Vol. XIV. No. 11

## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

In October, as in September, the money market was marked by a tendency towards an increased demand for credit. This tendency was, however, so weak and seasonal in character that no significance can be attached to it as an indication of the general trend of business conditions. On the other hand it is obvious that eoonomic enterprise in most spheres is working under more favourable conditions than during previous years. The rise in the price of raw materials is, however, having an adverse influence on the earnings of the woodworking industries, while at the same time a weaker tendency of prices for their products is beginning to make itself felt.

The credits granted by the Joint Stock banks, which rose in September by 79.2 million marks, increased in October by another 45.5 millions, whereas the credits in October, 1933, decreased by 85.9 millions. Deposits were reduced at the same time, probably owing to funds being required for financing trade, for payment of taxes etc., by 17.0 million marks in October compared with a reduction of 59.2 millions in the same month last year. As the deposits in the Joint Stock banks exceeded their credits by 226.1 million marks at the end of September, the surplus of deposits was reduced in October by 62.5 million marks to 163.6 millions. At the same time their cash grew from 433.7 to 497.6 million marks; the banks are not re-discounting any bills at present.

The position of the Joint Stock banks towards foreign countries reflects the considerable imports, while the foreign currency received for exports has improved the Bank of Finland's supply of foreign exchange. The foreign balances of the Joint Stock banks were reduced in October by 79.7 million marks to 379.8 millions, while their foreign indebtedness increased by 21.1 million marks to 272.1 millions. The net foreign balances of the Joint Stock banks have decreased by this means from 208.5 to 107.7 million marks in comparison with 78.7 millions at the end of October, 1933.

The position of the Bank of Finland has continued to develop in the same direction as in the previous months. The reserve of foreign currency, which had increased since the end of June, rose in October by 68.6 million marks and during the first half of November by a further 60.4 millions. Thus on November 15th the reserve of foreign currency amounted to $1,250.7$ million marks, the highest figure recorded since 1928. At the same date in 1933 the reserve of foreign currency was 900.3 millions. On the other hand the credits granted by the Bank have gradually fallen off, though at a slow pace. In October the reduction amounted to 9.8 million marks and in the first fortnight in November to 16.6 millions. In this way the total credits of the Bank were reduced to 780.7 million marks against 849.8 millions a year ago. The improvement in the position of the Bank
of Finland is seen most clearly in the increase of the Bank's note reserve which also grew in August and September. In October the increase amounted to 102.2 million marks and in the beginning of November to 19.5 millions, so that the note reserve amounted to $1,037.5$ million marks compared with 796.0 millions a year ago and only 524.4 millions two years ago. In proportion to the total sight liabilities of the Bank the ordinary cover amounted to 94.1 per cent on November 15th in comparison with 78.1 per cent a year ago and only 54.3 per cent two years ago.

The level of prices did not experience any great change in October, but tendencies in different directions are noticeable in it. The wholesale price index stood at 90 in October, as in most months during the last two years. The price index for exported goods, however, dropped 2 points to 77 against 83 a year ago. Seeing that the price level for imported goods has not fallen, but is 87 against 85 a year ago, this movement of prices must be described as unfavourable. - On the other hand the cost of living index has a rising tendency, as it rose 11 points to 998 against 1,012 a year ago. The rise is principally due to prices for farm produce having increased.

## TRADE AND INDUSTRY.

Foreign trade was again very lively in October. This refers chiefly to imports, their volume exceeding the figure for October, 1933, by 24 per cent. The value of imports amounted to 490.8 million marks compared with 425.8 millions in September and 401.6 millions in October last year. The volume of exports was 9 per cent larger than last year; their value amounted to 625.8 million marks in comparison with 620.2 millions in September and 561.1 millions in October last year. Thus there was a favourable balance of trade for October with a surplus of exports amounting to 135.0 million marks. The surplus wwas rather less than for October, 1933, 159.5 million marks, but appreciably larger than for 1932, when the
corresponding figure was 77.5 millions. For the past ten months the surplus of exports amounts to $1,193.1$ million marks against 1,171.6 millions last year and $1,008.7$ millions in 1932.

If we examine the way, in which imports and exports were composed in October, we will find that this was normal. Among imports, however, the heavy imports of hot rolled and sheet iron, amounting to 12,114 tons against 4,133 tons last year, are striking, besides which the figures for raw cotton and wool are also very large.

