## FINNISH CONSTRUCTION COMPANIES IN THE INTERNATIONAL MARKET

The construction industry has played a major role in the Finnish economy since the second world war. The rate of construction in the 1960s and, in particular, in the early 1970s was exceptionally high by international standards. In recent years in Finland, construction investment has accounted for 16 to 19 per cent of GDP at market prices while in Western Europe, for example, the corresponding share has been 10 to 13 per cent on average.

Due to domestic demand, the Finnish construction industry was still mainly involved in satisfying the home market at a time when construction industries in many other countries were intensively searching for markets abroad. However, during the present decade, and particularly the most recent years, the Finnish construction industry has taken on a new, international character. Within a few years, Finnish building contractors have gained a firm foothold in the construction markets of the Middle East, Africa and the Soviet Union. Exports of building materials and supplies and of knowhow associated with building have also grown quickly.

This article deals with the so-called contracting exports, which are the foreign activities of Finnish construction companies. Contracting exports include not only the erection of buildings, i.e. construction as such, but also the supply of machinery, equipment and materials, and various installation services, as well as planning. training supervision and control assignments connected with the construction or use of the buildings.

## THE DEVELOPMENT AND STRUCTURE OF CONTRACTING EXPORTS

Finnish construction companies completed their first contracts abroad in the late 1950s.

Activity abroad increased somewhat during the following decade, but before 1972 the annual foreign invoicing never exceeded 100 million marks in terms of 1977 currency. Foreign invoicing amounted to about 1100 million marks in 1977.

During 1972-1975 the emphasis in contracting exports was clearly on construction work close to the frontier between Finland and the Soviet Union. From the Finnish companies' point of view, this work was equivalent to domestic construction since the projects involved the same proportion of Finnish inputs of labour, planning and materials. In Finland, between 85 and 90 per cent of construction inputs are domestic.

The most extensive frontier project is the subject of an agreement concluded in the spring of 1977 between a Soviet buyer and a consortium of the largest Finnish construction companies. By 1982 the Finns are to build a large mining industry combine and a town for 9000 inhabitants, at Kostamus some 40 kilometres into the Soviet Union. This is the largest Finnish export project ever and at the time the agreement was signed it was valued at approximately 2700 million marks. In 1972-1976, invoicing arising from frontier projects totalled an average of 250 - 300 million marks each year, but since the start of the Kostamus project it has amounted to 700-800 million marks. At present, two new projects totalling nearly 1500 million marks, are being negotiated.

Apart from the frontier projects, Finnish construction companies did not have many projects abroad before 1974. Since then, the socalled far-off exports have grown very quickly with their value roughly doubling in each of the past three years. In fact, since 1976 these projects have accounted for a larger share of Finnish contracting exports than have the frontier projects.

## BREAKDOWN OF THE INVOICING (1100 MILL. MK) OF FINNISH BUILDING PROJECTS ABROAD IN 1977

Out of the total invoicing by Finnish contractors, more than 350 million marks accrued from the Middle East, about 150 million marks from Africa, somewhat less than 100 million marks from the CMEA countries (excluding frontier projects) and less than 50 million marks from Western Europe.

The real break-through in far-off exports and the whole Finnish contracting export trade was in 1977, when contracts signed abroad, excluding the Kostamus contract, amounted to 1900 million marks. In 1977. contracts for construction work abroad totalled about 4600 million marks, exceeding the total value of contracts made in 1960-1976. About 40 new foreign projects were started by Finnish contractors in 1977, while about 120 projects in 22 different countries were started in 19601976.

The largest contract obtained from the Middle East consists of building 3500 flats in two areas of Teheran, the capital of Iran. This contract is worth approximately 700 million marks. In Iraq, Finnish companies are building a network of vocational training schools to cover the whole country, a contract worth nearly

400 million marks. However, the greatest number of projects abroad, some of which are almost as large as those mentioned above, are under progress in Saudi Arabia.

The main emphasis in contracting exports to Africa has been on Nigeria, but there have also been many projects completed in Libya.

In 1978, the outlook for Finnish contracting exports has continued to be promising. By the beginning of June, Finnish companies had signed new building contracts abroad totalling the equivalent of more than 500 million marks, which was more than the total for 1976. Foreign invoicing by Finnish construction companies is expected to total almost 1800 million marks in 1978.

In 1977 contracting exports accounted for about 5.5 per cent of the total value of Finnish domestic construction. The Association of Finnish Building Contractors has forecast that by 1980 this share will have increased to about 10 per cent, which is a very high figure by international standards. This increase in the share of exports results from the continued growth of exports but also from a stagnation in Finnish domestic construction during the second half of the 1970s.

