

## THE FINNISH MARKET REVIEW.

THE MONEY MARKET.
The state of the money market was marked in May and during the early part of June by a quiet tendency. It might have been expected that the balance of trade, which is still uncommonly favourable, would bring about a considerable relaxation of the money market. That this failed to prove the case to any great extent is due to the international confidence crisis. Under normal conditions the Finnish exporting industries and import trade enjoy a considerable measure of short-term credit abroad, but have now been obliged to redeem these credits at a rapid pace. Owing to the favourable balance of trade these credits have been reduced to less than half of what was formerly considered normal, but so long as foreign creditors, in their nervous state, demand large redemption or even refuse to renew the credits, the money market cannot experience the relaxation that would otherwise be the natural result of the depression. In any case rates of interest have a falling tendency.
The reduction of the balance sheets of the Joint Stock banks continues on a considerable scale. Their deposits were reduced in May by 104.1 million marks compared with 41.3 millions in April and 17.8 millions in May, 1931. Credits fell off by approximately the same amount or 110.5 million marks in comparison with 10.6 millions in May, 1931. The cash of
the Joint Stock banks increased slightly, but re-discounted bills remained practically unchanged.

The change in the position of the Joint Stock banks towards other countries was insignificant, both indebtedness and balances rising slightly. The net foreign balances of the banks fell off by 5.2 million marks to 20.4 millions. During previous years the Joint Stock banks usually had a net foreign indebtedness and at the end of May, 1931, this amounted to 151.1 million marks.

The changes in the position of the Bank of Finland during May were very small in general. The total credits were reduced by 1.1 million marks and the note reserve by 0.9 millions. The reserve of foreign currency alone fell off by 48.1 million marks, partly in consequence of the circumstances referred to, and partly as a usual seasonal fluctuation. At the end of May the reserve of foreign currency amounted to 549.9 million marks compared with 719.6 millions a year ago. It is also worth noting that the note circulation, that has followed the usual weekly and monthly variations all the time, has gradually sunk below last year's figures. At the end of May the note circulation amounted to $1,167.6$ million marks against $1,256.7$ millions one year and $1,391.7$ millions two years before.

During the first fortnight in June the total credits of the Bank of Finland increased again
by 16.7 million marks owing to a rise of 23.0 millions in re-discounted bills. The drop in the reserve of foreign currency continued during these weeks and amounted to 36.6 million marks. At the same time, however, the note reserve increased by 8.1 million marks to 621.6 millions.

The falling tendency of commodity prices was expressed by the wholesale price index dropping one point in May to 88 compared with 84 a year ago. The fall in prices refers to all classes of groods. The cost of living index also fell 7 points to 1,021 compared with 1,037 a year before.

## TRADE AND INDUSTRY.

As usual, foreign trade increased very appreciably in May. The value of imports rose from 222.8 million marks in April to 311.0 millions in May. The imports were, however, rather less than in May, 1931, both in value and in volume. The value of exports amounted to 326.0 million marks compared with 290.9 millions in April, but 359.5 millions in May, 1931; the volume of exports was also slightly smaller than last year. The balance of trade in May thus resulted in a surplus of exports of 15.0 million marks. In May, 1931, the corresponding figure was 30.5 million marks, but it should be noted that at that time the balance of trade for January-May only provided a surplus of exports amounting to 27.2 million marks, whereas exports this year have exceeded imports by 376.3 millions.

The considerable increase in imports referred principally to heavier imports of grain, sugar, pig-iron and other iron goods, coal and coke, the imports of which had been appreciably below the normal quantities during the preceding months.

The state of the timber market is unchanged. Importers are extremely cautious and only purchase what is most necessary. The consequences of the general depression are apparent in this and it must be estimated that consumption has decreased. The difficulty of the position is increased by all kinds of restrictions such as the contingent system in France, the difficulty of obtaining foreign currency in Germany and Denmark etc. For these reasons it is still, contrary to custom, very quiet in the timber ports. According to estimates, however, labout 60,000 stds of sawn timber were sold during May, so that the total sales by the end of May are estimated at about 310,000 stds or about the same quantity as a year ago.

The market for plaper, chemical pulp and other important products of the wood-refining industries is also unchanged, i.e., weak and quiet.

## THE LABOUR MARKET.

The improvement in the state of the labcur market was considerable in May, as had been expected. According to the reports of the unemployment boards the number of unemployed in May was about 53,400 , so that the reduction during the month represented 22,100 . The reduction was 29.3 per cent against 16.6 per cent ini April. In the country districts, where spring work provides plentiful opportunities of labour, the reduction in the number of unemployed was 32.2 per cent, but in the towns only 20.4 per cent. If it is considered, however, that seasonal unemployment usually ceases altogether at this time of year, it will be realised that the position on the labour market is difficult, as it is to be expected that in the autumn the number of unemployed will again rise considerably.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET. <br> Bank of Finland:

1. Balance sheet.
2. Note circulation and foreign correspondents.
3. Ordinary cover, note reserve and home loans.
b. Rediscounted bills and balances of current accounts.

The above table is based on the monthiy report on the National Debt pablished by the Treasury in the Official Gazette.
${ }^{1}$ ) Internal loans are given at their nominal value. Foreign loans are given in Finnish currency according to the rate ruling on the date of the raising of the loan.
${ }^{\text {F }}$ ) Calculated as follows: The loans raised in the country have been calculated in dollars, acoording to the average rate of oxchange of each month. The loans, negotiated abroad, which are all issued in different currencies, are grouped according to the proportion of currencles, shown by the coupons paid, and reduced to dollars at the rate of exchange just mentioned.
20. - STATE REVENUE AND EXPENDITURE.