The state of the timber market is not clear, but the pessimistic feeling that obtained among importers in Great Britain recently appears to be giving way on account of the lively demand on the local market there. While negotiations proceed with regard to the purchase of Russian timber, sales for delivery next year do not get under way. - Sales of sawn timber from Finland were estimated in the middle of November at about $1,010,000$ standards compared with 860,000 standards a year ago. Remainder stocks are also coming to an end, so that it is not to be expected that sales for this year will increase to any extent worth mentioning.

## THE LABOUR MARKET.

The state of the labour market remains unchanged. Seasonal unemployment is increasing slowly, but the number of unemployed is at a much lower level than in former years. The number of unemployed registered by the Unemployment Boards increased in October by about 3,300 and was 15,700 at the end of the month against 42,200 a year ago and 67,800 two years ago.

According to the market investigations of the Research Office of the Ministry for Social Affairs the number of working hours in industry at the beginning of the fourth quarter of this year was 14 per cent higher than a year ago. The increase occurred in all branches of industry and was particularly marked in the case of the metal, glass and stone, leather and textile industries.

## CONTENTS OF THE TABLES.

## . MONEI MARKET.

## Bank of Finland:

Weekly Statement.
2. Note issue.
3. Note circulation and foreign correspondents.
4. Ordinary cover, note reserve and home loans.

The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Ihaports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

- Preliminary figures subject to minor alterations.

The index is calculated by the Central Statistical Office, and is based on the avorage prices for $1926=100$. The first group of indices refers to goods appearing in local wholesale trade in Finland, whereas the indices for imported and exported goods refer to the total quantities of goods imported or exported, including the movement of such goods that are in no way intended for wholesale trade in Finland. An indirect weighting has been applied, by means of which each class of goods is represented by the number of commodities corresponding to the calculated importance of this class in wholesale trade. The averages are arithmetical ones.
37. - INDEX OF WORKING HOURS IN INDUSTRY.

| Quarter | Branch of Industry |  |  |  |  |  |  |  | Total | Of which |  | Quarter |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## certain particulars about finland.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; from 1809 it was an autonomous Grand Duchy connected with Russia up to December Btn, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President P. E. Svinhufvud is elected for the term March 1st, 1931, to March 1st, 1987.

The Diet, composed of 200 members, is elected by universal suffrage. The propostions of the different parties in the Diet elected In 1933 are as follows:

Number
Social-Democratic party .......................................... . . 78
Agrarian party ..................................................... 53
Swedish party ...................................................... 21
Unionist party ..................................................... 18
Patriotic National Movement's party .......................... 14
Progressive party .................................................... . . . . . 11
Small farmers' party
People's party
2

## 2. LAND.

THE AREA is 388,217 square kilometres $=149,900$ square miles (Great Britain's ares is $89,047 \mathrm{sq} . \mathrm{m}$. and Italy's area 117,982 sq. m.). Of the total area $11.5 \%$ are lakes. On an average $11.8 \%$ of the land in the south of Finland is cultivated, $1.1 \%$ in the North, $6.6 \%$ of the whole land. Of the land area 25.8 mill. ha ( 62.5 mill. acres) or $73.6 \%$ are covered by forests.

THE AVERAGE TEMPERATURE in the coldest month is in S. W. Finland - $5^{\circ}$ to $-6^{\circ}$ C., in Lappland - $15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ}$ C. resp. The average temperature in Helsinki (Helsingfors) is $+4.6^{\circ}$ (in Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the South for about 100 days, in Central Finland for 150 to 180 days, in Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1932): 3.7 millions (of whom 0.2 million emigrants), Sweden (1932) 6.2, Switzerland (1931) 4.1, Denmark (1931) 3.6 and Norway (1981) 2.8 millions.

DENSITY OF POPULATION (1932): In South-Finland 18.9, in North-Finland 2.6 and in the whole country an average of 10.8 inhabitants to the square kilometre.

DISTRIBUTION (1932): $80.5 \%$ of the population inhablt the country, $19.5 \%$ the towns and urban districts. The largest towns are (1932): Helsinki (Helsingfors), the capital, 265,391 inhabitants, Turku (Åbo) 68,460, Viipuri (Wiborg) 59,955, Tampere (Tammerfors) 57,838.

OCCUPATION (1930): agriculture $59.6 \%$, industry and manual labour $16.8 \%$, commerce $4.3 \%$, transport $3.8 \%$, other occupations $15.5 \%$.

LANGUAGF (1930): Finnish speaking $89.4 \%$, Swedish speaking $10.1 \%$, others $0.5 \%$

RELIGION (1032): Lutheran $96.2 \%$, Greek-Orthodox $1.8 \%$, others $2.0 \%$.

