# BANK OF FINLAND MONTHLY BULLETIN 

## THE FINNISH MARKET REVIEW.

## TILE MONEY MARKET.

The money market during September and the early part of October was tight and it must even he said that the stringency grew slightly. This is a natural consequence of the fact that to the causes that were chiefly responsible for the stringency of the position, viz., the unusually lively building operations and the adverse balance of trade, some contributory factors of a seasonal character wene added. The gathering of the harvest and the redemption of exporters' short-term foreign loans made considerable denands, as usual, on the branks. In addition, the harvest which is poor in some parts, balled for increased imports of grain, while the consequently expected reduction of the purchasing power of the rural population will only affect imports later. As the trade will obviously, as a consequence, carry larger stocks of grods than, for instance, a year ago, a pronounced easing of the pasition of the banks can scarcely ibe expected within the next few months. Some improvement may, however, be caused by the Municipal Mortgage Bank (the Finland Residential Mortgage Bank) having recently taken up a loan of 10 million dollars, the proceeds of which should be received in Finiland before the end of this month.

The credits of the Joint Stock banks which were raised comparatively little in July and August, increased in September by 157.0 million marks as compared with 18.1 and 108.9 millions in the corresponding month in the two previous years. The total credits of the banks at a figure
of $9,620.9$ million marks, reached a higher point than ever before and exceeded the level for the end of September, 1927, by nearly 1,650 minlion marks. Bank deposits in September showed a falling off of 46.2 million marks. It is especially noteworthy that actual deposits (including savings accounts) dropped lby fully 40 million marks, whereas they showed a rise for the same period last year, notwithstanding that the total deposits fell off. By this means the difference between the banks' credits and deposits was increased in September by 204.1 million marks to no less than $2,007.7$ million marks. We have to go as far back as May, 1924, to find as high a figure; it should, however, be noted that the banks' awn funds are now about 540 million marks more than at that time. Funds for the increased credits avere obtained principally lby means of re-discounting bills at the Bank of Finland.

The position of the Joint Stock banks towards other countries also grew worse to some extent in September, their balances having sunk and their indebtedness having grown. The net indebtedness was increased thereby by 39.8 millions to 180.6 million marks, while at the end of September, 1927, the lbanks had a net credit balance abroad amounting to 58.4 millions.

The changes in the Bank of Finland's position, as during the preceding month, bear signs of the stringency. It may be pointed out. however, that the changes in September were considerably smaller than in August. The total credits of the Bank were increased by 83.5 mil-
lion marks as against 139.3 millions in August. The increase was a result of the continued rise in re-discounts, by 118.2 millions to 477.7 millions, while direct credits were reduced, as in August. The reserve of foreign currency fell off by 15.3 millions compared with 57.6 millions during the previous month and the note reserve was reduced by 70.2 millions compared with 120.4 millions in August. During the first week in October the tendency was in the same direction in general; re-discounts reached the record figure of 526.0 million marks, while the note reserve dropped to 262.5 millions. Here, however, they seem to have touched bottom, for during the second week in Octolber re-discounts were reduced again to 494.9 millions and the note reserve grew to 285.7 million marks. During the whole time the notes in circulation showed a cnarked falling tendency, the rises having been smaller and the falls greater than during the corresponding weeks last year.

As evidence of the falling tendency in business activity it may be mentioned that the clearing operations in September were less for the first time iduring a long period than during the same month in the preceding year. The money shortage is also significantly expresised in the heavy fall of prices on the Stock Exchange which is as usual inclined to be too susceptible.

The level of prices lhas a falling tendency. The wholesale price index fell 1 point to 146 compared with 148 in September, 1927, while the cost of living index dropped 9 points to 1,249 compared with'1,230 a year ago.

## TRADE AND INDUSTRY.

The reharacter of foreign trade was the same as in the preceding months. Imports, valued at 762.6 mitlion marks, reached a record for the month, exceeding the corresponding figure for 1927 lby approximately 140 millions. Exports were also very lively. Their value, 801.9 million marks, however, was not quite as high as last year, when it amounted to 827.0 millions. There was thus a surplus of exports amounting to 39.3 million marks as compared with 205.1 millions for the same time last year. If we examine the reasons for this adverse change
since last year, we see that imports increased especially in the classes ,ecereals and their products" (44.2 million marks), ,fodder and seed" ( 14.3 millions), "metals and metal goods" (22.7 millions), ,machinery and apparatus" (19.8 millions), ,means of transport" ( 10.4 millions) and various kinds of textile goods (15.3 millions). Among exports the falling off was caused solely by the class ,,timber and wooden articles" that shows a reduction of 40.9 million marks. On the other hand the exports of agricultural products and of products of the paper trade were larger than during September, 1927.

