# BANK OF FINLAND MONTHLY BULLETIN

No 1 JANUARY 1922

# FINNISH MARKET REVIEW.

#### THE MONEY MARKET.

The improvement in the state of the money market which began in December was still more apparent in January. The deposits in the commercial banks increased from 3.788.3 mill. mks at the end of December to 3,851.4 mill. mks at the end of January, or by 63.1 million marks. The increase is divided almost exactly between current accounts and deposits for a longer term. On the other hand, the home loans of the banks decreased by 104.1 mill. mks to 5,868.8 mill. mks at the end of the month. The total decrease in home loans during the last four months is 390.5 mill. mks. This decrease in the quantity of home loans is all the more noteworthy as in normal years the greatest demand for credit occurred regularly during the winter months. The number of protested bills decreased from 468 in December to 420 in January.

The net foreign indebtedness of the commercial banks declined still further, the decrease being this time 59.8 mill. marks.

On the Helsingfors Stock Exchange very little business was done in January also, though still slightly more than in the previous month. The index showing the prices of the more important stocks and shares, which has declined continuously since July, showed a slight increase in January, viz., from 147 to 152.

Only slight changes occurred in January in the position of the Bank of Finland. The value of notes in circulation decreased, as usual during the first months of the year. On Jan. 23rd the note-issue amounted to 1,300.2 mill. mks, or almost exactly as much as one year earlier, when the corresponding figure was 1,303.2 mill. mks. At the end of the month, the amount had risen, however, to 1,341.2 mill. mks. The inland bill portfolio remained almost unchanged. Government short-term obligations, on the other hand, decreased from 303.3 mill. marks to 271.7 mill. or by 32.2 mill. marks. The note reserve was 135.0 mill. mks at the end of January, or only slightly smaller than at its beginning.

The exchange rates rose somewhat in January e. g., the dollar from 52:94 to 53:10 and the pound sterling from 218:92 to 223:78.

It would be as well to throw a glance at the development of the public debt of Finland during the past year, which has not previously been dealt with in this column.

During 1921 the Government raised only one foreign loan, viz., that of 250 mill. marks in the Scandinavian countries. The increase in the foreign debt, especially during February and March, was due to this loan. On account of this loan, which is repayable in the currencies of the respective lending countries within 10 years, a corresponding amount of deposits in Finnish currency made

by foreigners was withdrawn from the commercial banks and placed at the disposal of the Government. This loan was used by the Government for writing off Russian debts. Other changes in the foreign public debt were trifling. The total increase in the foreign debt was 251.1 mill. marks, but naturally this figure is only nominal, as, calculated in Finnish marks, the amount of the foreign debt depends on the rates of exchange ruling on every occasion.

The internal funded debt increased by 49.3 mill. marks. This was due partly to the fact that the remaining portion of the Lottery loan, 1919, was sold in the course of 1921, partly to the fact that the Government's war reparation bonds were handed over to the parties concerned. The remaining funded debt decreased through the redemption of drawn bonds.

The internal floating debt decreased by a total amount of 308.7 mill. marks, due to the fact that the Government redeemed Treasury bills from the Bank of Finland and the commercial banks.

Thus the total internal debt of the State decreased by 253.4 million marks.

#### THE BUSINESS MARKET.

In January the amount of foreign trade declined to less than half of that done in the preceding month. Each year, both import and export have been small during the first months of the year but this year the exceptionally difficult condition of the ice in the Baltic has had a more than usual restraining effect on trade. No actual stoppage in trade has occurred, as two harbours in the South of Finland, i. e., Hangö and Åbo have been kept open for traffic by icebreakers. The considerable quantities of goods, mainly paper,

which have accumulated in these harbours, it is to be hoped will soon be shipped away when the fourth and largest of the icebreakers has been put into commission. In the difficult ice of the Baltic Sea, Finnish vessels have been best able to move, particularly those built specially for navigation in ice also.

The value of import was 146.1 mill marks and that of our export 146.5 mill., so that we can show a surplus of export of 0.4 mill. marks. Thus the trade balance of Finland has been favourable for the seventh month in succession.