## SPECIAL FEATURES OF COMPETITIVENESS

The export orientation of Finnish construction companies came about because of the rapid rise of surplus capacity relative to domestic requirements. Since 1975 the volume of construction has fallen in two years by more than 20 per cent, and it will take ten years before the volume of construction returns to the level of the mid-1970s.

The fact that Finnish companies have been able to break through fairly rapidly into the international construction market with its increasing competitition, is mainly attributable
(continued on page 27)

## EXPLANATIONS RELATING TO THE STATISTICAL SECTION

## BANK. OF FINLAND

The balance sheet of the Bank of Finland was revised on Dec. 31. 1974 in connection with the revision of accounting legislation. New series have been built according to the revision. When the figures are not fully comparable to the previous ones, the series is broken by a line.

Page 4. Foreign sector: Gold and convertible exchange receivables $=$ Gold + Special drawing rights + IMF gold tranche + Convertible currencies.
Gold and convertible exchange reserve $=$ Gold and convertible exchange receivables - Liabilities in convertible currencies.
Non-convertible exchange reserve $=$ Receivables in tied currencies - Liabilities in tied currencies.

Other receivables $=$ Foreign bills + Foreign bonds + Currency subscription to Finland's quota in the IMF,
Other liabilities $=$ IMF mark accounts + Allocations of special drawing rights + Term liabilities.

Public sector: Receivables $=$ Total coinage + Other public sector receivables + Bonds.
Liabilities = Cheque accounts + Counter-cyclical reserves + Capital import deposits + Other public sector claims.
Deposit certificates are interest bearing, freely transferable, term liabilities of the Bank of Finland. Their maturities range from one week to one year.

Page 5. Domestic financial sector: Other receivables = Call money market advances + Bonds + Other financial institution receivables. Other liabilities $=$ Call money market deposits + Capital import deposits + Other financial institution claims.

Corporate sector: Receivables $=$ New export bills + Financing of suppliers credits + Other corporate receivables + Bonds.
Liabilities $=$ Investment deposits + Counter-cyclical witholdings + Capital import deposits + Import levy deposits + Other corporate claims.

## deposits by the public - <br> ADVANCES TO THE PUBLIC - MONEY SUPPLY

Figures for deposits and advances are supplied by the Central Statistical Office.
Page 6. Deposits by the public. The central government and the financial institutions are mainly excluded from the public.
From 1974 deposits include domestic deposits denominated in foreign currency.
Page 7. Advances to the public. The central government and the financial institutions are not included in the public.
Postipankki's (Post Office Bank's) advances do not include loans granted by the State Investment Fund (INRA). Domestic credits in foreign currency are mainly granted by the commercial banks and the rest by Postipankki.
Money Supply. $M_{1}=$ Finnish notes and coins in circulation Finnish notes and coins held by the banks+demand deposits held by the public (incl. demand deposits at the Bank of Finland) Quasi-Money $=$ Time deposits held by the public (incl. time deposits at the Bank of Finland)
Note; Domestic deposits in foreign currency included in money supply since 1974. In the money supply the public includes nonmonetary financial institutions.

## STATE FINANCES

Page 8. Official figures computed by the Economic Department of the Ministry of Finance. First date of publication: Bulletin No. 8, 1968. Revenue and expenditure: Extra-budgetary funds and the aggregated net current deficit of State enterprises are included.

Figures are reported on a cash payment basis. Debt: Foreign debt includes promissory notes given to international organizations. Index-tied bond loans are taken at nominal values. Cash debt (net) $=$ net debt to the Bank of Finland plus short-term debt to Postipankki less cash holdings (net) of State departments and funds.

## FOREIGN TRADE

Pages 9—11. Figures supplied by the Board of Customs. Indices ( p .9 ): The volume indices are calculated according to the Paasche formula and the unit value indices according to the Laspeyres formula. Terms of trade: the ratio of export indices to import indices. Foreign trade by countries (p. 11): from January 1978 imports by. countries of origin exports by countries of consumption.

## BALANCE OF PAYMENTS

Pages 12-13. Figures are calculated by the Bank of Finland. In addition to the Board of Customs figures, exports include grants in kind but exclude stevedoring expenses and imports include seamen's duty-free imports, non-monetary gold, grants in kind and adjusted allowance for smuggling.

## PRICE INDICES

Page 14. All indices calculated by the Central Statistical Office.

