## THE FINNISH MARKET REVIEW.

THE MONEY MARIKET.
The signe of an improvement in the money market visible in July proved to be of a transitory mature: during August the recurring shortage of capital made itself felt in the same degree as before. Large withdrawals of money from the deposit and current accounts in the Joint Stock banks always occur in Finland during August and September owing to the harvest work, but on this occasion the Government, too, withdrew an appreciable amount of its deposits, while the foreign balances in marks decreased. For these reasons the Joint Stock banks felt oibliged partly to curtail their grants of credit, partly to re-discount at the Bank of Finiland.

The deposits by the public in the Joint Stock banks (not taking into account the alterations in the deposits of the Treasury and the Industrial Mortgage Banik) were reduced by 90.7 million marks in all which must be considered an unusuailly lange drop. The reduction applied only in small measure to longterm deposits, as has been the rule at this time of year, and principally to the recounts of home correspondents. It is probable that savings banks in the country districts withdrew the cash they had placed in the Joint Stock banks, as ailso the timber firms, the struggle over prices on the timber market continuing and fresh means coming in from abroad only to a small extent.

As this tendency in the situation showed itself further in the reduction of Treasury deposite and foreigners' mark deposits, the Joint Stock banks were forced to restrict their granting of credits on bills. The reduction in credits as a whole was 21.2 million mariks or somewhat less than in the corresponding month last year.

The foreign indebtedness of the Joint Stock banks continued to decrease. The indebtedness in foreign currency was reduced by 3.8 million marks to 20.9 million marks, and the indebtedness in Finnish currency by 31.5 millions to 477.9 million marks. Credit balances abroad increased by 4.2 millions to 112.1 million marks. Owing to these movements the net indebtedness represented a reduction of 39.5 millions to 386.7 million mariks. The falling off in foreign deposite is probaibly due in part to the fact that in some quarters demands were put forward that the profitableness of agriculture and industry should be improved by means of a rise in the level of the rates of exchange. Under present conditions, however, the Bank of Finland does not see any reason to raise the dollar rate of exchange. To discuss what chaniges the dollar rate of exchange should possibly undergo int case of fixing a definite devaluation rate, with a view to the possibility of carrying out monetary reform in practice, would be to bring up this question far too early.

In the position of the Banic of Finland, of course, the tightness of the money market was reflected. Oredits increased allogether by 137.4 million marks to 814.6 millions, chiefly owing to the growth in re-diecounts. The demand for foreign currency was greater than offerings, so that the supply of foreign currency was reduced lby 100.3 million marks.
The jlatter ciroumstance, $i$. e. the infilux of notes to the Bank through the sale of foreign currency, woted as a counterweight to the increased granting of oredit, so that the note circulation only increased elightly, viz., by 11.9 million marks. The note circulation is still less than at the corresponding date last year.

In the value of Finnish currency no changes occurred again. The wholesale price index rose, indeed, 26 pointe to 1,1111 points and the cost of living index rose 44 points to 1,198 points, but these rchanges are probably due to the higher prices abroad. The doillar rate of exchange contin'ues to be 39:85. It would, no doubt, be mere natural to allow the dollar rate to fluctuate to some extent in accordance with the supply and demand on the foreign exchange market, but in wiew of the fact that experience has shown that, so long as a legellity fixed new gold parity is not established, the public eatily foelieves every alteration in the level of exchanges to be the forerunner of considerable fluctuations and indulges in specuilation without any real cause the Bank of Finland has kept the dollar rate of exchange absolutely unchanged during the last. few months.

## TRADE AND INDUISTRY.

Both exports and imports were larger during August than during the same month last year. As usual at this time of year, exports exceeded imports coneiderably: the value of imports amounted to 391.9 million marks and the value of exp.orts 587.5 millions, the surpilus of exports thus being 195.6 million manks This last figure is slighthly thigher than the correaponding figure a year ago. At the end of August the sumplus of inports, calculated lfor the first eight months
of the year, was only 249.1 million mariks. The corresponding figure was rather less last year, namely 185.6 million marks.

In ryiew of the fact that the grain imports this autumn will tbe considerably emadler than last year, awing to the good harvest, and as exports of agricultural produce and products of the paper rindustry have increased; it seems probable, provided timber exports reach the same level as last year, that Finlandls balance of trade this year will prove more favourable than for the previous year. As it is, however, possible that some part of the woodgoods mas remain unsold, in consequence of the low level of prices offered, it is as yet uncertain, how far the balance of trade mas improve.

The sailes of the principal articles of export from Finland are satisfactory. ?

Business on the timiber mariket which was doull for several months, has again become livelier, but unfortunately the expense af prices. By the uniddile of September the quantity sold was estimated at about 650,000 standards of sawn. wroodgroods or about $015 \%$ of the estimated annual production. The prices at which ibusiness Ihas again been done, are considered unsatisfactory lby the sellers.

The market for boti paper and pulp continues lively. Pulp prices are firm and in some cases show a rising tendency. Prices for paper, on the other thand, have not followed the lead of the pulp prices. Quite recently Russia bas begun to appear as a buyer on the market.

The rye and barley crop thas been gathered throughout the country and has proved, both as regards quantity and quality, above middling. The oats have not yet been garnered everywhere, but, if only the weather doee not turn too rainy, it should be safe to predict of oats the same as of aye. Vegetables are also expected to give a satisfactory harvest.

## THE LABOUR MARRKET.

The labour market continues to be satisfactory and calm.