Up to the middle of February, sawn timber had been sold for shipment in 1922 to the amount of 160-170,000 stds, chiefly to the Continent, only a small portion being destined for England. Prices have averaged # 14-# 15 f. o. b. for 7" battens. In view both of the restraint shown by British buyers and the dissatisfaction of Scandinavian sellers with the present prices, it is impossible as yet to say how prices will shape in the timber market. The market for paper is on the other hand favourable. The paper factories have a satisfactory amount of orders, some for the production of the next few months, others for the next half year's production even. Producers in Scandinavia and Germany have pressed down prices considerably. The situation in the woodpulp and cellulose markets is satisfactory.

# THE LABOUR MARKET.

No special changes have occurred in labour conditions during January. Unemployment does not seem to be of much greater extent than the usual degree for the season. The municipalities can probably arrange work for their unemployed, without special action on the part of the State. Conditions continue to be peaceful in the labour market.

#### 10. — STOCK EXCHANGE INDEX.

	Average Quotations for a few of the Leading Stocks and Shares at the Helsingfors Stock Exchange												
Year	Jan.	Febr.	March	April	Мау	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Year
1919 1920 1921 1922	300 322 214 152	296 327 192 160	289 331 175	267 305 167	267 284 165	274 288 175	27.6 303 169	286 315 169	288 296 167	290 248 160	286 213 154	300 196 147	1919 1920 1921 1922

According to figures published in the \*Mercator\*.

In calculating the above index-figures 16 investments have been taken into account, of which 6 bank shares, 8 industrial ditto and 2 others. The value of the total number of each of the included shares sold during the month has been divided by the number of shares sold, by means of which an average rate for each was obtained. These average rates were then calculated in percentages of the nominal value of the shares and added together, the total thus obtained being divided by the number of shares included in the index.

The above table is based on the monthly report on the Public Debt published by the Treasury in the Official Gazette. Internal loans are given at their nominal value. Foreign loans are given in Finnish currency according to the rate prevailing on the date of the raising of the loan. As a result of this, loans of an earlier date than 1914 are set down at par.

The term import covers all imported goods which have been let out into the market either immediately after importation or after storage.

Export covers all goods exported from the open market, including re-exports.

Goods are notified to the Customs by their owner, who must thereby state also the value of the goods as calculated at the boundaries of the country. Consequently, imports are given according to their C. I. F. value and exports F. O. B.

<sup>1)</sup> The figures for 1921 are adjusted by statements obtained later, of which only those, regarding a portion of sales and purchases of vessels are lacking, which statements always are included later in the commercial statistics.

<sup>\*</sup> See note p. 5.

According to figures given by the Statistical Department of the Board of Customs.

Up to, and including, 1917 the last port of shipment and the first port of discharge were used in determining the respective countries of import and export. Regarding transportation of goods over land boundaries, the country from which goods arrived or that to which they were transferred was used in a similar sense, with the exception of a part of the exchange of goods with Russia, which was not put down to that country but to the true countries of import or export. From, and including, 1918 the country of import indicates the land in which goods were purchased, and country of export the land to which goods were sold.

<sup>1)</sup> Included in figures for Russia.

This table, prepared from the weekly reports of the Board for Social Affairs' Labour Exchange Department, shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very little part of the rural centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled industrial workers proper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed but is to be regarded more as symptomatic.

February	1 115.0	1 097.6	602.5	1 254.0	1 288.2	1 079.4	1 049.4	5.7	February

The above index is calculated by the Board for Social Affairs' Statistical Department, and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the income of which amounted during the years 1908—1909 to 1600—2000 Fmk., presupposing that the average consumption within the same per month remained unaltered. The index for total cost of living is the weighted average formed from the different indices.

1922								¦	1922
January	1 083	1 213	1 062	927	922	1 010	1 034	916	January

The import- and export-indices have been calculated by the Statistical Dept. of Board of Customs in the following manner: the quantities of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in question in 1913, after which the import (or export) value for the current year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods chosen for the setting-up of a total-index have been divided, according to their use, into the groups: food-stuffs, clothing, agricultural necessities and other goods. The three last-named have been further divided, according to their degree of finish, into raw-materials, machinery and industrial products.

#### 24. — EXPORT-PRICE INDEX.

Year	Total		0 f w	hich		Year
Month All Kinds	All Kinds	Fresh Meat	Butter	Timber	Pulp and Paper	Month

Besides the total index the table contains indices for only a few of the most important exports. See in addition text under Table No. 23.

