## THE FINNISH MARKET REVIEW.

## THE MONEY MARIKET.

The state of the money market is still marked by the same stringency and shortage of money that has existed for a long time. The consequences of the stringency have gradually become more and more pronounced. Imports are less than last year by no inconsiderable amount; building operations are falling off greatly, as those ibuildings that were started before the change in the money market are completed one after another; the number of bankruptcies and protested bills is on the rise - in August the latter reached the highest amount for nine years. Productive enterprise has not suffered to too great an extent; in some branches it has, of course, fallen off, but in others it has grown, on the contrary. This is shown, for instance, by the rise in exports and the very busy state of shipping and railway traffic. The reduction of lumbering last winter will, however, gradually show itself in less work at the sawmills. The greater part of the reduced exports caused therelby should, nevertheless, ke outweighed by increased exports of products of the paper trade.

The position of the Joint Stock banles indicated a slight improvement for August. Their deposits fell off, it is true, by 32.0 million marks, but credits granted dropped at the same time by 40.3 millions. Fior the sake of comparison it may be mentioned that during the same time last year deposits were reduced by 84.7 million marks,while credits increased by 4.7 millions. Against an accentuation of the difference
between credits and deposits of 89.4 million manks in August, 1928, there is therefore now an improvement of 8.3 millions. In other respects the changes in the position of the Joint Stock banks are very slight.

The ohange in the position of the Joint Stock banks towards other countries, however, merits attention. As in June and July, the net indebtedness of the banks displayed a falling tendency also in August. The reduction on this occasion was 27.3 million marks and the net foreign indebtedness at the end of August amounted to 280.2 million marks as against 140.8 millions a year before and 466.9 millions at the end of May.

The changes in the position of the Bank of Finland during August were in the direction of an easier tone, but they were all very small. The supply of foreign currency; which had sunk almost uninterruptedly since the beginming of the year, was increased in August by 14.9 million marks to 520.0 millions. 'Surh changes are, of course, seasonal fluctuations and are closely related to fluctuations in foreign trade. The total credits of the Bank of Finland had a falling tendency, as in July, but the drop was only 3.7 million marks. The note circulation rose by 9.0 million marks, but the rise was considerably smaller than in August in previous years. At the end of August the note circulation was $1,448.1$ million marks compared with 1,564.9 millions a year before and 1,413.5 millions two years earlier.

The changes during the first fortnight in September were partly in the same direction, but partly they were marked by the continued money shortage. The supply of foreign currency increased by 26.9 million marks and the direct credits of the Bank were reduced by 10.7 million marks. During the first week in September re-discoun'ted bills bounded up to 680.2 million marks, but dropped again to 650.8 millions in the following week. The note reserve fell off during the first week by 11.5 millions, but rose again subsequently by 33.6 millions and reached a figure of 390.6 million marks, which exceeds the corresponding figure a year ago by 55.0 millions.

## TRADE AND INDUSTRY.

The total foreign trade in August was larger than in any earlier month this year. This was chiefly due to record exports that were only surpassed once ibefore, i. e. in July, 1927. The value of exports amounted to 904.4 million marks compared with 801.6 millions in July this year and 825.2, millions in August, 1928. Imports, on the contrary, displayed a falling tendency. Their value was 610.5 million marks compared with 639.5 millions in July and 714.8 millions in the previous August. The balance of trade thus showed a surplus of exports amounting to 293.9 million marks which is a good result even for this season of the year.

If the import and export figures for the most important classes of goods are compared, it will be seen that imports for August show an appreciable reduction since last year, for instance in the coase of various kinds of textiles, hides and skins, metals and metal goods, machinery, means of transport, oils and fats and fertilisers. There was an increase in imports only in a few cases. As regards exports, the value of timber shipments was considerably higher than in August, 1928. The exports of products of the paper trade were also rather larger, but on the other hand agricultumal products showed a reduced value.

During the comple'ed two-thirds of this year the value of imports was $4,614.2$ million marks
or 429.4 millions less than for the same period last year, though 639.8 millions more than for the same months in 1927. Exports were valued at $3,934.9$ milliion marks, which exceeds the corresponding figure for last year by 354.5 millions and for 1927 by 51.6 millions. 'the lbalance of trade is therefore appreciably more satisfactory this year than it was last year, when it was uncommonly adverse, but it is not quite as satisffactory as in 1927, when it was very normal.
By the end of August the sales of sawn timber are estimated to have reached 930,000 standards. The position is consequently, from a purely statistioal point of view, satisfactory, for the corresponding figure last year was not more than 835,000 stds. The level of prices, however, as we have pointed out before, is less satisfactory. The prospects for next year are also not brilliant, as the negotiations of British importers for Russian timber appear to comprize larger quantities than this year and there is a danger that the Russians may ke forced to accept prices that are not remunerative for the Finmish sawmillers. - Shipments of the parcels sold have proceeded normally, although in some ports there have been complaints of the difficulty of obtaining suitable tonnage. Up to the end of August 689,400 stds. had been shipped against 546,800 last year and 729,700 in 1927 .

## THE LABOUR MARKET.

The dabour market shows a clear change for the worse, seeing that production has fallen off considerably in several branches of industry owing to bad times. This is shown in the figures for the number of unemployed registered at the labour exchanges. According to these the numiber of unemployed at the end of August amounted to 1,859 compared .with 857 year ago. In the Diet and in the Government the position is being watched carefully in order, that it should be possible to step in, when necessany, and without delay allcw any extra grants required.

## CONTENTS OF THE TABLES.

1. MONEY MARKET.

Bank of Finland:

1. Balance sheet.
2. Note issue.
3. Note circulation and foreign correspondents.
4. Ordinary cover, note reserve and home loans.
5. Rediscounted bills and balances of current accounts.
6. Rates of exchange.