## CONTENTS OF THE TABLES.

## 1. MONEY MARKET.

Bank of Finland:

1. Balance sheet.
2. Note issue.
3. Note circulation and foreign correspondents.
4. Note reserve and home loans.
5. Rediscounted bills and balances of current accounts.
6. Rates of exchange.
7. Movement of the dollar rate.
8. Clearing. Joint Stock banks:
9. Home deposits.
10. Home loans.
11. Position with regard to foreign countries.
12. Deposits in the savings banks, bankruptcies and protested bills.
13. Turnover of Helsingfors Stock Exchange.
14. Stock Exchange index.
II. STATE FINANCES.
15. National Debt.
16. Total state revenue and principal groups.
17. Miscellaneous State receipts collected by Customs.
III. FOREIGN TRADE.
18. Value of imports and exports.
19. Value of imports and exports in different groups of goods.
20. Imports of the most important articles.
21. Exports
" "
"
22. Foreign Trade with various countries.
23. Import-Price index.
24. Export-Price index.
25. Index numbers for quantities of imports and exports.
26. Value of imports and exports divided according to the purpose of the goods.
IV. TRAFFIC.
27. Foreign shipping.
28. Shipping with various countries and passenger traffic.
29. Railways, goods traffic and rolling stock.
30. Railways, revenue, expenditure and traffic surplus.
V. LEVEL OF PRICES.
31. Index number of cost of living.
32. Wholesale Price Index.

## VI. LABOUR MARKET.

33. Number of unemployed.
34. Cessation of Work.

Deposits in the Savings Banks, Including long-term depoaits and current accounts, according to figures supplied for 1922 and
1923 by the Savings Banks Inspector's Office and for 1924 by the Central Statistical Office.
These figures for bankruptcies are not comparable with those published earlier in 1923. The fligures above, complled by the
Central Statistical Office according to the reports sent in by the various Courts, include all bankruptcy petitions, of which only about half will lead in due course to actual bankruptcy, whereas the rest owing to agreement, lack of means etc. will be cancelled.

Protested bills according to figures published in the sReport of Bills Protested in Finlands.

- Preliminary figures subject to minor alterations.

| 1924 | 143 | 143 | 139 | 129 | 127 | 126 | 125 | 125. |  |  |  | . | 1924 |

According to figures published in the 2 Mercators.
This revised index series is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank, 12 industrial anil 2 other kinds of shares. By multiplying the price bld for each security by the number of shares in the corresponding company the so-salled stechange values has been arrived at for the share capital of the company, the sum of which values has been calculated in $\%$ of the total nominal value of the share capital of the same companies. These percentages in the above table usually ahow a fall during March and April owing to the payment of dividends.

The above table is based on the monthly report on the National Debt published by the Treasury in the Official Gazette. Internal loans are given at their nominal value. Foreignloans are given in Finnish currency aceording to the rate ruling on the date of the raising of the loan. As a result of this, loans of an eariler date than 1014 are set down at par.
${ }^{1}$ ) Calculated as follows: The loans raised in the country have been calculated in dollars, acoording to the average rate of exchange of each month. The loans, negotiated abroad, which are all lssued in different currencies, are grouped according to the proportion of currencies, shown by the coupoos paid, and redured to dollars at the rate of exchange just mentioned.
16. - total state revenue and principal groups.

The term imports covers all imported goods which have been placed on the market either immediately after importation or after storage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country. Consequently. imports are.given according to their C. I. F. value and exports F. O. B.

- Preliminary figures subject to minor alterations.

## 19. - VALUE OF IMPORTS AND EXPORTS IN DIFFERENT GROUPS OF GOODS.*

[^0]20. - IMPORTS OF THE MOST IMPORTANT ARTICLES.

| Jan.-Dec. |  |  |  |  |  |  |  |  | Jan.-Dec. |

The import- and export-indices have been calculated by the Statistical Dept. of the Board of Customs in the following manner: the quantities of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in question in 1918, after which the import (or export) value for the current year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods chosen for the setting-up of a total-index hade been divided, according to their use, into the groups: foodstaffs, clothing, agricultural requirements and other goods. The three last-named have been further divided, aecording to their purpose into raw materials, machinery and industrial products.

This import-price index is lower than the wholesale price index because the import-price index is not influenced by the custom dutics.
24. - EXPORT-PRICE INDEX.

${ }^{1}$ ) From the beginning of 1921 onwards a new official index has been drawn up differing from that published In the Bulletin for 1922 in that the whole first half of 1914 forms the basis ( $=100$ ) for the same, and that the rise in taxation is also included.

The index is calculated by the Social-statistical Department of the Central Statistical Office and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the income of which amounted during the years 1908-1909 to $1600-2000 \mathrm{Fmk}$, assuming that the average monthly consumption within the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.

| October | 562 | 560 | 1122 | 347 | 539 | 886 |  |  |  |  | October |
| November | 786 | 634 | 1420 | 493 | 592 | 1085 |  |  |  |  | November |
| December | 836 | 458 | 1294 | 488 | 291 | 779 |  |  |  |  | December |

This table, prepared from the weekly reports of the Labour Exchange Department of the Ministry of Social Affairs, shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very small part of the rural centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled artisans proper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.

The abuve particulars which are of a preliminary nature, have been compiled by the Social-Statistical Department of the Central Statistical Office. As they indicate, only a few cases of cessation of work on a small scale have interrupted peaceful labour conditions in Finland during the last few years. The most serious conflict in 1923 arose in the building trade in Helsingfors, lasting for two months, and among the stevedores in May, while the longest cessation of work occurred in the metal industry. The majority of cases of cessation of work were described as strikes.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809 ; since 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its independence. It became a republic in 1919., The Diet together with the President possess the legislative power of the country. The highest executive power is held by the President chosen for a period of 6 years. The Diet, composed of 200 members, is elected by universal suffrage.