## WAGES - PRODUCTION

Pages 15-16. Figures supplied by the Central Statistical Office. Page 16. Index of industrial production calculated by the Central Statistical Office. The grouping by branches of industry is in accordance with the Standard Industrial Classification (SIC) which is a version of the 1968 edition of the ISIC. The SIC facilitates international comparisons between Finnish statistics and corresponding data from countries which use the ISIC. The seasonally adjusted series is calculated by the Bank of Finland on the basis of the index of industrial production per working day according to a method resembling the U.S. Bureau of Census Method II. Commodities according to use: Investment goods weight 7.0, other producer goods weight 67.0 and consumer goods weight 26.0 . The weights for the special manufacturing indices are food manufacturing (SIC 311-2) 9.8, manufacture of wood, and wood and cork products (SIC 311-2) 8.0, manufacture of paper and paper products (SIC 341) 15.2, manufacture of industrial chemicals (SIC 351-2) 5.2, manufacture of non-metallic mineral products except products of petroleum and coal (SIC 361-9) 3.6 and metal industry (SIC 37-38) 25.9 .

## LABOUR - TIMBER FELLINGS - INTERNAL TRADE TRAFFIC - CONSTRUCTION OF BUILDINGS

Page 17. Labour figures supplied by the Central Statistical Office. Commercial timber fellings compiled by the Ministry of Labour. Retailers' and Wholesalers' volume indices supplied by the Central Statistical Office. Construction of buildings figures calculated by the Central Statistical Office.

# SOME PARTICULARS ABOUT FINLAND 

## FORM OF GOVERNMENT

From 1155 to 1809 Finland formed a part of the kingdom of Sweden. Connected from 1809 with Russia, Finland was an autonomous coutry with the Emperor as Grand Duke until December 6, 1917. the date of Finland's declaration of independence. The republican constitution was adopted in 1919. The legislative power of the country is vested in Parliament and the President. The highest executive power is held by the President, elected for a period of 6 years. Mr. Urho Kekkonen has been President since 1956 and he was re-elected for the period March 1, 1978, to March 1, 1984.
Parliament, comprising 200 members, is elected by universal suffrage for a period of 4 years. The number of seats of the different parties in Parliament elected in 1975 is as follows: Social Democrats 54. People's Democrats 40. Centre Party 41. Conservatives 34. Swedish Party 10, Liberal Party 8, Christian League 9, Finnish Farmers Party 2 and Finnish People's Constitutional Party 2.

## INTERNATIONAL ORGANIZATIONS

Finland became a member of BIS 1930, IMF 1948. IBRD 1948. GATT 1950, UN 1955, IFC 1956, IDA 1960. EFTA 1961, ADB 1966, OECD 1969, and IDB 1977.

## LAND

THE AREA is 337000 square kilometres (Great Britain's area is 245000 sq . km and Italy's area $301000 \mathrm{sq} . \mathrm{km}$ ). Of the total, inland waters form $9.4 \%$. Of the land area (1970) 2.7 mill. ha ( $9.6 \%$ ) are cultivated and 19.1 mill. ha ( $68.4 \%$ ) are covered by forests.
OWNERSHIP OF LAND (1970): The total land area was distributed among different classes of owners approximately as follows: private $60.7 \%$. State $29.4 \%$, joint stock companies etc. $8.0 \%$, municipalities and parishes $1.9 \%$.

## POPULATION

NUMBER OF INHABITANTS (1976): 4.7 million. Sweden 8.2, Switzerland 6.4. Denmark 5.1 and Norway 4.0 million.
DENSITY OF POPULATION (1976): In South Finland 46.2, in East and Central Finland 13.9, in North Finland $4: 0$ and in the whole country an average of 15.5 inhabitants to the square kilometre.
DISTRIBUTION BY AREA (1976): $41 \%$ of the population inhabit the rural areas, $59 \%$ towns and urban districts. The largest towns are: Helsinki (Helsingfors), the capital 493324 inhabitants. Tampere (Tammerfors) 166 179, Turku (Åbo) 164520.
EMPLOYMENT (1976): Agriculture and forestry $14 \%$, industry and contruction $35 \%$, commerce $15 \%$, transport and communication $8 \%$ services $28 \%$.
LANGUAGE (1975): Finnish speaking $93.3 \%$, Swedish speaking $6.4 \%$. others $0.3 \%$.

EDUCATION (1977): Practically all persons over 15 years of age are literate. There are 6 universities (the oldest founded in 1640) and 14 colleges of university standard.
CHANGE OF POPULATION (1976): births $14.0 \%$, deaths $9.4 \%$. change $+2.7 \%$, net emigration $2.0 \%$. Deaths in France $10.5 \%$ and Great Britain $12.2 \%$.