Joint Stock banks:
7. Home deposits.
8. Home loans.
9. Position with regard to foreign countries.
10. Position of the banks towards foreign countries.
11. Clearing.

Turnover of Stock Exchange according to figures supplied by the Stock Exchange Committee.
The figures for bankruptcies are not comparable with those published earier in 1923. The figurea above, compiled by the Central Statistical Office according to the reports sent in by the various Courts, include all bankruptcy petitions, of which only about half will lead in due course to actual bankruptcy, whereas the rest owing to agreement, lack of means etc. will be cancelled.

Protested bills according to figures published in the oReport of Bills Protested in Finlands.

* Preliminary figures subject to minor alterations.

## 18. - STOCK EXCHANGE INDEX.

| Year | Jan. | Febr. | March | April | May | June | Jaly | Aug. | Sept. | Oct. | Nov. | Dec. | Year |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1926 | 144 | 147 | 152 | 154 | 153 | 157 | 164 | 172 | 175 | 172 | 177 | 178 | 1926 |

| 1929 | 221 | 215 | 200 | 202 | 199 | 196 | 197 | 194 |  |  |  |  | 1929 |

According to figures published in the smercators.
This revised index series is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank, 12 industrial and 2 other kinds of shares. By multiplying the price bld for each security by the number of shares in the corresponding company the so-called sexchange value has been arrived at for the share capital of the company, the sum of which values has been calculated in $\%$ of the total nominal value of the share capital of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

The above table is based on the monthly report on the National Debt published by the Treasury in the Official Gazette.

1) Internal loans are given at their nominal value. Foreign loans are given in Finnish currency according to the rate ruling on the date of the raising of the loan. As a result of this, loans of an earlier date than 1914 are set down at par.
2) Caiculated as follows: The loans raised in the country have been calculated in dollars, according to the average rate of exchange of each month. The loans, negotiated abroad, which are all issued in different currencies, are grouped according tothe proportion of currencles, shown by the conpons paid, and reduced to dollars at the rate of exchange just mentioned,

| Jan.-Dec. |  |  |  |  |  |  |  |  | Jan.-Dec. |

The import- and export-Indices have been calculated by the Statistical Dept. of the Board of Customs in the following manner: the quantitiles of imports and, reapectively, exports for the current pear have been multiplied by the average price for the class of goods in question in 1913, after which the import (or export) value for the current year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods chosen for the setting-up of a total-index have been divided, according to their use, into the groups: foodstuffs, clothing, agricultaral requirements and other goods. The three last-named have been further divided, according to their parpose, into raw materials, machinery and industriar products.
duties.
28. - EXPORT-PRICE INDEX.

${ }^{2}$ ) From the beginning of 1921 onwards a new official index has been drawn up differing from that pubulshed in the Bulleth for in that the whole first half. of 1914 forms the basis $(=100)$ for the same, and that the rise in taxation is also included. The index is calculated by the Statistical Burean of the Ministry of Social Affairs and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the income of which amountrad during the years $1908-1909$ to $1600-2000$ Fmk, assuming that the average monthly consumption within the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.

The new wholesale price index is worked out at the Central Statistical Office. - The index is based on the quantity of goods in the local wholesale trade in Finland, the average price for 1926 being taken as a basis. There is no direct weighing of the data regardIng prices, but indirect weighing has been carried out by each class of goods being represented by the number of commodities which corresponds to the calculated importance of the class in the wholesale trade. The averages are arithmetical averages.
37. - NUMBER OF UNEMPLOYED.

| December | 1689 | 463 | 2152 | 2220 | 648 | 2868 |  |  |  |  | December |

This table, prepared from the weekly reports of the Labour Exchange Department of the Ministry of Social Affairs, shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very amall part of the raral centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled artisans proper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.

The above particulars which are of a preliminary nature, have been complled by the Statistical Bureau of the Ministry of Social Affairs. The majority of cases of cessation of work were described as strikes.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; after 1809 It was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland deelared its independence, which was acknowledged by all the Powers including Eoviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President L. Kr. Relander is elected for the term 1 March, 1925, to 1 March, 1931.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1929 are as follows:

Per

## Number

cent
Swedish party ............................................ 23.
Unionist party .......................................... 28 14.0
Agrarian party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . $60 \quad 30.0$

## 2. LAND

THE ARFA is $\mathbf{3 8 8 , 2 7 9}$ square kilometres $\boldsymbol{\sim 1 5 0 , 0 0 5}$ square miles, (Great Britain's area is $\mathbf{8 9 , 0 4 7}$ sq. m . and Italy's area 117,982 8q. m ). Of the total area $11.5 \%$ are lakes. On an averaige $10.8 \%$ of the land in the south of Finland is cultivated, $0.2 \%$ in the North, $6.8 \%$ of the whole land, Of the land area 25.8 mill. ha ( 62.5 mill. acres) or $73.4 \%$ are covered by forests.

THE AVERAGF TEMPRRATURE in the coldest month is In S. W. Finland - $5^{\circ}$ to $-6^{\circ}$ C., in Lappland - $1^{\circ}$ C. and during the warmest month $+15^{\circ}$ and $+18^{\circ}$ to $+14^{\circ}$ C. resp. The average temperature in Helsinki is +4.60 (in Oslo $+5.4^{\circ}$, in Montreal $+5.40^{\circ}$, in Moscow +3.60). The ground is covered by snow in the South for about 100 days, in Central Finland for 150 to 180 days, In Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1927): 3.6 millions (of which 0.3 million emigrants), Sweden (1927) 6.1, Switzerland (1926) 4.0, Denmark (1927) 3.5 and Norway (1926) 2.8 millions.

DENSITY OF POPULATION (1927): In South-Finland 18.1, in North-Finland 2.4 and in the whole country an average of 10.4 Inhabitants to the square kilometre.