The proportions of the different parties in the Diet elected on the 1st. and 2ad April are as follows

| Right | $\left\{\begin{array}{c} \text { Swedish people's party } \\ \text { (Swedish speaking po- } \\ \text { pulation) } \end{array}\right.$ | Number |  | $\underset{\text { cent }}{\text { cert }}$ |  |

## 2. LAND.

the average temperature in the coldest month is in S. W.Finland - $5^{\circ}$ to $-6^{\circ} \mathrm{C}$., in Lappland - $15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ}$ C. resp. The average temperature in Helsingfors is $+4.6^{\circ}$ (in Christiania $+5.5^{\circ}$, in London $+9.9^{\circ}$, in Montreal $+5.5^{\circ}$, in Chicago $+9.1^{\circ}$, in Vladivostock $+4.4^{\circ}$, in Moscow $+8.6^{\circ}$ ). The ground is covered with snow in the South during about 100 days, in Central Finland during 150 to 180 days, in Lappland about 210 days.
the ared (the new province of Petsamo included) is 387,565 square kilometres ( $=149,651$ square miles, Great Britain's area is $89,047 \mathrm{sq} . \mathrm{m}$. and Italy's area 110,632 sq. m.). Of the total area $343,279 \mathrm{sq} . \mathrm{km}$. $(88.6 \%)$ consist of land, while $44,286 \mathrm{sq} . \mathrm{km}$. $(11.4 . \%)$ are lakes. On an average $10.8 \%$ of the land in the south of Finland is cultivated, $0.8 \%$ in the North, $6.1 \%$ of the whole land.

## 8. POPULATION.

NUMBER OF INHABITANTS (1922): 3.4 millions, of which 0.2 million emigrants, [in Sweden (1921) 6.0, in Switzerland (1920) 3.9, in Denmark (1921) 3.8 and in Norway (1920) 2.6 millions].
density of population (1920): In South-Finland 17.2, in North-Finland 2.3 and in the whole country an average of 10.1 inhabitants to the square kilometre.
laxguage (1920): Finnish speaking $89 \%$, Swedish speaking $11 \%$.
religion (1920): Lutheran $98 \%$, Greek-Orthodox $2 \%$.
distribution (1922): $83.9 \%$ of the population inLabit the country, $16.1 \%$ the towns. The largest towns are (1922): Helsinki (Helsingfors), the capital, 201,435 inhabitants, Turku (Åbo) 59,457, Tampere (Tammerfors) 49,398, Viipuri (Viborg) $31,353$.
eddcation (1920): Amongst persons over 15 years of age only $0.8 \%$ are illiterate. Three universities founded 1640, 1917 and 1920.
increase of population (1922): Births $23.4 \%$, deaths $14.4 \%$ (in France in $191915.0 \%$ and in England in $192012.4 \%$ ), nataral increase $9.0 \%$.

## 4. 'INDUSTRIAL AND BUSINESS CONDITIONS.

PROPORTIONS OF OCCUPATIONS OF THE POPULATION (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $3.4 \%$, other occupations $17.7 \%$.
agriculture (1920): Cultivated land 2.0 million hectars, divided as follows: area under cultivation $0.5-10$ hectars $33.8 \%, 10-50 \mathrm{ha} .48 .9 \%, 50-100 \mathrm{ha}$ $9.3 \%$, over $100 \mathrm{ha} .8 .0 \%$. The above mentioned surface of cultivated land was divided between the different kinds of crops as follows: $45.8 \%$ hay, $19.6 \%$ oats, $11.2 \%$ rye, $5.8 \%$ barley, $\mathbf{3 . 5} \%$ potatoes, $14.1 \%$ other. 'The number of dairies in 1920 amounted to $45 \overline{0}$.
industry (1922): Number of industrial concerns 3,294, hands 132,842, gross value of products of industry $8,085.4$ million marks.
length of ranlways (1924): $4,527 \mathrm{~km}$., of which $4,231 \mathrm{~km}$. State railways and 296 km . private. The gauge is 1.524 m .
commercial flekt (1922): Sailing ships 646 (94,757 reg. tons net.) steamships 636 ( 88,319 r. t.), motor boats 125 ( 16,990 r. t.), lighters 3,284 ( 267,271 r. t.). Total 4,691 ( 467,337 r. t.).
FINANCES: Since 1860 the currency unit is the Finnmark ( $=100$ pennies) $=1$ French franc. The redemption of bank notes in gold was cancelled on April 15th, 1915.
the central bank. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleãborg), Kuopio, Joensuu, Sortavala, Viipuri (Viborg); Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskylä and Kotka.
the joint stock banks (1923): Number 21, possess 412 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,700 inhabitants.
tie satings banis (1923): Number at the nd of the year 467.

# ASSETS AND LIABILITIES OF THE FINNISH MUNICIPAL BOROUGHS IN 1923. 

ву

ARVI HÄLLEORS, m. A.<br>ACTUARY OF THE COMMUNAL CENTRAL BUREAU.

## STLATISTICS OF ASSETS.

The statistics of the assets of the Finnish Municipal Boroughs were incomplete up to the latter part of the last decade. This was due to the mundicipalities considering on account of their especially advantageous economic conditions, that there was no reason to attach particular importance to the calculation of their assets; thus the principal information available for such statistics was deficient. In the 1890's and in the first decade of 1900 it was still quite usual that the current cash assets alone should be put down in the balance sheets of the municipalities as assets balancing their liabilities whereas the considerable municipal real estate, consisting of both large landed estates and of buildings, was not taken into account at all. When the statistical information given by the municipalities was based on such balance sheets, it is only natural that the corresponding statistical figures should not have been able to show the amount of the assets of the municipalities, even approximately.

There are several reasons for the general change in this respect, which commenced about 1910. The modernisation of the towns, begun in the 90 's with the erection of municipal electric plants. gas- and waterworks, with the construction of tramway lines, slaughterthouses, market buildings, etc: augmented the municipalities' previously small need for credits. It therefore became the object of the municipal boroughs, that their boilanice sheets should show the real value of their assets. The basis of the municipal business concerns just mentioned also required that the bookkeeping should be so arranged as to show the profits of the concern. For these reasons greater attention began to be paid to the valuation of assets and their in-
clusion in the municipal balance sheets. When at the same time in 1909 there was a reform in the method of keeping the finanicial statistics of municipalities, it became posesible to make them more celiable.
If the material for the financial statistics issued in 1910-1916 ibe examined, it will be noticed, that the method of calculating assets to correspond to their purpose was imperfect in almost aill the towns. The reforms mainly affected the valuation of property acquired during recent years and often with borrowed means, whereas the old fundamental assets continued to be imperfectly calculatad or else were altogether left out of consideration. If the columns of figures of the statistios are examined, it is, however, possible to observe an improvement from year to year and to realise that the columns. of figures of the statistics published from 1917 to 1919 are already fairly complete. Many tests made by the writer show, nevertheless, that the assete and especialliy the most important ones, those of landed estates, were very commonly underestimated. Besides, several towns had left unestimated some important items of their assets, as. for instance, the harbours of Helsingfors and certain other towns which constitute very important sources of municipal revenue and had occasioned considerable liabilities which appear in the statistics of liabilities.

