

## THE FINNISH MARKET REVIEW.

## GENERAL SURVEY.

Last year was favourable in two respects, in particular: exports were good and possibilities for checking inflation were created; thus the basis of the national economy as a whole was strengthened. In regard to exports, it is true, the picture is changing. Towards the end of 1951 world prices for woodworking products declined and the market showed signs of weakening. Yet, far more serious was the decision of Great Britain - Finland's mosit important trade partner - to introduce maximum prices for woodpulp as from February 12. This meant a considerable reduction in the prices for pulp imported from Finland and the Scandinavian countries. The same action was later taken by other Western European countries. The effects of these measures cannot be fully estimated as yet, but evidently they will have far-reaching consequences both to Finland's foreign trade and to the general economic situation in this country. There are well founded reasons to expect the boom to be turning into a downward movement, the intensity and duration of which cannot be predicted. So far, however, no essential changes have occurred either in production or employment.

The Stabilization Programme encountered some adversity in the beginning of the year. In accordance with this programme the subsidies paid for some agricultural products were abolished, which led
to a rise in their retail prices. This, together with the fact that the advance collection schedule of taxes was not reduced as much as had been expected, caused some disappointment among the public. On the other hand, the fulfilment of the Stabilization Programme has been furthered by a reduction in investments, partly due to building control, and by the decrease in import prices and a slight decline in the demand for labour.

The most important event in the money market is the competition in deposit rates: (see Items) which has occasioned the Government to inform the credit institutions that an increase in lending rates will on no account be allowed. The Diet is already discussing a Government bill concerning the control of rates of interest, to be issued in case the credit institutions are unable to agree.

THE MONEY MAREET.
The movement on the money manket was exceptional in some respects in January. The initial months of the year are generally characterized by a stringency due partly to the demand for credit for financing lumber work, partly to the receipts of the rural population from lumbering flowing but slowly into the credit institutions. Last month, on the contrary, deposit business was surprisingly brisk. The public's deposit accounts in the Commercial Banks increased by 1,373 million marks, whereas in

January 1951 the increase had been 766 million only. The cheque accounts, however, reflected the growing need of cash of trade and industry, decreasing by 4,290 million marks as against 214 million only in the previous January. This caused the total deposits of the public to decrease by 2,916 million marks, whereas im January 1951 they had increased by 552 million. Other credit institutions received appreciably more deposits than a year before. The advances of the Commercial Banks, at 3,268, fell short of those of Jamuary 1951, 3,513 million. The need for credit was especially strong in the home market industry land home trade, but the funds available for lending were insufficient.

With regard to the Bank of Finloond the most important change was the reduction of Treasury bills. The favourable position of State finances of late had already last year enabled the Treasury to reduce its debt to the central bank, and the reduction continued in the early part of the current year. The minimum so far reached, 923 million marks, was reported on February 8, but in the following week Treasury bills again increased to 3,366 million. In general, their amount has been considerably lower than in the beginning of 1951. The reduction in Treasury bills, in particular, has caused a decrease in the total loans of the Bank of Finland. - The note circulation, as usual, decreased greatly in January, by more than 5,000 million marks, but has since begun to rise agaim.

## PRICES.

The stabilization of prices continues. The wholesale price index $(1935=100)$ decreased in January by 15 points to 1,913 , mainly as a result of a decrease in the prices of forestry products. The new cost of living index (October $1951=100$ ) increased from 100 to 102 , owing principally to an increase in food prices, the index for which rose from 103 in December to 107. "Rents" and "fuel and light" were unchanged at 100, "clothing" was 93 as in December, while "other" rose from 99. to 101.

## TRADE AND INDUSTRY.

Foreign trade has continued brisk as winter has been mild and no ice has interfered with shipping.. In January both imports and exports far exceeded the values of a year before. Exports amounted to 14,638 million marks as against 8,286 million in January 1951, while the corresponding figures for imports were 15,188 and 7,516 million respectively. The surplus of imports, customary in January, amounted to 550 million marks this year. The unfavourable change in the world market did not yet show in January. Reparations deliveries amounted to 533 million marks as against 377 million in January 1951.

No figures are available so far for industrial production in the current year, but in general most branches have continued active. In some branches a deterioration is to be noted, especially in buildning, mainly owing to the widening of control (see Items). Employment is still satisfactory, the number of unemployed registered at the end of January being just over half the corresponding number a year earlier. The demand for labour does not seem to be as strong as in the previous years. For the rural population the extent of lumber work is decisive, and all this winter the number of forest workers has been greater than in the winter of $1950 / 51$. In the middle of February 210,000 men were employed in lumbering, i. e. 10,000 more than at the peak of the previous felling season. In the winter of 1949/50, when there was considerable unemployment in the most important lumbering areas, the maximum was only 150,000 . The results of the present felling season are also satisfactory: by the end of January altogether 17.6 million cub. m. stacked measure had been felled as against 15.0 cub. m. one year and 9.5 cub. m. two years ago. The extent of lumbering is of consequence to the stocks of industry and the supply of fuel, besides affecting employment.

February 23, 1952.

## CONTENTS OF THE TABLES.

## I MONEY MARKET.

Bank of Finland:

1. Statement.
2. Note issue.
3. Notes in circulation, foreign currency and cover for the issue of notes.
4. Note reserve, home loans and rediscounted bills.
5. Treasury bills and balances of current accounts.
6. Rates of exchange.

Commercial Banks:
7. Home deposits and credits from the Bank of Finland.
8. Home loans.
9. Position towards foreign countries.
10. Foreign payment position of all banks.
11. Post Office Savings Bank. Deposits and giro accounts.
12. Deposits in the savings banks.
13. Deposits in co-operative credit societies and consumers' co-operative societies.
14. Deposits in all credit institutions.
15. Insurances in life assarance companies.
16. Changes in number and capital of limited companies.
17. Bankruptcies.
18. Stock Exchange.
19. Stock Exchange index.