LANGUAGH (1920): Finnish speaking $88.7 \%$, Awedish speaking $11.0 \%$, others $0.3 \%$.

RELIGION (1927): Lutheran 97.0 \%, Greek-Orthodox $1.7 \%$, others 1.3 \%.

DISTRIBUTION (1927): $\cdot 80.0 \%$ of the population inhabit the country, $20.0 \%$ the towns and urban districts. The largest towns are (1927): Helsinki (Helsingfors), the capital, 220,904 inhabitants, Turka (Abo) 62,599, Tampere (Tammerfors) 63,121, Vifpur (Viborg) 49,912.
mDUCATION (1920): Amongst persons over 15 years of age only $1.0 \%$ are illiterate. There are three universities, founded 1640, 1917 and 1920.

INORHAST OF POPULATION (1927): Births $21.2 \%$, deaths $14.5 \%$ (in France in $192517.6 \%$, and in Fngland in $192512.2 \%$. $)$, natural incresse $6.7 \%$ os.

## 4. INDUSTRY.

PROPOBTIONS OF OCCUPATIONS OF THEF POPULATION (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $8.4 \%$, other occupations $16.7 \%$.

OWNERSHIP OF LAAND. The land area is diatributed among different classes of owners approximately as follows: private $52.1 \%$, State $89.7 \%$, Joint Stock Companies $6.5 \%$, communitiea $1.7 \%$.

FOREST RESOURORS. The growing stock of the forest is 1,620 million $\mathrm{m}^{*}(57,213$ million cubic feet). The merchantable timber (measuring 20 cm at breast helght $=6 \mathrm{in}$. at a height of 18 ft .) amounits to 1,557 million trees. Of this namber pine is represented by $61 \%$, spruce by $28 \%$, the conifers thus consituting $89 \%$ or 1,384 million trees, leaftrees, mostly birch, $11 \%$ or 178 million trees. The annual increment is 44,5 million $\mathrm{m}^{8}(1,568$ million cub.ft.). The annual fellings according to eariter calculations are 40 million $\mathrm{m}^{\mathbf{2}}$ ( 1,413 million cub. $\mathrm{ft}_{\mathrm{o}}$ ). In North Finland the increment in much larger than the fellings, but in South Finland excess felling occurs locally.

AGBICULTURE. Cultivated land 2.1 million hectars, divided: as follows: area under cultivation $0.4-10$ hectars $38.7 \%, 10-50 \mathrm{ha}$ $48.9 \%, 50-100$ ha $9.8 \%$, over 100 ha $8.1 \%$. Cultivated land is divided between the different kinds of crops as follows: $46.8 \%$ hay, 20.4 \% oats, 11.1 \% rye, 5.3 \% barley, 3.2 \% potatoes, 13.1 \% other. The number of dairies in 1926 amounted to 595.

INDUSTRY (1927): Number of industrial concerns 8,789 , hands 159,141, gross value of products of industity 12,382 million marks.

LENGIH OF RAIEWAYS (1929): $5,241 \mathrm{~km}$, of which 4,97

COMMERCIAL FLIEET (1920): Steam ships 529 (140,537 reg. tons net), motor vessels 132 ( 14,714 r. t.), sailing ships 377 ( 67,916 r. t.), lighters 3,992 (282,628 r.t.). Total 5,030 (505,795 r. t.).

## 5. FINANCE AND BANKING.

CURRENTOY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish omarkkas) - 100 penniä. The gold value of 100 marks is equal to $\$ 2.5186 \mathrm{mf}$-. $10 \mathrm{~s} .4^{1 / 5} \mathrm{~d}$.

STATE FINANCES. According to the balance sheet for 1928 the State revenue was 5,0724 million marks of which $4,475.7$ million marks were ordinary revenue, and State expenditure $4,041.6$ million marks, of which 3.567 .7 million marks were ordinary expenditure. The principal sources of revenue were as follows: State property and undertakings 1.671.2, direct taxes 566,5 , indirect taxea 1,604.7, miscellaneous taxes 306.4, charges 209.9, miscellaneous revenue 143.9 and loans 535.0. The valne of State property in 1922 is estimated at $11,150.6$ million marks. Fror National Debt see table 18 in this issue.

MUNICIPAL FINANCES. According to the Budget for 1928 expenditure amounted to $1,127.1$ million marks. Income from taxation was 400.2 million marks, taxed income $5,708.2$ million marks. The communal income tax (not progressive) averaged $7.0 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of F'mland, (founded in. 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Abo), Pori (Björneborg), Vassa (Vasa), Oulu (Uleaborg), Kuopio, Joensuu, Sortavala, Vilpuri (Viborg), Mikkeli (S:t Michel), Tampere (Tammerfors), Hameenlinna (Tavastehus), Jyväskyla and Kotka.

THE JOINT STOCK BANKS (1929): Number 17, possess 555 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per $\mathbf{5 , 8 0 0}$ inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska F'reningsbanken, Maakuntain Pankki Oy., Ab. Unionbanken and Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1929): Mortgage banks 7, Savings banks 474, Co-operative Credit Societies 1,419 and a Central Bank for the latter.

# THE GROWTH OF POPULATION IN FINLAND. 

BY<br>G. MODEEN, m. A.

CHIEF ACTUARY OF THE CENTRAL STATISTICAL OFFICE.

## INTRODUOTION.

The population statistics of Finland are older than those of most other countries in the world. They go back as far as 1750 . Since then statistics have been collected regularly of births, deaths, marriages etc. and later of the migration of population between the different communes and towns, of divorces and so on. During the last half-century since 1880 statistics have been collected regarding the division of the population according to sex, age, occupation, language etc., every ten years. These statistics, which are based on the registration of the population and bear the character of a kind of subsidiary census, have been amplified by an exact actual census in the larger towns of Finland, the latter also ibeing carried out every ten years for the last sixty years.

