## No. 11

## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

The tightening of the money market that had already been felt in September, continued during October. This development, which recurs seasonally every autumn, was accelerated this year by several circumstances, for the Government had, for financial reasons, brought forward a bill for raising the duty on a considerable number of imported commodities and had received the sanction of the Diet that the higher duties should come into fiorce from the middle of November. Fior this reason importers hurried to import an appreciable part of their winter supplies during the latter part of Octolber and the beginning of November, which, of course, made considerable demands on the lbanks. The position of the banks was also affected at the end of October by the fact that the woodworking industry has at the end of October to pay the Treasury the cost of the timber purchased from the State forests. In addition, the collection of the income tax during the autumn affects the position of the lbanks in the same direction.

Under such cincumstances it is not surprising that deposits in the Joint Stock banks were reduced during October liby 82.1 million marks, whereas the falling off in Octolber, 1929, amounted to 67.5 million marks. In regard to credits the difference is still greater. Last year credits increased in October to an inconsiderable amount of 12.7 millions, but this year the rise was 119.2 millions. It must be taken into con-
sideration, however, that at the end of Octolber this year credits amounted altogether to $9,191.1$ million marks, while a year ago they totalled $9,800.7$ millions. While credits were thus reduced appreciably during the past year owing to trade depression, deposits grew from 7,486.6 to $7,895.0$ million marks. The increase is not large, indeed, but is not to be despised in view of the hard times.

The Joint Stock lbanks were alble to satisfy the greater demand for credit principally iby drawing on their reserves abroad. Their foreign balances fell off during October by 103.7 million marks. As their foreign indebtedness rose slightly at the same time, their net credit ibalance dropped 120.0 millions to 96.2 millions. For the sake of comparison it may be mentioned that at the end of October, 1929, the Joint Stock banks had a net foreign indelbtedness of $\mathbf{3 0 2 . 1}$ million marks.

The position of the Bank of Finland also bears marks of the greater stringency. The Bank's credits, which had dropped from 1,381.7 million marks at the ibeginning of the year to 699.4 millions at the end of Septemiber, increased during October lby 62.2 millions to 761.6 million marks. Simultaneously its reserve of foreign currency was reduced iby 13.3 million marks to 855.7 millions compared with 598.7 millions a year before. Although the decline in the notes in circulation continued in October - by 36.8 million marks - the note reserve of the Bank of Finland fell off iby 96.6 millions. The note
reserve was consequently 785.1 million marks at the end of October as against 458.7 millions one year and only 278.4 millions two years earlier. The ordinary cover was thus 75.7 \% of all liabilities payable on demand at the end of Octolber compared with 81.1 \% at the end of Septemiber, ibut only $55.8 \%$ a year ago.

During the first half of November the development went on in the same direction. The total credits of the Bank of Finland increased by 66.8 million marks chiefly owing to some of the Joint Stock banks being olbliged to rediscount bills at the Bank again. However, the total amount of rediscounted bills was only 55.1 million marks. In spite of the reserve of foreign currency growing again to 875.8 million marks, the note reserve dropped a little to 707.7 millions.
The level of prices still has a pronounced falling tendency. The wholesale price index dropped 2 points in October to 86 as against 96 a year ago and 101 two years ago. The index for agricultural products dropped to 75, while on the contrary the index for products of the home industries has not fallen further than to 94 . While the fall in price twas formerly considerably greater for imported than for exported goods, an appreciable levelling process occurred during September and Octaber, the index for imported goods having dropped from 79 in August to 76 in October and for exported goods from 90 to 83 at the respective dates. - The cost of living index also declined appreciably in October or by 21 points to 1,109 compared with 1,236 a year before.

## TRADE AND INDUSTRY.

Foreign trade in Octolber was marked by an advance over September both in regard to imports and exports. The value of imports amounted to 556.9 million marks as against 488.8 millions in September, while the value of ex-
ports rose from 482.7 to 5 ǒ3.0 millions. In spite of the increase the figures were, however, appreciably lower than for October, 1920, when the value of imports was 653.5 million marks and the value of exports 730.8 millions. For October this year there was, therefore, a surplus of imports amounting to 3.9 million marks. A year ago there was a surplus of exports in Octaber of 77.3 million marks, but two years ago there was a surplus of imports of 1.44 .2 millions. In view of the existing situation the results for October may be described as satisfactory, and for the past ten months the results are very good. The balance of trade for this period wound up with a. surplus of exports of 288.3 million marks, whereas at the same date in 1929 there was a surplus of imports amounting to 511.1 million marks and in 1928 to $1,568.1$ millions. It is therefore beyond all doubt that the balance of trade for the whole of the current year will prove much more favourable than for the two previous years.
In regard to trade in individual goods the heavy imports of rye, wheaten flour, coffee and sugar attract most attention, all of them consequences of the anticipated changes in the Customs tariff already referred to. Among exports the recovery in exports of butter arouse most attention. In regard to most of the other important articles rather smaller quantities were shipped than during the same month last year.

As regards the state of the market for the most important articles of exports the reader is referred to the first article in the present issue.