## II. STATE FINANCES.

20. Public Debt.
21. State revenue and expenditure.
22. Collection of taxes and charges.
III. TRADE AND INDUSTRY.

Foreign trade:
23. Value of imports and exports.
24. Value of imports and exports in different classes of goods.
25. Imports of the most important articles.
26. Exports of the most important articles.
27. Unit value index of imports and exports.
28. Foreign trade with various countries.

Home trade and industry:
29. Wholesale trade
30. Sales of petrol.
31. Volume index of industrial production.
32. Building activity.

## IV. TRAFFIC.

33. Foreign shipping.
34. State Railways.

## V. LEVEL OF PRICES.

35. Wholesale price index.
36. Cost of living index.
37. Bank of Finland building cost index.

## VI. LABOUR MARKET.

38. Index of working hours in industry.
39. Number of unemployed.
40. Cessation of work.

Tables 23-28 according to Finnish Official Statistics I, A, Foreign Trade of Finland, Monthly Reports.
The term imports covers all imported goods which are placed on the market either immediately after lmportation or after storage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Oustoms by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.
${ }^{*}$ Preliminary figures subject to minor altorations.
24. - VALUE OF IMPORTS AND EXPORIS IN DIFFERENT CLASSES OF GOODS.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; from 1809 it was an autonomons Grand Duchy connected with Russia up to December 6, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Sovlet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The President for the current period, March 1, 1950, to March 1, 1956, is Juho Kusti Paasikivi who has been in office since March 11, 1946.

The Dlet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1951 are at present as follows: Social Democrats 53, Agrarians 51, People's Democrats 48, Conservatives 28, Swedish Party 15, Liberal Party 10.

## 2. LAND.

THE AREA is 337,009 gquare kilometres (Great Britain's area is $245,000 \mathrm{sq} . \mathrm{km}$. and Italy's area $301,000 \mathrm{sq} . \mathrm{km}$.). Of the total area $9.4 \%$ are inland waters. On an average $13.6 \%$ of the land in the South of Flnland is cultivated, $1.8 \%$ in the North, $7.5 \%$ of the whole land. Of the land area 21.7 mill. ha ( 58.8 mill. acres) or $70.9 \%$ are covered by forests.

## 3. POPULATION.

NUMBER OF INHABITANTS (1950): 4.0 millions (present-In-area). Sweden (1949) 7.0, Switzerland (1940) 4.6, Denmark (1949) 4.2 and Norway (1949) 3.2 millions.

DENSITY OF POPULATION (1950): In South Finiand 23.1, in North Finland 3.4 and in the whole country an average of 13.1 inhabitants to the square kilometre.

DISTRIBUTION (1951): $67.5 \%$ of the population inhabit the country, $32.5 \%$ the towns and urban districts. The largest towns are (1951): Helsinki (Helsingfors), the capital, 376,000 inhabitants, Turku (Abo) 108,900, Tampere (Tammerfors) 102,900.

OOCUPATION (1940): agriculture and forestry $51.5 \%$, industry and manual labour $21.0 \%$, commerce $5.1 \%$, transport $4.6 \%$, other occupations $17.8 \%$.

LANGUAGE (1951): Finnish speaking $91.2 \%$, Swedish speaking $8.6 \%$, others $0.2 \%$.

RELIGION (1949): Latheran $95.4 \%$, Greek-Orthodox $1.7 \%$, others $2.9 \%$.

EDUCATION (1952): Practically all persons over 15 years of age are literate. There are three universities (the oldest founded In 1640) and 11 colleges of university standard.

INCREASE; OF POPULATION (1949): Births $25.8 \%$, deaths $11.1 \%$ increase $13.5 \%$. Deaths in France (1949) $13.8 \%$ and in Great Britain (1949) $11.7 \%$ a.

## 4. TRADE AND COMMUNICATIONS.

NATIONAL INCOME (1950, in thousand million marks): Gross national income at market price 527. Net national product at factor cost, by origin: Agriculture. 79 ( $19 \%$ ), forestry and fishing 43 ( $10 \%$ ), manufacturing 131 ( $31 \%$ ), construction 33 ( $8 \%$ ), transport and communications, 27 ( $6 \%$ ), banking and insurance 57 ( $14 \%$ ), public activities $40(9 \%)$, total 415.

FOREST RESO UROES (1950): The growing stock comprises 1,370 million of solid cub. m. incl. bark ( 48,384 million cub. ft ), of which plne is $\mathbf{4 5 . 5} \%$, spruce $32.2 \%$, the rest $22.8 \%$ being leaf-trees, chiefly birch. Of the growing stock 7,471 million cub. $\mathrm{ft}, \mathbf{6 5 . 0} \%$ of them pines, are up to the standard required for logs (minimum for sawmill $\log s 18^{\prime} \times 6^{\prime \prime}$ and for veneer $\log 818^{\prime} \times 7^{\prime \prime}$ ). The annual growth is about 41 million of solid cub. m. green wood excl. bark ( 1,448 cub. ft). The total removal in 1946 calculated according to the use of wood was 40 million cub. m. ( 1,413 million cub. it). In the years 1923 to 1938, in the then area of the country, it
averaged 41 million cub. m . ( 1,448 million cub. ft) per year, the corresponding yearly growth being 46 million oub. m. ( 1,624 million cub. ft).

AGRICULTURE (1941): Cultivated Iand 2.6 million hectares, divided as follows: area under cultivation under 10 hectares $33.1 \%, 10-50$ ha $54.4 \%, 50-100 \mathrm{ha} 7.2 \%$, over 100 ha $5.3 \%$. Cultivated land (1950) is divided between the different kinds of crops as follows: $40.6 \%$ hay, $9.7 \%$ temporary grassland for graidig, $18.8 \%$ oats. $7.6 \%$ wheat, $5.9 \%$ rye, $4.8 \%$ barley, $3.4 \%$ potatoes, $9.2 \%$ other. Dairy units in operation in 1951 amount to 488.

