 million. Early in the year there was a considerable overproduction of butter, so that about 3,200 tons were exported owing to storing difficulties. The decrease in output towards the end of the year combined with the reduction in the consumer price of butter caused stocks to decrease rapidly. At the end of the year butter had to be ordered from abroad.

The output of cheese is estimated at 230 million kg in comparison with 22.0 million in the previous year. Cheese is exported regularly from Finland, the quantity in 1954 having been 11,300 tons and in 195310,800 tons. The output of eggs also increased last year, and exports of 205 tons were subsidized.

Regarding the production of meat the figures record a powerful rise in the output of pork. To prevent the level of prices falling too much, exports amounting to 6,000 tons were subsidized. The output of other meat has slightly increased.

## INDUSTRY

The capacity of the exporting industry was raised by means of extensions and new constructions and, owing to the livelier demand, production attained fresh peaks in many spheres. The index of production in the exporting industry $(1948=100)$ for January-November rose to 140 as against 112 for the previous year the increase being 25 per cent. A continued rising tendency is indicated by the fact that the index for November was 149 points. In the home market industry, too, output increased, though at a slower rate, by 8 per cent. The index of total industrial production stood at 142
compared with 126 for 1953, so that there was an increase of 13 per cent.

In regard to the most important achievements of the exporting industry the following preliminary figures can be mentioned. The output of chemical pulp advanced to $1,550,000$ tons from $1,133,000$ tons in the previous year. Of paper 850,000 tons were manufactured compared with 795,000 tons, the increase being particularly large in the case of kraft paper. The output of cardboard increased from 197,000 to 250,000 tons, of plywood from 244,000 to 325,000 tons, and of fibre board from 103,800 to 125,000 tons. The output of sawn timber grew to over a million standards as against 870,000 stds in the previous year. The output of prefabricated houses formed an exception, as it decreased from $926,000 \mathrm{sq}$. m of floor space to $842,000 \mathrm{sq} . \mathrm{m}$.

The expansionary trend and the consequent growth of purchasing power and demand were also reflected in most branches of the home market industry. As imports were restricted, demand was concentrated on home-manufactured products, and the volume indices of most of the branches of industry rose and exceeded the levels of all previous years.

The favourable export conditions also set their mark on lumber work. This was already visible in the felling season that ended in May 1954 but still more clearly in the autumn, when the improved conditions encouraged lumbering. The final result for the season referred to amounted to 33.4 million cu. m, piled measure, whereas the corresponding figure for the previous felling season was 28.3 million cu. m. Considerably more timber of all kinds, excepting fuelwood, was cut than during 1952/53. Owing to the great improvement in the plywood market, fellings of heavy broadleaved timber were actuailly doubled. Partly on account of favourable snow and weather conditions and partly because of work being rationalized and efficiency increased, the demand for labour did not grow to the same extent as fellings. For this reason the state of employment did not prove as good in the late winter as might have been expected on the sole basis of the growth of production in the branches of industry concerned.

During the current felling season, which
started last June, lumber work has proceeded more rapidly and on a broader front. Both the quantities cut and the numbers employed in lumber work have been, month by month, on a higher level than the corresponding figures for the year before. At present it even seems as though the results for the record winter of $1951 / 52$ would be attained or even, perhaps, slightly exceeded. By the turn of the year, up to which time fellings were concentrated on piled timber, 13.4 million cu. m , had been cut or nearly 19 per cent more than at the corresponding date a year earlier. At the end of December 1954 there were 112,000 men employed in lumber work; a year before the corresponding number was 85,000 .

## BULLDING ACTIVITY

Housebuilding, which in 1953 exceeded the 1952 level by 4.5 per cent, continued to expand last year. The total volume amounted to 22.11 million cu. m as against 21.05 million in 1953. It thus fell short of the peak in 1951 by 2 per cent only. The value of housebuilding amounted to 110,340 million marks as against 99,830 million in the previous year and exceeded the 1951 figure by 13 per cent. This higher rate of growth in value is due to the substitution of stone for wood as building material as well as to the increase in the relative share of the more expensive types of building.

