

## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

During October a slight tightening of the money market made itself felt - if the expression "tightening" can lbe used, when the position is as easy as it still remains in reality. The uneasy political situation abroad showed itself in a fairly general rise in prices, very much increased imports and unusually lively home trade.

The credits granted by the Joint Stock banks to the public increased in October by 15.2 million marks, while credits to other credit institutions fell off by 10.2 millions. The increase was thus less than last year, when the total credits of the Joint Stock banks grew by 45.5 million marks. On the other hand deposits were reduced very much, by 24.0 million marks in the case of deposits by the public and by 88.9 millions in the case of deposits made by other credit institutions. The total reduction in October, 1934, only amounted to 17.0 million marks. The business of the Savings banks and other savings institutions in October slso indicates that the public was forced to draw on its savings to a greater extent than last year. In these circumstances the cash of the Joint Stock banks was slightly reduced by 22.2 million marks to 544.1 millions in comparison with 497.0 millions a year ago.

The position of the Joint Stock banks towards foreign countries was affected by the conditions referred to, their foreign credit balances being reduced by 95.0 million marks. As the foreign
indebtedness remained almost unchanged, their net foreign balances decreased during the month under review from 206.9 to 112.3 million marks. For the sake of comparison we may mention that the corresponding net credit balances amounted to 107.7 millions a year ago and 78.7 millions two years ago.

The position of the Bank of Finland is also marked by the greater demand for credit; in October the credits granted by the Bank increased by 58.0 million marks to 806.1 millions and were consequently slightly larger than a year ago. The gold reserve of the Bank that had grown very much during August and September, recorded a slight rise of 1.1 million in October and an increase of 2.6 millions during the first fortnight in November. By this means the gold reserve rose to a fresh maximum of 464.5 millions. As regards the reserve of foreign currency there was also a rise in October, of 21.3 million marks, and it amounted at the end of the month to $1,280.7$ million marks as against $1,190.3$ and 921.5 millions respectively in the previous years. During the first fortnight in November, however, the reserve of foreign currency was again reduced by 27.5 million marks in consequence of the Treasury redeeming a small foreign loan. The note reserve fell off in October by 51.7 and during the first half of November by 34.0 million marks to 878.2 millions. This reserve had, therefore, dropped below the corresponding level in 1934; at that time it was $1,037.6$ million marks.

The level of prices rose fairly generally in October. The wholesale price index advanced 1 point to 92 and thus attained a level that had not occurred since the beginning of 1932. The majority of the class indices recorded a similar rise. The cost of living index advanced 11 points to 1,021 compared with 998 a year ago. This rise must, however, be described principally as a seasonal occurrence.

## TRADE AND INDUSTRY.

Foreign trade was lively, mainly owing to heavier imports. The value of imports amounted to 557.2 million marks as against 468.0 millions in September and 490.8 millions in October, 1934. At this figure imports reached their highest monthly value since 1929 . The value of exports amounted to 621.8 million marks in October compared with 601.3 millions in September and 626.2 millions in October last year. In spite of the large increase in imports the balance of trade for October yielded a surplus of exports amounting to 64.6 million marks. The surplus was, however, appreciably smaller than in the previous years, when the corresponding figures were 135.4 and 159.5 million marks.

For the ten completed months of this year the value of imports was 445.5 million marks or 11.3 per cent larger than last year. The value of exports, on the contrary, was 89.3 million marks or 1.t per cent less than last year. In this way the balance of trade at the end of October recorded a surplus of exports amounting to 657.4 million marks as against $1,192.2$ and $1,171.6$ millions at the same date in the two previous years.

If we examine the way, in which trade was composed during the month under review, we find higher figures for many goods and classes of goods, e.g., for imports of rye, rice, bran. coffee, sugar, raw cotton, oils etc. Exports recorded much larger quantities of meat, cheese, plywood, mechanical woodpulp, cellulose, cardboard and paper. In some cases the exports were larger than in any previous month.

The tone of the timber market was distinctly better in October than in the preceding months. Evidently, exaggerated ideas had been formed regarding the quantities that could be supplied by Finland and attempts had therefore been made to force prices down. In a few isolated cases this succeeded, but in general exporters maintained firm prices and made no concessions worth mentioning. At present the danger of any great fall in prices, when the remaining stocks are being sold off, appears to have been avoided. Sales from Finland in October amounted to about 100,000 standards and the total sales by the end of October are estimated at 950,000 standards in comparison with 965,000 last year. Shipments have proceeded normally and at the end of October this year's exports amounted to 828,500 standards as against 900,300 last year and 822,900 in 1933.