OWNERSHIP OF LAND (1941): The land area is distributed among different classes of owners approximately as follows: private $49.2 \%$, State $41.6 \%$, joint stock companies etc. $7.1 \%$, communities $2.1 \%$.

INDUSTRY (1949): Number of Industrial concerns 5,924, workpeople 259,148 , gross value of products of industry 260,791 million marks.

LENGTH OF RAILWAYS (1952): $4,987 \mathrm{~km}$., of which $4,800 \mathrm{~km}$. State rallways and 187 km . private. The gauge is in general 1.624 m .

MEROHANT FLEET (1952): Steamshlps 375 (468,191 gross reg. tons), motor veseels 128 ( 106,793 gross reg. tons), sailing-ships with auxiliary englnes $140(13,007$ gross reg. tons), other salling-ships 5 ( 3,810 gross reg. tons). Total 648 (591,301 gross reg. tons).

## 5. FINANCE AND BANKING.

CORRENCY. Since 1860 FInland has Its own monetary system. From 1877 up to 1914 the carrency maintained its stable gold value, and after the disturbances caused by the war a gold standard was again introduced from January 1 , 1926. The unit currency is the mark (Finnish smarkka m 100 pennia). Since October 12, 1931, the redemption of bank notes in gold is, however, suspended. In 1918 Fin'and joined the International Monetary Fund and on June 27, 1951, the official par value of the mark was established at 230 marks per one U.S. dollar, the selling rate of the Bank of Finland being 231 marks and its buying rate 229 marks.

STATE FINANCES. According to the finance accounts for 1950 the State revenue was 137,219 million marks of which 129,643 million marks were current revenue, and State expenditure 143,342 million marks, of which 102,006 million marks were current expenditure. See tables $20-22$ in this issue.

MUNIOIPAL FINANCES. According to the finance accounts for 1949 expenditure amounted to 45,683 million marks. Total revenue was 47,229 million marks, of which income from taxation was 27,225 million marks. The municipal income tax (non-progressive) averaged $10.0 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of FYnland (founded In 1811) is a State Bank. Its head office is in Helsinki (Helsingfors) with branches in Turku (Abo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleaborg), Kuoplo, Joensuu, Mikkeli (8:t Mlchel), Tampere (Tammerfors), Hzmeenlinna (Tavastehus), Jyväskylk, Kotka and Lahti.

THE COMMERCLAL BANKS (1952): Number 6, possess 482 offices, where all kinds of banking business is transacted. There is one banking establishment per 8,458 inhabltants.

The largest banks are Kansallis-Osake-Pankki, Oy Pohjoismaiden Yhdyspankki - Ab Nordiska Föreningsbanken and Helsingin Osakepankki - Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1952): Mortgage banks 5, Savings banks 439, Co-operative Credit Societies 658 and a Central Bank for the latter.

# THE BANK OF FINLAND IN 1951. 

BY

PROFESSOR A. E. TUDEER.

## HEAD OF THE INSTITUTE FOR ECONOMIC RESEARCH OF THE BANK OF FINLAND.

## THE MONEY MARKET.

At the beginning of 1951 the money market in, Finland was marked by very great stringency which continued throughout the greater part of last year. Gradually, however, some improvement set in. This change was due to several causes. The raising of the rates of interest, undertaken in the autumn of 1950, in conjunction with some taxation relief and other measures introduced at that time, induced an appreciably larger flow of funds into the credit institutions than in the previous year, and on the other hand the unusually favourable market for exports began to display its influence in the form of a considerable influx of capital. To this must be added the measures adopted by the Bank of Finland for restricting credits, especially for purposes of investment. By limiting the rediscounting rights of the commercial banks the latter were forced to pursue more cautious lending policy.

Altthough the demand for credit continued to be very great, the position grew easier by degrees during the autumn. The question of lowering the high rates of interest was raised and was included as an important point in the general scheme of stabilization. On October 18 the Supervisors of the Bank of Finland decided to lower the discount rate by 2 per cent, i. e., from $73 / 4$ to $53 / 4$ per cent, as from December 16. Later, the joint delegation of the financial institutions came to a similar decision and from Jamuary 1, 1952, the rates of interest were reduced throughout to the level from which they had been raised in the autumn of 1950 .

This trend of the money market was clearly reflected in the figures of the Bank of Finland for that period.

## BALLANCE SHEET.

The following table gives a general idea of the position and of the changes recorded in the various accounts.

|  | Total 56,161 | 59,234 |

It will be seen that considerable changes occurred in the position of the Banlk of Finland in the course of 1951. Among the assets special attention is attracted by the great increase in the Bank's supply of foreign currency. The foreign currency reserve grew by 18,613 million marks or more than fourfold, which was, of course, a result of the favourable balance of trade. At the same time the Bank increased its gold reserve by 3,192 million marks. In addition, the Bank's holding of foreign bills rose loy 919 million marks. Thanks to these alterations the Bank has ai satisfactory foreign reserve for the first time since the war.

The position of the Banlk of Finland has further been strengthened by its bill portfolio having been considerably reduced, altogether from 40,159 million marks to 20,268 million. The bill portfolio is made up of bills of four kinds. The balance sheet on the previous page shows that the largest decrease occurred in the case of rediscounted bills which practically dis-
appeared. This final result, which is, of course, a consequence of the central bank's measures already referred to, is all the more remarkable, seeing that in June sediscounted bills had amounted to as much as 17,304 million maxks. Owing to the improved position of the State finances, Government borrowing from the Bank of Finland was less than in the previous year. The reduction during the year amounted to no less than 11,777 million marks. The direct doans of the Bank to its own customers - productive and commercial firms of various kinds - were also Ikept at a lower level than during the year before in accordance with the credit policy of the Bank. The decrease amounted to almost 2,000 million. The last item in the bill portfolio, the cover of the balances of the International Monetary Fund and the International Bank for Reconstruction and Development, is balanced by a corresponding item among the liabilities, as this is noit a case of the Bank's own operations, but consists of some of the sums paid by the

Finnish State into these international institutions. These payments were made in the form of bills drawn on the Bank of Finland which were sulbsequently deposited in the bank mentioned.