# THE PURCHASING-POWER PARITY OF THE FINNISH MARK AND THE EXCHANGE RATES.

BY

O. K. KILPI, PH. D.

PROFESSOR AT THE FINNISH COMMERCIAL HIGH-SCHOOL OF HELSINGFORS.

During the three last years the value of the Finnish Mark, as shown by the exchange rate quotations for the various currencies of Scandinavia and the Western Powers, has rapidly depreciated. With regard to the pound sterling and the Swedish Crown the fact will appear from the following:

One pound sterling equalled

Anno 1919 (average) 66:97 Fmk

- » 1920 105:43
- » 1921 » 197:69

Contrariwise, the Stockholm quotations in Crowns per 100 Fmk were

Anno 1919 (average) 29:54 Sw. Cr.

- » 1920 » 18:75 » »
- » 1921 » 9:37 »

From this it will be seen that for the pound sterling an increasing number of marks had to be paid, and for the Finnish Mark a decreasing number of Swed. Crowns.

Matters being thus, there is perhaps reason to enquire into whether this great depreciation of the value of the Finnish Mark has its foundation in a decreased purchasing-power in its own country corresponding to the changes which have occurred in the purchasing-power of the various other currencies in their respective countries. This is best done by calculating a parity of purchasing-power between the currencies of Finland and these countries. Should it then be found

that a sufficient reason for the continuing depreciation of the Finnish Mark is not to be found on the basis of this parity, it must be concluded that other causes have influenced the development of our currency. Of such causes, the following are generally mentioned as being of the most importance, viz., the development of the balance of payment and of the ratio between the supply and demand of money, mistrust of the political or economic state of the country, speculation on the Money Market, etc.

In the following a series of calculations will be given showing the various phases of development of the parity of purchasing-power between the Finnish Mark and the pound sterling and the Finnish Mark and the Swedish Crown. preliminary remark must, however, be made regarding these calculations. The parity of purchasing-power is reckoned here on the basis of the official cost of living index-numbers of the respective countries 1), and the conclusions drawn up in this article assume parity results arrived at in this manner to answer the purpose of these calculations. Theoretically, it would perhaps be more correct to use, in the controlling of the exchange rates, figures based on wholesale prices. No serviceable wholesale index-numbers are, however, procurable for Finland. The indices

<sup>1</sup>) The Labour Gazette (United Kingdom), Sociala Meddelanden, published by K. Socialstyrelsen (Sweden), Sosialinen Aikakauskirja (Finland). for import and export goods published in this periodical (see page 15) are useless as a basis for a criticism of exchange rates, as they are them selves directly dependent on these rates.

The results of the calculations for each individual month are shown in the diagrams attached to this article. But in order to obtain a general view of the main directions of development in this connection a few annual averages are added in the following.

The degree in which the depreciation in value of the Finnish Mark in exchange quotations abroad can be explained by a decrease in its purchasing-power at home, as mirrored by the cost of living, is shown in the following figures:

One pound sterling

		(a actus	should have cost (according to par- ity of purchasing- power) Fmk.	
Anno	<b>192</b> 0	(average)	105: 43	94:90
*	1921	<b>»</b>	197: 69	122: 42

The pound sterling thus cost nearly 90 % more in 1921 than in 1920, whereas the parity of purchasing-power stood at barely 30 % over that for 1920.

Still more clearly is this disparity in the development of the actual quotations and the parity of purchasing-power apparent in the quotations for the Finnish Mark on the Stockholm Exchange, as the following annual (unweighted) averages will show:

		;	100 Fink, cost (according to actual quotation) Swed, Crowns	should have cost (necording to par- ity of purchasing- power) Swed, Crowns
Anno	1919	(average	20:54	approx. <b>27</b> :95
*	1920	»	18:75	21:29
'n	1921	9	9: 37	16:09

The theory, according to which exchange rates tend to approach the parity of purchasing-power cannot thus be said to apply to the Finnish Mark. Rather the opposite. The actual quotations have largely been constantly drawn further away from parity in this sense and in a direction unfavourable to the Finnish Mark. Thus, the great depreciation in the value of our currency can only

partly be put down to the decrease in its purchasing-power at home.