During the nine completed months of this year imponts had a value of $5,806.2$ million: marks compared with $4,596.3$ millions last year, while the value of exports amounted to $4,382.3$ million marks as against $4,710.3$ millions during the same months last year. The surplus of imports consequently now amounted to $1,423.9$ mililion marks.

With regard to the timber market it can be said that sales in September were particulaaly satisfactory. The total sales for sawn goods are stimated at 930,000 standards by the end of September against $1,135,000$ and 905,000 stds by the same darte in 1927 and 1926. Shipments have proceded normally in spite of the dockers" strike and by the end of September they amounted to 738,200 stds. In the beginning of October the f. o. b. market in England bercame livelier and contracts were made for many cargoes for shipment before the close of the navigation. In regard to the market for 1929 it can be stated that small contracts have been concluded, chiefly for staves. Inquiries have also ibeen received, but it cannot really be said yet that the market for 1929 has opened.

The plywood market has been marked by considerable activity and prices are on the rise. Some of the Finnisth plywood mills have already sold their whole production ffor next year "and negotiations are already going on with regard to sales for 1930.

## THE LABOUR MARKET.

The state of the labour market remains unchanged.

## CONTENTS OF THE TABLES.

1. MONEY MARKET.

Bank of Finland:
Balance sheet.
Note issue.
Note circulation and foreign correspondents. Ordinary cover, note reserve and home loans. Rediscounted bills and balances of current. accounts.

According to figures published in the M Mercators.
This revised index series is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank, 12 industrial and 2 other kinds of shares. By multiplying the price bid for each security by the namber of shares in the corresponding company the so-called sExchange valnes has been arrived at for the share capltal of the company, the sum of which values has been calculated in \% of the total nominal value of the share capital of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

The term imports covars all imported goods which have been placed on the market either immediately after importation or after etorage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner. Who must at the same time state the value of the goods as calculated at the frontiers of the country.

* Preliminary figures subject to minor alterations.

22.     - VALUE OF IMPORTS AND EXPORTS IN DIFFERENT GROUPS OF GOODS. *

* Preliminary figures subject to minor alterations.

23.     - IMPORTS OF THE MOST IMPORTANT ARTICLES.

The import- and export-indices have been calculated by the Statistical Dept. of the Board of Customs in the following manner: the quantitiles of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in quegtion in 1918, after which the import (or export) value for the current year has been calculated in percentage of the sum thus: obtained for purposes of comparison.

The goods chosen for the setting-up of a total-index have been divided, according to their use, into the groups: foodstuffs, clothing, agricultural requirements and other goods. The three last-named have been further divided, according to thelr purpose, into raw materials, machinery and industrial products. duties.
27. - EXPORT-PRICE INDEX.

${ }^{\text {1 }}$ ) From the beginning of 1921 onwards a new oficial index has been drawn up differing irom that pubished in the Bulletin for 1922 in that the whole first half of 1914 forms the basis ( $=100$ ) for the same, and that the rise in taxation is also included. The index is calcuiated by the Statistical Bureau of the Ministry of Social Affairs and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the income of which amounted during the years $1908-1909$ to $1600-2000 \mathrm{Fmk}$, assuming that the average monthly consumption within the same remained unaltered. The index for total cost of living ist the average based on weight of the different indices.

The index is worked out at the Central Statistical Office. - In determining the basea o icalculation for the index the combined value of the country's production and imports for 1913 are taken into account without deducting the value of exports. The figures show the change in the level of prices in relation to gold and are obtained from those previously published by dividing the latter by 7.3813. The totol number of commodities inoluded is 135, and the figures in brackets at the head of the columns indicate the number of commoditics in the corresponding groups. - In working out the index figures the method known as pproportionate pricess is employed, i. e. the price of each commodity is taken in a percentage ratio to a corresponding figure for the basic period and the average is then calculated on the basis of the resultant proportionate figures. The corresponding months in 1913 are taken as a basis. In the calculations geometrical averages are employed. No actual weighting of figures is undertaken; this is carried out, however, indirectly with the aid of the list of commodities.
36. - NUMBER OF UNEMPLOYED.

| Bud of Month | 1926 |  |  | 1927 |  |  | 1928 |  |  |  | End of Month |

| December | 1528 | 644 | 2172 | 1689 | 463 | 2152 |  |  |  |  | December |

This table, prepared from the weekly reports of the Labour Exchange. Department of the Ministry of Social Affairs; shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very small part of the rural centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled artisans proper register, up to the present, only in a minority of cases at the commonal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.
37. - CESSATION OF WORR.