## THE LABOUR MARKET.

The labour market is naturally still marked by the growing depression. The customary seasonal winter unemployment will obviously grow to a higher extent this year than for a long time past. The number of unemployed registered at the labour exchanges was 10,279 at the end of October against 5,637 a year ago.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET.

Bank of Finland:
Balance sheet.
Note issue.
Note circulation and foreign correspondents. Ordinary cover, note reserve and home loans. Rediscounted bills and balances of current accounts.
6. Rates of exchange.

Joint Stock banks:
Home deposits.
Home loans.
Position with regard to foreign countries.
10. Position of the banks towards foreign countries.
11. Clearing.
12. Deposits in the savings banks.
13. Deposits in Post Office Savings Bank and on Consumers' Co-operative Societies' Savings Account.
14. Deposits in Co-operative Credit Societies.
15. New risks insured by Life Assurance Companies.
16. Changes in Number and Capital of Limited Companies.
17. Helsingfors Stock Exchange. Bankruptcies. Protested Bills.
18. Stock Exchange index.
II. STATE FINANCES.
19. National Debt.
20. State revenue and expenditure.
21. Miscellaneous State receipts collected by Customs.
III. TRADE.
22. Value of imports and exports.
23. Value of imports and exports in different groups of goods.
24. Imports of the most important articles.
25. Exports
26. Foreign Trade with various countries.
27. Import-price index.
28. Export-price index.
29. Index numbers for quantities of imports and exports.
30. Total sales of some wholesale firms.
IV. TRAFFIC.
31. Foreign shipping.
32. Shipping with various countries and passenger traffic.
33. Railways, goods traffic and rolling stock.
34. Railways' revenue, expenditure and traffic surplus.

## V. LEVEL OF PRICES.

35. Index number of cost of living.
36. Wholesale Price Index.

## VI. LABOUR MARKET.

37. Number of unemployed.
38. Cessation of Work.

Tarnover of Stock Exchange according to figures supplied by the Stock Exchange Oommittee.
The figures for bankruptcied are not comparable with those published earilier in 1923. The figures above, compiled by the Central Statistical Office according to the reports sent in by the various Courts, include all bankraptey petitions, of which only about half will lead in due course to actual bankruptcy, whereas the rest owing to agreement, lack of means etc. will be cancelled.

Protested bills according to figures published in the sReport of Bills Protested in Finlands.

* Preliminary figures subject to minor alterations.

## 18. - STOCK EXCHANGE INDEX.

According to figures published in the sMercators.
This revised index series is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank, 12 ndustrial and 2 other kinds of ahares. By maltiplying the price bid for each security by the number of shares in the corresponding company the so-called sixchange values has been arrived at for the share capital of the company, the sum of which values has been calculated in \% of the total nominal value of the share capital of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

The above table is based on the monthly report on the National Debt published by the Treasury in the Official Gazette.
${ }^{\text {1) }}$ Internal loans are given at their nominal value. Foreign loans are given in Finnish currency according to the rate ruling on the date of the raising of the loan.
${ }^{2}$ ) Calculated as follows: The loans raised in the country have been calculated in dollars, according to the avarage rate of exchange of each month. The loans, negotlated abroad, which are all issued in different currencies, are grouped according to the proportion of currencies, shown by the coupons paid, and reduced to dollars at the rate of exchange just mentioned.
20. - STATE REVENUE AND EXPENDITURE.

The term imports covers all imported goods which have been placed on the market either immediately after importation or after storage. Eaports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner; who must at the same time state the value of the goods as calculated at the frontiers of the country.

Preliminary figures aubject to minor alterations.

| Jan.-Nov. Jan.-Dec. |  |  |  |  |  |  |  |  | Jan.-Nov. |

The import and export-Indices have been calculated by the Statistical Dept. of the Board of Customs in the following, manner: the quantities of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in question in 1913, after which the import (or export) value tor the carrent year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods chosen for the setting-up of a total-index have been divided, according to their use, into the groups: foodstuffs, cothling, agricultural requirements and other goods. The three last-named have been further divided, according to their purpose, into raw materials, machinery and industrial products.

This import-price index is lower than the wholesale price index because the import-price index is not influenced by the castom duties.
28. - EXPORT-PRICE INDEX.

${ }^{1}$ ) From the beginning of 1921 onwards a new official index has been drawn up differing from that published in the Bulletin for 922 in that the whole first half of 1914 forms the basis ( $=100$ ) for the same, and that the rise in taxation is also included.

The index is calculated by the Statistical Bureau of the Ministry of Social Affairs and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the income of which amounted during the years $1908-1909$ to $1600-2000 \mathrm{Fmk}$, assuming that the average monthly consumption withfn the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.

The wholesale price index is worked out at the Central Statistical Office. - The first group of indices is based on the quantity of goods in local whoiesale trade in Finland, whereas the indices for imported and exported goods are based on the total quantities of goods imported or exportéd, including the movement of such goods as are in no way intended for wholesale trade in Finland. The average prices for 1926 are taken as a basis. There is no direct weighing of the data regarding prices, but indirect weighing has been carried out by each class of goods being represented by the number of commodities which corresponds to the calculated importance of the class in wholesale trade. The averages are arithmetical averages.