## TRADE AND TRANSPORT

NATIONAL INCOME (1976, in million marks): Gross domestic product at factor cost by industrial origin: agriculture 6407 ( $6 \%$ ). forestry and fishing 4950 ( $5 \%$ ), manufacturing 31509 ( $31 \%$ ). construction 9233 ( $9 \%$ ), transport and communication 10849 ( $11 \%$ ). commerce, banking and insurance 13585 ( $14 \%$ ). public administration 5264 ( $5 \%$ ), ownership of dwellings 3639 ( $4 \%$ ) services 15581 ( $15 \%$ ), total 101017 . Index of real domestic product 162 (1964 $=100$ ).

FOREST RESOURCES (1976): The growing stock comprised of 1520 million $\mathrm{m}^{3}$ (solid volume with bark) of which $45 \%$ was pine and $37 \%$ spruce, the remaining $18 \%$ being broad-leaved trees, chiefly birch. Of the growing stock, 637 million $\mathrm{m}^{3}$ was up to the standard required for logs, $56 \%$ of these being pine. The annual growth was 57.4 million $\mathrm{m}^{3}$ and the total removal. calculated on the basis of roundwood consumption, was 42.4 million $\mathrm{m}^{3}$.
AGRICULTURE (1976): Cultivated land 2.3 million hectares. Number of holdings 242700 of which 164600 are of more than 5 ha. Measure of self-sufficiency in bread cereals $150 \%$ in the crop year 1976/77.
INDUSTRY (1976): Gross value of industrial production 95790 mill. marks. number of workers 412718 , salaried employees 136 890, motive power (1976) 6.8 mill. kW . Index of industrial production 125 for $1976(1970=100)$.

STATE RAILWAYS (Jan. 1. 1978): Length 6063 km .
MERCHANT FLEET (April 30, 1978): Passenger vessels 118 (197 058 gross reg. tons), tankers 51 ( 1165653 gross reg. tons), dry cargo vessels 212 ( 958002 gross reg. tons), other vessels 72 ( 9640 gross reg. tons), total 453 ( 2330353 gross reg. tons).
MOTOR VEHICLES (Dec. 31, 1977): Passenger cars 1075400. lorries and vans 136200 , buses 8800 , others 7200 , total 1227600.
FINNISH AIRLINES (April 1. 1977): Finnair and Kar-Air have in use 4 DC-8, 1 DC-6-ST, 8 Super Caravelles, 9 DC-9s, 5 DC-9-51s, 2 DC-10-30 and 5 Convair Metropolitans. Companies have scheduled traffic outside of Finland to 32 airports and to 20 domestic airports.

## FINANCE AND BANKING

CURRENCY. Since 1860. Finland has had its own monatary system. From 1877 until 1914 the country was on the gold standard. and returned to it in 1926. In 1931, the Central Bank's duty to redeem bank notes in gold was suspended and at the end of 1962 was entirely cancelled. The monetary unit is the mark (Finnish markka). The last par value of the mark was set on Oct. 12. 1967 and was 0.21159 grams of fine gold per mark (equivalent, at the time, to 4.20 marks per U.S. dollar). Since Nov. 1, 1977 the external value of the mark has been officially expressed in terms of a currency index. This index is tradeweighted and indicates the average change in the currencies which are important in Finnish foreign trade. The permissible range of fluctuation is 2.25 per cent on either side of the arithmetic mean. The fluctuation limits are 121.7 and 116.4.

THE CENTRAL BANK. The Bank of Finland (estab. 1811) functions under the guarantee and supervision of Parliament. Its Board of Management is appointed by the President of the Republic; the Bank Supervisors, nine in number, are elected by Parliament. The Bank has a head office in Helsinki and 12 branches in other towns.

OTHER CREDIT INSTITUTIONS (Dec. 31, 1977). There are two big and five small commercial banks with in all 858 offices, 280 savings banks 376 co-operative banks, six mortgage banks. Postipankki and three development credit institutions. The co-operative stores accept deposits from their members. The Social Insurance Institution and fifty-eight private insurance companies also grant credits.
RATES OF INTEREST (May 1, 1978). The official discount rate of the Bank of Finland (the basic rate applied by the Bank of Finland for discounts and rediscounts of commercial banks) is $71 / 4 \%$. The range of rates for other credits granted by the Bank of Finland is between $51 / 2$ and $81 / 2 \%$. Other credit institutions time deposits $31 / 4 \% ; 6$ month deposits $41 / 4 \% ; 12$ month deposits $51 / 2 \% ; 24$ month deposits $61 / 2 \%$; 36 month deposits $71 / 4 \%+$ savings premium; 36 month deposits $71 / 4 \%+$ tax concession. The highest lending rate $10 \frac{1}{2} \%$.