EDUCATION (1930): Amongst persons over 15 years of age only $0.9 \%$ are illiterate. There are three universities founded in 1640, 1917 and 1920.

INCREASE OF POPULATION (1932): Births $18.7 \%$, deaths $12.6 \%$ (in France in 1931 16.2 \% \% and in England in $193112.3 \%$ ), natural increase $6.1 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOURCES. The growing stock of the forest is 1,620 million $m^{2}(57,214$ million cubic feet). The merchantable timber
(measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $60.7 \%$, spruce by $28.1 \%$, the conifers thus constituting $88.8 \%$ ur 1,383 million trees; leaftrees, mostly birch, $11.2 \%$ or 174 million trees. The annual increment is 44.4 million $\mathrm{m}^{3}$ ( 1,568 million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{3}$ ( 1,413 million cub. ft.). In North Finland the increment is much larger than the fellings, but in South Finland excess felling occurs locally.

AGRICULTURE (1932): Cultivated land 2.2 million hectars, divided as follows: area under cuitivation $0.3-10$ hectars $33.4 \%$, $10-50$ ha $52.1 \%, 50-100$ ha $8.4 \%$, over 100 ha $6.1 \%$. Cultivated land is divided between the different kinds of crops as follows: $51.3 \%$ hay, $19.2 \%$ oats, $9.2 \%$ rye, $5.3 \%$ barley, $3.2 \%$ potatoes, $11.8 \%$ other. The number of dairies in 1932 amounted to 636.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 . \%$

INDUSTRY (1932): Number of industrial concerns 3.371, hands 127,222 , gross value of products of industry 9,556 million marks.

LENGTH OF RAILWAYS (1933): $5,574 \mathrm{~km}$, of which 5,319 km State railways and 255 km private. The gauge is 1.524 m .

COMMERCLAL FLEET (1932): Steamships 530 (210,976 reg. tons net), motor vessels 163 (19 000 r. t.), sailing ships 256 (66,762 r. t. $\rangle$, lighters 3,457 ( 245.091 r.t.). Total 4,406 ( 541,829 r.t.).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish markkan) $=100$ pennis. According to the monetary law of December 21st, 1925, a gold coin of 100 marks' value shall contain $3^{16} / 10$ grammes of fine gold. Since October 12th, 1931, the redemption of bank notes in gold is, howevet, suspended.

STATE FINANCES. According to the balance sheet for 1933 the State revenue was $3,300.6$ million marks of which $2,872.6$ million marks were current revenue, and State expenditure 3,247.2 million marks, of which $2,543.6$ million marks were current expenditure. The principal sources of revenue were as follows: State property and undertakings (net) 186.3, direct taxes 458.8, indirect taxes $1,521.3$, stamp duty 171.3 , charges 85.7 , interest and dividends 145.1 and capital revenue 427.9. The value of State property in 1922 is estimated at $11,150.6$ million marks. For Public Debt see table 19 in this issue.

MUNICLPAL FINANCES. According to the Budget for 1933 expenditure amounted to $1,383.8$ million marks. Income from taxation was calculated at 489.9 million marks, taxed income at 4,970.2 million marks. The communal income tax (non-progressive) averaged $9.9 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleaborg), Kuopio, Joensuu, Sortavala, Vipuri (Wiborg), Sikkell (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyvãskylă and Kotka.

THE JOINT STOCK BANKS (1934): Number 9, possess 474 offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,200 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska Füreningsbanken and Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1933): Mortgage banks 6, Savings banks 481 Co-operative Credit Societies 1,388 and a Central Bank for the latter.

# THE OUTPUT OF FINNISH TIMBER AND WOODWORKING PRODUCTS IN RELATION TO WORLD PRODUGTION. 

BY<br>N. A. HILDEN, M. A.<br>assistant at the forest research institute.

## IN'IRODUCTION.

From the point of view of national economy the forests probably play a greater part in Finland, both directly and indirectly, than in any other country. This is mainly due to two causes: the forest resources of Finland, if calculated per head of population, are very large, and they form the most important natural wealth of the country. The forest resources of Finland are, however, so important in themselves that they are a factor to be considered, when examining the forest resources not only of this country, but of Europe and the whole world. The output of the Finnish woodworking industries is so ample that the greater part can be exported and consumed in other countries, and they have expanded to such an extent that their share in world production is beginning to prove an appreciable item.