## EXTENT OF POPULATION.

In 1750 Finland had a population of 421,500 . At the beginning of the next century, in 1800 , the number was twice as large: 832,700 . Fifty years later the population had again doubled and numbered $1,636,900$. In the 1860 's Fin-
land suffered an exceptionally severe failure of the harvest accompanied by famine and epidemics. During that decade the growth of the population was arrested almost entirely. Subsequently a strong increase of population set in again. By the end of the 1870 's the number of inhabitants had already reached 2 millions and by 1908 it had reached 3 millions. During the last deoades the population has grown rather more slowly and the cause of this phenomenon, of which the principal one is a reduced birthrate, are examined below.

The latest official figure for the population of Finland is 3,582,406 inhabitants. This is the number of inhabitants registered in the church and civil registers at the end of 1927. This figure is, however, a little in excess of the actual population at the present time, owing to the fact that those persons who have emigrated continue to figure, as a rule; in the registers of their own communes. Deducting such emigrants, most of whom are finally lost to the country, the population at the end of 1927 may be estimated at $31 / 3$ million people. At the same date there were about 30,000 foreigners in Finland.

Of the total registered population 1,770,000 were males and $1,812,000$ females. To every 1,000 males there were 1,024 females. The female part of the population therefore exceeds the male population of Finland very slightly in numbers in contrast to those countries which took part in the Great War. It may be mentioned by way of illustration that in England the number of females was 1,096 to every 1,000 males, in Germany 1,099 and in France 1,103.

## DENSITY OF POPULATION.

Finland covers an area of 388,279 sq. kilometres, of which $343,427 \mathrm{sq} . \mathrm{km}$. are land and the rest lakes and rivers. To one sq. km. of land there were 10.4 inhabitants in 1927. Finland is sparsely populated compared with most other European countries, but its southern parts are comparatively densely populated. Setting aside the very sparsely populated northernmost province; with an area equal to about half the area of the whole country and to its greatest extent situated north of the Arctic Circle, the density of the rest of the country is about 20 inhabitants to the sq. km .

## BIRTHRATE.

The growth of the population is determined chiefly lby the relation of births to deaths. The
birthrate in Finland has moved, broadly speaking, in a similar direction to the birthrate in the other civilised countries in Western and Northern Europe: it has been falling for several decades. This falling off began, however, a little later in Finland than in other countries. In the eighteenth century the annual number of births was about 40 per thousand of population. During the greater part of the nineteenth century, up to the end of the decade 1881-1890, it remained very high, as a rule over 35 per thousand. From that date, however, the birthrate shows a decided drop. At first the reduction was slow, but in the years immediately before the war, the number of births began to fall more rapidly and the fall was most severe during the war years and the first year after the war. During the last few years the birthrate has fallen more slowly again, but the falling tendency is nevertheless clearly perceptible. The latest available figure for the birthrate, for 1927, was 21.2 per thousand.
This means that the number of live children born, taken in absolute figures, has fallen off of late years. While the number of births during 1901-1910 was, on an average, 90,000 a year, in 1927 it was only 75,600 . This latter figure is about equal to the annual number of births in the middle of the 1890 's, when the extent of the population was only about $2 / 3$ of the present population.

It should be pointed out, however, that the fall in the birthrate in Finland has at all events not gone as far as in some other North and West European countries. There was a considerably lower birthrate than in Finland in several other countries, for instance, in Sweden (16.1 per thousand), England (16.6), France (18.2) and Germany (18.4).

The falling birthrate started in Finland, as in most other countries, earlier in the towns than in the rural districts, and has gone considerably further in the former. In 1927 the birthrate in the towns was 14.4 per thousand and 22.6 in the rural districts. To some extent this large difference in the birthrate can be ascribed to the essential difference in the division according to civil status and sex which exists ketween the inhabitants of the towns and the rural districts. In the towns there is a larger proportion of unmarried people and the excess of females is also very large in the towns, while in the country the sexes are more evenly represented.

## DEATHRATE.

In the digram on page 23 the curve that illustrates the progress of the deathrate indicates abrupt changes in the beginning. The first peaks mark war periods accompanied by consequent epidemics. The bad harvests and
famine in the 1860 's have already been referred to. Since then the mortality has decreased to a gratifying extent. While it was formerly between 25 and 30 per thousand, it has since the 1890's been below 20 per thousand. In 1927 it was down to 14.5 per thousand. - In regard to its deathrate Finland is about on the same satisfactory level as the Scandinavian countries, the mortality in which is among the lowest in the world.
As regards the reduction of the deathrate the towns have an advantage over the rural districts. In the former the deathrate was 12.9 per thousand in 1927, but in the country 14.8 per thousand. The difference, it will be noted, is, however, considerably smaller than in the case of the birthrate. This is, no doubt, due in part to sanitary conditions being better in the towns. Partly, too, the division according to age is more favourable to the towns, seeing that those age classes that have the lowest mortality are more strongly represented in them than in the rural districts.

The influence of infant mortality, on the generai deathrate is very important. It has been possible to reduce the mortality among infants below one year of age chiefly by means of improved care of infants and hygiene. Thus, the deathrate for this age class has been reduced from 141.7 per thousand in 1891-1900 to 97.1 per thousand in 1927.

GROWTH OF POPULATION.
The result of the primary factors in the change of population, i. e. nativity and mortality, varied greatly during the long space of time illustrated by the accompanying diagrams. Up to the 1870's the greatest changes in the excess of births over deaths were caused lby the periodical increase in mortality. As the latter was continuously reduced from that date up to the period 1911-1915, this period records the most even and greatest increase in population, particularly in its earlier part, before the fall in the birthrate attained any great proportions.