A certain new feature begins to appear during the war, making the statistics runreliable, wiz. the decline in the value of Finnish currency. The first consequence of this was that the assets aequired after 1915 were calculated in the books acconding to the value of the paper currency as it happenedl to be at the time they were acquired. Sseing that the currency policy of the Bank of Findand since 1921 has led to the stabilisation
of the value of the Fmak and confidence in the permanent stability of the currency has become general in the country, the municipalities have again begun to value their assets in paper currency. So far, however, this has only affected certain groups of epeciail assete revalued for practical reasonis whereas the entire revaluation of assets in other respects is still cimperfect. By the end of 11933 the revaluation of assets had been carried out only to a small extent and it will still probrably take a couple of yeara before it is finally completed. In the balance sheets of the municipalities at the end of 1923 the assets were valued thus: 1) the greater part in gold currency, 2) a certain part in the currency that happened to obtain at the time of purchase, and 3) the least part in present currency.

## ASISETS OF THE MUNICIPALITLES.

On account of all these circumstances it has proved impossible to arrive at figures which would show exactly the present value of the assets of the municipalities. It is, thowever, possible to ascertain by means of the necessary calculations the limits, showing the lowest amount at which the assets of the municipalities should be valued. The mode of calculation is as follows.

The amount of the assets of the municipalities on 31 Dec. 1919, Fmik. 1,095, 445,613 : - according to official statistics, has been taken as a basis.

Two different reasons influenced the choice of the ibalance sheets for 1919, firstly, that the municipal assets had been included in the statistics for that year almost completely, although valued too low, and secondily, that the idea of the recovery of our currency was still quite general in that year, so that not even the municipalities had begun to revalue their assets. In accordance with the abowe onily assets appraised according to two methods of valuation, wiz. the greater part in gold currency and the new property acquired during 1915——1919 in paper marks of differing value, appeared in these figures.

For determining such part of the assets, as the municipalities had acquired in 1915-1919, the amount of loans raised during the corresponding period has provided a sufficient basis. On account of the Governmental control of loans, there has been no possibility for the municipalities to tie up borrowed means for any other purposes than those, by which corresponding assets have been created and on the other thand the municipalities have not even nominally immobilised ordinary revenue in acquiring property during the years of war. The amount thus arrived at, showing the value of property acquired in 1015 r-1919, has been deducted from the amount of the assets shown by the statistic for 1919, so that the remainder has consequently given the amount of assets valued in gold currency.

The average price indicers for exports and imports had to be employed, when oalculating the value of fresh assets arcquired in 19015-1919 in peace-time marks, because the official wholesale price index in Finland does not go further lback than 1920. The yearly additions to assets have been converted, according to the index thus obtained, into gold marks and their total added to the amount which, according to the above, indicated that part of the assets of 1919 which was valued in gold currency.

The application of the method indicated is seen in the following calculation:
$\left.\begin{array}{cccc}\text { Year } & & \text { Lbans received. } & \text { Index. }\end{array} \begin{array}{c}\text { Assets in gold } \\ \text { ourrency. }\end{array}\right]$

Assets in 1919 . . . . . . . Fmik. 1,095,425,613: -
Of which in depreciated currenoy

289,120,500: -
Aseets in pold currency in 1919 . . . $19 . .$.

Assets in 1919 (31 Dec.)
in gold currency ...
Fmk. 889,129,398:-
Having thus arrived at the value in gold currency of the municipal assets in 1919 the
task was to convert it into present currency as well as to determine the increase of assets, which the municipalities had acquired during 1920-1923.

In order to fix the rate according to which assets, calculated in gold currency, have to be converted into the existing currency, it was necessaxy to examine the increase in value of the principal groups of municipal property: building sites, other landed estate, builidings and technical undertakimgs. This increase in value, according to information derived from different sources, thas been as follows: building sites about 8 fold, landed estate about 11 fold, buildings about 10 to 12 fold, and technical undertakings about 10 fold. Consequently 10 may be taken as the average increase and this has been employed as a factor.

The method already explained in detail above, ha: been used in determining the inorease of assets of the municipalities in $1920-1928$; the amount of the loans contracted by the municipalities has lbeen considered in proportion to the increase in assets. The increase of assets in the existing currency may be estimated as equal to the amount of the loans, since the fluctuations of the internal walue of the Finnieh currency during these years have been comparatively small.

On this basis. the amount of the municipal assets on 31 Dec. 1923 has been calculated as follows:

Assete for 1819 in ex-
isting currency $\ldots .$. Fmk. 8.891,293,980: Increase of assets 1920
-1923 $\ldots \ldots \ldots \ldots \ldots$, 218,032,150:-
Assets on 311 Dec. 1923
in existing currency Fmk. 9,109,326.130:-
Converted into dollars at the rate of exchange on December 31st, 1923, (1dollar = Fmk. 40: 4 ${ }^{\text {an }}$ ) this represents 225,199,650: - dollars.

## MUNICIPAL LIAABILITIES.

More reliable figures are available with regard to the amount of municipal liabilities on December 31st, 1928 than for theix assets. Accord-
ing to the balance sheets the total amount of liabilities on that date was Fmolk. 602,851,186:-: Part of the municipal liabilities (a total of 17 different loans to 6 towns), however, was iseued in several different currencies and placed, at least partly, in other countries. As the municipalities thave entered these loans in their balance sheets at par and have treated the increase in interest and instalments due up to date simply as an agio loss, the real burden caused by these loans had to be apecially calculated. The task has, therefore, been to determine how much of the actual Finnish currency would have been needed, if the municipalities had redeemed all their loans on the 31 Dec. 1923. The following method has been used in order to determine this amount.