Among the "Other assets" the foreign clearing accounts are worth noting. This item of balances appeared among the liabilities at the end of 1950, but, thaniks to the favourable balance of payments, the indebtedness under this head was converted into a credit balance; the difference amounts to 4,959 million marks. It is further worth pointing out that the considerable reduction of ,"Sundry assets" is largely due to the fact that bank assignments and current accounts were recorded met in the final accounts for 1951, whereas the assignments of the commercial baniks amounted to the gross sum of 1,758 million marks a year before.

In regard to the liabilities, the increase of 10,391 million marks or one-third in the note circulation should lbe mentioned in the first place. During the early part
of the year this increase was connected with the growth of the loans granted by the Bank of Finland. During the latter part of the year, however, when loans were heavily reduced, the increase in the note circulation was due to the influx of foreign currency into the central boank.

The changes in respect of the items „Current accounts" and "Foreign clearing accounts" have already been explained. The appreciable drop in the indebtedness of the Bank to foreign bolders is also proof of the considerable improvement in the foreign payment position of the Bank. The reduction of the foreign debt is due to the fact that at the end of 1950 the loans obtained from the Export-Import Bank and the International Bank for Reconstruction and Development were entered on this account as they were drawn upon, but that the former of these loans was subsequently transferred directly to the State.

The capital of the Bank remained unaltered, but the Reserve Fund increased by 502 million marks by the transfer of
this sum from the profit of the Banik for 1950.

Finally, as shown in the balance sheet, the Bank recorded a net profit of 1,415 million marks for 1951. The profit was thus 411 million more than for the preceding year.

## THE RIGHT OF NOTE ISSUE.

The following table shows the figures of the right of note issue of the Bank of Finland for 1950 and 1951, the amount of issue used, and the note reserve.

|  | $\begin{gathered} 1951 \\ \text { Deo. } 31 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ |
| :---: | :---: |
| Gold reserve and foreign currency 10,002 | 32,818 |
| Additional right of issue ...... 50,000 | 50,000 |
| Total right to issue notes 60,002 | 82,818 |
| Amount of issue used |  |
| Notes in circulation . . . . . . . . . . 34,383 | 44,774 |
| Other liabilities payable on demand ...................... 11,417 | 5,039 |
| Undrawn amount of advances on current accounts ........... 649 | 646 |
| Total amount used 46,449 | 50,459 |
| Note reserve 13,553 | 32,359 |
| Total 60,002 | 82,818 |

As a result of the large increase in the gold reserve and the foreign currency reserve the total right to issue notes increased lby 22,816 million marks or about 38 per cent. The amount of issue used also rose, though only by 4,010 million marks or considerably less than the total right. The natural consequence was that the mote reserve recorded a powerfull increase of 18,806 million marks or no less than 138 per cent. This appreciabile relaxation in the position of the Bank of Finland referred exclusively to that part of the note reserve which is dependent on supplementary cover, for the latter amounted at the beginning of the year to 9,841 million marks, but at the end to 29,731 million, in other words it had grown to three times its former size. On the contrary, the immediately available part of the note reserve was reduced from 3,712 to 2,628 million marks. This division of the note reserve into different categories is of no great importance in practice, for it is always easy to increase the supplementary cover by discounting bills.

## PROFIT AND LOSS ACCOUNT.

The following table shows the Profit and Loss Account of the Bank for 1951 with comparative figures for 1950 and 1949.

| Credit | $\begin{gathered} 1949 \\ \text { Miil. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} 1950 \\ \text { Mill. mk } \end{gathered}$ | $\begin{gathered} 1951 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Interest on internal loans | : 932 | 995 | 1,3:28 |
| Interest on current accounts |  |  | 18 |
| Interest on bonds | 68 | 143 | 134 |
| Sundry income | 18 | 18 | 31 |
| Agio . . . | 18 | 479 | 642 |
| Commission | 164 | 144 | 207 |
| Total | 1,200 | 1,780 | 2,360 |
| Debit |  |  |  |
| Interest on current accounts abroad | 9 | - |  |
| Salaries . . . . . . . . . . . . . | 143 | 203 | 268 |
| Pensions | 7 | 12 | 18 |
| Cost of manufacturing banik notes $\qquad$ | 86 | 102 | 108 |
| Sundry expenses . ......... | 38 | 44 | 63 |
| Written off building costs | 5 | 407 | 475 |
| Depreciation of furniture . . | 4 | 8 | 13 |
| Total' | 292 | 776 | 945 |
| Net profit | 908 | 1,004 | 1,415 |
| Total | 1,200 | 1,780 | 2,360 |

According to this table the total income of the Bank of Finland for 1951 exceeded its corresponding income for 1950 by 580 million marks or about 33 per cent and was nearly double the income for 1949. This increase was mainly due to the fact that the interest on internal loans, despite the appreciable reduction of such loans, rose iby 333 million marks in consequence of the rates of interest being on an average nearly 2 per cent higher than in the previous year. It should further be noted that the actual income in interest was larger than the amount included in the Profit and Loss Account, as part of the former was transferred directly to the meserves in order to strengthen the position of the Bank.

Owing to the large growth of the foreign currency reserve, interest on current accounts abroad also increased many times over, though it did not amount to any considerable sum. The income from bonds fell off slightly, while sundry income recorded a rise.

More income was obtained, too, on the agio and commission accounts. The agio income increased by 163 million marks,
principally owing to the greater turnover in foreign currency which was a natural consequence of the large expansion of foreign trade. An appreciaible portion of this income, too, was transferred to the agio equalisation account. The increase in commission amounted to 63 million marks, chiafly in consequence of the amount of documentary credits, expressed in marks, having been considerably higher than in the previous year.