In the present article we make a cursory examination of the relative importance of Finnish timber and woodworking products in the world market. At the same time we will endeavour to estimate, taking her forest resources as a basis, what prospects Finland has of developing her timber trade and her woodworking industries in the future.

## TIMBER.

Information regarding the output of the more important kinds of timber is only available as regards very few countries, this being due partly
to this trade being carried on as a handicraft or small industry, and partly to the nature of timber, which to a great extent represents a raw material or a semi-finished product. Regarding imports and exports of woodgoods international statistics are, however, available.

The table on the next page gives the total exports of sawn timber, pulpwood and mining timber in 1925-1932 from the more important timber exporting countries of Europe. The figures for Finland in 1925-1933 are given in a separate column. The countries omitted are of so little importance, that the figures for them can probably not exert any influence worth mentioning on the totals, which have been rounded off into hundreds of thousands of standards or cubic metres. It should also be noted that the difference in the units of measure employed in the statistics of different countries is a factor that causes some uncertainty in the grand total.
The quantity of sawn timber exported from Finland, in absolute figures, had a falling tendency after 1927 and the exports in 19311939 in particular were small. The variations occurring in the total European exports of timber are in the same direction, though comparatively greater. The same can be said of mining timber, the exports of which from Finland were almost level, especially when they are compared with the great changes in the total European exports. The case is different in regard to pulpwood: the total European exports varied very much, but Finnish exports varied even more.

TOTAL EXPORTS OF SAWN TIMBER, PULPWOOD AND MINING TIMBER FROM DIFFERENT EUROPEAN COUNTRIES (APPROXIMATELY) AND FROM FINLAND.

| Year | Sawn timber |  | Pulpwood |  | Mining timber |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Europe | Finland | Europe | Finland | Europe | Finland |
|  | Million standards |  | Million cub. metres, solid measure |  |  |  |
| 1925 | 4.4 | 1.04 | 5.9 | 1.40 | 5.8 | 1.25 |
| 1926 | 4.4 | 1.13 | 5.9 | 1.71 | 5.2 | 0.93 |
| 1927 | 5.2 | 1.28 | 6.3 | 1.65 | 7.8 | 1.87 |
| 1928 | 5.1 | 1.15 | 6.8 | 1.52 | 6.7 | 1.64 |
| 1929 | 5.3 | 1.21 | 8.2 | 1.23 | 7.0 | 1.41 |
| 1930 | 4.7 | 0.91 | 7.5 | 0.79 | 7.5 | 1.48 |
| 1931 | 3.8 | 0.78 | 4.9 | 0.24 | 5.1 | 1.24 |
| 1932 | 3.4 | 0.74 | 4.3 | 0.20 | 4.1 | 1.35 |
| 1933 | . | 0.98 | . | 0.79 | . | 1.44 |

On the basis of the figures in the table further calculations were made as to the proportion of the total exports in each year that fell to the share of Finland. These figures are shown in the diagram above.
Finland's share in sawn timber on the European market has had a falling tendency to some extent. Her share, which was about 26 per cent in 1926, fell in 1930 to 19 per cent, though it rose again slightly in 1931 and 1932. This tendency was partly due to the Finnish sawmills having restricted their output, this being caused in turn by the state of the forest resources besides other factors, and partly to changes in the total exports. The figures show that a considerable part, about $20-25$ per cent, of the quantity of sawn timber supplied to the in-
ternational market by different European countries was of Finnish origin.
Finland's share in the total exports of pulpwood varied very much during the period referred to. Her share was largest in 1926, when it amounted to 29 per cent. Subsequently there was a continuous and very sharp falling off, so that in 1931 and 1932 Finland's share was below 5 per cent. - Some European countries that possess a fairly large woodpulp and paper industry, above all Germany, are so poor in forests that their own forest resources do not suffice for producing all the pulpwood required as raw material. As a supplier of raw materials for the industry of these countries Finland has therefore played a fairly important part; it is worth noting that exports of pulpwood from Finland have grown livelier again in 1933 and 1934. We will return later to the exports of pulpwood from Finland, which have been a subject of controversy in this country.
As buyers of mining timber those countries are of importance that are poor in forests, but have large coal mines, above all Great Britain, Belgium and France. Finland's share in the market for this class of goods has proved fairly large. In 1925-1930 her share, remaining at about $20-24$ per cent, fluctuated without any decided tendency, but in 1931-1932 it rose sharply, so that during the latter years Finnish exports were third among all the European countries exporting pitprops.