The above particulars which are of a preliminary nature, have been compiled by the Statistical Bureau of the Ministry of Social Affairs. The majority of cases of cessation of work were described as strikes.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; since 1809 it was an antonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland deelared its independence, which was acknowledged by all the Powers including Soviet Russia, It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President L. Kr. Relander is elected for the term 1 March, 1925, to 1 March, 1931.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1927 are as follows:

|  | Number | Per cent |
| :---: | :---: | :---: |
| Swedish party | 24 | 12.0 |
| Unfonist party | 84 | 17.0 |
| Agrarian party | 52 | 26.0 |
| Progressive party | 10 | 5.0 |
| Social-Democrats | 60 | 30.0 |
| Communists | 20 | 10.0 |

## 2. LAND.

THE AREA is 388,483 square kilometres $=150,005$ square miles, (Great Britain's area is $89,047 \mathrm{sq} . \mathrm{m}$. and Italy's area 117,982 sq. m). Of the total area $11.5 \%$ are lakes. On an average $10.8 \%$ of the land in the south of Finland is cultivated, $0.9 \%$ in the North, $6.3 \%$ of the whole land. Of the land area 25.3 mill. ha ( 62.5 mill. acres) or $73.4 \%$ are covered by forests.

THE AVERAGE THMPERATURE in the coldest month is in S. W. Finland $-5^{\circ}$ to $-6^{\circ}$ C., In Lappland $-15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki is $+4.6^{\circ}$ (in Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the South during about 100 days, in Central Finland during 150 to 180 days, in Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1926): 3.6 millions, of which 0.3 million emigrants, (in Sweden (1926) 6.1, in Switzerland (1025) 3.9, in Denmark (1926) 3.4 and in Norway (1926) 2.8 millions).

DBNSITY OF POPULAATION (1926): In South-Finland 18.1, in North-Finland 2.4 and in the whole country an average of 10.4 inhabitants to the square kilometre.

LANGUAGE (1920): Finnish speaking $88.7 \%$, Swedish speaking $11.0 \%$, others $0.3 \%$.

RELIGION (1926): Lutheran 97.1 \%, Greek-Orthodox $1.7 \%$, others $1.2 \%$.

DISTRIBUTION (1926): $80.0 \%$ of the population inhabit the country, $20.0 \%$ the towns and urban districts. The largest tewns are (1926): Helsinki (Helsingfors), the capital, 215,829 inbabitants, Turku (Abo) 61,664, Tampere (Tammerfors) 52,394, Vilpuri (Viborg) 48,988.

EDUCATION (1920): Amongst persons over 15 years of age. only $1.0 \%$ are illiterate. Three universities founded 1640, 1917 and 1920.

INCREASE OF POPULATION (1926): Births $21.7 \%$, deaths 13.4\% (in France in 1925 17.6 \%os, and in England in $192512.2 \%$ \%a), natural increase $8.8 \%$

## 4. INDUSTRY.

PROPORTIONS OF OCOUPATIONS OF THE POPULATION (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $3.5 \%$, other occupations $17.7 \%$.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock companies $6.5 \%$, communities $1.7 \%$.

FOREST RESOURCES. The growing stock of the forest is 1,620 million $\mathrm{m}^{\mathbf{2}}$ ( 57,213 million cuble feet). The merchantable timber (measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft ) amounts to 1,557 million trees. Of this number pine is represented by $61 \%$, spruce by $28 \%$, the conifers thus consituting $89 \%$ or 1,384 million trees, leaftrees, mostly birch, $11 \%$ or 173 million trees. The annual increment is 44.5 milion $\mathrm{m}^{2}(1,568$ million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{\mathrm{a}}$ ( 1,413 million cab. ft.). In North Finland the increment is much larger than the fellings, but in South Finland excess felling occurs locally.

AGRICULTUBE. Cultivated land 2.1 million hectars, divided as follows: area under cuitivation $0.4-10$ hectars $33.7 \%, 10-50 \mathrm{ha}$ $48.9 \%$, $50-100$ ha $9.3 \%$, over 100 ha $8.1 \%$. Cultivated land was divided between the different kinds of crops as follows: $46.8 \%$ hay, 20.4 \% oats, 11.1 \% rye, $5.3 \%$ barley, 3.2 \% potatoes, 13.1 \% other. The number of dairies in 1926 amounted to 595.

INDUSTRY (1926): Number of industrial conserns 3,525, hands 149,367, gross value of products of industry 10,935 milion marks.

LENGTH OF RAILWAYS (1927): 5,053 km, of which 4,787 km State railways and 266 km private. The gauge is 1.524 m .

COMMERCLAL FI,EET (1927): Salling ships 511 ( 79,351 reg. tons net.), steam ships 548 ( 109,863 r. t.), motor vessels 92 ( 11,095 r. t.), lighters 3,779 ( 277,020 r.t.). Total 4,930 ( 477,329 r. t.).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained Its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish smarkkaw) $=100$ pennies. The gold value of 100 marks is equal to $\$ 2.5185=\left\{-10 / 4 \frac{1}{5} \mathrm{~d}\right.$.