The term imports covers all imported goods which have been placed on the market either immediately after importation or after storage. सxports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

- Wreliminary figures subject to minor alterations.

| Jan.-Nov. |  |  |  |  |  |  |  |  |  | Jan.-Nov. |
| Jan.-Dec. |  |  |  |  |  |  |  |  |  | Jan.-Dec. |

The tmport- and export-indices have been calculated by the Statistical Dept. of the Board of Customs in the following manner: the quantities of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in question in 1913, after which the import (or export) value for the curcent year has been calculated in percentage of the sum thus obtained for purposes of comparison.

This import-price index is lower than the wholesale price index because the import-price index is not influenced by the castominties.
28. - EXPORT-PRICE INDEX.

| Year and Month | Total All Kinds | Details |  |  |  |  |  |  |  | Year and Month |

The index of value referring to the production of the home industries is given according to figures published in the *Unitase. The index is calculated on the basis of adjusted monthly figures for 1926.

The index of quantity referring to the production of the exporting industries is calculated according to similar principles.
32. - FOREIGN SHIPPING.

${ }^{1}$ ) From the beginning of 1921 onvards a new official index has been drawn up differing from that published in the Bulletin for 1922 in that the whole first half of 1914 forms the basis $(=100$ ) for the same, and that the rise in taxation is also included.

The index is calculated by the Statistical Bureau of the Ministry of Social Affairs and is based on monthly reports from 21 different centres; it shows the rise in the cost of living for a workingman's family of normal size, the Income of which amounted during the years $1908-1909$ to $1600-2000 \mathrm{Fmk}$, assuming that the average monthly consumption within the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.
36. - WHOLESALE PRICE INDEX.

The wholessle price index is worked out at the Central Statistical Office. - The first group of indices is based on the quantity of goods in local wholesale trade in Finland, whereas the indices for imported and exported goods are based on the total quantities of goods imported or exported, including the movement of such goods as are in no way intended for wholesale trade in Finland. The average prices for 1926 are taken as a basis. There is no direct weighing of the data regarding prices, but indirect welghing has been carried out by each class of goods being represented by the number of commodities which corresponds to the calculated importance of the class in wholesale trade. The averages are arithmetioal averages.

37．－NUMBER OF UNEMPLOYED．

| End of Month | 1930 |  |  | 1931 |  |  | 1932 |  |  |  | End of Month |

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the lingdom of Sweden from 1154 to 1809; after 1809 it was an automomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its Independence, which was acknowledged by all the Powers inciuding Soviet Rusaia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President P. R. Svinhutvud is elected for the term 1 March, 1931, to 1 March, 1937.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Dlet elected in 1930 are as follows:

|  | Number | Per cent |
| :---: | :---: | :---: |
| Unionist party | 42 | 21.0 |
| Agrarian party | 60 | 30.0 |
| Progressive party | 10 | 5.0 |
| Swedish party | 20 | 10.0 |
| Swedish left | 1 | 0.5 |
| Small farmers' party | 1 | 0.5 |
| Social-Democratic party | 66 | 33.0 |

## 2. LAND.

THE AREA is 388,217 square kilometres $-149,981$ square miles, (Great Britain's area is 89,047 sq. m. and Italy's area 117,982 sq. m.). Of the total area $11.5 \%$ are lakes. On an average $10.8 \%$ of the land in the south of Finland is cultivated, $0.9 \%$ in the North, $6.8 \%$ of the whole land. Of the land area 25.3 mill. ha ( 62.5 mill. acres) or $78.4 \%$ are covered by lorests.

THE AVERAGE TEMPERATURE in the coldeat month is in S. W. Finland - $5^{\circ}$ to $-6^{\circ} \mathrm{C}$., in Lappland $-15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki is $+4.6^{\circ}$ (In Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.0^{\circ}$ ). The ground is covered by snow in the South for about 100 days, in Central Finland for 150 to 180 days, in Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1929): 3.6 millions (of which 0.3 milion emigrants), 太weden (1929) 6.1, Switzerland (1928) 4.0, Denmark (1929) 3.5 and Norway (1929) 2.8 millions.

DENSITY OF POPULATION (1929): In South-Finland 18.4, In North-Finland 2.5 and in the whole country an average of 10.6 Inhabltants to the square kilometre.

LANTGUAGW (1920): Finnish speaking $88.7 \%$, Swedish spealing $11.0 \%$, others $0.9 \%$.

RELIGION (1928): Lutheran $96.8 \%$, Greek-Orthodox. $1.7 \%$, others $1.5 \%$.

DISTBIBUTION (1928): $79.6 \%$ of the popalation inhabit the country, $20.4 \%$ the towns and urban districts. The largest towns are (1929): Helsiakd (Helaingfors), the capital, 234,096 inhabltants, Turku (Ab0) 65,291, VHparl (Viborg) 55.010, Tampere (Tammerfors) 54,824.

EDUCATION (1920): Amongst persons over 15 years of age only $1.0 \%$ are illiterate. There are three universities founded 1640, 1917 and 1920.

INCREASE OF POPULATION (1920): Births $21.0 \%$, deaths $15.0 \%$ (in France in $192816.5 \%$, and in Fingiand in $192811.7 \%$ ), natural increase $6.0 \%$ \%e.