PLYWOOD AND SPOOLS.
Reliable particulars regarding the world production of plywood and spools are unobtainable, partly because these branches of industry are classed in the statistics of many countries as belonging to the joinery or similar trades and partly because actual spool factories are often combined with the corresponding main factory that uses the spools.

The plywood mills are divided, besides, according to the different qualities of plywood sheets manufactured of many different species of wood and most of the different qualities of plywood have their own special forms of consumption and their own markets. It is therefore impossible in reality to speak of the total world production of plywood. The production of plywood in Finland refers almost exclusively to birch plywood and as a producer of this quality Finland occupies an important position, as, besides Finland, it is almost solely the countries adjacent to Finland in the South and East that manufacture birch plywood. Owing to the statistical data being deficient, as already stated, it is impossible to state definitely, what proportion of the production of birch plywood falls to the share of Finland, but the available information points to Finland's share in the world production of birch plywood being over 50 per cent. Finland's position as a producer of birch plywood is consequ mtly a very mportant one.

Finland's share in the international spool market is very considerable. The spool industry is; it is true, carried on as a local industry in many countries, so that the total quantities exported only represent a part of the world production. There are, however, only three countries in the world - Russia, the United States and Japan - carrying on a spinning industry worth mentioning to which spools are not exported from Finland at present. Of the exports of spools from all countries Finland's share in 1926-1933 averaged 78 per cent (7184 per cent). Finnish industry has not been able to secure such a predominating position in the world market in any other sphere of manufacture.

## PRODUCTS OF THE WOODPULP AND PAPER INDUSTRY.

With regard to the production of chemical and mechanical pulp and newsprint figures are available for the production of the whole world and of Europe, with which the figures for Finland can be compared. In the table on the next page the absolute figures for this are given. The figures for Finnish production in comparison with world production on the one hand and European production on the other are illustrated by the curves in the diagram above.

World production and European production, in absolute figures, showed an upward

THE PRODUCTION OF CHEMICAL AND MECHANICAL PUIP AND NEWSPRINT IN THE WORLD, IN EUROPE . AND IN FINLAND.

| Year | Chemical pulp, all kinds |  |  | Sulphate pulp |  |  | Mechanical pulp |  |  | Newsprint |  |  | Year |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1926 | 7.8 | 4.0 | 0.44 | 1.8 | 0.6 | 0.11 | 6.0 | 2.3 | 0.29 | - |  |  | 1926 |
| 1927 | 8.3 | 4.4 | 0.50 | 1.9 | 0.7 | 0.12 | 6.2 | 2.6 | 0.33 | 5.8 | 2.1 | 0.18 | 1927 |
| 1928 | 8.7 | 4.5 | 0.57 | 2.1 | 0.7 | 0.13 | 6.5 | 2.8 | 0.36 | 6.1 | 2.2 | 0.19 | 1928 |
| 1929 | 9.8 | 5.3 | 0.61 | 2.5 | 1.0 | 0.14 | 7.2 | 3.1 | 0.46 | 6.6 | 2.4 | 0.20 | 1929 |
| 1930 | 9.5 | 5.3 | 0.71 | 2.5 | 1.0 | 0.19 | 7.0 | 3.1 | 0.42 | 6.4 | 2.4 | 0.20 | 1930 |
| 1931 | 8.5 | 4.6 | 0.71 | 2.4 | 0.9 | 0.19 | 6.4 | 2.9 | 0.42 | 6.0 | 2.4 | 0.22 | 1981 |
| 1932 | 8.1 | 4.9 | 0.87 | 2.3 | 1.0 | 0.23 | 6.0 | 3.0 | 0.45 | 5.7 | 2.5 | 0.23 | 1932 |
| 1933 | . | . | 0.92 | - | . | 0.24 | . | . | 0.52 | 5.8 | 2.6 | 0.26 | 1933 |

tendency up to 1929; subsequently a comparative falling off can be noticed. The production of newsprint in Europe forms an exception, as it has increased constantly. A good idea can bo gained from the table above as to the rapid pace at which the Finnish pulp and paper mills have been able to increase their output.