STATE FINANCES. According to the balance sheet for 1927 the State revenue was $\mathbf{3 , 9 8 6} .1$ million marks of which $3,907.9$ million marks were ordinary revenue, and State expenditure $3,988.5 \mathrm{mil}$ lion marks, of which $3,329.3$ million marks were ordinary expenditure. The principal sources of revenue were as follows: State property and undertakings 1,438.2, direct taxes 485, 3 , indirect taxes 1,424.2, miscellaneous taxes 244.0, charges 193.7, miscellaneous revenue 187.1. The value of State property in 1922 is estimated at 11,150.6 million marks. For INational Debt see table 18 in this issue.

MUNICIPAL FINANOES. According to the Budget for 1927 expenditure amounted to 965.1 million marks. Income from taxation was 359.6 million marks, taxed income $4,925,5$ million marks. The communal income tax (not progressive) averaged $7.0 \%$ of the ratepayers* income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Abo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleaborg), Kuopio, Joensuu, Sortavala, Vipuri (Viborg), Mikkell (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyvalskyla and Kotka.

THE JOINT STOCK BANKS (1928): Number 18, possess 555 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 6,800 inhabitants.

The largest banks are: Kansallis-Osake-Pankk, Ab. Nordiska Föreningsbanken, Ab. Unionbanken and Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1028): Mortgage banks 7, Savings banks 471, Co-operative Oredit Societies 1,398 and a Central Bank for the latter.

${ }^{1}$ ) Including the Credit abroad, which amounted to 244.8 mill. mks. to January 31st 1925, 256.2 mill. mks, to January 31st 1926, and has since amounted to 114.6 mill. mks.
${ }^{2}$ ) Loans granted to Joint Stock banks and the public.

${ }^{1}$ ) Including deposits in the Savings-Banks, in the Post Office Savings-Bank and on Consumers' Co-operative Societiess Savings Account.

${ }^{1}$ ) Imports and exports in corresponding month $1913=100$, see footnote to table 28.

# THE TEXTILE INDUSTRY IN FINLAND. 

BY<br>MARTTI KOVERO, PH. D. Chief director of the central statistical office.

## DEVELOPMENT.

Wearing is an extremely old-established industry in Finland. The chief products of the weaver during the Middle Ages were linen, canvas and homespun. Then, early in modern times, about the middle of the sixteenth century, the first broad-cloth mills were started on behalf of the Government, without, it is true, aay lasting success, for already at the beginning of the following century they were closed down, and private enterprise failed to provide any successors to them. Better success attended the weaving trade practised by artisans under the protection of guilds, a trade which developed during the seventeenth century. The linen and homespun manuffiactured by the peasants and artisans ranked at that time with the most important export commodities. Cotton began to be used in Finland as raw material for the textile industry in the eighteenth century. In the same wentury the first privately owned broad-cloth mills and hempen cloth mills were founded. These branches of industry represented in a way at that time large-scale manufacture, but as regards technical equipment they were still in the handicraft stage. An omen of a new epoch, however, was the introduction of a spinning machine into one of the broad-cloth mills at the end of the century.
Mass production based on the use of machinery did not actually begin to develop in Finland until the second decaide of the nineteenth century. In that decade two large modern factories were established, viz., Finlayson's cotton mills at Tampere (Tammerfors) and the Littois broad-cloth mills near Turku (Abo). The former factory, which olbtained its power from the Tammerkoski rapids, soon began to export its products, chiefly to Russia. Already in 1844 it was employing 526 hands and was equipped
with 8,720 spindles and 200 looms. The Littois broad-cloth mills catered chiefly for the home market. These, too, used water-power to begin with, until in 1844 steam was introduced. Three other large-scale factories were founded during the first half of the nineteenth century, viz., one broad-cloth mill and two cotton mills. The number of industrial workers employed in the textile industry in 1849 was 1,143 . The technical standard of the factories was comparatively high. Particularly in Finlayson's mills production by machinery had been highly developed, with the result that the mills were on a par with the better-class English enterprises in this field. Even the broad-cloth mills had progressed so far that mule-jennies were used in them.
The development in the textile industry continued at a rapid rate during the following decades. New factories were founded and old ones enlarged. A great step forward was the establishment of the linen factories at Tampere. These mills began operations in 1859 with 5,000 spindles and 96 looms. The number of workpeople reached 456 as early as 1861 , and by 1865 had risen to 785 . To give an idea of the development of the older factories it may be mentioned that in 1859 the number of spindles in Finlayson's mills was 24,640 and in 1878 it reached 50,000 . The total labour employed in the textile industry amounted to 5,627 hands in 1875, the gross value of production being 15 million marks in the currency of that time.

The rise of the textile industry was based in the main on the existence of an export trade. An abrupt change in the circumstances of the industry occurred, however, in the 'eighties. On the one hand, the fiscal policy of Russia became less favourable towards the importation of Finnish industrial products, and on the other
hand Finnish agriculture had progressed rapidly meanwhile towards trade based on the use of cash, causing a swift increase in the home demand for textiles and yarns. The outcome was that the textile industry changed from an export industry to one relying on the home market.