There was in 1954 a marked shift from rural towards urban building. Of the buildings completed during the year, 36 per cent were in urban districts as compared with 32 per cent in 1953. Simultaneously the relative share of dwelling houses and industrial and business premises grew, that of the former from 42 to 43 per cent and that of the latter from 13 to 16 per cent, whereas the share of agricultural buildings fell from 28 to 24 per cent.

The total of dwelling units completed, 31,009 as against 29,142 in 1953, constituted a new peak. Of the total, 10,552 were sotermed Arava-dwellings, the construction of which is supported by cheap Government loans. About 46 per cent of the total number of dwellings were in urban districts as compared with 38 per cent in the previous
year. The average floor space of the dwelling units has continuously declined over the last few years, and was now $59 \mathrm{~m}^{2}$ as against $63 \mathrm{~m}^{2}$ in 1953.

## THE LABOUR MARKET

The number of registered unemployed at the beginning of 1954 was fully 46,000 , which was considerably more than a year before. In the beginning of the year the number of unemployed increased, but much more slowly than in the previous year, and work was organized for the majority of them by the Government and the communes. The peak was reached in the first half of March, about 54,000 unemployed, while the corresponding maximum in February 1953 had been as high as 65,700 . In the following months the number of unemployed fell off rapidly and in the summer there was no unemployment whatsoever.

Last autumn the employment situation remained good. The registration of unemployed started later than usual and at the end of October only 2,000 persons were on the register. By the end of December
this number had risen to 12,600 , or a little more than one-fourth of the corresponding figure a year earlier.

## THE MONEY MARKET

The money market, which had relaxed to some extent in 1953, nevertheless was fairly tight throughout the year. Owing to the livelier economic activity the demand for credit was very large, and despite considerable accumulation of savings the credit institutions were by no means able to satisfy the total credit requirements. The favourable export conditions did, indeed, bring funds into the country, but stocks were replenished in many spheres, which again tended to strain the position.

The activity of the Bank of Finland is dealt with in the first article in this Bulletin and need not be referred to here. The accumulation of savings in the commercial banks and other monetary institutions that accept deposits is illustrated by the following table, in which particulars for 1953 and 1952 are included for the sake of comparison.

DEPOSITS BY THE PUBLIC

|  | Fluctuations |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 31/19 1954 | Mill ${ }^{1954}$ |  | M11. ${ }^{1953}$ |  | 19 |  |
|  |  | Mill. mk | \% | Mill. mk | \% | Mill. mk | \% |
| Commercial Banks | 118,358 | +15,791 | +15.4 | +14,805 | +16.9 | - 1,684 | $-1.9$ |
| Savings Banks | 97,046 | +16,425 | +20.4 | +11,664 | + +16.9 | +13,753 | +24.9 |
| Post Office Savings Bank | 30,079 | + 3,005 | +11.1 | + 3,512 | +14.9 | +5,319 | +29.2 |
| Co-operative Credit Societies | 54,513 | + 9,990 | +22.5 | +5,270 | +13.3 | + 7,557 | +23.9 |
| Central Bank of the Co-operative Credit Societies .. | 702 | + 126 | +21.9 | + 235 | +69.1 | 225 | -39.8 |
| Consumers' Oo-operative So- cieties | 13,415 | + 1,464 | +12.3 | + 1,153 | +10.7 | + 2,356 | +27.9 |
| Total | 314,113 | +46,801 | +17.5 | +36,639 | +15.9 | +27,076 | +13.3 |

Deposits increased in absolute figures rather more than in the previous years, and also the proportionate increase was larger. In comparison with the pealk year of 1951, when there was a strong tendency towards inflation, last year's relative increase was very moderate. The favourable bond loans offered by the Treasury evidently tended to reduce the accumulation of funds in the credit institutions. The growth of deposits related to time deposits whereas current accounts were almost the same at the end of 1954 as at the beginning.

In examining loans, however, it is noticeable that they increased appreciably
more than in the previous year. The increase amounted to about 48,000 million marks as against 28,000 million in 1953 . The change was due entirely to the commercial banks, which were obliged in 1953 to employ considerable sums in order to reduce their rediscounted bills at the Bank of Finland. During the year under review rediscounts were generally on a considerably lower level than in the previous year, although in December, mainly owing to an improvement in the cash position of the Treasury, they rose again to the same level as a year before.