In examining the respective percentages for Finland in the diagram on page 24 it can be stated in the first place that the total production of Finnish chemical pulp prior to 1929 was about $5 \frac{1}{2}-6 \frac{1}{2}$ per cent of the world production. Thenceforward there was a considerable increase, so that in 1932 Finland's proportion exceeded 10 per cent. As far as data are available for 1933 and 1934, Finland's proportion has increased still more. The curve illustrating the proportionate share in the production of sulphate pulp is approximately at the same level and there is a marked analogy in its tendency to increase. It can therefore be concluded indirectly that Finland's relative share in the total production of sulphite pulp follows a similar course. The production of mechanical woodpulp in Finland also displays a slowly rising tendency compared with the production of the world, although the rise is not so rapid as in the case of chemical pulp. Of the world production of mechanical pulp Finland's share amounted to about 5-7 per cent. Finally, a steady rise can be observed in the production of newsprint, too. Finland's share in the world production of newsprint has been about 3-4 per cent.

In relation to European production Finland's proportion is, of course, much larger than in
relation to world production, as a very considerable part of the pulp and paper industry of the world is situated in America. In comparison with European production, however, the mutual order of the different products is to some extent different from their order in comparison with world production. Compared with European production it can be said that Finland is relatively a bigger producer of sulphate pulp and mechanical pulp, while as a producer of sulphite pulp she is relatively not so large a manufacturer, for in comparison with world production Finland has an approximately equal relative share in both kinds of chemical pulp.

It is worth noting that Finland's share in the production of woodpulp and paper increased at the very time that the world depression became acute. This development is obviously due partly to production having been restricted in most countries and to world production having decreased in consequence. But the absolute growth of Finnish production of woodpulp and paper was, nevertheless, so rapid that, if world production had increased at the same pace as before the years of depression, Finland's proportionate share would have risen in any case, although, of course, more slowly than at present, when world production was simultaneously restricted.

## STAGES OF MANUFAOTURE OF EX-

## PORTED WOOD PRODUCTS.

It is interesting to examine in broad lines the present change in the development of Finland's timber trade and woodworking industries

as regards the stage of manufacture of their products. This can be done most conveniently by comparing, on the one hand, the figures for Finland with those for Sweden, which is a country with more or less similar conditions, where the woodworking industries and the timber trade have been developed to a high degree, and on the other hand with those for Russia which, under at any rate partly comparable conditions, for the present represents a slower development. Such a comparison is made in the accompanying diagram above which shows, how the total exports of timber and woodworking products are divided proportionately between goods in different stages of manufacture.

In order to make such a comparison possible all the classes of goods have been converted approximately by means of suitable proportionate figures into quantities of original round timber. The classes of goods have been divided into three categories: 1) round timber, 2) sawn timber, plywood etc., 3) pulp and paper. The first category represents goods that are still to a great extent in the stage of raw materials, while the third category contains partly finished products (paper) or semi-finished ones (chemical pulp) that have been the object of a fairly advanced stage of manufacture. The goods in the middle category are semi-finished, their stage of manufacture, however, being mostly comparatively small.

The diagram shows that exports of forest products from Russia consist exclusively of goods belonging to the first two categories, whereas goods of the third category have not been exported at all. The stage of manufacture of exports has, therefore, been comparatively low, especially as the proportion of round timber has been fairly large. Nor did any change worth recording occur in 1925-1932. The way in which exports of forest products from Sweden were composed, is totally different. The proportion of round timber is small and the proportion of the pulp and paper industries is very large. The latter proportion increased to a marked extent in 1925-1932, to some extent at the expense of round timber, but principally at the expense of sawn timber.

In Finland the position is between that of Russia and of Sweden, although more reminiscent of Sweden. In 1925, indeed, round timber had a larger share in Finnish exports than products of the pulp and paper industries, but in 1932 already the ratio had changed considerably. Indeed, the large increase in the proportion of exports of pulp and paper that is visible in the diagram represents a great development in this sphere of industry. But there is obviously still much room for development in the exports of Finnish forest products, before the highest possible stage of manufacture under existing conditions is reached.

PROPORTION BETWEEN CONSUMPTION AND FOREST RESOURCES.

We must next examine the proportion between the quantity of timber consumed in manufacture or for other purposes and the forest resources of Finland. In our last diagram above the circles represent the annual growth of different species of trees in the Finnish forests and the sectors illustrate the ratio between some of the more important items of consumption of woodgoods and the growth. The items of consumption, referred to in the aforesaid diagram, are based on figures relating to 1930 and divided as follows:
I. Large timber used as raw material for industry consisting of saw-logs and plywood logs.
II. Small timber used as raw material for industry including, in particular, raw materials for the pulp and paper industries and wood for spools.
III. Other marketable forms of timber. The principal forms in this case are round timber exported from the country and firewood for industry, means of transport and centres of population.
IV. Wood for domestic purposes. A possible surplus growth or its opposite - excessive consumption - also belong to this sector.
We can now examine, what the ratio is between the items of consumption and the
growth of each species of tree. A comparison made with the growth alone does not, of course, elucidate the question exhaustively from the point of view of forestry conditions, but a good general idea can thus briefly be obtained.