This table，prepared from the weekly reports of the Labour Exchange Department of the Ministry of Social Affairs，shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very small part of the rural centres of population at the close of the week nearest to the month＇s end．As agricultural labourers and skilled artisans proper register，up to the present，only in a minority of cases at the communal labour exchanges，the table does not give a ccmplete review of the number of unemployed，but is to be regarded more as symptomatic．

## 38．－CESSATION OF WORK．

| October |  |  | － | 1 | 5 | 41 | 1 | 5 |  |  |

The above particulars which are of a preliminary nature，have been compiled by the Statistical Bureau of the Ministry of Socis ${ }^{\text {a }}$ Affairs．The majority of cases of cessation of work were described as strikes．

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; after 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President $L$. Kr. Relander is elected for the term 1 March, 1925, to 1 March, 1981.

The Diet, composed of 200 members, is elected by unlversal suffrage. The proportions of the different parties in the Diet elected in 1930 are as follows:

| 1930 are as follows | Number | Per cent |
| :---: | :---: | :---: |
| Unionist party | 42 | 21.0 |
| Agrarian party | 59 | 29.5 |
| Progressive party | 11 | 5.5 |
| Swedish party | 20 | 10.0 |
| Swedish left | 1 | 0.6 |
| Small farmers' party | 1 | 0.6 |
| Sacial-Democratic party | 66 | 33.0 |

## 2. LAND.

THE AREA is 388,279 square kilometres $=150,005$ square miles, (Great Britain's area is 89,047 sq. m. and Italy's area 117,982 sq. m.). Of the total area $11.5 \%$ are lakes. On an average $10.8 \%$ of the land in the south of Finland is cultivated, $0.9 \%$ in the North, $6.3 \%$ of the whole land. Of the land area 25.3 mill. ha ( 62.5 mill. acres) or $73.4 \%$ are covered by forests.

THE AVERAGE TEMPERATURE in the coldest month is in S. W. Finland - $5^{\circ}$ to $-6^{\circ} \mathrm{C}$., in Lappland $-15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki is $+4.6^{\circ}$ (in Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the South for about 100 days, in Central Finland for 150 to 180 days, in Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1928): 3.6 millions (of which 0.3 million emigrants), Sweden (1928) 6.1, Bwitzerland (1927) 4.0, Denmark (1928) 3.5 and Norway (1928) 2.8 millions.

DENSITY OF POPULATION (1928): In South-Finland 18.4, in North-Finland 2.4 and in the whole country an average of 10.5 inhabitants to the square kilometre.

LANGUAGE (1920): Finnish speaking 88. $7 \%$, Swedish speaking $11.0 \%$, others $0.3 \%$.

RELIGION (1928): Lutheran 96.8 \%, Greek-Orthodox $1.7 \%$, others $1.5 \%$.

DISTRIBUTION (1928): 79.6 \% of the population inhabit the country, $20,4 \%$ the towns and urban districts. The largest towns are (1928): Helsinki (Helsingfors), the capital, 227,375 inhabitants, Turku (Abo) 63,918, Tampere (Tammerfors) 54,015, Vilpuri (Viborg) 54,120.

EDUCATION (1020): Amongst persons over 15 years of age only $1.0 \%$ are illiterate. There are three universities founded 1640, 1917 and 1920.

INCREASE OF POPULATION (1928): Births $21.5 \%$ \% deaths $13.5 \%$ (in France in 1927 16.6\% and in England in $192712.3 \%$ ), natural increase $8.0 \%$.

## 4. INDUSTRY.

PROPORTIONS OF OCCUPATIONS OF THE POPULATION (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $3.4 \%$, other occupations $16.7 \%$.

OWNERSHIP OF LAND. The land ares is distributed among diffcrent classes of owners approzimately as follows: private $52.1 \%$. State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$.

FOREST RESOURCES. The growing stock of the forest is 1,620 million $\mathrm{m}^{2}$ ( 57,213 million cubic feet). The merchantable timber (measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $61 \%$, spruce by $28 \%$, the conifers thus constituting $89 \%$ or 1,384 million trees, leaftrees, mostly birch. $11 \%$ or 173 million trees. The annual increment is 44.5 million $\mathrm{m}^{2}$ ( 1,568 million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{2}(1,413$ million cub. ft .). In North Finland the increment is much larger than the fellings, but in South Finland excess felling oceurs locally.

AGRICULTURE. Cultivated land 2.1 million hectars, divided as follows: area under cultivation 0.4-10 hectars $33.7 \%, 10-50$ ha $48.9 \%, 50-100 \mathrm{ha} 9.3 \%$, over $100 \mathrm{ha} 8.1 \%$. Cultivated land is divided between the different kinds of crops as follows: $46.8 \%$ hay, $20.4 \%$ oats, 11.1 \% rye, $5.8 \%$ barley, $3.2 \%$ potatoes, $13.1 \%$ other. The number of dairies in 1928 amounted to 630.

INDUSTRY (1928): Number of industrial concerns 4,021, hands 169,729 , gross value of products of industry 18,721 million marks.

LENGTH OF RAILWAYS (1930): $5,331 \mathrm{~km}$, of which 5,065 km State railways and 266 km private. The gauge is 1.524 m .