Information has been collected concerning each foreign loan of the municipalities, iboth with regard to the currency and the amount of the bond loan coupons presented for redemption in 1923. A $A_{6}$ it is probalble that the corresponding quantity of bonds exists in the country in the currency of which the coupons thave been preseuted for redemption, it has been poosible to calculate in what proportions the loan has been placed in the different countries. According to these proportions the unredeemed portion of the loan has been divided between the different currencies and converted into Finnish currency at the rate of exchange of 34 Dec. 1923. The amounts obtained in this whay have been added together and the total sum may consequently be considored to indicate approximately the amount of actual Finnish currency, which would have been needed for the redemption of the loans on 31 Dec. 1923. That part of these loans of which the couponis have been presented for redemption in Finnish currency has been treated as an internal loan, the rest as a foreign loan.

The objection may, indeed, be raised that coupons are not always presented for redemption in the currency of the country in which the corresponding bondis are located. But in view of the fact that coupons are generally presented for payment in the currency of the country
with the highest rate of exchange, it is, more prabable that the amount of Finnish currency calculated for the redemption of the loan is too high than too low.

According to this method of calculation the total amount of the municipal loans may be taken as follows:

Internail loans . . . . . . . . . Fmok. 533,539,30:3: -
Foreign loans ........... $331,796,8997$ :_
Total amount of loans $\overline{\text { Fmk. }} 8 \mathbf{6 5 , 3 3 6 , 2 0 0 : ~ - ~}$
Caloulated in dollars this amount of loans equals Doll. 21,392,736:-

## MUNIOIPAL WEALTH AND CORRESS-

 PONDING WEALTH IN OTHER NORTH EUROPEAN OOUNTRIES.On the basis of the foregoing calculations the difference between the municipal assets and liabilities, i. e. the extent of municipal wealth, may be reckoned as $8,248,989,930$ : - marks or according to the rate of exhange on 31 Dec. 1923 203,806,914: - dollars, or, calculated per head of pqpulation in the towns Fomk. 18,560: - and Dollars 458: 90. The significance of such municipal wealth in the economic life of the municipalities would probably be clearer, if compared with the correaponding wealth in other countries of Northern Europe, Sweden, Nonway and Denmark, where the nature of municipal activity is in its ohief oharacteristios similar to that of Finland.
A comparison of thio nature with Norway and Denimark thas, however, proved impossible on the basis of the information at present availiable. Also in the case of these countries the depreciation of currency has ibeen considerable, so that to arrive at a correct conclusion the method of calculation applied in the case of the figures in the offficial statistics for Finland would have to be applied to the official figures issued lby these countries also. On the other hand, the figures in the Swedish official istatistios could well be used as a basis of comparison, a reversion to a gold standard having been effected in that country. The figures denoting liabilities could therefore be used las they stand. The average
wholesale price index for Sweden in 1923 being 163.4 and as in all probability no revaluation of the assets of Municipal Boroughs has been made, it was possible to make use of this index as a multiple in defining the present value of assets. A comparison drawn up on this basis rappears in the table given separately. More in the nature of an experiment, the method used in the oase of ISweden thas been applied to the figures for aesets and liabilities contained in the official statistics of Norway and Denmark. Although the result thus obtained is incorrect and disproportionately favourable to those countries, it is nevertheless evident that the assets of Finnish municipalities per capita are considerrably greater than in the countries mentioned.

The favourable result to which the comparative statistica lead in regard to the municipal wealth of Finland, is brought about by at least two different causes. Municipal wealth is without exception notably great in all Finnish towns. According to a Governmental custom establiehed since the most remote times, a municipality could not be founded except on ground belonging to the community. Therefore the Government of the country has, in parts where a town settlement has begun to appear, purchased the tracts of land and transferred them to the full ownership of the municipality in course of formation on the property. For the same reason the municipalities have later on acquired by purchase considerable tracts of land, which they generally hare been able to buy at the price of agricultural land and thus to reap the advantage of its rise in value. The freehold owned lby the towns amounted in 1912 to a total area of 120,000 hectars or 2,700 square metres per inhabitant (equivalent to 296,000 acres and 0.66 acres). In certain towns the amount of landed property is as much as 30,000 to $40 ; 000$ sq. metres per inhezbitant. This freehold ownership of the municipalities is likely considerably to inorease the present municipal wealth and is besides a good source of revenue.

The other reason for the favourable result for Finland of the comparative statistics is to be
found in the effects of the fall in the walue of money. As is known, the result of the fall in the value of money has been the automatic decrease of liabilities, by the fact that the internal liabilities are paid in money, the value of which is $1 / 10$ to $1 / 1.1$ of its former value. The towns of Finland have participated to a considerable degree in this deorease in liabilities. The municipal officials have been well aware of this and have tried to protect the capital thus gained by the
towns from being spent. These efforts will amongst other results produce a fundamental modernisation of the present system of municipal bookkeeping.
In other North-European countries municipalities do not possess a similar freehold wealth, at least not in the same degree as Finland. Neither has the influence of the fall in the value of money on the reduction of the internal liabilities been as great as in Finland.

# THE CIVIC GUARDS OF FINLAND. 

BY<br>MARTTI KIVILINNA, M. A.

HEAD OF' THE INTELLIGENOE OFFICE AT THE HEADQUARTER'S STAFH OF THE CIVIC GUARDS.

ORIGIN OF THE CIVIC GÚardS.
The first voluntary Oivic Guards were formed in Finland after the Russian revolution of 1917, when a strong desire arose to diseolve the union with the rapidly declining Russian Empire and when, on the other hand, dife in Finland had become unsafie owing to the undisciplined Russian soldiery stationed in the country and to the fact that unruly elements in the popudation had joined the latter.