## 4. INDUSTRY.

PROPOBTIONS OF OCCUPATIONS OF THE POPULATION (1920): agriculture $65.1 \%$, industiry and manual labour $14.8 \%$, commerce $3.4 \%$, other occupations $16.7 \%$.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$.

FOREST RESOURCESS. The growing stock of the forest is 1,620 million $m^{2}(57,213$ million cubic feet). The merehantable timber (measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $61 \%$, spruce by $28 \%$, the conifers thus constituting $89 \%$ or 1,384 million trees, leaftrees, mostly birch, $11 \%$ or 173 million trees. The annual increment is 44.6 million $\mathrm{m}^{3}(1,568$ million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{2}$ ( 1,413 million cub. ft .). In North Finland the Increment is much larger than the fellings, but in South Finland excess felling occurs locally.

AGRICULTURE. Cultivated land 2.2 million hectars, divided as follows: area under cultivation $0.4-10$ hectars $33.8 \%, 10-50 \mathrm{ha}$ $48.9 \%, 50-100 \mathrm{ha} 9.5 \%$, over $100 \mathrm{ha} 8.0 \%$. Cultivated land is divided between the different kinds of crops as follows: $47.1 \% \mathrm{hay}$, 21.2 \% oats, $10.2 \%$ rye, 5.1 \% barley, $3.2 \%$ potatoes, $13.2 \%$ other. The number of dairies in 1928 amounted to 630.

INDUSTRY (1930): Number of industrial concerns 3,778, hands 144,031, gross value of products of industry 11,285 million marles.

LENGTH OF RAILWAYS (1930): $5,331 \mathrm{~km}$, of which 5,065 km State railways and 266 km private. The gauge is 1.624 m .

COMMERCIAL FIREET (1931): Steamships 527 ( 151,266 reg. tons net), motor vessels 150 ( 16,145 r.t.), sailing ships 311 ( 64,621 r. t.), lighters 3,729 (266,179 r. t.). Total 4,717 (497,211 r. t.).

## 5. FINANCE AND BANKING.

CURRENC F. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finiand has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish smarkkay) - 100 pemnia. The gold value of 100 marks is equal to $\$ 2.5185=f-10 \mathrm{~s} .4^{3} / \mathrm{f}$ d.

STATE FINANCESS. According to the balance sheet for 1830 the State revenue was $\mathbf{4 , 3 9 8 . 1}$ million marks of which $\mathbf{4 , 2 7 5 . 4}$ million marks were ordinary revenue, and State expenditure $4,738.7$ million marks, of which $3,834.0$ million mariss were ordinary expenditure. The princlpal sources of revenue were as followss State property and undertakings $1,468.2$, direct taxes 604.2 , indirect taxes $1,615.5$, miscellaneous taxes 212.5 , charges 230.3 , miscellaneous revenue 154.4. The value of Itate property in 1922 is estimated at $11,160.6$ million marks. For National Debt see table 19 in this issue.

MUNICIPAL FINANCBS. According to the Budget for 1981 expenditure amounted to $1,365.0$ million marks. Income from taxation was in 1929428.4 million marks, taxed income $6,380.2$ million marics. The communal income tax (not progreasive) averaged $6.7 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-otfice is in Helsinki (Helaingfors) with branches in Turku (Abo), Porl (Björneborg), Vaasa (Vasal, Oulu (Vleaborg), Kuopio, Joensuu, Sortavala, Fiipurl (Viborg), Mikkell (S:t Michel), Tiampere (Tammerfors), Hămeenlinna (Tavastehus), Jyvấskyla and Kotka.

THE JOLNT STOCK BANKS (1932): Number 12, possera 498 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking eatablishment per 6,600 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska Föreningsbanken and Helsingfors Aktiebank, all with head offlces in the capital.

OTHEB BANKS (1930): Mortgage banks 7, Savings banks 478, Co-operative Credit Societiea 1,419 and a Central Bank for the latter.

# THE PRESENT SITUATION IN THE WOODWORKING INDUSTRIES OF FINLAND. 

BY<br>AXEL SOLITANDER,<br>general manager of the central assoclation of finnish woodworking industribs.

## GOVERNMENTS AND TRADE.

The decline of international trade both in volume and value, which is the outstanding feature of the present world economic crisis, still continues and gives rise to serious anxiety in industrial and agricultural as well as financial circles. In so far as the fall in prices and shrinkage of consumption are concerned, there seems to be no clear line between luxuries and necessities. Both groups are hit hard and suffer indiscriminately under the heavy pressure caused by deflated markets; in many cases primary materials have been even worse off than manufactured products. It would certainly be difficult to pick out a single article, whatever the natural conditions for the maintenance of its price level, which has not sustained such a heavy fall in price and consumption as urgently to demand a complete readjustment of the cost of production. But such a readjustment is extremely difficult and cumbersome, because it involves not only corresponding reductions in the cost of labour and raw material, but also a tremendous depreciation of financial values, which were formerly looked upon as firmly established, but which in the light of the present caisis have proved more or less nonexistent. The difficulty is seriously accentuated by the lack of flexibility in the present economic structure, which again to no small extent is the result of rigid measures taken by the Governments of nearly all countries, originally with the view of establishing a basis for a speedy economic improvement, later, when the
present crisis became acute, for the recovery of the position, and, finally, to save whatever was left after the economic avalanche. The main trend of these measures is towards economic nationalism. Nearly every country seeks at present to achieve economic independence in the shape of self-sufficiency by promoting exports and restricting imports, although success on these lines, at any rate when attempted by all nations simultaneously, is about as likely as the passing of two trains meeting one another on the same track. Customs tariffs are raised, direct import prohibitions introduced, quota systems and exchange restrictions used as protective and export subsidies as aggressive weapons in this economic warfare, which ultimately seems to result in direct barter between the participating states as the only available solution of an impossible situation created by modern economic statesmanship.