COMMERCIAL FLEET (1929): Steamships 529 ( 140,537 reg. tons net), motor vessels 132 ( 14,714 r. t.), sailing ships 377 ( 67,916 r. t.), Lighters 3,992 ( 282,628 r. t.). Total 5,030 ( 505,795 r. t.).

## b. FINANCE AND BANKING.

CURRENOY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintalned its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish markkas) $=100$ pennia. The gold value of 100 marks is equal to $\$ 2.5185=\left\{-10 \mathrm{~s} .4^{1 / 5} \mathrm{~d}\right.$.

STATE FINANCES. According to the balance sheet for 1929 the State revenue was $4,342.1$ million marks of which $4,302.4$ million marks were ordinary revenue, and State expenditure $4,508.1$ million marks, of which 3.642 .8 million marks were ordinary expenditure. The principal sources of revenue were as follows: State property and undertakings $1,583.4$, direct taxes 544.2, indirect taxes 1,657.8, miscelldneous taxes 246.6, charges 215.8, miscellaneous revenue 183.8. The value of State property in 1922 is estimated at 11,150.6 million marks. For National Debt see table 18 in this issue.

MUNICIPAL FINANCPB. According to the Budget for 1929 expenditure amounted to $1,245.1$ million marks. Income from taxation was 428.4 million marks, taxed income $6,380.2$ million marks. The communal income tax (not progressive) averaged $6.7 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Abo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleaborg), Kuopio, Joensuu, Sortavala, Vipurd (Viborg), Mikizeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyvaskylä and Kotka.

THE JOINT STOCK BANKS (1930): Number 17, possess 589 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 5,700 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska Föreningsbanken, Maakuntain Pankkl Oy., Ab. Unionbanken and Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1929): Mortgage banks 7, Savings banks 477 Co-operative Credit Societies 1,419 and a Central Bank for the latter.

# RECENT DEVELOPMENTS IN EXPORTS OF FINNISH WOODWORKING PRODUCTS. 

BY<br>A. I. MALINEN, c. e.<br>ASSIETANT DIRECTOR OF THE ASSOCIATION OF FINNISH WOODWORKING INDUSTRIES.

## INTRODUCTION.

A glance at Finland's foreign trade statistics at once reveals the extreme dependence of exports on one class of commodity: of the total value of Finland's exports in recent years about $85 \%$ was derived from wood in one form or another, about $9 \%$ from foodstuffs of animal origin, chiefly butter, leaving only about $6 \%$ for all other exports together. The lack of variety conveyed by these figures naturally denotes a serious danger to the national economy of Finland. The country is in a great measure dependent on the demand in the world market for wood in its various forms of refinement at remunerative prices. The degree of this depnedence is further enhanced iby the fact that of the aggregate output of the woodworking industries only a small proportion, $10-20 \%$, is consumed within the country; the rest has to be exported.

If we examine the division of the abovementioned $85 \%$ between the different types of product, we find that, on an average, about $75 \%$ of the total value of exports represents wood of some degree of refinement, the rest comprising round or hewn timber, chiefly pitprops and pulpwood.

THE SELLING ORGANISATIONS OF. THE FINNISH WOODWORKING INDUSTRIES.

The woodworking industries, which together thus form the actual export industries of Finland, are not very numerous. The most important are the sawmilling, chemical and mechanical pulp, paper, plywood and spools industries. The value of the aggregate annual exports of all other woodworking industries has, since the war, fallen short of $£ 100,000$.

A characteristic feature of the Finnish export industries is an unusually high degree of
rationalisation in the organisation of sales. Sales of the output of mills manufacturing the same commodities are usually concentrated in a single joint sales organisation, and co-operation has thus been introduced in the place of an irrational competition between producers. It should be noted that the purpose of these ,"cartels" does not constitute an attempt to control foreign markets for woodworking products and to maintain artificially high prices; indeed, they are incapable of ever doing so. The advantage derived from them by the respective industries is chiefly based on the reduced selling expenses and rational division of orders which they make possible, which in turn enable the individual mills to specialise in one particular branch, and further on the ease with which an organisation of this nature can follow and estimate the development of the markets. The degree of completeness with which the principle of joint selling has been applied varies in the different industries. Sales of chemical and mechanical pulp, board and spools are practically in the hands of single sales organisations; as regards paper, one large concern only is partially outside the joint sales organisation. In the plywood industry joint selling is restricted to a part of the mills, and in the sawmilling industry such close co-operation has not been achieved.

## LATEST DEVELOPMENTS IN PRICES.

The Finnish woodworking industries 'were mostly in the fortunate position that the fall in prices, as shown by the official index of exported goods, during a year or so after the beginning of the general fall in commodity prices in the autumn of 1928 was not so evident as in the case of the majority of other commodities. This was due partly to the fact that the world supply
of timber suitable for industrial refinement is not unlimited, especially in areas with which communications are maintained; partly to the fact that in some branches of woodworking prices had already fallen during the previous couple of years; partly to the system of selling many such articles, under normal conditions, as much as a year or more in advance of the date of delivery; and finally in a great measure to the fact that improvements in quality, due to improved technical methods, and a general advance to higher quality classes tend to delay the appearance of a downward direction in an index based on values. This, however, applies only to the value of the products of the woodworking industries already exported. The fall in prices of wood products is shown to be considerably steeper, if we turn to the prices that have latterly had to ibe accepted for orders for delivery at the end of the present year and next year. Thus, sulphate prices have now fallen in the British market since 1928 by about $37 \%$, and sulphite prices since the autumn of 1929 by $20 \%$. The joint index for all Finnish exported commodities will consequently fall in the near future much more rapidly than up to last Septemiber, in which month the official price index had dropped 11 points from its level in September 1928, or from 98 to 87 ( $100=$ average prices in 1926), the corresponding figure for September 1929 being still as high as 97, and for August 1930, 90.