In recent years the margin between births and deaths has again decreased owing principally to the fact that the birthrate has fallen off more than the deathrate. In 1927 the excess of births over deaths only amounted to 6.7 per thousand of the population compared with 13.5 per thousand in the years 1906-1910. The growth of the population in Finland is therefore proceeding at a considerably slower pace at present than about twenty years ago.

It should be noted that the increase in population has not actually been as great as these figures would seem to indicate. The loss which the population sustains annually by emigration has to lbe deducted. The question of emigration and its progress have already been dealt with in Bulletin No. 8 for 1927. We need only
add that in 1901-1910 an average of 5.5 per thousand, in 1911-1920 2.1 per thousand and in 1921-1925 1.8 per thousand of the population left the country. Owing to the growth of the population having been so slight in the last few years, the reduction it has experienced by emigration has been comparatively important, even though emigration has fallen off in extent during the same period.

## MIGRATION OF POPULATION.

The growth of population has benefited different parts of the country in a very dissimilar way. Although the excess of births is appreciably larger in the rural districts than in the towns, the population of the latter grows more rapidly in proportion. Migration between the towns and the country regularly provides a considerable surplus in favour of the towns, while the growth of the rural population is reduced in a corresponding degree. The growth of the urban and rural population is illustrated by the accompanying diagram above dealing with the period 1871-1927. This shows that the greater part of the growth of the town population has occurred at the expense of the country districts, while the excess of births has played a smaller and smaller part from year to year in this respect. The influx into the towns was especially great during the decades 1891-1900 and 1901-1910. During the former period the

population of the towns was increased altogether by 104,400 persons, of whom only 27,500 or about $1 / 4$ represented an excess of births and the rest a gain on migration. For the latter period the corresponding figures were 117,300 and 43,400 . In 1921-1927, when the town population was increased liby 77,300 persons, only $1 / 8$ of this number represented an excess of births and $5 / 6$ a gain on migration.

For the growth of population in the rural districts the influx into the towns was formerly, when the excess of births was large, of comparatively subordinate importance. Of late, however, when the number of births has been falling off there, too, circumstances hiave changed. In 1921-1927, when the excess of births over deaths in country districts was 195,600, the net increase in population was not quite $3 / 4$ of that figure or 140,200 persons. In many rural communes with a low birthrate the number of inhabitants has actually decreased during these years.

## POPULATION IN TOWNS AND RURAL DISTRICTS.

As Finland was originally an agricultural country, its urban population was formerly quite insignificant. Owing to the considerable influx into the towns the share which the population of the towns and other dwelling centres constitutes in the total population, has grown uninterruptedly, whereas the share of the
rural population has been reduced to a corresponding degree. This displacement of the residential conditions which is due ultimately to the corresponding change in the mutual importance of the various kinds of occupation, is illustrated by the diagram above and is seen in the following figures indicating the share of the town population in proportion to the total population:

| Year. | Percentage. |
| :--- | :---: |
| $1800 \ldots \ldots \ldots$ | 5.6 |
| $1850 \ldots \ldots \ldots$ | 6.4 |
| $1875 \ldots \ldots \ldots$ | 7.8 |
| $1900 \ldots \ldots \ldots$ | 12.5 |
| $1910 \ldots \ldots \ldots$ | 14.7 |
| $1920 \ldots \ldots$. | 16.1 |
| $1927 \ldots \ldots \ldots$ | 17.3 |

In 1927. there were 620,500 persons domiciled in the towns and $2,961,900$ persons in the country districts. Among the latter are included the inhabitants living in urban distriots and in densely populated districts (industrial centres, the vicinity of railway stations etc.); their number amounted at the end of 1927 to 115,600 persons or $3.2 \%$ of the whole population. It can consequently be estimated that the population living under urban conditions was about $20.5 \%$ of the total population. Compared with other countries in Europe the urban population in Finland is at all events at present of very little importance. In the large industrial countries considerably more than half the population now lives in towns and districts similar to towns.

# THE CULTIVATION OF GARDEN PRODUCE IN FINLAND. 

BY<br>ARVO HAAPANEN, director of the lepaa school of gardening.

## INTRODUCTION.

Garden produce was first cultivated in Finland in the Middle Ages, the custom spreading from the monasteries. It was slow to obtain any appreciable foothold among the people, yet even in those early years there were periods, when gardening flourished. One such period was at the end of the eighteenth century. In spite, however, of its century-old history, the cultivation of garden produce has not even now attained the same position in Finland that it has in many other countries. Nevertheless, there are unmistakable signs latterly of a growing comprehension of the significance of gardening in the national economy, and especially in the economy of agriculturists, particularly small farmers. Attention has also been awakened to its great social significance, obvious enough if we think of the sohool-garden or small-holding movement and the club movement as applied to gardening.

A detaliled review of Finnish gardening is difficult owing to the complete lack of statistics on the subject. Any account of the subject must therefore inevitably be based on the personal experience of the writer, which is of necessity limited. Nevertheless, an attempt will be miade in the following account to be as objective as possible.

## NATURAL OONDITIONS.

The natural conditions of most importance are soil and climate.