There are some countries which still try to follow the principles, which a few years ago were considered sound for international trade and endorsed by all international economic congresses, and there are also a number of commodities of such eminent importance that they pass unmolested through this ordeal. On the other hand, there are many primary materials, the supply of which some years ago was considered hardly sufficient to meet the evergrowing world demand, which are now in exactly the same precarious situation as all those that can be produced in abundance.

THE TIMBER TRADE.
Timber and timber products belong to this ast-mentioned group. A few years ago an alnost universal opinion declared the shortage Jf the world's timber supply as an imminent langer. The North-European countries made areparations to meet this shortage by means of zareful and effective forest economy. The United States and Canada realized that they were entering into the first stage of timber shortage and that, if the consumption were to proceed at the same rate, an exhaustion of the forests was to be feared. In these circumstances substitutes for wood were recommended, and conferences were arranged for the purpose of discussing means for diminishing wastage of this important material. Now, only a few years later, congresses are held for the opposite purpose, namely of limiting the output of this very article in order to raise its value to a level ensuring the forest-owner, not a fair price, but a small fraction thereof for his timber. This amazing change is, of course, to a very large extent the result of the decreasing consumption of timber as well as the opening up of the world's greatest virgin forests in Russia to the international market. The latter fact especially, generally referred to as "the Russian timber dumping", is often quoted as the main cause of the disorganization of the timber market.
It is, however, not my intention to discuss here the pros and cons of this latter statement, nor to touch upon the influence of the general crisis on the consumption of timber, but to survey the results of State and Government intervention in recent years in the timber trade, which should be of interest for a country like Finland, where the influence of the State on forestry policy and even on forest management is so preponderating for natural reasons.

Even in a survey of the position from this angle the timber exports from Russia must be taken into account as the primary and most important factor. The present Russian timber industry is wholly a result of State enterprise, a link in a chain of measures aiming at precisely
the same goal, which in recent times has been considered normal by most European countries, viz., a pronounced economic nationalism, manifesting itself in the promotion of exports and restriction of imports with a view to achieving economic self-sufficiency. The Soviet system is the supreme result of Government interference with the freedom of trade and industry. It has all the advantages of a monopolized trade, and all the defects of a State monopoly. In addition, it has several defects of its own, with grave consequences to almost all industries working in competition with this State trust, or in one way or another connected with this huge experiment of the Soviet rulers.
The international timber market, and particularly the sawn wood trade, has felt this influence sorely. The policy of the Soviet has here, in line with the general Soviet system, aimed at an unlimited increase of output regardless of market requirements including a deliberate overrating of the productive capacity, particularly in the forecasts for the future. It is hardly possible to conceive a line of operation more destructive and bound to result in a weak market and falling prices, but it must be admitted that all other countries, which to-day are taking measures to increase their exports regardless of costs and consequences, are in a sense using exactly the same means. The system is, in fact, the same, only the Russians are carrying it to extremes, quite in the same way as the Russian State import monopoly, which deprives the Russian population of all freedom iu trade, represents the extreme means to cut down imports to a minimum and establish autonomous self-subsistence such as most countries at present are trying to attain.

The direct influences of Russian competition in the timber trade together with the collateral influences of the general Russian system are clearly visible all over the world with all their evil effects and abnormal consequences. Partly to safeguard themselves against Russian competition and partly as a result of the common tendency towards economic nationalism already
described above, measures have been taken by the Governments of many timber importing countries, which hamper the flow of trade and make the position insupportable. Germany has adopted a clearance system providing for the exchange of Russian products, chiefly timber, against Soviet debts, as a result of which a marked preference has been given to Russian goods. This preference extended to Russian goods has caused deep resentment in wide circles in Finland, as it deprives Finland - in the same way as Sweden - of the "most favoured nation" treatment. As far as sawn wood is concerned the result of these measures on the part of the German Government has been that the sales of Finnish sawn goods to Germany have up to the end of May this year reached only some 7,000 standards as compared with about 13,000 standards at the corresponding time last year. - France has found it necessary to resort to a contingent system, based on average imports in previous years, which thus limits the exports to that country. - Belgium contemplates similar measures, and Denmark has adopted strict currency control for all imports. Of all the principal European markets for North-European sawn wood only England and Holland seem to remain free and open, and naturally the pressure of competition in these markets is heavier than ever.

In these circumstances it is hardly an exaggeration to assert that State control over trade, be it in the form of producing or selling, in the form of Government trusts or measures against such trusts taken by other Governments, has so far failed to improve market conditions or trade in general. On the contrary, the present position of the international timber trade is such as to be a distinct warning against similar experiments in other trades. The situation in the timber producing countries is everywhere precarious, perhaps not least in Russia itself, which surely needs all the cash obtainable for products sold abroad. In many of the other wood exporting countries the exports have on account of the adverse market conditions been cut down
to a minimum and the timber industries of Finland and Sweden are suffering heavily under the pressure of Russian competition.