In the autumn the question of lowering rates of interest came up in connection with
the new Cabinet Programme, but the credit institutions stressed the fact that there was no reason for this during a strong expansionary trend and under the threat of inflation.

## PRICES AND WAGES

The price level in Finland remained in broad lines unaltered. The cost of living index stood at 104 up to October (Oct. $1951=100$ ), but, as some prices rose slightly, it was feared that the index would rise to 105 , in which case wages would have to be raised by five per cent. To prevent this it was agreed in the autumn, when the new Cabinet was formed, to reduce certain prices. From November the price of i.a. dairy produce, sausages and bread was lowered by means of subsidies and the sales tax was abolished on some textiles. Thus, the index was pressed down to 98.
Wholesale prices, too, remained steady for the greater part of the year; only wood products formed an exception, the trend of the world market causing their prices to rise. The reduction of prices undertaken in November also influenced wholesale prices, though by no means to the same extent as it affected the cost of living. Under the influence of these price movements the general index for home market goods rose slightly at first, from 1,709 points in Decem-
ber 1953 to 1,740 points last October, but then fell to 1,684 points in December.

Wages remained unchanged on the whole with the exception of a very small inclination upwards and a rise in real wages due to the price adjustments referred to. The average hourly wages of industrial workers are estimated to have risen by 2-3 per cent, if the change in real wages is left out of account. Notwithstanding these increases, considerable demands for higher wages were presented at the end of the year, when a large number of collective agreements had to be renewed. A decision was, however, deferred till the following year.

## CONCLUSION

The cyclical development of the world market last year once again proved favourable to Finland. Now, early in 1955, the signs are still promising. The „eosts crisis", which was mainly due to production costs in Finland being higher in many spheres than in other countries, has receded, but the fact cannot be ignored that it still exists in latent form and that a fresh change of trend in the world market may again bring it into the open. It is most important therefore to establish the economy before that on as secure a foundation as possible.

## ITEMS

Bank of Finland, Change of Governor. Mr Sakari Tuomioja has been released from his duties as Governor of the Bank of Finland from March 1, when he will enter his post as Finnish Ambassador to London. The President of the Republic has appointed Mr Rainer von Fieandt Governor of the Bank of Finland from the same day. Mr von Fieandt has been member of the Board of Management of the OY Pohjoismaiden: Yhdyspankki - AB Nordiska Föreningsbanken, one of the two leading commercial banks, since 1925 and Chief General Manager of the same bank since 1945 .

At the same time Mr Penna Tervo, Minister of Finance, was appointed member of the Board of Management of the Bank of Finland.

The Budget. The Budget for 1955 was passed by the Diet in December. Revenue amounts to 196,300 mill. marks, of which 18,800 million are capital revenue, and expenditure to 196,300 mill. marks, of which 53,900 million are capital expenditure. For technical reasons the subsidies decided on last October are not included. They will be submitted to the Diet in a supplementary budget in February. Not until then can a general idea of total Government revenue and expenditure be obtained.

Trade Agreements. Finland has recently concluded trade agreements with the following countries.

United Kingdom, on January 14, 1955. Period: 1955. Finnish exports to the United Kingdom and other sterling area countries are estimated at $£ 70$ mill. Of these, £ 40 mill. are earmarked for purchases from the United Kingdom. The remainder will be freely available for purchases from the sterling or transferable sterling area or for strengthening the Finnish exchange reserves.