## RUSSIAN OOMPETITION.

In dealing with the situation in the export market for wood products, the influence of Russia on the market must not lbe ignored. In this connection there is no need to comment in detail on the methods adopted lby that country for the manufacture and sale of its wood products for the dual purpose of satisfying its increasing need of foreign currency by higher exports and of bringing the economy of the countries dependent on exports of wood products into confusion. It is sufficient to say that the prices of Russian sawn timber have fallen during the period 1928-1931 - according to the information
now available regarding the recent sale of 600,000 stds to England - by over $£ 5$, the actual drop in the price of the basic dimension, 7 " redwood battens, Archangel third quality, ibeing from £1.6. $15 /$ - cif to $£ 11.10 /$ - cif or about $30 \%$.

This has naturally caused a similar, though happily not as great a fall in the price of timber from other countries. As sales for shipment next year are still in a nebulous state, it is difficult to say as yet how great the corresponding drop will be in Finnish timber prices. Another field in which Russian competition represents a serious threat to Finnish exports, is plywood. In this field the effect has been to create difficulty in securing new orders at moderate prices, the result being an appreciable decline in both the quantity shipped and prices obtained as compared with last year.

## MEASURES FOR MEETING THE FALL IN PRICES.

One result of the drop in the prices of sawn timber has been that during last year and this several small and medium-sized sawmills, whose position was not strong enough to withstand the strain of the altered market conditions, have either gone into liquidation or closed down. In the other branches production has not been suspended.

Nevertheless, in view of the fall in prices already apparent in the official statistics and in particular of the fall in the prices for new orders that will appear, when recent orders begin to be shipped on a large scale, it is evident that the position of the woodworking industries is not easy. Cost of production must be brought down, which has already been done partly by means of a constant rationalisation of production, partly thanks to the fact that the rise in the price of raw material, which continued to the end of 1928, has turned into a movement in the opposite direction; and partly by means of recent reductions in wages, dictated by dire necessity, of about $10-20 \%$.

Yet neither of the two last-mentioned circumstances are desirable developments. A fall in the price of timber means a still worse position
for the farmers, who are already trying to cope with grave difficulties, seeing that a considerable part of the income of the farming classes is derived from the sale of timber to the woodworking industries, and any change for the worse in the economic situation of this class of the population naturally affects the economic conditions of the country as a whole. And as regairds wages, a reduction is a step manufacturers only care to take, when they are absolutely compelled to do so. As matters stand at present, lower wages can to some extent be justified, owing to the fact that the cost of living, as shown by the index, has fallen within a year by about $15 \%$.

In the circumstances producers have been compelled to consider, what other measures would help them to meet the diffioulties imposed by the disproportion between supply and demand caused by the general business depression and abnormal Russian competition with the least possible harm. The first and most obvious idea in a case like this is a restriction of production. But, as already pointed out, Finland cannot alone control the markets for its chief articles of export. Consequently it was desirable to find a broader basis on which to apply the system of co-operation already existing among Finnish producers. In pursuance of this idea Finnish producers of the different classes of wood products have entered into agreements with such industries in other countries for the restriction of production with a view to stabilising the market, as long as the present disproportion between supply and demand continues. Finnish, Swedish and Norwegian producers af mechanical pulp had already decided to reduce output in 1.928 lby $33 \%$ of the productive capacity of the mills. This agreement is still in force, and at a meeting held on Octoiber 17th and 18th at Oslo an even greater reduction was found to be necessary. In the same way, Finnish and Swedish producers of sawn timber recently signed an agreement, according to which, owing to the overloading of the market in consequence of increased exports from Russia and the consequent necessity of preventing a catastrophic fall in
prices, exports of sawn timber from the two countries concerned are to be reduced next year by a little over $20 \%$. Further, the Finnish, Swedish, Norwegian, German and Ozechoslovakian producers of sulphite and those in the Memel area, have finally signed an agreement for a restriction of the production of sulphite pulp in the countries mentioned by $15 \%$. As regards other wood products, no such international agreements have been concluded; yet in these cases, too, the excessive supply evident everywhere, or rather the lack of demand, has compelled the individual manufacturers to restrict production, in some cases to a considerable degree.