As far as Finland is concerned the consequences have been the following. The export of round timber, especially of pulpwood, has practically come to a deadlock and the sawmill industry has been compelled to cut down its production for export from a maximum of nearly $1,300,000$ stds to about $700,000-800,000$ standards a year. The prices for raw material and labour have been adjusted to a level that permits competition with other wood exporting countries. All this could not have been done without great difficulties and hardships, but necessity knows no law, and the readjustment had to be carried out. Fortunately, the advantage of the energy and enterprise of private management in conjunction with geographical and technical advantages have saved us by a wide margin from the non-existent forest prices and extremely low wages of present-day Russia. Even after the readjustment the workmen in the Finnish timber trade are able to live fairly well on their wages, but the forest-owners have lost a great part of what formerly was considered the value of their property, and the purchasing pawer of the country has materially decreased, to which, however, the general crisis has also contributed to no small extent.

## OTHER WOODWORKING INDUSTRIES.

It is of considerable interest to compare the position of the Finnish timber trade with that of the other woodworking trades in the country, mainly the paper and pulp trades, which are faced with no such State trust competition as the timber trade. Paper and pulp are not of the same primary nature as sawn wood, but most countries without forests of their own regard the paper industry as being almost in the nature of a key industry, and try to encourage home production of this important article. Paper and pulp have been hit by the economic crisis no less than timber. Prices are down to a level that deprives even the soundest

If producers of profits. Tariffs are raised and mports cut down by restrictions on currencies and import quantities: But even with due allowance for these adverse effects of the general rrisis, it must be admitted that the situation in the timber trade is decidedly more difficult, and that whatever optimism can be mobilized it certainly goes to paper and pulp rather than to the timber industry. This may or may not be subconsciously influenced by the fact that there is no big State trust in the paper and pulp trades and that these industries consequently are more free to join in common endeavours for stabilisation. In any case the fact is there, and, at least as far as we are concerned, adds to our feeling of confidence in these trades. Neither can it be denied that the depression of the past years in the timber trade has to some extent also reacted on the paper and pulp industries and facilitated a similar adjustment to altered conditions as the one carried out in the timber trade.
The woodworking industries of Finland are thus making strenuous efforts to maintain their competitive power under very adverse conditions. These efforts to carry on the Finnish woodworking industries are greatly helped by the fact that without exception they supply primary commodities, which are required by all civilized countries and the production of which is based on home resources, because this has ensured the Finnish products a fair and friendly treatment in nearly all markets. Unfortunately, there have been some exceptions of late. In some countries, the exports of which to Finland are greatly in excess of their imports from us, Government restrictions are reducing the importation of our most important articles to almost nil, and, at the same time, preference is given to countries, where freedom of trade is an unknown term. Some of the consequences of
these systems have already been mentioned above. Finland's attitude towards these and other current systems of restrictions and State interference with trade can only be one: to side with those who are anxious to disentangle themselves from them and restore a free flow of international trade in compliance with the principles approved. by the Scandinavian countries, Holland and Belgium at the conference in Oslo in 1930.

In spite of all the difficulties referred to, besides many others with which the woodworking industries of Finland are confronted at present, sales have proceeded satisfactorily during the first five months of 1932. More than forty per cent of the calculated output of sawn wood for 1932 have been sold and as to the pulp and paper industries the export quantities during the first five months of 1932 are considerably above those of the two preceding years. Shipments of paper and pulp during January-May, 1930, 1931 and 1932, were as follows:

|  | 1930 | 1981 | 1982 |
| :---: | :---: | :---: | :---: |
|  | Tons | Tons | Tons |
| Chemical pulp | 202,046 | 2013,493 | 275,362 |
| Mechanical puip | 59,825 | 665,438 | 65,093 |
| Paper | 1018,9663 | 105,6445 | 1112,927 |

The mills still have orders in stock for a considerable time to come and will consequently be able to fill their part in the balance of trade.

The plywood factories, which are in a difficult position on account of keen Russian competition and restrictive measures on the part of importing countries, have nevertheless also been able to maintain their export quantities considerably above those of the preceding years. The exports of plywood during January-May, 1930, 1931 and 1932, were as follows:

|  | 1930 | 1931 | 1932 |
| :---: | :---: | :---: | :---: |
|  | Tons | Tons | Tons |
| Plywood | 32;257 | 27,681 | 37,062 |

# THE EXPORT MARKETS FOR FINNISH CATTLE-FARM PRODUCE. 

BX<br>KALLE JÄNTTI,<br>agriculturist.

## THE TREND OF FARMING IN FINLAND.

A good half of the crops harvested in Finland, on some farms as much as three-quarters, if calculated according to the cash value, is used for feeding cattle, chiefly neat cattle. Finnish agriculture thus tends strongly towards cattlefarming. Although the cultivation of cereals has increased of late to a considerable degree, we can nevertheless be certain that the cultivation of hay and fodder-crops in general will continue to dominate Finnish agriculture. The growing of cereals cannot be extended beyond the point needed to satisfy local consumption, and to reach this point no very large expansion of the area now devoted to cereals is needed. It is inconceivable that cereals should be grown for export purposes, as Finland is absolutely unable to compete with the actual grain growing countries, which can produce cereals much cheaper than they can be produced as far north as Finland. Besides, there are extensive areas in Finland, especially in the north, where the ripening of cereals and their preservation from frost is so uncertain, that a transfer of the balance of agriculture to cereal-growing might prove fatal in many years, in other words, it might lead to a complete failure of the crops.