The prospects for next year are not yet clear ; very few contracts have been made so far and neither sellers, nor buyers have formed a decided opinion as regards prices. The greatest attention should be paid to the plans for an agreement between the exporting countries regarding the restriction of supplies of timber. At a meeting held in the middle of November by representatives of woodworking associations in Finland, Jugoslavia, Austria, Poland, Roumania, Sweden, Ozechoslovakia and Soviet-Russia a preliminary decision was carried concerning the restriction of supplies of sawn and planed goods during. 1936-1937 in accordance with the demand. If the decision is ratified, it will come into force on December 1st and may affect the course of events considerably.

## THE LABOTR MARKET.

As usual, unemployment increased slightly during the autumn. The number of unemployed registered by the Unemployment Boards increased in October by about 4,000 and amounterl to approximately 9,700 at the end of that month compared with 10,700 a year ago. At the same date in 1932 the corresponding number was close on 68,000 .

The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

- Preliminary figures subject to minor alterations,

29.     - VALUE OF IMPORTS AND EXPORTS IN DIFFERENT GROUPS OF GOODS.*

| October | 947 | 959 | 1101 | 939 | 1333 | 1175 | 1854 | 1021 | +11 | October |

The index is calculated by the Research Office of the Ministry for Social Affairs according to monthly reports from 30 different centres. It is based on the cost of living for the first half of $1914=100$ and refers to the normal budget of a workman's family. The index for the total cost of living is the average of the weighted group indices.
36. - WHOLESALE PRICE INDEX.

The index is calculated by the Central Statistical Office, and is based on the average prices for $1926=100$. The first group of indices refers to goods appearing in local wholesale trade in Finland, whereas the indices for imported and exported goods refer to the total quantities of goods imported or exported, including the movement of such goods that are in no way intended for wholesale trade in Finland. An indirect weighting has been applied, by means of which each class of goods is represented by the number of commodities corresponding to the calculated importance of this class in wholesale trade. The averages are arithmetical ones.
37. - INDEX OF WORKING HOURS IN INDUSTRY.

| Quarter | Branch of Industry |  |  |  |  |  |  |  | Total | Of which |  | Quarter |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## CERTALN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1164 to 1809 ; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared Its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President P. E. Svinhufvud is elected for the term March 1st, 1931, to March 1st, 1937.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1933 are as follows:

Number
Social-Democratic party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 78
Agrarian party . ..................................................... 53
Swedish party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 21

People's party

## 2. LAND.

THE AREA is 388,217 square kilometres $=149,900$ square miles (Great Britain's area is 89,047 sq. m. and Italy's area 117,982 sq. m.). Of the total area $11.5 \%$ are lakes. On an average $11.8 \%$ of the land in the south of Finland is cultivated, $1.1 \%$ in the North, $6.8 \%$ of the whole land. Ot the land area 25.8. mill. ha ( 62.5 mill. acres) or $73.6 \%$ are covered by forests.

THE AVERAGE TEMPERATURE in the coldest month is In S. W. Finland - $5^{\circ}$ to - $6^{\circ} \mathrm{C}$. , in Lappland - $15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki (Helsingfors) is $+4.6^{\circ}$ (in Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the Sauth for about 100 days, in Central Finland for 150 to 180. days, in Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1934): 8.8 millions (of whom 0.2 million emigrants), Sweden (1933) 6.2, Switzerland (1932) 4.1, Denmark (1932) 3.6 and Norway (1933) 2.9 millions.

DENSITY OF POPULATION (I934): In South-Finland 18.5, in North-Finland 2.6 and in the whole country an average of 10.8 inhabitants to the square kilometre.

DISTRIBUTION (1934): $79.6 \%$ of the population inhabit the country, $20.4 \%$ the towns and urban districts. The largest towns are (1984): Helsinki (Helsingfors), the capital, 272,427 inhabitants, Vilpuri (Wiborg) 72,154, Turku (Ảbo) 69,466, Tampere (Tammerfors) 59,184.

OCCUPATION (1930): agriculture 59.6 \%, industry and manual labour $16.8 \%$, commerce $4.3 \%$, transport $3.8 \%$, other occupations $15.5 \%$.

LANGUAGE (1930): Finnish speaking $89.4 \%$, Swedish speaking $10.1 \%$, others $0.5 \%$.