Pine is used plentifully in Finnish industry in the form of large logs as raw material, but small timber very little. The proportion of ,other" -marketable timber is very large in comparison with the total consumption of raw materials in industry. It was stated above that Finnish exports of mining timber had attained considerable proportions. These goods, which consist almost entirely of pine and are included under item III, are of the same value as item II in quality. Under such circumstances it is obvious that Finland has great possibilities of considerably extending such industries as work up small timber of pine. In the present state of technical development the sulphate pulp industry is the only large industry concerned. The production of sulphate pulp, which has tended to rise in Finland during recent years, is to be increased appreciably by a large sulphate mill ( 100,000 tons a year) at present in course of construction. But from the point of view of the forest resources it is possible to increase production far more. In the absence of a sufficiently large sulphate industry at present it is, however, well possible to justify the exportation of a class of goods that is worked up to such a small degree as mining timber, as no other outlet can be found for such goods.

With regard to spruce the position is essentially different. The consumption of small spruce timber (i.e. pulpwood) is very large in comparison with its growth and the sulphite pulp and mechanical pulp industries that use spruce as ratw material have already expanded to such an extent in Finland that anxiety has been aroused as to the spruce forest resources being sufficient. Demands have also been put forward to restrict the exportation of spruce pulpwood. Utilising the domestic forest resources, the Finnish woodpulp industry that works up spruce would be able to extend its production considerably, at any rate in the near future, only in the event of the consumption of spruce as a raw material for the sawmills being appreciably restricted. Such a development, distinct signs of which can be observed at present, depends, however, in the first instance on the mutual relation of prices for the products. The exportation of pulpwood from Finland in an unmanufactured state is not considered at all desirable from this point of view, but such exports are connected at present with some other questions that are difficult of solution.

Broadleaved-trees, especially birch, again present a new picture. The quantity of timber consumed by industry is so far small in comparison with the forest resources. There is therefore room for a great extension of such production in which birch is used as a raw material. It should be noted, however, that the most important industry working up birch, the manufacture of plywood, demands such large and high-quality birch that a sufficient supply of it is already growing difficult. Under such circumstances the forest resources could offer an opportunity for such exports and industry on a large scale as could make use either of smaller-sized or not quite such faultless birch. The present technical conditions, however, do not provide such an outlet.

## OONOLUSION.

The share of Finland's timber and woodworking products in world production and world markets reaches noteworthy relative figures. In the total European exports of timber 25--30 per cent fall to the share of Finland and 15-20 per cent in the European production of woodpulp. In regard to several important classes of goods Finland's share has displayed a comparatively sharp rise during the last few years, although the relative increase in Finnish production has been partly due, too, to the restriction of world production.

Whether Finland can in the future maintain and improve her position in the market for timber and woodworking products, is a question that depends above all on technical progress and the trend of business conditions. However, in examining the available forest resources and their present utilisation, it can be said that Finland has considerable possibilities of extending the manufacture of such products in particular, in which small-sized pine and birch are used as raw materials, while on the other hand there is less opportunity at present of increasing manufacture that employs spruce. At present this refers in particular to increasing the production of sulphate pulp. In any case it is one of the future tasks of the Finnish woodworking industries to work up the raw materials available to a higher stage of manufacture than at present.

This is the picture presented by an examination based on the present forest resources and their utilisation. At present effective forestry is becoming more general all over Finland, but it would occupy too much space to attempt an estimate in this article as to what future possibilities could be achieved gradually in this field. It can, however, be maintained that the possibilities of increasing the production of spruce and of the woodworking industries based on it would by such means appear to be comparatively good.

## ITEMS.

State Revenue and Expenditure. During the completed part of this year the State finances have turned out considerably more favourably than it was possible to expect, when the Budget was drawn up, and appreciably better than last year. The improvement since last year is seen, according to preliminary figures, in the following table which gives the revenue and expenditure during January-September:

The increase in the capital revenue is of no great importance, as it is mainly a result of the conversion of loans. It is all the more remarkable that the current State revenue has grown by about 356 million marks. This is principally due to the increased receipts from import duties and excise and the greatly improved net results of the State Railways, Forests and Posts and Telegraphs. This increase in revenue exceeds the increase in expenditure in a high degree. It shoüld be noted, however, that the expenditure will be increased to a considerable extent by supplementary grants to this year's Budget already passed or proposed.