The course of agriculture is therefore chiefly determined by two factors: geographical situation and the markets for farm produce. The geographical situation of Finland, as indicated above, is such that the cultivation of fodder-
crops is appreciably more favourable than the cultivation of cereals. Finland is by nature a cattle-farming country. Dairy produce has been exported regularly from Finland for ages and only the maintenance and development of this export trade can guarantee the future of Finnish agriculture. It is the only basis on which progress is possible, and consequently it is worth while to review the chances of Finland to preserve and improve the position it has won at the cost of great efforts in the markets for dairy produce.

## THE BUTTER MARKETS.

To begin with butter; which has always been the most important exportable article of dairy produce, it must be admitted that the recent trend of the market has given rise to grave anxiety. The butter exports of nearly every dairy-farming country are chiefly thrown on to two markets, viz., England and Germany. The aggregate annual sales of butter in the world market àre estimated at present at about 500 million kgs, and of this quantity over 90 per cent is sold to the two countries mentioned. This proportion between the two is in the ratio of $7 / 10$ to $2 / 10$, England taking the larger share. Anxiety has been caused mainly by the enormous increase in the quantity of butter on the world market, an increase that has continued to this day. In 1013 altogether 4.5 million ewts of butter were supplied to the British market from abroad. Last year the quantity had risen to

3 million owts, an increase of no less than 80 per cent. During the same period Germany's butter imports increased from 1.1 million to about 2 million cwts, although last year a reduction of half a million cwts was recorded in comparison with the preceding year. This stupendous increase in butter imports is due chiefly to the fact that some countries in the southern hemisphere, which had previously gone in for sheep-farming and meat production have partly transferred their production to butter and cheese. New Zealand is a case in point, as it used to ship about $300,000 \mathrm{cwts}$ of butter yearly to England before the war, but last year supplied 1,935,000 cwts. Australian butter exports to England rose during the same period from about 650,000 to $1,560,000$ cwts, butter exports from the Argentine from about 60,000 to 375,000 awts. As cattle can be kept out at pasture in these countries almost all the year round, their cost of production per kilogramme of butter is extremely low, which explains, why the heavy fall in butter prices on the world market that was one of the inevitable consequences of the enormous increase in the output of butter, has not, up to the present, appeared to be any obstacle to a continued rise in the output of butter in these countries.

The absorption of the increased quantities of butter by the English and German markets was possible on one condition only: a reduction in the price of butter. The consumers of margarine and other vegetable fats and lard, have formed a contingent of buyers, always ready to go over to butter as soon as the price of the latter was sufficiently low.

However, in spite of the great increase in the exports of butter by these overseas countries, the northern countries, including Finland, have been able to retain their position in the butter market of the world. Primarily this is due to the circumstance that, thanks to their proximity to the markets, they are able to provide comparatively fresh, prime quality butter that has satisfied their buyers' tastes. As regards Finland in particular, the quality of export butter
has been appreciably improved in recent years by advisory work of increased efficiency, by greater strictness in the conditions on which the classification of butter is based and of export regulations, and other suitable measures.

Greater anxiety, perhaps, than was aroused by the rapid increase in the imports of butter from the countries in the southern hemisphere, has been aroused in Scandinavia by the measures of Oustoms policy instituted by Germany since 1629 and quite recently by Great Britain. Special resentment has been provoked by the kehaviour of Germany in this respect. In July, 1929, Germany raised her duty on butter to 50 Rmks per 100 kgs . In the course of subsequent Commercial Treaty negotiations between Germany and Finland, the Finnish delegates had endeavoured to convince the Germans that German agriculture would not benefit by the increased duty, as the exporting countries would be compelled to sell as nearly as possible the same quantities of butter as before to Germany, even in the event of butter prices having to be reduced. The increased duty would consequently not lead to a rise in the price of butter on the German market, but to a fall in prices on the world market. What the duty would do, the Finnish negotiators explained, would be to reduce the income of the northern countries, which would thereafter be unable to buy as many industrial products from Germany as before, with a corresponding effect on German industry and unemployment in Germany. The Germans, however, held stubbornly to the increased duty, and after prolonged negotiations an agreement was reached in the autumn of 1930, according to which the duty of 50 Rmks was restricted to a contingent of only 5 million kgs. The agreement came into force as from the beginning of December, 1930.

Later, when events took the course predicted by the Finnish delegates and it turned out that German farmers were receiving no more for their butter than before, whereas the markets for German industry had deteriorated and industrial unemployment increased, the only remedy the

German farmers could think of was to demand a new increase in the duty. They succeeded in carrying through this demand in the early part of the present year, in a form, moreover, that violated the rights guaranteed to neighbouring countries and particularly to Finland by Commercial Treaty, for on this occasion Germany without further ado raised the butter duty in respect of these countries by 36 Rmks per 100 kgs , justifying its action by the excuse that Finland, Denmark and Sweden had suspended the gold standard. The new duty applied also to the contingent of 5 million kgs referred to above; on imports exceeding the contingent the duty was doubled and thus amounted to 100 Rmks per 100 kgs . - The latest increase in the duty and the currency restrictions attached to it have, it is true, reduced German imports of butter to some extent, but at the same time their chief effect seems to be a continued decline in the demand for German industrial products and a corresponding increase in unemployment. Even in Germany the policy of the Government in this matter is beginning to be criticized and it is possible that the new Government may adopt a different attitude from that of the previous Government.