The soil of Finland is young seeing that the loose strata which hide the bedrock were formed during the glacial period. Amongst the mineral soils moraine formations are the commonest,
these oovering most of the country with the exception of the coastal districts. Marshes are plentiful in the same areas, particularly in North Finland. Clay soils are found in South and Southwest Finland and Ostrobothnia, where the most fertile districts are situated. Elsewhere clay appears only sparsely along the shores of some of the biggest lakes. The only large areas of sand and silt are on the Carelian Isthmus and between Lake Oulu and the Gulf of Bothnia. Although moraine gravel is not in itself an especially good soil for garden produce, experience has shown that fruit-trees thrive best. in this country and are less susceptible to the severe winters on such soils.
As regards climate it should be noted that Finland is situated between lats. $60^{\circ}$ and $70^{\circ}$. Thus the southernmost areas, Helsinki (Helsingfors) for example, are in the same latitude as the southern end of Greenland. The influence of the Gulf Stream, however, keeps our climate more favourable than that of any other country as far north as ours. Thus the mean temperatures for the whole world at lat. $60^{\circ}$ are $-16^{\circ} \mathrm{O}$ in January, $+14^{\circ}$ in June, and $-1^{\circ} \mathrm{C}$ for the whole year, whereas the corresponding figures for Finland are $-5^{\circ},+16.5^{\circ}$ and $+4^{\circ}$ C. In gardening, as in agriculture in general, great importance attaches to the number of days on which the meati temperature is above freezing-point. These number 250 for Helsinki, 217 for Kuopio and 205 for Ka jaani.
A good idea of the comparative lateness of the Finnish spring may be gleaned from the following fenological observations. Fruit-trees flower in Athens and Rome on an average on March 16th, in Giessen and Vienna on April

19th, in Oslo and Riga on May 18th, as against June 4th in the Turku (Åbo) district in South Finland, and June 8th in Häme (Tavastland). The first strawberries ripen in South Finland at the turn of June/July.

Nevertheless, although the soil of Finland is on the whole barren and its climate severe, gardening can be carried on here in extremely varied forms. Fruit-growing is naturally restricted to the southern districts, but berries and vegetables can be grown almost anywhere, though it is true that the limit for currant-bushes and even for certain vegetables coincides with the northern parts of the country. As an example of the cultivation of vegetables in the far north it may be mentioned that potatoes, carrots, beetroot, turnips, swedes, onions, peas, rhulbarb, spinach, salad-leaves, radishes, horseradish, dill and parsley are grown at the Utsjoki Rectory, almost in lat. $70^{\circ}$.

## OOMMEROIAL GARDENING.

Fruit-growing is restricted, as already stated, to southern Finland. Plums and cherries in particular thrive practically only in the southwest, although plum and cherry orchards are found in Häme and Savo (Savolax) that give a very good yield in good years. During severe winters, however, the trees suffer much damage and may even die. The area for pears, too, is greatly restricted. On the other hand, apples can be grown with some success as far north as a line drawn from Vaasa (Vasa) to Joensuu, or up to about lat. $63^{\circ}$. Great care must naturally be taken in these boundary-areas in choosing the right sites and hardy varieties. As a general rule, only relatively modest varieties can be grown here, yet extremely tasty cooking fruit is produced. The aroma is usually much finer and stronger here in the north than in the south. In good years even some of the finest dessert varieties can ripen in the best districts. It is difficult to estimate the extent to which fruit is grown here, but calculations show that about 150,000 fruit-trees are purchased annually from the
nurseries and the demand for apple-trees seems to increase each year. In certain districts even the smallest dwellings have their orchards, and there are gardens with thousands of fruit-trees. The cultivation of red, black and white currants, gooseberries, rasplberries and strawberries is fairly common, and all these thrive very well. Indeed, as the natural conditions for this form of cultivation are so good, it would be possible greatly to extend it. Even exports are not out of the question, the demand for black currants being very great, for example, in England.

Nursery gardening only began to develop seriously in recent years. Even a decade or two ago, fruit-growers had to order their shoots from albroad, whereas the demand for fruittrees and berry-bushes can now be met lby the home nurseries. Some of the nurseries graft tens of thousands of apple-trees yearly. The nursery cultivation of decorative trees and bushes and perennials is comparatively undeveloped, but production has grown in the measure in which the demand has increased. The import of cuttings of this description, however, is still great.

Vegetable gardening is possible, so far as natural conditions are concerned, all over the country. The cultivation of vegetalbles is indeed fairly common, though farmers might learn to make still greater use of the health-giving products of a vegetable garden. In the vicinity of the towns and other thickly-populated centres there are usually large numbers of cultivators with considerable grounds. In addition to open-air produce, they grow certain vegetables under glass and in beds. Oucumbers and tomatoes in particular are grown under glass. The vegetables mostly grown by the people are cabbages, swedes, carrots, beetroot and onions, but on the big estates and near towns every description of vegetable is grown. From the point of view of the national economy vegetable-growing is probably the most important branch of gardening in Finland.

The organisation of the sale of garden produce leaves much to be desired and this circumstance
has a detrimental affect on gardening. Lately some signs of improvement have, however, appeared. Thus, a oo-operative society for the sale of garden produce, „Osuusliike Puutarhakeskus", was founded last year at Helsinki and quite recently another co-operative sales society, "Osuusliike Puutarhatuote", was founded at Turku.

Seed-cultivation is of necessity of small extent, owing to the geographical situation of the country.
Commercial flower-growing, or flower-growing under glass or in hathouses is very highly developed in Finland. In this case the climate is not such an obstacle as in others, though the long dark winters certainly affect the results and the frosts greatly increase the cost of heating. In spite of these drawbacks there are, however, very many florists doing a considerable business, each with dozens of hothouses and several hundred frames. The demand for flowers in the largest towns is lively, and they also possess numerous florist's shops.