On the debit side aill the items were slightly higher than in 1950. It is worth mentioning in particular that the expenditure on salaries increased by 65 million marks or 30 per cent. The costs of family allowances and national pensions were incladed in this sum. The actual expenses of the Bank totadled 457 million marks as against 361 million in the previous year. The increase thius represented 96 million marks or close on 27 per cent.

As in 1950, considerable sums were written off. The most important depreciation referred to a new building for one of the branoh offices of the Bank in the provinces, the value of which, 425 million marks, was written off in its entirety in accordance with the regulations for the Bank. Funther, some costs of repairs to the buildings owned by the Bank and the value of a purchased site were also written off. Besides, the value of newly acquired furniture and fixtures was written off.

As already stated, a net profit of 1,414.6 million marks was recorded. This profit will ibe disposed of according to the same principles as in former years. One-half of it, or 707.3 million marks, has been transferred to the Reserve Fund which has thereby been raised to $2,234.4$ million marks. The other half of the profit is available for covering the general budgetary expenditure of the State.

# THE ECONOMIC POSITION IN FINLAND IN 1951. 

$\mathbf{B Y}$<br>K. O. ALHO, DOCT, PHIL.<br>head of department of the bank of finland institute for economt research.

INTRODUCTION.
Economic conditions in Finland were in general very favourable during 1951, in fact last year takes its place in history, from the economic point of view, as the most favourable year since the war. The most impontant factors in this result wene the remarkably good conditions for exports of the principal Finnish articles, i. e. timber products, and the stabilization of political life. The latter was mainly due to the broadening of the basis of government in January and to the General Election in the summer. The changes in the Diet did not affect the general political treend, so that the Government formed after the Election, supported by a majority in the Diet, continiued to be based on the collaboration of the two largest parties, the Agrarians and the Social-Democrats. The stabilization of political conditions tended to promote peace in the labour market
which was appreciably better than in previous years. At thie same time it afforded possibilitities for preveniting further inflation, stabilizing finance and generailly restoring an economice balance.

According to preliminiary data, the real national income increased by about 10 per cent over that of 1950 and was 30 per cent higher than in 1938. This strong rise and the reduction of war indemnities, in comparison with the national income, resulted in consumption and the general standard of living also rising during the year under review.

The favourable conditions for exports also made it possible considerably to increase imports. Nevertheless, the balance of trade turned out highly positive and the balance of payments, too, provided a large surplus. For this reason. Finland's foreign payment position improved appreciably. Among the favourable features in the
sphere of real reconomy, the growth of production should also be mentioned. The greatest rise occurred in forestry in which the output increased by approximatelly one-third. Industrial output also rose, as did building activity. On the other hand, owing to a poor harvest, the output in agriculture was only slightly above that of 1950. Investments were large last year in adil branches. It has been estimated that they equalled as much as 30 per cent of the national income. Thanks to brisk economic activity employment was good, there even being a considerable shortage of labour in some key industries.

In addition, notable results were achieved on the monetary front. The high level of productive activity and foreign trade, political stabilization and the settled labour market enabled the Government to pursue a firm and determined economic and financial policy. This was also factilitated by the fall in prices in the world market. There was a fairly steep rise in domestic prices 恠 the beginning of 1951 , but by the end of the year the rising tendency was already weaker than in previous years. The stabilization policy of the Government was supported by the restrained credit policy of the Bank of Finland, the flourishing of deposit business and the favourable development of istate economy.

## AGRICULTURE.

In the spring of 1951 harvest prospects were very good. Ample quantities of fertilizers were available and sufficient labour was to be had. Besides, a constantly increasing number of different machines was being obtained, which tended to improve the conditions of production. However, the harvest did not turn out as well as had been expected. Up to the latter half of July the weather was colder than usual and at the end of the summer drought interfered with growth in many places, especially in the south-west and south of the country. In Northern Finland, on the contrary, the mainfall was above normal, in some cases even excessive.

According to preliminary estimates, the total harvest in 1951 amounted to 3,438 million grain units (a grain unit equalling a fodder unit) or rather less than the har-
vest of the year before, which amounted to 3,574 million grain units. The corresponding figure for 1938 was considerably higher or 4,134 million units, so that last year's harvest was only 83 per cent of this quantity. The decnease in the crop of cereals was particularly regrettable. The crop in 1950 had amounted to 712,000 toms, but the crop in 1951 was as low as 669,000 tons according to preliminary data. In 1938 a cereal crop of 850,000 tons was obtained. The considerable reduction of cereal production during the war was due in part to fortuitous circumstances, such as unfavourable weather and a shortage of labour and fertilizers, but principally to the constant decrease in the area of cereal cultivation. As the subsequent development has not yet restored the pre-war level of self-sufficiency, fairly heavy imports had to be resorted to last year, as in previous. years. In 1951 imports of cereals amounted to 314,700 tons as against 238,800 tons in 1950. The potato crop was $1,236,700$ toms as against $1,210,100$ tons, and the hay crop. correspondingly $3,172,000$ as against $3,139,000$ tons.

Notwithstanding some radverse factors, cattlefarming was good last year. In the principal spheres the production rose in comparison with the preceding years. There were some disturbances in the distribution of butter in the autumn, but, as imports were increased and output grew later in the autumn, rationing, which had to be reintroduced at the beginning of October, could be abolished a month later. The output of milk amounted to 2,550 million kgs according to preliminary data or rather more than in the previous year, when it was 2,450 million kgs. Nevertheless, the pre-war level was not attained last year, for the output in 1938 represented 2,670 million kgs. The growth of milk production made it possible to increase the making of butter. The output of dairy butter advanced from 34.6 million kgs in 1950 to 41.5 million last year, and the production of farm loutter also rose. Owing to the comsumption of butter in private households having greatly increased, the output did not suffice to satisfy the demand, so that foreign butter had to be imported to some extent, as already stated. Rather more cheese was produced than in the previous
year, and cheese was exported, as in 1950, mostly to Central Europe. The output of meat increased from 121.6 million kgs in 1950 to 124.4 million in 1951. Meat, principally pork and reindeer meat, game and poultry were exported altogether to a quantity of fully one millioni kgs. Imports of meat, chiefly pork, undertaken for reasons of trade policy, reached approxit mately the same level. Partly on account of exports and partly for the sake of price policy more poultry was slanghtered than usual and in consequence the supply of eggs dropped from 20.2 million kgs in 1950 to 15.0 million in 1951. As ia result, there was a shortage of eggs on the market at times.