England, too, departed from its former Free Trade position by imposing duties, on the 1st of March last, on nearly all foodstuffs, including butter. As butter from the British Dominions is exempt from duty, the position of the northern countries has grown still worse. The duty failed to raise the price of butter, and consequently the 10 per cent ad valorem rate had to be borne by the exporting countries.
In addition to the Customs measures referred to above, some countries have instituted special measures for restricting imports. In Germany, for instance, the supply of foreign currency has been subjected to restrictions, which compel importers to reduce their purchases. The countries which export butter to Germany have tried to sell their butter to the buying countries of secondary importance, such as Belgium, France, Czechoslovakia and Switzerland, but in these
cases, too, sales have been very difficult to make owing to increased duties and all kinds of restrictions.

## THE OHEESE MARKETS.

In the cheese markets of the world a similar development to the one in the butter market has been evident since the war. Germany, for instance, imported 26 million kgs of cheese yearly before the war, whereas recently these imports amounted to over 60 million kgs , though last year they declined to 55 million kgs. Similarly, British imports of cheese rose from 117 million kgs to 150 million kgs . A similar tendency has also been apparent in other cheeseimporting countries, viz., Belgium, France and the United States.

For export purposes Finland produces almost solely large-sized Emmenthaler cheese and only small quantities of other kinds, such as Edam and Cheddar. The output and supply of Emmenthaler cheese has not increased during the past few years, but has on the contrary slightly declined. The result has been that, while the price of butter has continued to fall, the cheese market has remained comparatively firm. Nor are there similar fiscal difficulties to be overcome in the cheese market to those prevailing in the batter market, at least not such serious difficulties. There was probably a desire in Germany to raise the cheese duty in that country, but the measure would have necessitated a renewal of the commercial treaties with all the neighbouring countries, an action that was apparently regarded as being too dangerous. Finland has consequently been able to enjoy the moderate duty of 20 Rmks per 100 kgs guaranteed to her by the 1926 Commercial Treaty with this country, her most important market for cheese. In Belgium the duty on cheese is similarly not excessive, or about 1:50 Fmks per kg., the same applying to Sweden, where the duty is 2:20 Fmks per kg. France raised the duty on Finnish cheese by 15 per cenit last December on the grounds that Finland had suspended the gold standard, but even after the rise the duty
was only a little over 3 Fmks per kg. The United States duty on cheese, which was fixed in 1930 at 7 cents per lb. or about 9:50 Fmks per kg., is approaching a prohibitive duty.

To some extent the cheese market, too, has been hampered by various restrictions. The worst case is that of Germany, where currency for the purchase of foreign cheese has been extremely difficult to obtain. Special import licences have been required in France, which has greatly hampered cheese exports to that country.

## POSSIBILITIES OF EXPORTING BACON AND MEAT.

In the bacon market Finland is a newcomer. Attempts have been made to establish an export trade during a period of ten years, and in 1922 exports reached $315,500 \mathrm{kgs}$. After that, however, they declined and then ceased. Bacon began to be exported again in 1930 and last year the exports amounted to $1,380,000 \mathrm{kgs}$ and appear to be still rising.

Efforts have been made in Finland to develop the production and exportation of bacon by strict attention to quality. With this object three export slaughterhouses have been built in Helsinki (Helsingfors), Turku (Abo) and Kuopio - their plant being up to the highest standard. Finnish bacon has, indeed, been favourably reported on by buyers.

As bacon is sold only to England, no obstacles have been presented to this trade in the shape of increased duties, currency restrictions, etc., as is the case with butter and cheese. Even the 10 per cent ad valorem duty imposed on provisions in England last March does not affect bacon. On the other hand, the recent trend of prices for bacon is of such a nature that the slightest additional burden would have made business difficult.

In addition to bacon, minor. quantities of fresh pork and beef have been exported from Finland, the former chiefly to Sweden, the latter to both Sweden and Norway. In Norway, however, a high duty, about 5-6 Froks per kg.,
has been placed on meat, and in the case of Sweden imports have been obstructed in other ways, so that exports to these countries are almost at a standstill. Germany has classed Finland with the Eeastern countries in the matter of meat imports, which are permitted from such countries only by special licence, a measure which in practice has had the effect of an import prohibition.

## EXPORTS OF EGGS.

Attempts were made to organize an export trade in eggs at the beginning of the last decade, when numerous co-operative associations were formed for the sale of eggs. Regular exports did not begin until 1930, since when they have continued. The total quantity exported in 1930 was only $433,000 \mathrm{kgs}$, but increased in the following year to $1,874,000 \mathrm{kgs}$ and the rise still goes on.

The distribution of egg exports last year was as follows: Germany $694,000 \mathrm{kgs}$, England $670,000 \mathrm{kgs}$ and Sweden $535,000 \mathrm{kgs}$.

Up to the present no great obstacles have been experienced in exporting eggs. The German duty has been fixed by commercial treaty at 5 Rmks per 100 kgs and in Great Britain a 10 per cent ad valorem duty has been in force since the beginning of March. In Sweden, however, a duty of 20 öre per kg. was recently imposed, which will probably somewhat reduce exports to that country.