When, later, the situation became critical, and the Finnish struggle for independence broke out in the winter of 1918 , the Ciivic Guards were able, despite the insufficiency of their equipment and training, to form and hold a front traversing the whole of the country, in the shelter of which a regular army could be raised, with which the Oivic Guards were then amalgamated. The army thus formed finally liberated the whole country.

The present Oivic Guards were organised at the end of the war of independence, and the enthusiasm for the oause was so great, that within a year this voluntary armed organisation increased to the number of about 100,000 members, at which figure it has since remained.

## ORGANUSATION IOF THE OIVIC GUARDDS.

The present organisation of the Civic Guards is based on a Government Statute of Septemiber 16th, 1921. The President of the Repuiblic is the Head of the organisation and appoints its Com-mander-inHOhief, who holds the command with the assistance of a headquarters' staff, the leaders of which, as well as those of its various sections, ane appointed by the President. The cauntry is divided into 21 districts and a district commander is appointed as leader of each idistrict. He performs his duties with the help of a district staff, to which four advisory members belong, consisting of trustworthy men elected
by the members of the Oivic Guards of the district. Eeach district is divided into local Oivic Guard Detachments, following roughly the areas of separate communities (town or parish). Each Oivic Guard Detachment is commanded by a local commander, assisted by a picked local staff. Two or more Civic Guand Detachments are often united into one section, at the head of which stands a section commander, who is responsible for the military education of the members belonging to the section. The district commander, who is appointed by the Commamder in Chief, appoints the local section commanders. In apppointiments to commands the principle is adopted of ensuring that commanders possess the confidence of thein subordinates. The higher commanlds in the Civic Guards are held by resigned regular officers or by regular officers in active service appointed from the standing army to the Civic Guards.

## WORK OF THE ORGANLSATION.

The duties of the Oivic Guards Organisation, according to the statute in force ane as follows:

1. to give military traing to members,
2. to assist the standing army in case of need,
3. to promote the practice of gyminastics and athliletics,
4. to support the Government authorities and
5. in general to awaken and promote the civic virtues.

## MILITARY TRAINING.

The Civic Guards consist of: infantry, cavalry: artillery, technical troops, motor-car troops, flying corps and the motor-lboat flotilla. According to its size every Civic Guand Detachment is divided into platoons, companies, etc. The local commander is head of all the members of local Civic Guard Detachments. The main
points emphasized in the traing are rifle and machine gun practice and field operations. Camping and manoeurres are gone in for besides the regular training. During the time in camp the members of the Civic Guards are trained not only in cegular drill, but also in regimental order and at the same time receive theoretic instruction in the form of lectures. In 1923 133 such manoeuvres were arranged, in which at least two Civic Guards Detachments took part, and a great number of those in which only one Civic Guard Detachment took part. The military instructors of the districts and the military inspectors of the headquarters' staff further supervise the training of the local commanders. The organisation has been able to train the greater part of its officers and noncommissioned officers. The rank of officer of the Civic Guards has been established for the commanders and, in order to attain, it, the same qualifications are demanded as for Army officers in the reserve. The organisation has a military college of its own. Non-commissioned officers have beem trained by means of numerous courses and the number of those who have taken part is: them is nearly 10,000 .

## RELAATION OF THE CIVIC GUARDS TO THE ARIMY.

The development of the Civic Guard Organisation ihas logically led to its gradually becoming an integral part of the defence, a part, the existence of which is taken into account in organising the defence of the country. Als an outward sign of this, it may be mentioned that the President of the Republic is the head both of the Army and of the Civic Guards, and appoints the commanders-in-chief of both these organisations.

IA great numiber of Army officers also serves in the Civic Guardis, to which they have been transferred. In this conmection it is of interest to mote that the Commander-in-Chief of the Civic Guards is at present the Minister for Defence in the existing Oabinet. The Army and the Oivic Guards often come in direct touch with each
other in numerous common parades and manoeuvres. In almost all Oivic Guard manoeuvres of importance Army officers assist, while commanders of the Oivic Guards are likewise detailed to take part in the field exercises of the Army:

The training given in the Oivic Guards is also of noticeable help to the Anmy, when enilisting recruits from the former. "The Civic Guards allso take charge of the further training of members enrolled in the Army reserve, as there has been so far no possibility of organising general reserve exercises on account of expense. In case of war the mobilized army would derive great help from the officers and non-commissioned officers of the Civic Guards.

## GYMNASTICS AND ATHELETIGS.

The gymnastios and athletics of the Civic Guards are founded on the motto: „a emall programme on a large front". Attention has been concentrated. on a few forms of exercise, calculated easily to arouse the interest of the masses, and of psychological or military value as well as useful for physical development. Amongst the summer exercises Finnish baseball is most practiced. It is played by a team of 9 men and is reminiscent of American baseball. The summer programme ailso includes $3,0,00$ metre team races and a pentathlon consisting of: 100 m . and $1,500 \mathrm{~m}$. races, hightjumping, putting the shot and throwing the javelin. In the summer athletic meetings and matches between districts are held in these bramches of athletics.

Gymmastics are gone in for chiefly during the winter and an ocoasion for controlling this work is provided at the gymnastic meeting of the organisation, held in the spring, the programme comprising gymnastic competitions between Civic Guard Detachments and a cross-country race of about $8,000 \mathrm{~m}$. between the various district organisations.

During the winter skiing is the most imp.ortaint form of athletics. As skis are used in the country as a general means of communication,
the interest in this form of athletics has spread enormously among the Civic Guards. In the winter of 1924843 teams and 12,380 individual membens of the Civic Guards took part in the skiing races of the Civic Guard Organisation. Besides cross-country skiing races, forms of racing are also practised, in which besides speed skill in shooting and the ability to find one's way in unknown country with the aid of maps and compass are demanded.

Last year 3,064 skiing races were organised by the organisation, for which 3,262 teams and 39,364 members of the Civic Guards entered.