# RECENT DEVELOPMENTS IN THE FINNISH TRAVEL BALANCE 

by Pirkko Miikkulainen, M.A.

Economics Department
Bank of Finland

Finland's travel account was in deficit until the late 1960s. Travel expenditures grew rapidly throughout the decade as the result of an overall rise in the Finnish standard of living, an improvement in opportunities for travel and a fall in the relative prices of trips. The growth of receipts was not as rapid, and the deficit on the travel account reached a peak of about 100 million marks per year in 1964-1965. Measures designed to curb travel expenditure were introduced as part of the policy to restore the current account balance.

The devaluation of the Finnish mark in 1967 contributed substantially to the decline in the travel account deficit which had already started. After the devaluation, the growth of travel receipts accelerated and it continued until the international economic recession induced by the 1973 oil crisis. In the early 1970s Finland was a comparatively cheap tourist and shopping country, particularly for travellers from the other Nordic countries, which included a substantial number of Finns who had emigrated to Sweden in the late 1960s. Expenditures have also grown rapidly throughout the 1970s: since 1974 they have increased even more quickly than the receipts. Between 1970 and 1972 the surplus on the travel account grew from 140 million marks to 340 million marks. During 1972-1974 the surplus stayed at around 300 million marks, but since then it has declined to only 22 million marks in 1976; in 1977 the travel account was more or less balanced. However, there are already signs of a new upswing in tourism. Prices in Finland have moved favourably recently and there has been an improvement in the country's competitive position in the field of international travel (Chart 1).

## general aspects of the travel ACCOUNT

All payments related to foreign tourism are entered into the travel account. The guidelines followed in the compilation of statistics on tourism are the same as those recommended by the International Monetary Fund for the compilation of balance-of-payments statistics. The travel account classification "Travel and tourism» includes all accomodation, catering and similar expenses related to travelling. purchases from abroad and expenses on local or inland transport. International transport, mainly by sea and air, to the destination of the journey is included in the balance-ofpayments item »Transport».

The Bank of Finland's foreign exchange statistics constitute the basic source of information used in the calculation of the travel account. The authorized banks are obliged to submit monthly currency-by-currency data on their purchases and sales of travel currency. However, information on the destination or purpose of the journey cannot be obtained from the foreign exchange statistics, so, for instance. business trips cannot be separated from actual tourism. Some 100 million marks is added annually to both the receipts and the expenditures side of the travel account, to allow for the amount of Finnish bank notes transported by tourists.

As there is no passport control between the Nordic countries, besides a sample survey, an examination based on currency data is the only method of studying travel between these countries.

CHART 1. FINNISH TRAVEL ACCOUNT IN 1960-1977, MILL. MK

By using the present compilation method, the travel account also includes the border trade carried out on the Swedish-Finnish border. It has occasionally been quite considerable, but at present it amounts to about 100 million marks annually. Travel receipts include a small amount of foreign currency imported by Finnish emigrants from Sweden which can be used for purposes other than actual tourism. For statistical reasons, the travel currency also includes certain gifts and other income transfers by emigrants.

The data based on the currency statistics do not actually indicate the destination or the country of origin of a tourist. However, when travelling in the Nordic countries, tourists tend to use mainly the currency of the country they have come from; hence the breakdown based on the currency statistics is here not so misleading as it is in the case of several other currencies. Certain major currencies, such as the U.S. dollar, sterling and the DM, are widely used by nationals of other countries.

Changes in exchange rates affect travel receipts and travel expenditures in various ways. For example, after the devaluation of a currency a tourist will need, for given services and purchases, the same amount of the devalued currency, but less of his home currency. However he may choose to increase his purchases, in which case his expenditure will increase in
terms of the devalued currency and decline less in terms of his home currency. A revaluation has an opposite effect. In the 1970s, Finland has been affected particularly by the revaluation of the DM; while payments in terms of the DM have increased, payments in Finnish currency have doubled.

From examining quarterly developments in the travel account, it can be seen that Finnish tourist facilities are used unevenly during the year. Hotels and other accomodation facilities are used fairly little outside the summer months, so that the greater part of the facilities are in efficient use for only a few months. Travel receipts during the summer are twice what they are for the rest of the year. On the other hand, travel expenditures are more evenly distributed over the year, although in recent years Finns have tended to travel abroad more often during their summer holiday. The quarterly figures show that since 1974 the deficits on the travel account for the first quarter have increased and the surpluses for the summer months have

declined, bringing about a rapid decline in the annual surplus on the travel account (Chart 2).