## CONOLUSION.

As will be seen from the above account, there seem to be a good many obstacles to the free development of the markets for cattle-farming products. In the economic policy of nearly every country the idea prevails that the only way of escape from the present depression is to try to reduce imports to vanishing point, while increasing exports to their utmost. Naturally, when every country tries to realise a programme of this nature, the result cannot be other than a stagnation of international trade, which has, indeed, occurred to a great measure. When-
ever attempts are made to reduce imports by means of unnaturally high duties and other restrictive measures, as has been done by Germany and the United States, the outcome can only be a reduction in those countries' own exports. The northern countries, whose vital interests include the exportation of cattle-farming products, must jointly discover methods which would enable them to protect themselves against such unjustified measures as those referred to above. The Managing Director of the Central Association of the Finnish Co-operative Dairies, Dr. F. M. Pitkäniemi, recently brought forward the suggestion that, if Finland or the
northern countries jointly should fail to effect an alteration in the standpoint of the countries which have hitherto bought their dairy products, Finland should try, either by entering into a Customs union or by means of a special agreement, to secure a privileged position in regard to some large consuming country capable of buying the production for export of a small country in return for special privileges in the import market of the latter. The only country that this would apply to at present is Great Britain, which already buys about 40 per cent of Finland's total exports. The idea probably has a good deal of support behind it in Finland.

## ITEMS.

Presidential visit. The President of the Republic, accompanied by his suite, paid a visit to Estonia on June 17th-20th. The President was received in state by the Riigivanem Teemant amid the lively acclamations of the local population, especially the organisations of Civil Guards.

State business undertakings converted into limited companies. In accordance with the decision of the Diet some of the business undertakings of the State were recently converted into limited liability companies with independent boards of administration and boards of directors, though the overwhelming majority of the shares remains in the hands of the State.

The Imatra power station has thus been transferred to Imatran Voimalaitos $O . Y$. which has, according to the articles, a share capital of 250 million marks that can be raised to 500 millions. The State has transferred property to the company valued at 370 million marks and has taken over all the shares except two, besides possessing a claim against the new company of 120 million marks.

The Outokumpu copper.mine has also been converted into a limited liability company under the name of Outokumpu O.Y. The share capital amounts to 45 million marks, divided into shares of 1,000 marks each, but the share capital can be increased to 120 million marks. The State has transferred property to the company valued at 63 million marks and owns all the shares except two. The company also has a debt to the State of 18 million marks.

In addition the Veitsiluoto sawmill and pulpmill have been turned into a limited liability company under the title of Veitsiluoto O.Y., with a share capital amounting to 100 million marks, which can be raised to 300 millions. The State also owns all the shares in this company except two. This represents the value of the property the State has transferred to the new company, consisting of the sawmill and pulpmill mentioned, besides the Kevätniemi sawmill and various land and waters.
*

Lower rates on deposits. The joint delegation appointed by the associations of Joint Stock banks, Savings banks, co-operative credit societies
and consumers' co-operative societies for the purpose of guiding their joint policy with regard to rates of interest, recently decided to lower all rates on deposits from July 1st by half a per cent. Rates on six months' deposits will therefore be $5,51 / 4$ and $51 / 2$ per cent from that date in the three categories into which the financial institutions have been divided. On current accounts the financial institutions will pay $3,31 / 4$ and $31 / 2$ per cent.

The object of this reduction of rates on deposits, as in previous cases, is to effect a lowering of rates on credits and thereby to alleviate the grave position in which agriculture, commerce and industry are situated on account of the continued depression.

Pulp conference. Representatives of the countries that belong to the Sulphite Pulp Suppliers organisation, Finland, Sweden, Norway, Germany, Ozechoslovakia, Austria and Memel met in Helsinki (Helsingfors) in the middle of June. The general position of the market and the statistical situation were dealt with thoroughly. The meeting was unanimously in favour of extending co-operation still further. The possibility of stabilisation by means of export quota for the countries adhering to the agreement was specially discussed.

Finns from America visit the mother-country. As in previous years, a considerable number of Finns from America will visit their mothercountry in the course of this summer. It is stated that on this occasion an appreciable part of the visitors does not intend to return, but will
remain here, because economic conditions in America are so hard at present.

Crop prospects. After a winter that was generally mild with little snow the ground was uncovered fairly early, but as the frost remained in the ground on account of dry weather and cold nights, work in the spring could only be started rather later than usual. During the time of sowing the temperature was only favourable in the southern and south-western parts of the country, but unfavourable in the greater part of Finland, in which cold and windy weather proved detrimental to growth. At the end of May and in the early part of June the country suffered generally from frost that damaged the grain and grass shoots, though only slightly in general. The autumn sowings survived the winter satisfactorily on the whole; in a few communes, however, it was necessary to plough the fields and make spring sowings. The crop prospects in general are medium or slightly above medium. A general idea of the crop prospects in the middle of June for the presen't and the two preceding years can be gleaned from the following table in which, in stating the crop prospects, a scale of figures is employed, 8 signifying very good, 7 good, 6 above medium, 5 medium, 4 below medium, 3 a poor crop, 2 almost a failure of crop, and 1 a failure of crop.

|  | 1932 | Middle of june ${ }_{1931}$ |  |
| :---: | :---: | :---: | :---: |
| Wheat | 5.5 | 5.3 | 5.3 |
| Rye | 5.5 | 6.1 | 6.0 |

| Oats | 5.2 | 5.1 | 5.3 |
| Potatoes |  | 5.1 | 5.4 |
| Hay | 5.0 | 5.2 | ${ }^{5} .6$ |

## THE <br> BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at.a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.