## LANDSCAPE GARDENING.

Landscape gardening has not reached the same level in Finland as in wealthier countries more favoured by nature. Nevertheless there have been individuals in Finland, too, who have sacrificed much for the lbenefit of landscape gardening and have created beautiful and even magnificent parks and gardens around their homes. The best-known of the older parks in Finland are those of Monrepos and KarlbergAulanko. But even in quite recent years our garden-architects have created extremely beautiful and splendid gardens as for instance the garden at Hahkiala well known for its perennials. Even in the oase of small gardens attention is now being paid to artistic standards.
Besides, municipalities and certain congregations have had aesthetically noteworthy parks and cemeteries laid out. In this respect the capital leads the way, and the fine parks of Helsinki have received wide recognition. The parks of Helsinki, not including popular recrea-
tion grounds, cover albout 173.5 hectares, and cost the town in 1928 about 2.6 million marks. A further 1.6 mill. marks was devoted to the establishment of new parks. The appropriation in the municipal budgets of some other towns for the care of parks during 1929 were: Turku 738,400 marks, of which about 45,000 for new plantations, Tampere (Tammerfors) 1,151,940 marks of which 291,000 for new plantations, and Viipuri (Viborg) 600,000 marks, of wich 85,000 for new plantations.

## EXPORTS AND IMPORTS.

Scarcely any garden produce is exported from Finland, only wild berries, whortleberries in particular. Imports of garden produce are considerable. In 1927 and 1928 the total value of fruit, vegetables, live plants; etc., imported amounted to 139.5 and 180.2 million marks respectively, including such southern fruit as cannot be cultivated in Finland. The following figures from .the trade statistics show the imports of the most important items:

|  | 1926 | 1927 | 1928 |
| :---: | :---: | :---: | :---: |
| Fresh: | 1,000 kgs. | 1,000 kgs. | 1,000 kgs. |
| Apples | 3,498 | 3,509 | 4,567 |
| Pears | 808 | 828 | 1,147 |
| Plums | 42 | 52 | 171 |
| Potatoes | 13,405 | 8,897 | 20,091 |
| Onions | 2,023 | 1,794 | 1,904 |
| Cucumbers | 34 | 120 | 134 |
| Cabbages | 583 | 478 | 726 |
| Dried or pickled: |  |  |  |
| Apples | 382 | 460 | 369 |
| Plums | 2,296 | 2,287 | 2,382 |
| Chicory-roots | 1,672 | 1,475 | 1,428 |
| Cucumbers, etc. | 243 | 206 | 461 |
| Preserves: |  |  |  |
| Fruit and berries . . | 40 | 54 | 75 |
| Kitchen vegetables . | 53 | 58 | 73 |
| Live or dried plants or parts thereof.. | 193 | 248 | 255 |
| Bulbs . . . . . . . . . . . | 183 | 236 | 245 |
| Garden seeds ...... | 35 | 28 | 42 |

As regards fruit, a great part of the apples imported might well be grown here. Similarly certain varieties of vegetable are imported which might well be grown in Finland. On the other hand the home cultivation of builbs and certain other decorative plants would be unprofitable.

## EXPERIMENTAL AND EDUOATIONAL WORK.

Research work in the sphere of gardening is still new in Finland. In 1927 the State founded the Southwest Finland Plant-breeding and Gardening Research Station (budget for the year 1929 438,000 marks) for experimental and research work in the field of gardening. There had previously been a research station at Hinnonmäki next to the Lepaa School of Gardening, but this area has now been placed under the direct control of the school, though experiments in fruit-growing are still made there under the auspices of the Central Board of Agricultural Research Work.

Educational work in gardening is of older date in Finland, the first school of gardening being established in 1841. Of schools with a two-year course, which are to be regarded as the actual training centres for professional gardeners, there are five, three State-owned and two - one for the Swedish-speaking population - privarte, but subsidized by the State. Practical and theoretical training is given. Most of the pupils are men, though women are admitted to two of the schools. For sehools of gardening the State Budget for 1929 contains a grant of 233,500 marks. Higher education in gardening is given at the Lepaa School of Gardening, which wias opened in 1912. The school aims at producing gardening advisers, teachers and gardeners fitted for ambitious works. The school course lasts two years, and pupils are required to have two years' practioal experience of gardening and to have passed either a middle school or a school of gardening. The school budget for 1929 totals 805,800 marks but there is an added estimated income of 252,000 marks (the accounts for 1928 show an income from the garden of about 263,000 marks). Beyond this there is no higher education in Finland for the gardener, gardening not being represented in the agriculturalsilvicultural faculty of the Helsinki University.

Education in gardening occupies an important place in the housewifery schools. The Haa-
pavesi and Reitkalli schools deserve special mention, as they have effectively helped to extend the knowledge of gardening for thirty years. Also in the national high-schools, in the colleges for teachers in national schools and in the national schools some degree of gardening is taught. In connection with the last there are often fine gardens in which each pupil has his own plot.
Since 1865 the agricultural societies have gone in for gardening and household advisory work and in 1927 they used about half a million marks for that purpose, employing 47 advisers. The achievements of these include the drawing up of plans for 561 gardens, with an aggregate area of 217.2 hectares. Further, they planted altogether 4,000 apple-trees, 10,000 currantbushes, 6,000 decorative trees and bushes and about 7.5 kilometres of hedge in 1,000 gardens altogether. The societies working on behalf of the small farmer and the Martha organisation of Finnish women also pay the salaries of gardening advisers. The number of the Martha advisers in 1927 was 175. Altogether they founded a little over 1,000 new gardens and planted about 63,000 trees and bushes as well as close upon 34,000 other cuttings.

Mention should finally be made of the garden cities and club-work. As there are few large towns in Finland, the garden city movement has not attained the same extent as in many other countries. The biggest garden cities are at Helsinki, Tampere and some factory districts. The garden-club movement is still comparatively new in Finland, but has already gained considerable support.

## CONCLUSION.

Gardening still has great possibilities before it in Finland. As the use of garden produce gains ground and its sale is organised, cultivation is sure to increase greatly. The slogan of the central organisation of gardeners, the Finnish Gardeners' League: „A grarden round the home is a sign of culture" attains more and more comprehension throughout the country.