RELIGION (1933): Lutheran 96.2 \%, Greek-Orthodox $1.8 \%$, others $2.0 \%$.

EDUCATION (1930): Amongst persons over 15 years of age only $0.9 \%$ are illiterate. There are three universities founded in 1640, 1917 and 1920.

INCREASE OF POPULATION (1934): Births $18.1 \%$, deaths $12.4 \%$ (in France in $193116.2 \%$ and In England in $193112.3 \%$ ), natural increase $5.7 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOURCES. The growing stock of the forest is 1,620 million $\mathrm{m}^{3}$ ( $\mathbf{6 7 , 2 1 4}$ million cubic feet). The merchantable timber
(measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $60.7 \%$, spruce by $28.1 \%$, the conifers thus constituting $88.8 \%$ or 1,383 million trees; leaftrees, mostly blrch, $11.2 \%$ or 174 million trees. The annual jncrement is 44.4 million $m^{2}(1,568$ million cub. $f t$.$) .$ The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{3}$ ( 1,413 million cub, ft .). In North Finland the increment is much larger than the fellings, but in South Finland excess felling occurs locally.

AGRICULTURE (1939): Cultivated land 2.2 million hectars, divided as follows: area under cultivation $0.3-10$ hectars $33.4 \%$. $10-50$ ha $52.1 \%, 50-100$ ha $8.4 \%$, over 100 hs $6.1 \%$. Cultivated land ls divided between the different kinds of crops as follows: $50.7 \%$ hay, $18.9 \%$ oats, $9.6 \%$ rye, $5.4 \%$ barley, $3.8 \%$ potatoes, $12.1 \%$ other. The number of dairies in 1933 amounted to 627.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$. State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$.

INDUSTRY (1983): Number of industrial concerns 3,527, hands 140,736, gross value of products of industry 10,837 million marks.

LENGTH OF RAILWAYS (1933): $5,574 \mathrm{~km}$, of which 5,319 km State railways and 255 km private. The gauge is 1.524 m .

COMMERCLAL FLEET (1934): Steamships 548 (251,890 reg. tons net), motor vessels 157 ( 17,323 r.t.), sailing ships 218 ( 61,168 r. t.). Total 923 (350 381 r. t.).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finland Las again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish markkai) $=100$ pennia. According to the monetary law of December 21st, 1925, a gold coin of 100 marks' value shall contain $3^{15} / 39$ grams of fine gold. Since October 12th, 1931, the redemption of bank notes in gold is, however, suspended.

STATE FINANCEAS. According to the balance sheet for 1934 the State revenue was $4,185.7$ million marks of which $\mathbf{3 , 3 6 6 . 9}$ million marks were current revenue, and State expenditure $4,100.7$ million marks, of which $2,599.2$ million marks were current expenditure. The principal sources of revenue were as follows: State property and undertakings (net) 320.3, direct taxes 485.0, indirect taxes $1,815.6$, stamp duty 165.7 , charges 94.8 , interest and dividends 184.2 and capital revenue 768.8. The value of State property in 1922 is estimated at $11,150.6$ million marks. For Public Debt see table 19 in this issue.

MUNICIPAL FINANCES. According to the Budget for 1934 expenditure amounted to $1,429.1$ million marks. Income from taxation was calculated at 466.4 million marks, taxed income at $4,978.4$ million marks. The municipal income tax (non-progressive) averaged $9.4 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches In Turku (Ảb), Pori (Björneborg), Vaaga (Vasa), Oulu (Uleaborg), Kuopio, Joensun, Sortavala, Viipuri (Wiborg) Mikkeli (S:t Michel), Tampere (Tammerfors), Hameenlinna (Tavastehus), Jyvaskylă and Kotka.

THE JOINT STOCK BANKS (1935): Number 9 , possess 473 offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,300 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska Föreningsbanken and Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1935): Mortgage banks 6, Savings banks 482, Co-operative Credit Societles 1,342 and a Central Bank for the latter,

# THE GENERAL TREND OF WAGES IN ḞINLAND DURING 1920-1934. 

BY<br>KALERVO TAMMINEN, M. A.

MATERIALS FOR THE INVESTIGATION.
With the exception of wages in farm work no official statistics have been kept hitherto of the daily or hourly earnings in different branches of production, though the average annual earnings of workmen can be calculated by means of the official statistics of industry. However, the annual earnings by themselves do not afford a correct idea of the wages in different industries, because in those branches of production, e.g., in the sawmill industry, the largest industry in Finland, in whioh even under normal conditions there are manufacturing establishments that are only in use for part of the year, the annual earnings are smaller than in factories that work all the year round, in spite of the scale of wages possibly being lower in the latter. In making a comparison of wages it is, therefore, important to know the daily or hourly earnings.