Even after it had come to depend chiefly on the thome market the large-scale textile industry continued to develop briskly. During the years immediately preceding the Great War the number of workpeople and the gross value of production had risen as follows:

## Gross value of

 Workpeople. production.| 1911 | $\ldots \ldots \ldots \ldots$ | 13,222 | 69.5 |
| :--- | :--- | :--- | :--- |
| 1912 | $\ldots \ldots \ldots \ldots$ | 14,548 | 79.4 |
| 1913 | $\cdots \cdots \cdots \cdots$ | 14,912 | 77.0 |

Since 1875 the number of workpeople had thus increased over two and a half times and the gross value of production fivefold. Calculated in dollars at par the gross value of production in 1913 amounted to 14.8 millions.

The outbreak of the Great War brought with it great changes in the position of the textile industry. Owing to the transport difficulties resulting from the war the supply of raw material was badly disturbed. For the same reason, however, the import of foreign industrial products became difficult, with the result that the demand for home products increased greatly. In addition, during the finst phases of the war the Finnish textile industry obtained plentiful orders for war material from the Russian Government. The increased demand and the difficulthes in the way of olbtaining naw material naturally caused prices to soar. From a business point of view, therefore, the war was favourable to the textile industry. With the coming of peace the supply of raw material and machinery was released, but at the same time a long period of world-wide depression set in, which acted unfavourably on the purchasing power of the home market. Further, foreign competition besame keener in the Finnish market.

## THE POSITION TO-DAY.

The development of the textile industry since the war is seen in the followling table.

|  | Workpeople. | Machine power. HP. | Gross value of production. Mill. mks. |
| :---: | :---: | :---: | :---: |
| 1919 | 13,723 | 25,732 | 399.1 |
| 1920 | 17,273 | 25,105 | 867.3 |
| 1921 | 17,589 | 25,326 | 806.3 |
| 1922 | 19,589 | 28,139 | 1,037.0 |
| 1923 | 20,247 | 29,790 | 1,012.1 |
| 1924 | 19,152 | 31,151 | 935.9 |
| 1925 | 18,722 | 34,927 | 972.9 |
| 1926 | 20,110 | 36,568 | 1,041.6 |
| 1927 | 21,252 | 36,655 | 1,197.0 |

The great increase, in the number of workpeople in 1920 must be regarded as due chiefly to the compulsory introduction of the eighthour day into industry. As regards the figures for production, comparison is made difficult by the fluctuations in the value of the Finnish mark. Only from 1923 onward can they be regarded as fairly comparable on level terms.

The consumption of raw material in the cotton, linen and woollen factories during recent years is shown in the table below.

|  | Raw cotton consumed in cotton mills. Tons. | Flax, etc. consumed in linen factories. Tons. | Wool and artificial wools consumed in woollen factories. Tons. |
| :---: | :---: | :---: | :---: |
| 1913 | 7,886 | 2,608 | 2,442 |
| 1922 | . 6,884 | 2,026 | 3,369 |
| 1923 | . 7,719 | 1,657 | 3,3b3 |
| 1924 | . 6,275 | 1,680 | 3,451 |
| 1925 | 7,633 | 1,369 | 3,079 |
| 1926 | . 8,675 | 1,302 | 3,419 |
| 1937 | . 9,050: | 1,072: | 3,141 |

The consumption of raw cotton in the cotton mills did not return to the level reached in 1013 until 1926, when the figure for the former year was surpassed. In 1926 production in the cotton mills, as shown by the consumption of raw material, was $10 \%$ higher than in 1913. On the other hand, the consumption of flax in the linen factories has latterly been on the decline, amounting in 1926 to only half the amount consumed in 1913. Against this the appreciably increased ronsumption of wool in the woollen factories since the war should be noted.

The number of workpeople and the gross value of production in the most important branches of the textile industry was as follows in 1936:

| Spinuing and weaving: | Gross value of production |  |
| :---: | :---: | :---: |
|  |  |  |
| Cotton mills | 7,746 | 380.4 |
| Linen factories | 1,073 | 41.6 |
| Woollen factories | 4,619 | 239.8 |
| Tape and ribbon factories | 349 | 14.2 |
| Other branches of textile industry | 204 | 9.4 |
|  | 13,993 | 685.4 |
| Twine and rope works | 142 | 17.3 |
| Clothing trade: |  |  |
| Hosiery factories | 1,674 | 87.6 |
| Shirt factories | 955 | 43.7 |
| Tailor's shops | 1,661 | 92.9 |
| Hat factories | 554 | 41.0 |
| Other branches of clothing trade | 267 | 29.7 |
|  | 5,111 | 294.9 |
| Other commodities | 864 | 44.9 |

The main branch of the Finnish large-scale textile industry is thus the splinning and weaving lindustry. Its share in the aggregate gross value of production in the whole largescale textile industry lamounted in 1926 to $65.8 \%$ of the whole. The next branch in order of importance is the clothing trade, the share of which in the aggregate gross production in 1926 wras $28.2 \%$. In the spinning and weaving industry the most important subsidiary branches are the cotton anills and the woollen factories, are the cotton anilds and the woollen factories,
and in the clothing trade the tailor's shops and the hosiery factories.