In the buying countries measures of this nature, regarded, perhaps, by some as artificial attempts to prevent prices from falling to the "normal" level of 1913 or even lower, may not be met with unanimous approval. In this respect, however, it should be remembered that timber suitable for refinement is not the kind of raw material of which the supply is as unlimited as that of several other materials and products, the prices of which, owing to the plentiful supply, have fallen to the pre-war level. Further, viewing the matter particularly from the point of view of Finland's national economy, practically the only commodity with which Finland can pay for its imports, is wood and products derived from wood, as mentioned in the beginning of this article. Now, as was shown in the third issue of this Bulletin for the present year, the present normal consumption of wood in Finland already exceeds the supply, and it may be asked, therefore, whether future generations would ever forgive the present generation, if the forest capital of Finland were to be endangered without receiving at least as much as is needed to cover actual costs in return. Is it not rather, in abnormal times like the present, the duty of the present generation towards posterity to save up this natural wealth of ours for the better times which we hope to see once more?

Examining the matter more closely from the point of view of the buyers of Finnish export commodities, it will be seen that their interests
are in reality not as diametrically opposed to the interests of the seller as a superficial survey of the situation might seem to indicate. Often enough, the most important thing for the buyer is not the assurance that he is lbuying at the cheapest price; the assurance that the price he is paying today for goods for future delivery will not have changed by the morrow is of greater importance. And for the restoration of markets, which the uncertainty bred by a disproportion between supply and demand has made so unstable that all calculations must be based on guesses of doubtful reliability, to a state of stability, the most efficacious remedy is, undoubtedly, a restriction of production.

## DEVELOPMENT OF FINLAND'S EXPORTS OF WOOD PRODUOTS IN THE NEAR FUTURE.

A simultaneous powerful decline in the volume of exports and in the prices obtained for them, must obviously result in bringing down the value of exports. Consequently, the total value of Finland's exports, which, including re-exports, reached the record figure of 6,430 million marks in 1929, having increased even from the preceding year, will in the near future be considerably below the figure mentioned. In the present uncertain conditions it would be hazardous to venture on detailed calculations. However, as the total exports for the first ten months of the present year represent a value of only 4,602 million marks, against 5,380 millions during the same period last year, we can be sure that the final figure will be about 1,000 million marks below last year's total.

The value of wood products exported from Finland varied during the years 1927-1929 as follows: $1927-4,738$ millions; $1928-4,730$ millions; 1929 - 4,862 million marks. The share of sawn and planed timiber in these totals is about 60-55 \%. Exports of sawn timber reached their peak, $1,283,000$ stds, to a value of 2,820 million marks in 1927, to fall in 1928 to $1,147,000$ stds and 2,663 million marks. Last year a considerable increase occurred in the
volume of exports. The timber exports from Finland totalled $1,207,000$ stds, to a value of 2,600 million marks. The increase was due to the fact that numerous sawmills of weak competitive capacity closed down after first. using up all their logs and selling their whole stock of sawn timber. This year the decrease in exports is clearly apparent: exports during the first ten months were over 240,000 stds below the corresponding exports last year. No matter whether all the stocks intended for shipment during the present season are sold and shipped or not, the total decrease from last year's exports will probably exceed 260,000 stds, which means that the total value of timber exports will this year fall below 2,000 million marks.

As the development in respect of several other wood products reveals a similar trend, it may be estimated that the total value of exports of these other commodities will be in the neighbourhood of 4,050 million marks, or about one-sixth less than last year. As regards next year calculations are at present still more uncertain. As exports of sawn timber are scarcely likely much to exceed 800,000 stds, it may be calculated that the value of these exports in 1931 will decline from this year's figure by a further 500 millions. Consequently the fall that is to be expected in both the volume and value of exports of the majority of other wood products on the basis of present indications, will bring down the total value of Finland's exports of wood products in 1931 to only a little over two-thirds of the value reached in the years 1927-1929.

## CONICLUSION.

The Finnish woodworking industries have thus extremely great difficulties to face. Nevertheless, they have in the past successfully overcome so many seemingly insurmountable crises, that now, too, they have not lost their confidence in the future. An increasingly effective cooperation and an ever completer rationalisation of every branch of production and lower costs of production are the means they must adopt to overcome the present crisis.

# STANDARDISING IN FINLAND. 

BY<br>A. WILLBERG, ENGINEER, SECRETARY OF THR FINNISH STANDARDS ASSOCIATION.

## INTRODUCTION.

When the Finnish Standards Association was started in 1924, its work was directed principally to the solution of problems connected with mechanical engineering. Such a restriction of its activities was a natural consequence of the development of the problem of standardising in Finland. The formation of a standards organisation was the work of our leaders in engineering who subsequently also gave the organisation the greatest support both in labbour and finance. As, however, the work of the association, according to its rules, was intended to embrace all branches of trade and thus to form a central body in which all standardising work in the country wras to be concentrated, the association at once proceeded to adopt measures in this direction. But the result did not turn out as had been hoped. The building trade, the woodworking industry, agriculture etic. showed little interest in the question and, with the exception of agriculture, still hold aloof from the work of standardisation. At the same time the support accorded by those who joined the Standards Association was totally out of proportion to the work in hand. Work is, therefore, at present still carried on most energetically in mechanical engineering and the number of standand tables in this sphere is considerably in excess of the combined number in other spheres. On the other hand it is gratifying to note that there are people who, though for the present little affected by standardising, nevertheless appreciate its importance for the public good and have given generous support.