The only available source for this article that indicates the trend of daily wages during a prolonged period in several branches of production, are the statistics of wages compiled by the largest Finnish accident insurance company, on the basis of which a fairly reliable general idea of the trend of wages in Finland during 1920-1934 can be obtained.

There are, of course, considerable defects in these materials, the most important being that they only refer to a part of industry and that the wages of male and female labourers cannot be distinguished from each other. Payment in kind is also estimated in terms of money on different bases in different businesses, but on the. other hand it should be noted that the
importance of payment in kind is not very great. As the size of insurance premiums depends on the level of daily wages, it is probable that the insured persons are likely to state their daily wages to the insurance company ton low rather than too high. The result is that the absolute figures of wages in the statistios of the insurance company cannot be considered reliable, but it can be assumed on the other hand that they indicate the proportionate trend of wages from year to year with sufficient exactness. If we calculate the indices that show the course of wages, the actual trend will no doubt be seen with sufficient accuracy. The proportion between the categories of male and female labourers does not generally fluctuate so rapidly as to render our statistical materials unreliable.

In this connection no opportunity is afforded for showing the trend of wages separately in each individual branch of production, so that we must confine ourselves to large groups. In the first place a distinction should be made between wages in farm and lumber work on the one hand and industrial workpeople's wages on the other. The latter are sub-divided into three oategories, viz., exporting industries, home industries exposed to competition, and protected home industries. The category of exporting industries refers to the woodworking industries in their entirety. In classifying home industries the influence of foreign competition alone has been taken as a basis of classification and accordingly the metal, spinning and weaving, clothing, rubber, glass and china industries have been included among the industries exposed to competition. Among the protected home in-

dustries the tobacco and sugar industries, bookprinting and lithographic works, stevedoring and inland shipping, warehousing, transport, and electric and water power stations are included.

It should be specially emphasised that the building trade is not included in any of the above categories.

## WAGES IN FARM AND LUMBER WORK.

The curves referring to wages for lumber work and temporary farm work are illustrated in the diagram above. The curve for lumber wages refers to felling, carting and floating work and is drawn on the basis of the insurance company's statistics. The curves for wages for temporary farm work are obtained from the official statistics of wages published by the Ministry for Social Affairs and refer to the daily wages of male farm labourers providing their own board, in summer and in winter. This category is smaill, indeed, in farm work, yet sufficiently large to indicate the general level of wages in farm work, besides which it is the only class of labourers that can be coordinated directly to lumbermen in regard to conditions of work.

It will be seen from this diagram that wages in farm and lumber work are clearly correlated
to each other, as the general direction of the trend of wages was exactly the same in both categories. Farm wages 'were without exception lower in the winter than the corresponding wages for lumber work, but on the other hand it is a fact especially worth noting that summer wages for farm work and wages for lumber work in the winter appear to be, as a rule, on the same level. The only striking exception are the last years of the depression, when the rise in wages for lumber work set in earlier and was more pronounced than the increase in farm wages.

The equality of farm wages in summer and wages for lumber work is evidently due to both representing seasonal work that occurs at different seasons of the year and to the same labour being employed in both. In the summer -- at harvesting time - farmers usually pay higher wages, while in the winter, above all owing to the felling of saw-logs and the transportation of all kinds of timber, lumber work is more urgent and wages for it are higher than for farm work at the same season. In view of these circumstances it is very natural that summer wages for farm work and wages for lumber work should approach each other closely.
During the period of depression there was a rather sharp decline in both farm wages and wages for lumber work. This was principally due

[^7]to the demand for labour being restricted in the worst years of the depression on account of marketing difficulties and the great fall in the price of manufactured goods. The export prices of products of the paper and pulp trade, for instance, are at present over 40 per cent lower than in 1926. The prices of sawn timber are correspondingly 23-25 per cent lower, but were still lower during the depression. For determining wages for lumber work the activity of the sawmills is the principal factor, as in the best years they provide work for more than three times the number of workpeople that, e.g., the paper and pulp mills do. As a typical building materials industry the sawmills are very susceptible to cyclical fluctuations.