The proportion of raw material costs in the gross value of production of the textile industry

Gross value of production. Workpeople. Mill. mks.正
during the last few years is showm in the following figures.

|  |  |  | Value of raw material. <br> Total. <br> Mill. miks. |
| :---: | :---: | :---: | :---: | :---: |
| of gross value |  |  |  |
| of producion. |  |  |  |

Of the gross value of production in the textile industry, the cost of raw material thus accounts for more than one-half. The greater part of the naw material used is imported from abroad. Thus, the total value of the raw material used in 1926 included locally produced raw material to the amount of 45.1 mill. mks. and semi-finished materials of local origin to the value of 116.5 mill. mks., leaving a sum of 436.2 mill. mks. for imported raw material. In recent years, however, the use of locally produced raw material has grown appreciably. Against the fact that before the war wool and even flax had mostly to be imported, the amount of wool produced locally and used in recent years has approximated in weight to that of imported wool, while the amount of home-grown flax used now greatly exceeds the quantity imported. The monetary value of the foreign wool used is still, however, greatly in excess of the value of the local wool used. On the other hand, the monetary value of the home-grown flax used is about double that of flax imports.

## IMPORTANCE OF THE INDUSTRY.

It may further be of interest to examine to what extent textile products are imported into Finland and to what extent the country sends its awn textile products abroad. If we add together the imports of cloth, miscellaneous textile products and ready-made clothing, we arrive at the following results for the last few years:

| 1923 | 558.6 mill. mks |  |  |
| :---: | :---: | :---: | :---: |
| 1924 | 465.3 | " |  |
| 1925 | 472.8 | " |  |
| 1926 | 566.8 | " |  |
| 1927 | 646.1 | " | " |

If we compare these figures with the gross value of home production in the textile industry, we see that imports have amounted latterly to about half the home production. To turn to yarns, twine and ropes, the annual imports have varied recently ibetween 85.2 and 151.8 mill . mks. Foreign yarns were used in the Finnish textile industry to the value of 62.7 mill. mks. in 1926.

The exports of the Finnish textile industry have recently amounted to the following sums:

Cloth and miscellaneons

|  | and ropes. | prodiots. Mill. mks. |
| :---: | :---: | :---: |
| 1923 | 0.5 | 3.9 |
| 1924 | 5.0 | 1.0 .2 |
| 1925 | 12.7 | 27.: |
| 1926 | 1.0 | 11.8 |
| 1927 | 3.6 | 11.9 |

Compared with the corresponding imports and the home production, the exports of the Finnish textile industry are therefore small. Altogether it may be said that the large-scale production of the textile industry in Finland satisfies approximately two-thirds of the total home consumption.

The importance of the textile industry in the industrial life of the country is reflected in the following figures for 1926.

|  | Total industries. | Share of textile industries. |  |
| :---: | :---: | :---: | :---: |
| kpeo |  |  | 13.5 |
| Machine-power, HP. | 460,252 | 36,568 | 8.0 |
| Gross value of production, mill. maks | 10,942.9 | 1,041.6 | 9.5 |

The textile industry thus represents an appreciable proportion of the total Finmish industries. In regard to gross value of production in industrial manufacturing the textile industry is only surplassed by the wood-working, paper and metal industries.

# THE OUTOKUMPU COPPER MINE. 

EERO MÄKINEN, ph. d., mining enginerr.
managing director of the outokumpd copper mine.

Mining has always been of little importance in Finland, and at present there exists in the country only one productive mine, the Outokumpu copper mine which, after the extension work completed this year, has become a fully established industrial plant. Its annual production, to a value of 35 million marks, is, indeed, even at this stage of no great importance for the economic life of the country. Its chief importance lies in the ffact that the mine already produces, and will, do so still more in the future, certain raw materials necessary to industry,
especially to industry working for the defence of the country, namely, copper, sulphur, and iron ore, for which the country has hitherto been dependent upon imports from abroad.

With its large ore deposits and comparatively high copper contents the mine is one of the most valuable ones in Europe.

## SITUATION.

The Outokumpu mine is situated in Eastern. Finland ( $62^{\circ} 42^{\prime}$ N. and $29^{\circ}$ E. of Greenwich), in a sparsely populated forest and lake region.