## INDUSTRY.

Industry was able to work last year in favourable conditions in general. In some branches there was a shortage in labour and raw materials at times, but this did not alter the picture as a whole. As there was greater labour peace than in earlier years, the figures for last year's output were higher than in 1950. The woodworking industry continued to work at high pressure. There was a brisk demand for all the main products and the prices were generally favourable. The downward movement of prices in the world market did not affect the prices of wood products to any extent worth mentioning. At the end of the year there were signs of an approaching change: the demand for some articles slackened and prices fell. It was, however, difficult as yet to form a clear opinion of the extent and consequences of this change. In mast branches of the home market industry, too, fresh records in production were established. The total volume of industrial production increased, according to preliminary estimates, by about 18 per cent above the previous year. The index for production in the home market industry was considerably above the pre-war level, while the index for the exporting industry exceeded it only slightly. Yet, in some branches of the home market industry, especially in the textiles, the foodstuffs and the chemical industries, it was noticeable that the powerful increase of the previous years was slackening. In the metal industry the increase of output
was still 30 per cent in spite of the reduction of the war indemnities. In industry supplying goods for the war indemnities there was a considerable shift towards commercial output. This change, however, caused no appreciable dislocation of production.

In all branches of the woodworking industry the quantities produced exceeded those of the previous yearr, and in most cases those of any post-war year. The figures available are as yet preliminary, but the final ones ane not dikely to differ from them essentially. The statistics for sawn goods indicate that the output reached about $1,000,000$ standards, whereas the corresponding figure for 1950 was 875,000 stds. The output last year thus approached very closely to the pre-war record of $1,031,000$ stds attained in 1938.

The output of chemical pulp increased from $1,193,600$ tons in 1950 to $1,385,000$ tons in 1951. The increase referred to both sulphite and sulphate cellulose. The output of the former rose from 717,300 to 821,000 tons, and that of the latter from 476,300 to 564,000 tons. The manufacture of paper rose from 635,000 to 696,000 tons. The output of newsprint, however, fell off slightly, from 421,000 to 420,000 tons. Owing to the reduction of output only part of the increased demand could be satisfied. Mechamical woodpulp, which was mostly used by Finnish mills, increased from 719,000 to 807,000 tons. The quantities of other importanit articles produced by the woodworking industry, such as plywood, cardboard, walliboard and prefabricated houses, aliso exceeded the output of the previous year. There was a particularly large increase in the output of prefabricated houses, the production rising from 519,000 sq. m in 1950 to 1 million sq. m (floor area). Over 95 per cent of the output was exported, chiefly to the Soviet Union, but a constantly growing quantity also to Israel, Great Britain, and the United States. Last year saw a growth in the productive capacity of several branches of the woodworking industry owing to the extension of mills, new buildings and the supply of machinery.

The influence of favourable export conditions and of the high degree of working capacity in industry was also apparent in
lumber work which was carried out on a much larger scale than during the two preceding felling seasons. The number of workers reached its peak in January 1951 at 200,000 in comparison with 150,000 in January 1950 amd 100,000 a year earlier. Labour peace was preserved in forest work without any serious interruption. The result for the felling season $1950 / 51,33$ million cub. $m$, according to preliminary information, was over 10 million cub. m above the result for the previous felling season, 22 million cub. $m$. The quantity felled in 1950/51 was also larger than in 1948/49, 29 million cub. m, but fell short of the result for $1947 / 48,35$ million cub. m . The increase in lumber work had an easing effect on employment in the rural districts in which no such unemployment occurred as in the two previous years. The receipts from forest sales and lumbering flowed more amply than before, chiefly into the hands of the rural population.

## BUILDING ACTIVITY.

Although finall figures referring to all building activity are not available at the moment, it can be said that building attained larger proportions in 1951 than in previous years. The index for total building ( $1938=100$ ), which is based on the quantity of building materials employed, rose from 158 points in 1950 to 161 in 1951. In reality, however, the increase over the previous year was probably somewhat larger than this. Building was very brisk both in industry and agriculture and large sums were invested both for productive and other purposes. House building was probably more extensive than in 1950 , although the absence of precise data makes it difficult to draw any definite conclusions. The cubic contents of dwellings completed in towns and urban districts, which amounted to 1.8 million cub. mim the previous year, increased to 2.4 million cub. $m$ in 1951. A considerable part of them was financed by means of loans granted by Govermment. In 19504,000 million marks of state funds were invested in this way. Last year 5,000 million were set aside for this purpose, but, owing to the rise in building costs, fewer dwellings were built with this larger sum than in the previous year: 8,500 dwellings were completed in 1950 and 6,300 last
year. Building activity was also hampered to some extent by a shortage of some of the most important building materials, such as cement and iron. Owing to the Government's view that excessive investment might endanger the fulfilment of the Stabilization Programme it was decided to tighten the building control from the beginning of 1952.

## THE LAABOUR MARKET.

The labour market was easier than in the two preceding years, when the decline of forest work created fairly widespread unemployment in the northern and eastern parts of the country. As activity was, in general, brisk in all spheres last year, mo unemployment occurred except on a small scale from purely local causes. At the end of the year there were only about 3,600 registered unemployed or 70 per cent fewer than at the end of 1950. In some branches of industry, especially in the textile industry, shorter working week had to be adopted, mostly in connection with the difficulty of obtaining raw materials. The main feature, however, was a shortage of labour in many branches. It is indicative of the situation that the number of available vacancies at the labour exchanges was at times three times as large as the number of applicants for work. Towards the end of the year balance was returning in the labour manket.