## ASSISTANCE TO GOVERNIMEN'T AUTHORITTIES.

Spread over the entire country the Oivic Guards are always ready to assist the authorities, should any disturbances of a serious nature occur. Since, however, fully peaceful and normail conditions prevail in Finland, such assistance has not been needed to any extent. When it has been demanded by the authorities, it has in most cases been only a previously arranged reinforcement of the police forces, as a measure of precaution, where large gatherings of peaple thave been expected, or upon other similar occasions. The mere existence of the Civic Guards renders impossible any attempt even at organised distrurbances.

## AWHAKENING AND PROMOTION OF THE CIVVIC VIIRTUES.

In spite of their short existence the Oivic Guards possess valuaible traditions, by the aid of which they are also able to perform moral educational work. When the Oivic Guards were formed, the conditions were such that courage and self-sacrificing patriotism were claimed of those who entered the ranks. This spirit has been fostered by the Civic Guards and through the present extension achieved by the organisation, it has also spread to wide classes of the population. United by the idea of the voluntary defence of the country the representatives of different classes of society stand side by side in
the ranks of the Civic Guards on an equality. This is apt to strengthen the feeling of national unity. The popular festivals organised in common by the Civic Guards have in many places foecome leading events, while their spirit and their programme are apt to have an awalkening and deapening influence on the general conception of the fulfilment of the civic duties of the individual.

## FINANCES OF THE ORGAN:ISATION.

The Civic Guards Organisation enjoys a yearly grant from the State, which in 1923 amounted to 28 millions and in the current year is 32 million Fmk. The financial aid of the State has, nevertheless, bean insufficient. The organisation has had a yearly expenditure of about twice that amount. This has been rendered passible by the Civic Guards receiving subventions and subscriptions from communities,' associations, business concerns and private persons.

## A PARALLLEL ORGANISATION, THE ,LDOTTA SIVARD".

Considerable support and help is given the Civic Guards by an organisation of the women of Finland, the "Lotta Sväird", a name derived from a tradition from the war with Russia in 1808-1809. The work and aims of this organisation: whose members number over 30,000 , appear clearly from the names of the four departments into which it is divided: the Sanitary, Field-Kitchen, Equipment and Collecting Departments.

The sanitary corps of the organisation consists of trained personnel. At all of the gatherings of the Civic Guards the ,Lottas" look after the food supply. The equipment sections provide large amounts of clothing anid equipment yearly. The collecting work brings continuous financial aid to the Civic Guard Organisation.

## SUMMMARY.

The Oivic Guards of Fimland differ from corresponding organisations in other countries by
the fact that their value and sigmificance are not of an internal political nature, but that their olbject and chief aim is that of a militany fonce able to give vigorous aid and support to the regular anmy, in case an enemy should attack the country. In case Finland should be drawn into war, all the forces that the nation'can possibly develop within itself, are needed for the defence of the country. This fact makes the existence of the Civic Guauds of graat importance, since the object of this organisation is
that any possible enemy who attacked the country, should libe met by a nation in arms. Preparations for defence on such a basis can be regarded as a strong pacific factor and an obstacle to the danger of war. Thus, when an enemy is obliged to calculate that the advantages to ibe gained lby an ocoupation of Finland are insufficient to set off the sacrifices entailed on an attacking armay by the subduing of a defence of this nature, such an attack will never be carried out.

## ITEMS.

Assembly of the Diet. The Diet widl re-assemble for its autumn session on the 1ist of October. The Finance Committee has been at work since September 1st.

The Government budget proposalls. On. September 2nd the President of the Republic sanctioned the proposals of the Government to the Diet regarding estimates of Sitate revenue and expenditure for the year 1925. The proposails amount to the following figures:

| Expenditare: | Million marks. |
| :---: | :---: |
| Ordinary expenditure | 2,687.9 |
| Extraordinary expenditure | 590.7 |
| Total | 3,278.6 |
| Revenue: |  |
| Ordinàry trevenue | 3,1.11.6 |
| Extraondinary revenue | 0.5 |
| Cash balance from previous years .... | 166.5 |
| Totail | 3,278.6 |

As already mentioned, the cash ballanice which arose owing to the surplus for the previous year, increased more than was necessary.

In the proposals of the Government the gross ordinary revenue has been esimated as follows:

> Million
marks.

| Revenue from. der talkings ways, etc.) | State property and un(estates, forests, rail | 1,109.4 |
| :---: | :---: | :---: |
| Direct taxes |  | 370.2 |
| Indirect taxes |  | 1,239.1 |
| Miscellaneous | taxes | 158.2 |
| Oharges |  | 142.5 |
| Miscellaneous | evenue | 92.2 |
|  | Total | 3,111.6 |

The Finance Committee has already begun to consider the budget proposalis.

Foreign post-office orders. Finland has recently made conventions with Germany, France, Austria and U. S. A. for direct postal orders and postal claims. The convention with Germany came into force on August 10th and
postail orders are made out in Finnish currency in either direction. The convention with France came into force on September 1st and the postal orders from Finland are made out in Finnish marks and those from France in francs. The convention with Austria also came into force on'September 1st and money orders between these counitries are to be made out in dollars in either direction. The cionwentions with U. S. A. will come into force onOctober 1st andl postal orders are to be madie out in dollars in either direction. Similar conventions are already in force with the foldowing countries: Czecho-SSlowakia, Danzig. Dentmark, Esthonia, Latria, Norway and Sweden.

Weather conditions and the crops. The fine, dry weather which characterised the summer, continued up to the middle of September. Besides hay, rye and barley have been harvested completely and the crop has turned out rather above the average in quantity and excellent in regard to quality. The crop of oats has not yet been got in. The vegetables have suffered to some extent thirough the drought. The following figumes published by the Statistical Depiaritment of the Boaud of Algriculture per 15th September show how the crop of harvested plants is estimlated and what the prospects are for the pliants not get gathered.