## TRAVEL RECEIPTS

Until the 1970s, Finnish travel receipts were fairly small by the standards of, for example, the other Nordic countries. In 1965 Finnish travel receipts accounted for 2 per cent of Finnish exports of goods and services, which was similar to the situation in Sweden. However, the corresponding figure for Denmark was over 6 per cent and for Norway 3 per cent. The international economic upswing during the early 1970s brought a rapid expansion in Finnish travel receipts. By 1975 Finnish travel receipts had increased to 5 per cent of exports of goods and services, while the corresponding figures for Sweden. Denmark and Norway remained at their 1965 level (Chart 3).

In 1970-1972 travel receipts grew on average by almost 40 per cent per annum. The travel receipts, which are highly sensitive to changes in comparative prices, increased more rapidly than other receipts from services. Other services are largely linked with visible trade. Total exports of goods and services only grew at half the rate during the same period. Travel receipts grew steadily until 1973, but then their growth stopped almost entirely. Exports of goods and services grew by 20 to 30 per cent annually.
except in 1974; hence the relative share of travel receipts fell slightly below the 1970 level. A rapid rise in domestic prices contributed to this stagnation of the growth of travel receipts. In 1974-1977 the average annual rise in the Finnish consumer price index was 15 per cent, while the corresponding rise, for example, in Sweden was about 10 per cent. Since more than half of Finnish travel receipts are denominated in Swedish kronor, the relative consumer prices in Finland and Sweden greatly influence Finnish travel receipts.

As shown in Table 2, Nordic currencies account for the greater part of Finnish travel receipts. In the years of the fastest expansion of Finnish tourism. Swedish kronor accounted on average for 60 per cent of Finnish travel receipts; in fact, the rapid growth in travel receipts in the early 1970s was almost entirely attributable to an increase in krona receipts. On the other hand, the fast growth in travel receipts in the late 1960s had been induced by the devaluation of the Finnish mark and an international economic upswing which had not yet reached the Nordic countries. This is supported by the following examination in which the real growth of travel receipts (using the

consumer price index as a deflator) is explained by comparing Finnish and Swedish consumer prices. In 1965-1972 Finnish consumer prices clearly rose more quickly than the Swedish. However, owing to changes in the exchange rates between the Finnish and Swedish currencies, the rate of inflation was lower in Finland than in Sweden and this promoted the growth of travel receipts.

In the early 1970s the real growth of Finnish travel receipts was rapid as consumer prices grew more slowly than in Sweden. At that time, shopping trips from Sweden to Finland reached their peak and part of the surplus on the travel account was attributable to earnings from this border trade. It is estimated that travel receipts from these shopping trips amounted to between 200 and 300 million marks per annum. Moreover, emigration to Sweden was vigorous towards the end of the 1960s, with net annual emigration amounting to 30000 people. As a result, holiday expenses of Finns working in Sweden contributed to the increase in travel receipts.

The real growth of travel receipts slowed down in 1973-1974 and in the following years, receipts even declined in real terms. In those years, Finnish consumer prices rose more rapidly than, for example, the Swedish. The share of Swedish kronor in Finnish travel receipts has declined since 1974, whereas the share of Norwegian kroner has increased since 1973. It is probably true that the growth in Finnish travel receipts still is based on increased tourism between the Nordic countries.

According to the passenger transport statistics published by the Central Statistical Office of Finland, most of the non-Scandinavian tourists in Finland come from the Federal Republic of Germany. The United States, the U.S.S.R. and the United Kingdom come next in the list, which is the same as in the foreign exchange statistics. The growth in DM receipts in 1975 -1976 and the relatively high proportion of DM receipts in 1977, indicated by the foreign exchange statistics, are mainly due to a growth in mark terms induced by a rise in the exchange rate for the DM, but there has been some increase in terms of foreign currency as well. The number of tourists travelling from the Federal Republic of Germany to Finland declined slight-

## CHART 4. PERCENTAGE ANNUAL CHANGES IN FINNISH REAL TRAVEL RECEIPTS IN 1965-1977

Iy in 1975-1976, and in 1975 there was also a decline in DM receipts in DM terms. Similarly, the devaluation of the U.S. dollar has been reflected in the fact that, although U.S. dollar receipts grew by more than 10 per cent in dollar terms, in mark terms the share of U.S. dollar receipts in total travel receipts fell in 1973. Likewise, the devaluation of the U.S. dollar in 1975 has been reflected in a fall of the share of U.S. dollar receipts in mark terms.