By a railway line 50 kilometres long, built in 1926-1928 from the town of Joensuu, the mine is now connected with the railway system of the rest of the country. The distance by railway from Outokumpu to its shipping port, Uuras (Trångsund), at the entrance of the Bay of Viipuri (Viborg), is 389 kilometres.

## THE QUANTITY AND QUALITY OF THE ORE.

The quantity of ore, ascertained by means of diamond drilling, shafit sinking and drifting over an area 1,800 metres in length and 500 metres. in breadth, and to a depth of 250 metres, has been calculated at 7 or 8 million tons. As the sheet-shaped ore-body retains its normal thickness even at the depth of 250 metres, it probably extends to still greater depths, and the tonnage of ore mentioned above should therefore be regarded as a minimum. At the rate of production attained at present, viz., 100,000 tons a year, the quantity of raw material so far ascertained wrould last at least 60 years.

The ore is remarkably uniform in quality, containing on an average $4.5 \%$ of copper, $23 \%$ of iron, $1 \%$ of zinc, $27 \%$ of sulphur and, in addition, small quantities of gold, silver, nickel, and cabalt. The valueless gangue, to an extent of $38 \%$, consists of quartz. The ore is favourable for mining, and its metallurgical treatment presents no great difficulty.

DISCOVERY AND HISTORY, 1910-1928.
The presence of copper ore at Outokumpu was discovered in 1910 by Mr. Otto Trüstedt, a mining engineer. A detailed acount of the very interesting prospecting work, carried out systematically on a theoretical basis, may be found in a paper published by the Geological Commission of Finland. ${ }^{1}$ ) Here it need only be mentioned that Mr. Trüstedt carried out his investigations as an official of the Geological Survey at the expense of the State, so that the

[^2]Government, in accordance with the mining laws: of Finland, became the owner of half the: deposit, while the other half fell to the land. owners, Mess:ms Hackman \& Co.

The Government and Mess:rs Hackman \& Co.. jointly erected, in 1913, at Outokumpu a small: experimental leaching plant for the extraction: of copper, and simultaneously continued the investigation of the ore field. Meanwhile theoutbreak of the Great War and the uncertain conditions created thereby discouraged the Government and Mess:rs Hackman \& Co. from developing the enterprise and they, therefore, leased the property to a company founded for this purpose by some Norwegian capitalists. The working and financing of this company, however, met with such difficulties that in 1920 alreadythe Norwegians gave up the undertaking, the mine once more coming under the control of the Government and Mess:rs Hackman \& Oo.

In 1924 the Government bought the share of ${ }^{-}$ Mess:rs Hackman \& Co. thus becoming thesole owner. An important reason, why this step. was taken, was that the Government found it advisable to retain the control of the mine which, being so far the only deposit in Finland of copper as well as of sulphur and iron, is of ${ }^{\text {c }}$ outstanding importance for the defence of thecountry and for the existence of the sulphuric acid, powder and ammunition factories founded for this purpose.

During the first few years, from 1910 to 1927, while the operations were confined mainly to prospecting and experimenting, the production was inconsiderable, in all about 3,100 tons of copper and 217,000 toms of ore. 87,000 tons of the ore production were used for the extraction of copper and 130,000 tons were sold as. raw ore.

## EXTENSION AND PRESENT ACTIVITIES. OF THE MINE.

Having purchased Mess:rs Hackman \& Co.'s. interest, the Government invested a total of 30 million marks in the mine, half of this. sum in the ore deposit and the rest in land.
dwelling houses, factories and machinery, including a narrow-gauge railway of 14 kilometres from the mine to the shore of Lake Juojürri, this railway having formerly been the only means of communication with the South of Finland.

In 1926 and 192 the Diet granted a total sum of 31.6 million marks for the extension of the enterprise. This sum was spent in 1927-1928 for the following extension purposes:

A new central hoisting shaft has been sunk and completely new mine machinery has been installed, raising the capacity of the mine to 350 tons of ore per 8 hours working shift.

A concentrating mill fior a production of 350 tons in twentyfour hours and a steam power station of 1,500 kilowatts have been constructed besides various means for facilitating the work. Among the latter may be mentioned the shipping warehouse equipped with a mechanical loading contrivance at Uuras, the shipping port.

The annual production of the concentration plant consists of:

From 30,000 to 35,000 tons table concentrate, containing 4 or $5 \%$ of copper and $44 \%$ of sulphur. This product, a copper pyrite, is specially intended for use by the sulphuric acid factory and the sulphite pulp mills; and

25,000 tons of copper concentrate being, with $1.5 \%$ of copper, chiefly a copper material.

Part of these products is sent by railway to the Government's sulphuric acid factory which roasts off the sulphur content. The copperbearing residue, as well as the rest of the con-
centrates, are for the present exported, though it is hoped that the sulphite pulp mills in the country will begin to make use of the latter. The value of the present annual production amounts to 30 million marks. To this should be added the production of the experimental copper extraction plant, 400 tons of copper, to a value of 5 million marks.