In the table, 8 signifies very good, 7 good, 6 above mediam, 5 medium, 4 below mediam, 3 poor crop, 2 almost failure of crops, 1 failure of crops.

|  | 15/91924 |  | 15/91924 |
| :---: | :---: | :---: | :---: |
| Wheat | 5.9 | Potatoes | 5.4 |
| Rye | 0. 7 | Turnips an other |  |
| Barley | 5.5 | root plants | 4.9 |
| Oats. | 5.6 | Pasturage hay | 6.2 |
| Meslin | 5.6 | Meadow hay . | 5.1 |
| Legumi | 5.2 |  |  |

The extent of the crops of the various kinds of plants are estimated as follows for 1924 and 1923:

|  | $\begin{gathered} 1924 \\ \text { Tons } \end{gathered}$ | $\begin{aligned} & 1923 \\ & \text { Tons } \end{aligned}$ |
| :---: | :---: | :---: |
| Wheat | 18,945 | 18,703 |
| Rye | 2187,5158 | 239,203 |
| Barley | 135,888 | 84,7600 |
| Oats | 47.6,108 | 381,8077 |
| Meslin | 12,3901 | 10,045 |
| Leguiminous plants | 11,415 | 10;495 |
| Potatoes | 5163,440 | 462,312 |
| Turnips and other plants | 317,715 | 330,785 |
| Pasturage hay | 1,962,910 | 2,124,858 |
| Meadow hay | 441,770 | 53.1,456 |

Timber prices. Final details as to the results of the State's timber sales by auction are now available. At the sales lby auction 3,145,280 trees and certain quantities of pulpwood, props and firewood as well as smaller quantities of plywood birch were offered. Bidls for 2,145,369 trees were made, but the Forestry Board accepted bids for conly 596,172 trees or about $19 \%$ of the quantity offered. All the other bids were refused because they were too low. The average price fior the whole country of the trees sold was Fmik 33.98. The corresponding price in 1922 was Fmk. 49.78 and in 1928 Fmk. 41.32.

The accepted average sale prices in the different districts in 1923 and 1924 were as follows.

| District: | Accepted price per tree Fmk. |  |
| :---: | :---: | :---: |
|  | 19\% | 1924 |
| Northern Finland. | 35.21 | 21.48 |
| Ostrobothnia | 299.22 | 1.8 .21 |
| Western Finland | 63.91 | 45.43 |
| Eastern Finland | 54.16 | 29.40 |

U. S. A. commercial representation in Finland. Hitherto the American Trade Commissioner in Riga, Mr Carrl J. Mayer, has represented the 'American Department of Commerce in Finland, too. Now, however, the U. IS. A. are to be represented by a Trade Commissioner, Mr Emil A. Keckich, stationed in Helsingfors.

La chambre de commerce franco-finlandaise à Paris. The Framco-Finnish Chamber of Commerce, founded in Paris on the 24th of October

1923, has since then been active in promoting commercial relations between France and Finland. The „Bulletin officiel de la Chambre de commerce franco-ffimilandaise", which appears once a: month and contains valuable information oi economic questions in both these countries, also senves the same purpose. Monsieur Louis Savare is President of the Board of the Chamber of Commerce, the present adddress of which is:

La Chambre de commerce frranco-finilandaise, 97, rue Saint-Lazare, Paris.

Yearbook of the Bank of Finland. The English edition of the "Banlk of Finland, Yearbook 1923" appeared in the middle of September. The book contains am extemsive survey of the economics of Finland, of the foreign currency position and of the lbusiness of the Bank of Finland and the Joint Stock Banks in 1923, as well as a number of explanatory tables. The Statistioal depantment of the Bank of Finland publishes this yearbook and supplies it free of charge to anyone wishing to receive it.

A new register of export and import businesses. A second edition of the Finnish Export and Import Register has lately appeared. The work, with English, German and French text, contains a list of all the export-, import-, shipping-, !forwarding-, insurance-, banking- and other concerns, as well as of economic associations, newspapers etc. in Finland. The names of the firms are arranged both allphabetically and according to their class of business. The work is clear and well arranged.

The book is to be had abroad at the following addresses:
England Wm. Dawson \& Sons 氏td., Cannon House, Breams Buildings, London ${ }_{C}$. C. 4.
France Chambre de Commerce Franco-Finlandaise, 97, Rue St. Lazare, Paris.
Germany Rudolf Mosse, Berlin S. W. 19.
Holland D. Y. Alta, 76-80, Warmoestraat, Amsterdam.
In Finland the work may be ordered from:
Suomen Vientiyhdistys, Helsingfors.

## BANK OF FINLAND MONTHLY - BULLETIN

Back numbers and reprints of some articles are also willingly supplied. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsingfors, Finland.

[^0]:    - Preliminary figures subject to minor alterations.

[^1]:    * Preliminary figures subject to minor alterations.

[^2]:    * Preliminary figures subject to minor alterations. - ${ }^{1}$ Dry weight.

[^3]:    Un to Dece 01,1917 the last port of shipment and the tirst port of discharge were
    of import ond exp. 31 , 1917, the last port of shipment and the first port o discharge were used in determining the respective countries they mport and export. In the case of transportation of goods over land frontiers, the country from which goods arrived or that to which Chey ware transeferred was used in a similiar sense, with the exception of a part of the exchange of goods with Russia, which was not putd own to that country, but to the actual countries of import or export. From January $1,19$.

    * Prellminary figures subject to minor alterations.

[^4]:    The index is worked out at the Central Statistical Office's Department for Economic Statistics. - In determining the bases of calculation for the index the comblned value of the country's production and imports for 1913 are taken into account without deducting the value of exports. The total number of commodities included is 135, and the figures in brackets at the head of the columns indicate the number of commodities in the corresponding groups. - In working out the index figures the method known as proportionate prices sis employed, i. e. the price of each commodity is taken in a percentage ratio to a corresponding flgure for the basic period and the average is then calculated on the basis of the resultant proportionate figares. The corresponding months in 1913 are taken as a basis. In the calculations geometrical averages are employed. No actual weighting of figures is undertaken; this is carried out, however, indirectly with the aid of the list of commodities.