## THE PRESENT POSITION.

The standardising work concentrated in the Finnish Standards Association at present em-
braces mechanical engineering, electrical engineering, the paper trade, fire-fighting technology, packings and the graphic industry. The work is carried cut partly by committees appointed by the Association and partly by the standards office. An exception is formed iby the committee for standardising agricultural marchinery, which was appointed by the Central Union of Agricultural Producers in Finland. During the last few years, however, the work has been taken over more and more by the office, as the voluntary committees work too slowly.

In mechanical engineering the work includes basic standards, machine parts, piping, transmissions and agricultural machinery. Of the questions appertaining to the first category, such as drawings, limits and fits, connecting measures etc., a part has already been approved as standard and part is being worked out. Machine parts, among which screws, nuts, rivets, wedges etc. are now ready, form the largest category. Among transmission standards lbearings and accessories have chiefly been the object of standardising. Only the main principles for piping are approved, but there are many schemes in existence in this sphere. With regard to agricultural machinery the mork is still in a preparatory stage. In working out these standards chief attention has been paid to reducing the number of types and ensuring their being interchangeable. It is only in isolated cases that the work has so far been extended to include stipulations as to quality and workmanship.

Work on standards in electrical engineering has been confined exclusively to installation and safeguarding stipulations for electrical plant. These are collected in a book published by the Electricity Inspectors.

In the paper trade the standards embrace the system of dimensions for finished sizes and their uses, e.g., for letters, envelopes, blank forms etc. The questions in preparation refer to stipulations of quality, weight and testing.

Of the standardising work connected with fire-fighting technology hoses and couplings are almost ready. Preliminary work has also been done with regand to standardising various kinds of fire-engines, both hand and motor, and stipulations as to materials to be used for fireextinguishing apparatus.

For packing there are two standards, one for whortleberry cases and one for moss cases, worked out with a viaw to exports. The standards for the graphic industry refer to certain letter types, pictures and signboards.

Besides this ordinary work the standards office has carried out investigations into some questions, as far as time and means permitted, which should act as a basis for future work. This work is connected with agricultural implements, iron and steel qualities, tar and terpentine qualities, and stipulations of a general nature, e.g., mathomatical and physical units, mathematical tables, standard figures etc. Further, the office has kept in touch with international standardising work and taken part in dealing with such questions as affect Finnish interests.

Altogether the standard tables approved so far number 195 and the schemes being worked out exceed 500. The following table gives an idea of the distribution of the work in different spheres.

FUTURE PLANS.
In addition to continuous and supplementary work on those questions that have already been lbegun, efforts are being made both to extend the field of rwork in those branches in which work has already been started and to introduce fresh branches of trade into the sphere of activity. It is proposed, for instance, when circumstances and funds allow, to extend the work of standardising mechanical engineering to include fittings, machine tools, textile machinery, hoisting machinery and welding technology. In electrical engineering work in the immediate future deals with electric machinery, transformers, installation material, wires and cables etc. The standards of crude sizes are the most burning question in the paper trade. With regard to fire-fighting technology it is proposed to standardise all kinds of equipment.

Among the new spheres which are to be the next object of standardising work agriculture, building, woodworking and the metal trade may be mentioned. The chemical industry, the glass and pottery trades, and transport have also been considered, all of them branches that are in great need of standardising. In particular, the inauguration of work in the agricultural sphere is receiving the greatest attention. As this is to include machinery, implements and stipulations as to materials, as well as stipulations as to the quality and packing of agricultural products, the first steps in this sphere will consist in centralising the work. In the building trade the work is to be begun by standardising all manner of joinery articles belonging to housebuilding, such as doors, windows, mouldings etc., and fittings, and extend it later so as to embrace other ibuilding equipment and materials. Questions of drainage, road and bridge construction etc. are also proposed in this connection. Among the tasks of standardising in the woodworking industry the fixing of uniform dimensions for both sawn and planed timber is the first problem to be attacked. In the metal trade the work is to include stipulations as to quality and testing of inon and steel.

As work in the committees has to advance very slowly, a reorganisation of the method of work has been suggested. According to this, the existing committees as well as those to be appointed in the future, will be released from the actual work of standardising and will only constitute advisory and criticising bodies. The work itself would be performed by the standards office, the staff of which would, however, have to be augmented to the required extent.

## FINANCE.

The realisation of the plans of the Finnish Standards Association for the future depends principally upon the financial support, both State and private, that it may receive. Up to the present State support has amorunted to Fmk. 100,000: - annually and private contributions in oash have amounted to albout Fmak. 70,000: a year. In addition private persons have helped in the form of work performed, the value of which may be estimated at not less than the same sum as actual support in money. By exercising the strictest economy these funds have sufficed to maintain the work in its present extent, though not without disadvantage to the intensiveness and effectiveness of the work. Any extension with consequent concentration of the work in the standards office cannot, therefore, be thought of withort an increase in funds.

A comparisou with other countries shows that the Finnish association works with the smallest funds both relatively and absolutely. For instance, the support granted to the standards associations in Sweden is Sw. Cr. 52,000:in Norway N. Cr. 13,000: -, in Denmark D. Cr. 19,325: - Private support in Norway amounts to N.Cr. 27,000:-, in Denmark to D.Cr. 19,000:- and in Siweden to SW.Or. 7,500:- in cash besides assistance in work.