## ITEMS.

The National Debt. At the end of August the National Debt of Finland amounted to $2,973.2$ million marks. It is specially worth noting that for the finst time for a long period this includes a sum of 53.3 million marks of short-term indebtedness. The funded debt consists of $2,574.8$ million marks of foreign and 345.1 millions of internal debt according to the booked value. Converted according to current rates of exchange the total National Debt of Finland at the end of August amounted to 3,496 million marks which is not quite 1,000 marks per head of population.

Building operations. During the first half of the year building operations in Helsinki (Helsingfors) were active. Up to the end of August altogether 127 new buildings were approved containing 8,496 living rooms compared with 102 buildings with 11,580 rooms during the same time last year and 67 buildings with 6,970 living rooms in 1927. As the houses begun earlier were completed, however, building fell off, only a small number of new houses having been started. Thus, at the end of August there were only 79 buildings in course of construction as against 224 at the same date last year and 141 in 1927. It is even more clearly seen that building operations are falling off greatly, if the state in which the buildings are, is considered. Of the houses under construction there were at the end of August:

|  |  | 1929 | 1928 | 1927 |
| :--- | :--- | :---: | :---: | :---: |
| foundations being laid ...... | 10 | 52 | 45 |  |
| Walls being built ........ | 40 | 99 | 46 |  |
| interiors being fitted up .... | 29 | 73 | 50 |  |

Particulars are not available regarding building in other towns and in the country, but the position there is probably the same as in the capital.

Wholesale trade in Finland. According to figures published the turnover in wholesale trade in Finland for 1928 is estimated at 8,214 million marks which represents an increase over the previous year of 1,167 million marks or 16.6 \%. The greater part of wholesale trade was transacted by private wholesale firms, but the importance of the central co-operative organisations and the associations of rural dealers appears to be growing as is indicated by the following table showing their turnover:

|  | $\frac{1028}{\text { Mill. maks. }}$ | $0 \cdot$ | Mill. mks. | , |
| :---: | :---: | :---: | :---: | :---: |
| Private wholesale firms | 4,945 | 60.2 | 4,300 | 61.0 |
| Central associaitions of rural dealers (4) .. | 954 | 11.6 | 800 | 11.4 |
| $\begin{gathered} \text { Central } \begin{array}{c} \text { co-operative } \\ \text { societies } \end{array} \text { (4) } \ldots . \end{gathered}$ | 2,3115 | 28.2 | 1,947 | 27.6 |
| Total | 8,214 | 100.0 | 7,047 | 100.0 |

For the present year the figures are not available, buit to judge by the figures for a restricted number of wholesale businesses, the increase in the turnover seems to have ceased (see table 30 in the section of tables).

## Deposits in the Co-operative Credit Societies.

 Side by side. with the older financial institutions, i. e. Joint Stock banks, Savings banks, the Post Office Savings Bank and the Saving Accounts of the Consumens' Co-operative Societies, deposits in the Co-operative Credit Societies have recently grown in importance. Deposits in the latter, it is true, did not exceed 335.3 million marks at the end of the half-year, while the Joint Stock banks had received 6,178.8 millions in deposits, the Savings banks $3,756.5$ millions and the Savings Accounts of the Consumers' Co-operative Societies 453.0 millions. But the Post Office Savings Bank with its 209.9 millions is already outdistanced and the increase has been greater this year, inproportion, in the case of the Co-operative Oredit Societies than in other financial institutions.

In order to amplify the statistical data in our Bulletin regarding the deposits in the country's financial institutions a new table No. 14 is included in this issue illustrating the business of the Co-operative Credit Societies. The introduction of the new table has caused some changes in the section of tables.

Weather and crop prospects. In August the temperature was slightliy below the normal in the western parts of the country, whereas the eastern parts enjoyed a somewhat higher temperature. Two frosty periods ocurred. In the beginning of September the weather was chilly and frosts ocurred again throughout the country from the 9 th to the 12 th, when potatoes and unmown oats were damaged. The rainy weather and the frost delayed the ripening of the spring sowings, especially the oats, and lbadly affected harvesting. The dry weather during the second week in September improved the prospects. The mowing of rye was completed in most parts of the country during August, only in some parts the harvest was delayed by rain. The
mowing of barley was started in general in the last week of August, the crop, as a rule, being fully ripe when mown, although partly damaged by frosts. However, the oat crops suffered most from the frosts and the rains, the later kinds in particular not having ripened. For fear of new frosts the oats were garnered in many places before they were quite ripe. - In spite of the frosts the crop prospects are rather brighter than a year ago and they are on the whole considered somewhat albove medium.

The figures for the most important crops are given in the following table compiled by the Statistical Office of the Board of Agriculture up to the middle of September this year in comparison with the results for 1928 and 1927. Of these 8 signifies very good, 7 good, 6 above medium, 5 medium, 4 below medium, 3 poor crop, 2 almost a failure of crop, 1 failure of crop.

|  |  |  |  |
| :---: | :---: | :---: | :---: |
| Wheat | 5.5. | 5.5 | 5.8 |
| Rye | 5.9 | 4.9 | 5.5 |
| Barley | 5.4 | 4.9 | 5.1 |
| Oats | 5.0 | 4.9 | 5.8 |
| Potatoes | 5.7 | 5.0 | б. 2 |
| Hay | 4.8 | 5.9 | 6.5 |

## THE <br> BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.

[^0]:    ${ }^{1}$ ) The figures indicate the position towards forelgn countries of the Bank of Finland (balances with foreign correspoidents and Corelgn bills are taken into acoount as well as credits due to foreign correspondents) and of the Joint Stack Banks (net claims or net indebtedness; see table 9 above).
    ${ }^{2}$ ) Indicates the clearing operations joined by 12 Joint Stock Banks both at the Head Office and five Branch Offices of the Bank of Finland.

[^1]:    According to Information supplied by the Central Statistical Office.