It is beyond the scope of an article like the present to attempt a detailed elucidation of the possible economical causes for the depreciation of the Finnish Mark beyond the point which its purchasing-power would suggest. Theoretically, the explanation lies nearest that this extra depreciation is a result of the changes in the proportion of supply and demand between Finland's and other currencies. The figures to hand suggest also that the real reason for the state of affairs in question is more to be sought in the supply and demand for currency during these last years than in any weakening of the economic foundations of our country. Least of all is this decline in the proportion of supply and demand between Finnish and other currencies to be explained by our trade balance. The latter has each year improved. The surplus of import has gone down from 1,630 mill. marks in 1919 to 197 mill. in 1921. More easily is a reason to be found in certain items on the debit side of our balance of payment which have grown side by side with the deterioration in our currency, but which have lately shown signs of improvement. To go still further and show the enrichment or impoverishment of the country, i. e., the growth or decline of the national wealth, a knowledge of the whole of our economic balance would naturally be necessary.

It might be asked: In what manner does the undervaluation of Finnish currency in the western markets compare with the quotations for other countries, if the parity of purchasing-power be applied to these?

A comparison of the quotations on the London Exchange with the above parities in Dec., 1921, shows two different groups of States to exist:

I Group: Currency overvalued in view of parity of purchasing-power (e. g. U. S. A., Canada, Sweden).

II Group: Currency undervalued (France, Italy, Finland, Germany).

To prove the above, the following comparison is appended, from which will be seen (besides

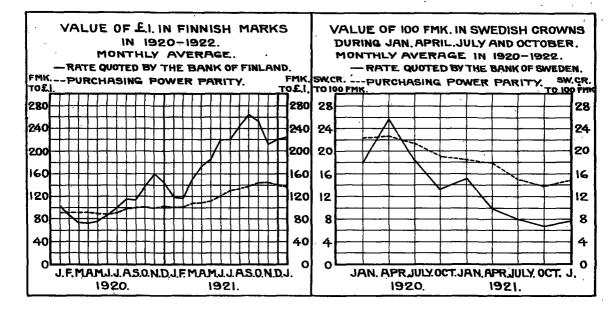

parity in gold for the £) the actual quotation and the parity of purchasing-power of the £ in the currency of the respective countries 1).

	Parity in gold for t	Paid for # (according to actual quotation	Should have been (accord. to parity of purpower)
I.			
U. S. A. Doll	4: 86 <sup>2</sup> / <sub>3</sub>	4:15	4: 24
Canada ,	4:86 2/3	4:35	4:64
Sweden Crowns	18: 16	16:90	18:27

1) In calculating parity of purchasing-power the following indices have been used: Board of Trade (United Kingdom); Bureau of Labor (U. S. A.); Dept. of Labor (Canada); Svensk Handelstidning (Sweden); Statistique Generale (France); Bachi (Italy); Frankfurter Zeitung (Germany). The figures for Canada and Italy refer to Nov. 1920. The indices for each of these countries are the same as those used by Crump in his calculations for 1919 and 1920. Comp. Norm an Crump: A Review of Recent Foreign Exchanges Fluctuations. Journal of the Royal Statistical Society. London, May 1921. Page 426/—. London quotations are given in monthly averages struck from the average quotations on five different days and taken from The Economists.

ш.			
France Francs.	25:22	53: 34	<b>47: 93</b>
Italy Lire	25: 22	96: 12	<b>85: 26</b>
Finland Fmk	22:22	218:92	139:78
Germany Rmk	20:43	801: —	406: 68

So interesting as such calculations are, it is well to remember that, at least with regard to the parity of purchasing-power, they can only be approximately accurate. This will be seen already from the fact that in those countries where several wholesale-price indices are published, these differ greatly from one another at times. A calculation of the parity of purchasing-power can thus give different results, depending on which index has formed its foundation. The same applies to cost-of-living indices. These also, owing to the different methods used in their formation, cannot always be compared with exactitude, so that a strict accuracy cannot be awaited from them either.

SUBSCRIPTION TO THE BULLETIN. Subscription to the Bulletin can be made at the Akademiska Bokhandeln, Helsingfors or the Helsingin Suomalainen Kirjakauppa, Helsingfors. The price including postage is in Finland Fmk 50:— and in foreign countries Dollar 1:— per annum. Single copies may be had at a price of Fmk 4:50 or 10 cents respectively.