According to calculations the plans to be carried out in the first instance in Finland demand annually about Fmk. 400,000: - of which State grants should at first contribute at least Fmk. 250,000: -

## OONMCLUSION.

The general position in the world has caused greatly increased activity in regulating production and consumption on a proper basis. Such activity is generally known under the name of rationalisation and is strongly supported everywhere both lby State and private interests. The Finnish :Standards Association is convinced that responsible circles in Finland will in future comprehend standardising activity with greater understanding as constituting an important link in every kind of rationalisation and will thereby render the fulfilment of the plans for the future possible for the benefit of the whole country.

## ITEMS.

The Diet. When the Diet assembled on October 20th, the Government submitted a report of recent occurrences and the measures it had adopted with regard to them. By 125 votes to 66 the Diet adopted a motion to proceed to the order of the day, thereby passing a vote of confidence in the Government.

Early in November the so-called "Communist bills" were dealt with, which demand a $2 / 3$ majority to lbecome law and which had caused the dissolution of the Diet last summer. First, the Diet unanimously adopted the bill with regard to applying the stipulations of martial law during the mobilisation of the Army. The other ibills awaiting decision - i.e. the bill for protecting the Republic, and the lbills for amending. the regulations of the Diet and general elections in the sense that it should ibe impossible for Communists to participate in the work of the Diet - were opposed by the Social-Democrats, but were carried liby a majority of all the 133 non-socialist votes to 66. The passage of these bills should, undoubtedly, calm the uneasiness that has existed of late in large circles of the population.

Raised duties. At the same time as the Government submitted its proposals for higher duties in 1931 it tabled a motion that the raised duties should come into fonce already during this year. It was intended to prevent a large increase of imports during the last months of the year, which had in former cases resulted in higher rates of duty not providing the intended increase in revenue. The motion was carried and the Government immediately exercised its right to raise duties temporarily. The rates of duty included in the Government proposals for the Customs tariff for 1931, therefore, came into force from November 15th. The higher duties
chiefly affect grain, sugar, coffee, petrol and other articles of general consumption, but protection for a number of industrial articles has also been increased.

New trade agreement. After prolonged negotiations the proposals for a new commercial treaty between Finland and Germany have been approved by the Diets of the two countries and the deeds of ratification have been exchanged.

Among the most important changes that come into force in virtue of the new treaty we may mention that bran, that has hitherto paid a duty of 8 penni per kg, will now the entirely free of duty. The duty on Finnish export lbutter is raised from Rmk. 27: 50 per 100 kg to Rmk.. $50:$-. On the other hand the German duty on various other exported goods is lowered, such as chemical pulp, cardboard, wrapping paper, plywood, bobbins and reindeer meat. The new treaty came into force on Novemiber 27th.

Rates of interest. The Government recently decided to lower the rate of interest on deposits in the Post Office Savings Bank from $61 / 2 \%$ to $6 \%$ from January 1st, 1931. - The local associations of Savings banks in various parts of the country have generally accepted the step urged by the Savings Banks Association of Finland that the rates on deposits and credits in the Savings banks should ibe lowered. From the beginning of next year, therefore, the larger Savings banks will pay $6 \frac{1}{2} \%$ and the smaller ones $7 \%$ on deposits, and $2 \%$ less on current accounts.

New bond loan. A new internal bond loan has to be added to the series of those taken up through the intermediary of the Bank of Finland by a number of municipalities. The City
of Helsinki (Helsingfors) has made an agreement for the issue of a bond loan of 42 million marks. The loan bears $71 / 2 \%$ interest and is redeemable in 20 years and is to be issued at a net price of $97 \%$.

Municipal taxation. According to information collected by the Central Municipal Office the amount to be raised liby the Municipalities by means of taxation for 1930 totals 436.8 million marks. For 1929 the corresponding figure was 428.4 million marks, so that the increase is not more than $3 \%$.

The taxed income of the populations in the towns is estimated at $6,356.9$ million marks or slightly less than in 1929, when the corresponding figure was $6,380.2$ million marks. The reduction is consequently $0.4 \%$ and is a natural consequence of the depression in trade; the taxed income rose in 1928 by $12.2 \%$ and in 1927 by $15.5 \%$.

The Tampere rapids to be dammed. Now that the Municipality of Tampere (Tammerfors) has acquired the right to the whole of the waterpower in the middle waterfall of Tammerkoski at Tampere, the Town Council has resolved to dam this waterfall and reconstruct the electric station of the town. According to estimates the power station, when completed, will develop 33 . million kwh, whereas the present electric station only has a power of 9 millions. The work of construction is to be lbegun at once and the Municipality has set aside 26 million marks for this purpose.

New flour mill. The Finnish Oo-operative Wholesale Society (S. O. K.) has decided to start building its new flour mill in Viipuri (Viborg) in the near future. The mill is to be arranged at first for a capacity of $120,000 \mathrm{~kg}$ of rye flour daily, but the plans provide for future extensions.

## THE <br> BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marke per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.