In addition to economic factors affecting tourism, such as domestic and foreign prices, and the level and distribution of income, the supply of tourist facilities plays an important role. After a vigorous investment and development period, the level of Finnish travel receipts achieved in the early 1970s is difficult to exceed, particularly with the present slow economic growth. Since 1974 Finnish travel receipts have maintained a steady level of slightly less than 1500 million marks, which implies that they have grown by only a few per cent annually and real receipts have even declined.

## TRAVEL EXPENDITURES

As a result of vigorous economic growth, travel expenditures started to grow rapidly in the early 1960s. The external balance of the current account became unstable, with the deficit increasing rapidly, so measures for restoring balance were implemented around 1965. Tourists leaving the country were restricted in the amount of travel currency they could take and there was a reduction in the amount of dutyfree goods Finns could import on return. Restrictions were placed on paying for foreign tourist facilities in advance in Finland. In 1968 -1970 a passenger tax was levied on Finns leaving the country. The growth of travel expenditures was slowed down by these measures, but started to increase once more at the beginning of the 1970 s. Finnish charter flights abroad increased greatly at that time: according to the National Board of Aviation, the number of journeys by air from Finland tripled during 1971-1975.

CHART 5. PERCENTAGE ANNUAL INCREASES IN FINNISH TRAVEL EXPENDITURES AND IMPORTS OF GOODS AND SERVICES IN 1960-1977

Empirical studies have shown that the demand for tourist facilities in the broad sense is very sensitive to price changes. This has also been proved by Finland's experiences after the devaluations. Price competition between two neighbouring countries will easily turn about the flow of border trade. For example, the demand for Swedish goods increases in Finland as a result of a devaluation of the krona, and this is reflected in a growth of travel expenditures (Chart 5).

In the early 1970s, the growth of travel expenditures was rapid, being about three times as fast as the growth of imports of goods and services. After a pause in 1974, travel expenditures have continued to grow rapidly, so that their share in total imports of goods and services increased once more to slightly over 4 per cent in 1977. In the 1970s, the share of travel expenditures in total imports of goods and services to Finland has grown by one percentage point. The recent years have seen a revival in travel abroad even to the other Nordic countries.

Table 3 shows that Swedish kronor currently account for 20 per cent of travel expenditures. The share of Swedish kronor in total expenditures was at its largest at the beginning of this decade. The DM and the U.S. dollar were the second and third most important currencies.

As these, along with sterling, are used in most of the popular tourist centres, travel to these countries is obviously much less frequent than the currency data would suggest. The breakdown of travel expenditures by major currencies has remained almost unchanged throughout the 1970s. However, the share of pesetas in total travel expenditures has grown from 9 per cent to 11 or 12 per cent. The stagnation in the growth of real income has not reduced the demand for mass tourist facilities (Chart 6).

Travel expenditures are financed out of disposable income, and it seems to have been a general trend throughout the 1970s that the real growth of travel expenditures has reflected the real growth of disposable income. However, in some years the changes in travel expendi-

## CHART 6. PERCENTAGE ANNUAL CHANGES IN FINNISH REAL TRAVEL EXPENDITURES IN 1965-1977

tures have been somewhat larger than the changes in income, and sometimes even the reverse. 1974 was the first year when the change in travel expenditures clearly diverged from the change in income. At that time travel expenditures declined all over the world, as a result of a sharp rise in the cost of tourist facilities (incl. transport costs) and economic uncertainty ensuing from the oil crisis. Following the overall international trend. Finnish travel expenditures started to grow again in the following year, although there were not any clear signs of an economic upswing. Travel expenditures continued to increase in real terms in 1976, though at a slower rate. The real growth of travel expenditures came to an end in 1977. which can be explained by a decline in disposable income in 1976-1977.

## FUTURE PROSPECTS

It is thought that tourism will be an expanding industry in the future, although growth will not be as rapid as in previous years. The Finnish tourist industry developed vigorously in the late 1960s and the early 1970s. In particular, accomodation was increased substantially. However, due to the change in the overall economic situation, travel to and from Finland and domestic tourism have stagnated. Because of the recession there has been a surplus of accomodation, which - coupled with a simultaneous rise in costs - has reduced the profitability of the industry.

However, the tourist industry in Finland has become more competitive in 1978, and the growth of the country's travel receipts seems more promising than it has been for years. The deficit on the travel account for the first quarter of the year was smaller than in the corresponding period of the previous year. As there are indications - the number of reservations made and the Central Statistical Office's most recent data on the number of travellers - that travel receipts will develop favourably during the
summer period, the travel account is likely to show a surplus for the current year, even if travel expenditures should grow further.