## FOREIGN TRADE.

Foreign trade during last year made a record advance in imports as well as exports both in regard to value and volume. The balance of trade, and thanks to it the bailance of payments, produced a considerable surplus in contrast to the preceding years. This was to a large extent due to the fact that the terms of trade had improved by almost one-third, on an average, since 1950. The total value of foreign trade, ignoring war indemnities, amounted to 342,325 million manks according to preliminary data, which signifies an increase of 101 per cent above the foreign trade of the previous year, 170,626 million marks. The value of imports last year represented 155,512 million marks and the value of exports 186,813 million. Thus the sumplus of exponts amounted to as much as 31,301
million marks, whereas in the previous year foreign trade resulted in a surplus of imports of 7,669 million marks. The exports of goods under the war indemnities amounted to 12,396 million marks last year. The volume index of imports $(1935=100)$ 'rose from 120 points in 1950 to 155 last year. The volume index of exports rose correspondingly from 88 points to 107. The quantity of goods exported exceeded the 1935 level for the first time since the war, but did not quite equal the volume of exports in 1938, the last year of peace.

In regard to the structure of foreign trade some changes were noticeable. Imports moved in a favourable direction from the point of view of national economy, seeing that the proportion of consumer goods to the total imports decreased from 35.9 per cent in 1950 to 30.1 per cent in 1951. The proportion of capital goods, i. e., raw materials, semi-finished articles, machinery and means of transport, to the total imports increased correspondingly from 64.1 to 69.9 per cent. Among exports the most striking change was the powerful increase in the proportion of products of the paper industry, particularly of paper and cellulose, this tendency having ibeen evident also in the previous year. It should further be stated that the proportion of the country's most important articles of export, the products of the woodworking industry, to the total exports rose from 86.7 per cent in 1950 to 92.5 per cent in 1951.

No revolutionary changes occurred in the geographical distribution of foreign trade during the year under review. Broadly speaking, the exchange of goods followed the same lines as in earlier post-war years. There were, however, some changes. Great Britain, which had long occupied the po-
sition of Finland's foremost trade connection, strengthened this position still further. Its share in total imports did, indeed, fall slightly, from 23.3 to 21.1 per cent, but its share of the total exports rose from 23.4 per cent to 30.8 per cent. Thus, mearly one-third of the total exports were directed to the British Isles. The share of the Soviet Union in the total exports also increased, from 7.7 to 8.3 per cent, but the share of the United States dropped appreciably, from 9.4 to 6.8 per cent. In the share of Western Germany there was a more considerable rise than usual in both imports and exports.

## THE MONEY MARIKIET.

The stringency that had prevailed on the money market for years relaxed to some extent last year, partly on account of greater deposit business and partly on account of the credit policy adopted by the Bank of Finland, owing to which other credit institutions were obliged to mestrict their loans. Deposit business was generally very active. This was due to several causes, such as the raising of rates of interest in 1950, the high level of employment, lively business and, not least, to greater confidence in the value of the curnency. Deposits recorded a rise in all financial institutions without exception and the increases in deposited funds were much in excess of the corresponding increases a year before, as the accompanying table shows in greater detail. The favourable course of deposit business and the efforts to pursue a currency policy within the framework of the Stabilization Programme led to a decision to lower rates of interest once more. The Supervisors of the Bank of Finland resolved to lower the discount rate by 2 per cent from December 16. This decision led

to the other financial institutions lowering their rates in a corresponding measure from the beginning of 1952.

The credit requirements of the business world and the consequent demand for credit were very great throughout 1951. This was especially the case during the early months of the year, when lumber work in particular, the fimancing of imports, and higher costs intensified the need for credit. The oredit institutions were no longer able to satisfy even the most urgent demand for direct credit, but had, above all the commercial banks, to resort to rediscounting bills at the Bank of Finland. When rediscounting increased abruptly during the spring, the Bank of Finland had, in accordance with its restrictive lending policy and for reasons of money policy, to adopt exceptional contrary measures. With this object the Bank of Finland informed the credit institutions at the beginning of July that from September 30, 1951, the right of each credit institution to rediscount bills would be restricted to the limit of its own funds. This step had the desired effect, for rediscounting began to decrease rapidly and fell much below the prescribed limit by the date referred to. This was essentially facilitated by exporters being able to redeem their shortterm credits by means of payments received for their exports. However, the reduced ability of the credit institutions to grant loans resulted in a considerable number of business concerns experiencing great financial difficulties, especially during the jatter half of the year.

## PRICESS.

The rise of prices, especially during the second half of 1951 , was appreciably quieter than in the preceding post-war years. During the first quarter the rise that continued from the previous year was, indeed, still steep. It was effected at that time not only by internal factors, but also by the very great rising tendency in the international market, this influence being, perhaps, at its height in Finland at that time. The pressure was so strong that the counter-measures of the Government, directed principally to preventing a rise of the cost of living index in order to avoid a general increase in wages and a subse-
quent deterioration of the currency, proved to be insufficient.

During the second quarter the rise in prices slowed down, though it still continued clearly. At this stage it was specially influenced by the rise in the price of imports, by the effect of earlier increases in wages, the raising of rents that came into force at the beginning of June, and the continued rise in the cost of fuel and textiles. Although the upward movement of prices had been arrested to some extent, the situation was so threatening that the Government found it necessary to adopt more decisive measures for preventing further inflation. With this object, on the initiative of the Government, an agreement was concluded at the beginning of May between the parties principally concerned for an economic truce up to September 30. By this agreement wages were "frozen". at their March level, while for the time being the 5 per cent increase in wages dependent on a rise of the cost of living index was not to be enforced. The different parties also undertook to abstain from pressing their demands until September 30. In this connection the Government promised to control the course of prices more effectively than before and, in the event of a rise occurring in prices notwithstanding, to compensate such a rise, when the truce ended.