Budget Equalisation Fund. On the motion of the Government the Diet has resolved to form a special Budget Equalisation Fund with the object of modifying the effect of fluctuations in trade conditions on the State finances. During periods of prosperity, when the State revenue increases, surpluses arising in the finance accounts are to be transferred to this Fund as well as special grants passed by the Diet. These funds are then available for budgetary purposes during periods of depression, so that it will not be necessary to reduce State expenditure. The amounts transferred to the

Fund, wich are not to exceed 590 million marks without the special sanction of the Diet, are to be invested in such a manner that they are not tied up in business undertakings and can be disposed of without trouble in case of need.

The Public Debt. The recent changes in the booked value of the Public Debt will be found in the following table:

This shows that the internal Public Debt has not experienced any great changes. On the other hand the amount of the foreign Public Debt has altered considerably: the funded debt was first reduced and then increased again in October, while the short-term credit has decreased month by month to only a fraction of its amount at the beginning of the year. The increase in the funded foreign debt in October is due to the issue of a loan for 15 million Swedish crowns referred to on a previous occasion (see Bulletin No. 10, p. 33). As the proceeds of this loan are being employed for the conversion of former loans, the increase in the Public Debt in October is only temporary.

At the end of November the Government concluded an agreement with a syndicate, including the Bank of Finland and several American investment houses with Messrs Brown Harriman \& Co., Inc., at their head, for issuing a new conversion loan. The amount of the loan is 10 million dollars, the nominal rate of interest 4 per cent and the bonds are to be redeemed in equal instalments from 1936 to 1940 . The proceeds are to be used for redeeming the 7 per cent State dollar loan of 1935 and the $5^{1 / 2}$ per cent dollar loan of 1928.

Conversion of loans. The conversion operations proposed by the City of Helsinki (Helsingfors) have been referred to on a previous occasion. During the autumn the City issued four loans for carrying out these plans. Two loans of 46 and 65 million marks were issued in the home market, the rate of interest being $51 / 2$ per cent in both cases and the rate of issue $971 / 2$ per cent for the former and $991 / 2$ per cent for the latter loan. The period of redemption is 15 years in the former case, 25 years in the latter. Both loans were oversubscribed in a few days.

In addition the City of Helsinki entered the foreign investment market and issued a bond loan of 5 million Swedish crowns for a period of 8 years, the nominal rate of interest being $4.1 / 2$ per cent. Finally, the City has taken up a credit of 2.5 million Swedish crowns for the same purpose, redeemable not later than in five years.

The harvest in 1934. The Board of Agriculture has published its report on the harvest for October 15th. The figures differ. very slightly from the figures for September already published by us. The harvest results will be seen in the following table which gives the figures for the last few years. As usual, 8 signifies very grod, 7 good, 6 above medium, 5 medium, 4 below medium and 3 a poor harvest.

|  | Middle of October. |  |  |
| :---: | :---: | :---: | :---: |
|  | 1934 | 1933 | 1932 |
| Autumn wheat | 5.2 | 6.4 | 5.8 |
| Spring wheat | 5.9 | 4.7 | 5.6 |
| Rye | 5.9 | 6.2 | 5.8 |
| Barley | 6.0 | 4.9 | 5.4 |
| Oats | 6.2 | 4.8 | 5.3 |
| Potatoes | 5.0 | 6.8 | 5.0 |
| Other root veg | 5.8 | 4.0 | 5.0 |
| Meadow hay | 5.3 | 4.4 | 5.1 |

On the basis of these figures the Board of Agriculture has calculated the following quantities for the harvest:

Although the figures for 1934 are only preliminary, it may be concluded from the above table that the quantities for the harvest constitute records in some respects, in spite of the potato crop, in particular, being worse than last year.

Timber sales from the State forests. We mentioned in a previous issue that the State timber auctions were very lively this year. Of the bids made the Board of Forestry accepted 37.4 per cent in the case of saw logs of standing timber and 39.8 per cent in the case of saw logs for delivery. Subsequently the bids were raised for the remaining parcels offered for sale with the result that now 78 per cent of the saw logs of standing timber and 79 per cent of the saw logs for delivery have been sold. According to the contracts made so far the average price for the former kind of logs is Fmk. 2:94 per cubic foot and for the latter kind Fmk. 4: 23, the average prices last year having been Fmk. $2: 52$ and 3:88.

## THE BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.