USSR, on January 24, 1955. Period: 1955. The agreement forms part of the five-year trade pact concluded in 1950 and the supplementary agreement of 1952. Finnish exports are fixed at 32,100 mill. marks and imports at 23,500 million. Of the Finnish export surplus, 2,300 mill. marks will be paid in Western currencies. The rest will be settled within triangular agreements, by imports from Poland, Rumania, Czechoslovakia and Eastern Germany. The most notable changes in comparison with 1954 are that exports of prefabricated houses are reduced from $750,000 \mathrm{~m}^{2}$ to $250,000 \mathrm{~m}^{2}$ and those of sawnwood from 60,000 std to 47,500 std, and that the value of the deliveries of vessels will increase from 10,000 to 11,800 mill. marks. Imports of rye will increase from 50,000 to 100,000 tons, while the value of naphtha imports will decrease from 5,200 to 4,200 mill. marks. Further, 1,000 tons of aluminium, 2,000 tons of zinc, $40,000 \mathrm{~m}^{3}$ of pulpwood and $80,000 \mathrm{~m}^{3}$ of sawlogs will be imported; these articles have not been imported from the USSR before.

New loan from the USSR. In January, the USSR granted Finland a stand-by credit amounting to 40 million roubles ( $\$ 10$ mill.). The credit may be drawn in gold, U.S. dollars or other currencies. It is repayable in ten years from the date when drawn, either in gold or in the respective currencies. The rate of interest is $21 / 2$ per cent.

The previous USSR stand-by credit, of equally 40 million roubles, granted in February 1954 is expected to be drawn upon in the near future and the amount drawn will be lent to the Bank of Finland. One half of the loan will be kept in the foreign exchange reserves of the Bank and the other half will be used for productive purposes, i. e. allocated for imports of capital equipment.

Rearrangement of Statistical Tables. The official monthly figures of Government revenue and expenditure as hitherto published in this Bulletin do not as such - i. a. on account of the structure of the budget provide a suitable basis for judging the development of Government finances. For that reason the former tables 21,22 and 23 , which were drawn up according to the Treasury accounts, will be replaced by tables 21 and 22, containing figures adjusted by the Bank of Finland Institute for Economic Research. The adjustment has been made as far as possible in accordance with the principles for adjusting the annual figures presented every year in a separate article. Owing to the lack of data, the monthly figures cannot, however, be as accurately adjusted and will therefore not be fully comparable with the annual figures. As, besides, the latter are not available until rather late in the year, they will not be published in table 22 but, as previously, in an article. For 1953, see this Bulletin No. 8, 1954, p. 20.

Table 21 still relates to the public debt, but the figures have been so adjusted as to agree with those concerning Government loans and redemptions in table 22. As to the breakdown, "Indemnity bonds and similar obligations" includes all indebtedness - except the Holding certificates - that the Government has incurred without recompense. The bonds of the index-tied Second Indemnity Loan are included at their nominal amount. „Treasury bills" relate only to bills held by private credit institutions (not by the Bank of Finland). „Debt to the Bank of Finland (net)" is in accordance with table 5. „Cash holdings" includes the Treasury postal giro accounts.

Table 22 gives consolidated figures of Government revenue and expenditure on a payment basis. The figures include the employment of appropriations transferred from previous years, transactions of extra-budgetary funds and all other receipts and payments outside the budget. All transactions are reported as of the month when they actually occurred. With regard to separate items the following should be mentioned.
."Gross collections" of income and property tax includes the communal tax and the National Pensions premiums deducted from wages. When credited, quarterly, to the
communes, they appear under „Refunds and share of communes". „Revenue from Alcohol Monopoly" comprises the surplus of the Monopoly, its prepayments of the surplus and its income and property tax. „Capital revenue proper" covers provision for depreciation in State business undertakings, sales of State property and reparment of loans. The inventories reported under ,,Decrease in inventories" consist mainly of the stores of the State Granary and the fuel stooks of State Railways. Among expenditure, the item „Unemployment relief" under „Real investments" concerns only such relief work as is financed out of unemployment grants proper. The item „Other capital expenditure" con-
sists for the main part of loans and is at the same time the residual of the table.

The figures of Government borrowing and redemptions correspond, with slight differences only, to those given in table 21. The sole exception concerns ,"Indemnity bonds and similar obligations", in that table 22 gives only the amounts redeemed but not the new bonds issued, which do not in fact imply receipts of the Treasury. „Redemptions" in table 22 also includes the index premiums paid on the bonds of the Second Indemnity. Loan. „Deficit or Surplus" in table 22 is equivalent to the change in "Cash debt (net)" in table 21.