In making the truce agreement it was the aim of the Government, besides checking the rise of prices, to create a more peaceful phase during which a thorough stabilization programme could be worked out. The drafting of a plan was entrusted to a planning committee which completed its work a few days before the truce came to an end. The main points of the Stabilization Programme and of the steps taken by the Government on the basis of it have been described in earlier issues of this Bulletin. In this connection it is sufficient to say that both the truce and the Programme exerted a favourable influence on the course of prices as well as on public opinion. The rise in prices continued to slow down, a tendency that was assisted by the downward movement of prices in the world market and the high level of imports and production, which kept the supply of commodities fairly
satisfactory. During the concluding months of the year both the wholesale price index and the cost of living index even fell to some extent. The beneficial effect of the economic measures described above is illustrated very clearly by the fact that the rise in wholesale prices, according to the index, constituted only 5.9 per cent during the latter half of the year, whereas in the first six months it had still been 26.4 per cent. During the full year the wholesale price index $(1935=100)$ rose from 1,439 to 1,928 points or 34.0 per cent, which was noticeably more than the corresponding figure for the previous year, 26.0 per cent. This shows that, if such decisive Government measures had not been adopted to arrest the course of inflation, the rise in prices would obviously have been considerably greater. Better conditions had thus been created for a financial and economic policy that would yield lasting results. In order to ensure that the
achieved results would not be lost, the Government instructed the Planning Committee to draw up a long-term plan.

## CONCLUSION

As the above survey indicates, 1951 in many respects differed favourably from the previous year. The economic progress does not, however, present an entirely uniform picture. The rise in the first half of the year was still largely inflationary, but towards the end of the year conditions became more stable and lost the character of an inflationary boom. On the other hand, signs of an incipient change in export conditions appeared simultaneously: demand began to decrease and prices fell. The transition to 1952 thus occurred under two portents: the possibilities to achieve economic stability were improving, but the prospects of a continued boom in the market for wood products were deteriorating.

## ITEMS.

Building control. The war-time system of building control was abolished at the end of 1949, but in the following year building expanded so much that control had to be partly reintroduced in February 1951. In the beginning of the current year the Government issued a new decision regarding building control, according to which from Jamuary 5 practically no building is allowed to be started without a licence.

The control introduced last year was mainly necessitated by the shortage of some important building material and the excessive demand for labour in this special branch. The present control principally aims at eliminating the inflationary effects of the recent building boom. Its goal is a considerable reduction of the volume of building and preference given to such building as is most urgent from the point of view of national conomy as a whole, mainlly industrial building and housing.

The Building Commission appointed by the Government on Janiaary 15 completed a building plan for 1952 at the end of February. According to this, licences for
the building of altogether $18-21$ million cub. m. will be granted during the year.

Competition in deposit rates. In 1931 the Finnish credit institutions concluded an agreement, according to which the rate on deposit accounts paid by the big savings banks was to be $1 / 4$ per cent and that paid by the small savings banks, the cooperative credit societies, and the consumers' co-operative societies $1 / 2$ per cent in excess of the rate paid by the commercial baniks. This agreement was renounced by the commercial banks in 1938, but in practice the margin was retained.

On January 28 of the current year Kan-sallis-Osake-Pankki', one of the leading commercial banks, announced its intention to raise its deposit rate to the same percentage as that paid by the small savings banks, i.e. to $5 \frac{1}{2}$ per cent. The other commercial banks and the Post Office Savings Bank, which had applied the same rate as the commercial baniks, followed suit. The savings banks, the co-operative credit societies and the consumers' co-operative
societies proclaimed that, in order to preserve the margin, they would raise their rate on deposit accounts to 6 per cent. The competition continued until the Government, in apprehension of an increase in the lending rates, which had remained unchanged, submitted a proposal to the Diat concerning the control of rates of interest, yet engaging to withdraw it should a voluntary agreement between the credit institutions emerge.

Om February 26, an agreement was reached, according to which, from March 1, the commercial banks and the Post Office Savings Banik pay $51 / 2$ per cent on deposit accounts except those with 6 months' notice, for which $53 / 4$ per cent are paid. Savings banks, co-operative credit societies, and consumers' co-operative societies pay $53 / 4$ per cent on all deposit accounts. The interest on cheque accounts is 1 per cent in the commercial baniks and $11 / 2$ per cent in other credit institutions. Lending rates remain unchanged. Accordingly the Government withdrew its proposal.

Trade agreements. Finland has recently concliuded trade agreements with the following countries:

Czechoslovakia. On November 23, 1951, an agreement was signed in Prague covering trade from that date to the end of December 1952, the total exchange of goods to amount to about 600 million Czechoslo vakian crowns. Czechoslovakia will deliver rolled products, chemicals, sugar, motor cans, textiles, machimery for the textile and other industries, etc. Finland will export
maimly woodwonking products and machinery.

Great Britain. An agreement for 1952 was signed in London on December 11, 1951. Great Britain will export coal, coke, steel, oil, petrol, and wool, etc. The main part of Finland's exports will be on a new basis, as, for instance, for sawn goods, cellulose, cardboard and wall board no quota will be fixed, but the Fimmish articles will compete with the corresponding axticles of other countries within the scope of the British global quotas. The exports of pitprops, newsprint and plywoodi will still be on a quata basis.

Poland. An agreement for 1952 was signed in Warsaw on December 17, 1951. Total trade will amounit to about 40 million. dollars, including about 13 million dollars for imports from Poland according to a tripartite agreement between Finland, the Soviet Union and Poland. Polish exports will includle coal, coke, textiles, products of the chemical industry, sugar and malt. Finiland will export chemical and mechanical pulp, paper, machinery, etc.

Eastern Germany. An agreement for 1952 was signed in Helsiniki on December 18, 1951. Total trade will value about 14 million dollars. Eastern Germany will deliver fertilizers, Glauber's salit, machinery for the textile and oother industries, electric apparatus, various chemicals, etc. Finland's exports will include sawn timber, cellulose, paper andi other products of the woodworking industry, asbestos, cheese, and whortleberries.