Later on the concentrates, according to a scheme for further extension, will also be refined. The production will then consist of 20,000 tons of sulphur, 4,000 tons of copper, 35,000 tons of purple ore and, as by-products from the copper extraction, some zinc, cobalt, gold and silver.

## ADMINISTRATION.

The mine is operated as a Government enterprise under the Ministry of Trade and Industry, although in the form of a private undertaking. It is controlled loy a Board of Directors, consisting of technioal experts and business men, appointed by the Government for a period of three years. This Board which has fairly wide authority, defined by special regulations, meets only when necessary, without interfering with the conduct of regular business. For the latter purpose the mine employs a managing director and the necessary technical and commercial staff.

The technical and commercial management is located at the mine (address: Outokummun Kaivos, Outokumpu, Finland).

## ITEMS.

Interest on deposits. An agreament has been in force of late between all the Joint Stock banks fixing the rate of interest on deposits in such a way that the banks were divided into three classes and the larger banks paid a lower rate on deposits and current accounts than the
smaller ones. As a result déposits increased far more in the smaller banks than in the large ones. For this reason the large banks have oancelled the agreement, so that it may be expected that from November 15th, when the agreement lapses, they will raise their rate
of interest on deposits to the same level as the smaller iJanks. By this means normal conditions will again set in in the market for deposits and it should be easier in future to come to an agreement in regard to rates of interest with other classes of financial institutions.

New foreign loan. The Municipal Mortgage Bank in Finland, known in the United States as The Finiland Residential Mortgage Bank, took up a new bond loan a short time ago through a consortium composed of The National City Company and Mess:rs Lee, Higginson \& Co. in New York and the Bank of Finland, Kansallis-Osake-Pankki and Ab. Nordiska Föreningsbanken in Helsinki (Helsingfors). The amount is 10 million dollars, the rate of interest $6 \%$ and the rate of issue $941 / 2 \%$. The bonds run for a period of 33 years, but the bank has the right of conversion after 5 years. The bonds are to be issued only in dollars. - The terms of the loan are so advantageous that the Municipal Montgage Bank is able to grant its new loans $1 / 2 \%$ cheaper than the older loans, for the average rate of interest for the whole period will be $6.73 \%$.

Increase of capital. Lojo Kalkverk A. B. which recently raised its capital to 40 million marks, has decided to increase it by a further 10 millions to 50 million marks. In addition the shareholders' meeting resolved that the Company was to issue debentures bearing a varying rate of interest, so-called ,,participating debentures", to an amount of 10 million marks. These are to bear interest at the rate of $7 \%$ at least, in addition to which, in case a higher dividend is paid on the company's shares than $7 \%$, the holders of debentures will receive extra interest epuivalent to the difference between this rate and the dividend on the shares. The funds are required for a proposed extension of the Company's business including the raising of the cement production from 500,000 to $1,100,000$ barrels a year.

The sugar crop. Owing to the cold and wet summer the beet sugar crop has turned out worse than last year. Although the area of beet root cultivated has increased from 2,700 hectares in 1927 to 3,000 hectares, the beet crop is estimated at only about 40,000 toms as compared with 52,000 tons last year. From the beet about 4,500 tons of sugar should be obtained, whereas the corresponding quantity last year was 5,600 tons.

Imports of motor vehicles. In September 423 motor vehicles and 267 chassis were imported altogether compared with 267 and 68 respectively in September, 1927. During the first three quarters of this year 5,828 motor vehicles and 2,372 chassis were imported, while the corresponding imports last year amounted to 5,297 and 1,648 respectively. Altogether 281 million marks have been used for importing motor vehicles this year as against 222 millions for the same period last year.

New statistical tables. Starting with the present issue of the Bulletin two new tables are added to the statistical section. In the first place a fresh column has been inserted in table No. 4 showing the percentage figure of the Bank of Finland's cover, i.e. the ordinary cover at the end of each month calculated in percentage of the total of the notes in circulation and the Bank's other liabilities payable on demand. Further, the former table No. 29 has been omitted and in its stead a table has been introduced illustrative of the turnover of trade in Finland. The new figures concern the monthly sales of several wholesale concerns and include ten business houses, four co-operative concerns and six associations of provincial dealers. The figures do not, therefore, by any means deal with the entire turnover of trade, as it would be impossible to obtain the necessary panticulars, but as they represent about $30 \%$
of wholesale business, they give a geod idea of the market and seasonal fluctuations in this branch. It should also be pointed out that these figures refer chiefly to articles of general consumption and some classes of agricultural requisites, but are less concerned with, for
instanee, aetual luxuries. - A third change has been made at the same time in the statistical section; table No. 6 having been rearranged, so that space has been provided for all foreign currencies quoted by the Bank of Finland.

## THE

BANK OF FINLAND MONTHLY BULLETIN
is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.