Although prospects for economic growth seem rather modest for the next few years, it is estimated that there will be a slight annual increase in both domestic and foreign tourism. Increasing leisure and some real growth of income ought to be sufficient to maintain a fairly stable growth of travel.

## ITEMS

Finland's balance of payments JanuaryMarch 1978. According to the Bank of Finland's preliminary figures, the current account showed a surplus of 184 million marks for the first quarter of this year. In the corresponding period of 1977, the current account showed a deficit of 8 million marks. In January-March 1978, the net inflow of long-term capital amounted to just over 800 million marks and the short-term foreign debt declined by 100 million marks. Total foreign exchange reserves of the Bank of Finland increased by 1556 million marks.

The visible trade account showed a surplus of 393 million marks for January-March 1978, as compared with a surplus of 212 million marks in the same period of 1977. The volume of commodity exports was approximately the same as for the first quarter of 1977, while the volume of imports, excluding fuel imports, decreased. Export prices rose by 10 per cent and import prices by 16 per cent from their level for January—March 1977.

The surplus on the services account increased by over 100 million marks to 467 million marks from the corresponding period in 1977. Travel
receipts grew more than travel expenditure, but the travel account still showed a deficit. The surpluses on the transport account and other services account clearly increased.

The payment of interest expenses, arising from borrowing abroad, grew noticeably and although interest earnings from foreign receivables increased slightly, the investment income deficit was 100 million marks more than a year earlier, totalling 613 million marks for January -March 1978. Transfer payments also increased to some extent.

In January-March 1978, the net inflow of long-term foreign capital was 838 million marks, 500 million marks more than for the first quarter of 1977. Drawings of long-term foreign loans totalled 1876 million marks and amortizations 854 million marks. Longterm export credits granted to foreign customers amounted to 264 million marks. while redemption of similar loans totalled 94 million marks. Finnish direct investment abroad amounted to 65 million marks, whereas foreign direct investment in Finland was 28 million marks.

${ }^{1}$ Preliminary figures

The short-term trade credit debt declined by 100 million marks. This was mainly attributable to the slower growth rate of imports than exports. Short-term prepayments and liablities related to imports decreased by 568 million marks, while net short-term prepayments and receivables related to exports increased by 671 million marks. All in all, the short-term capital account (incl. statistical discrepancy) declined by 98 million marks.

The overall balance showed a surplus of 924 million marks. The foreign exchange reserves of the Bank of Finland increased by 1556 million marks, while the net foreign debt of other foreign exchange holders grew by 632 million marks. Increases in the mark value of the reserves caused by exchange rate changes have not been taken into account in the figures for the changes in the foreign exchange reserves. At the end of March 1978, the convertible foreign exchange reserves of the Bank of Finland (allowing for the devaluation in February) amounted to 2814 million marks and the tied foreign exchange reserves to 822 million marks.

## (continued from page 2)

to the high standards of technology in the Finnish construction industry. By industrializing construction - mechanizing and rationalizing working and building methods - and carrying out intensive product development related to the entire building process, the Finnish construction industry has made achievements that are internationally esteemed. At present. about 70 per cent of industrial buildings and about 60 per cent of residential buildings in Finland are built using highly advanced component technology.

Finnish building contractors have proved to be most competitive in such turn-key projects in which the whole project - from planning and construction to equipment deliveries and various training assignments - has been implemented as a jont venture by Finnish building
enterprises. These package deliveries have involved the construction of individual industrial plants or of complete communities.

In recent years, there has been great international demand for various plants manufacturing components needed in construction. Such component factories, which will continue to serve the construction industry of the importing country, have been delivered by Finnish companies to the Middle East and certain West and East European countries. In addition to the construction of the factory, these package projects have, in certain cases, included the following stages: the planning of a factory; the supply of machinery for the factory; the starting of operations; the training of personnel; and the assembling of pre-fabricated houses.

Extensive and integrated turn-key projects related to urban planning have, at their largest, included the following assignments: the functional and environmental planning of a region: the technology of industrial construction; the planning and construction of residential, industrial and public buildings; the supply of machinery and equipment needed in manufacturing; the planning and construction of infrastructure; and the completion of the region.

In addition to turn-key projects. Finnish contracting exports have centred on the construction of water treatment plants, various water supply and sewage systems, schools, hospitals, hotels, cold stores and grain silos, built by using a slip casting method.

It is typical of the technological and economic know-how of Finnish construction that the acquired knowledge and skills can be easily applied in all kinds of circumstances. The export performance of Finnish construction companies has been largely attributable to the fact that they have been able to suggest solutions which can be flexibly transformed according to local requirements set by the climate, building technology and the size and level of equipment desired.