With regard to the trend of the standard of living of lumbermen during the depression, besides the drop in wages the simultaneous fall in the cost of living should also be taken into consideration. According to the official cost of living index the level of prices in Finland in 1934 was 20 per cent lower than in 1928, when the cost of living was at its highest. Wages for lumber work fell correspondingly 19 per cent on an average, so that we see that the fall in prices equalised the influence of the drop in wages on the standard of living of lumbermen, which returned in 1934 to the level of 1928. During 1935 wages for lumber work have risen appreciably. As an example it may be mentioned that on the basis of an enquiry into wages made by the Employers' Federation of the Finnish Woodworking Industries it can be established that the daily earnings of transport workers were higher in Finland than in Norway and only slightly lower than in Sweden. In making international comparisons it should also be borne in mind that the cost of living in Finland is appreciably lower than in the ather northern countries.

## WAGES IN INDUSTRY.

The curves for the principal categories of industry are illustrated in the diagram on the opposite page. They show that the average daily wage rose continously in all spheres of industry
up to 1928 , when the rising tendency was clearly arrested, but the level of wages whas, nevertheless, •at its highest in 1929 and the first half of 1930 . The downward tendency began in the autumn of 1930. The rapid rise of wages just referred to was due at first, approximately up to $1923-1924$, to the changes in the value of the currency, but later to the influence of the boom.
The reason, why wages followed the fluctuations in the value of the currency comparatively quickly, also consisted partly in the large expansion of productive enterprise in this country at the beginning of the era of its independence and the consequent great demand for labour. The formation of a regular army that called for young unskilled labourers, is also a factor to be taken into aocount. The result of all this was that wages rose rather quickly in comparison, for instance, with the pay of Government employees, whose index of real wages, based on 1914, was 63 on an average in 1920 and 78 in 1927. The result of the inflation has been, therefore, that the standard of living among Government employees is still lower than before the Great War; among the working classes the trend has been different.

The great rise in wages in 1925-1928 is a typical phenomenon for a period of prosperity. The cessation in the rise of wages or its slower pace from 1928 onwards is a sign of the approaching depression. In many branches of industry wages rose, even very appreciably up to 1930. Here the frequent phenomenon is repeated that wages follow trade fluctuations comparatively slowly.

It will be seen from the diagram referred to that the trend of daily earnings was quite identical in the exporting industries and in home industry exposed to competition in 1920 -1928 with the exception of 1927 . However, home industry that enjoyed protection paid higher wages to some extent than the exporting industries, though in other respects the wages curves are more or less similar. This is a regular phenomenon in present-day economy. If it were possible to differentiate in the statistics between the wages of male and female labourers.

the difference between the wages curves would be greater, as, for instance, in 1932 according to the industrial statistics women represented 45.5 per cent of all labour in home industry exposed to competition, while the corresponding proportion in the exporting industries was 32.6 per cent. As a counterweight it should be noted, however, that a considerable portion of the labourers in our exporting industries is unskilled, while a comparatively larger part of the workpeople in home industry are skilled labourers, whose wages are always higher.

Another important cause that influences the level of wages in the principal categories of industry, is the rather high cost of living in localities, where factories are situated; an investigation into the comparative cost of living shows that the factories of home industry exposed to competition are situated in localities, whose level of prices in 1931 was about 17 per cent and in 1934 about 12 per cent higher than in localities, in which the mills of the exporting industries are situated. The average daily wage in the former industry was higher than in the exporting industries, e.g., 0.7 per cent in 1928, 8.8 per cent in 1931, and 9.7 per cent in 1934. Although by means of the method employed here only approximate values can be ascertained, we can conclude on the basis of these ratios that during the period of prosperity the standard of living among workpeople in the exporting industries was higher,
in spite of lower wages, than that of workpeople in home industry exposed to competition and that in consequence of the depression the level of wages in these branches of industry is at present approximately in accordance with the comparative cost of living in the localities, in which the factories are situated.

In 1930-1932 wages were reduced in all branches of industry, the reductions being largest in the category of the exporting industries and least in the category of protected home industry. In 1933 the level of wages was at its lowest. In 1934 wages rose everywhere. According to the statistics protected home industry forms an exception, but this is due to this category of industry being represented in the statistics considerably more sparsely than the other categories, so that the influence of ${ }^{*}$ incidental factors is felt in it.

## REAL WAGES.

Let us now investigate the influence that these reductions in wages exercised on the standard of living among labourers. In doing so we must compare the reductions in wages on the one hand and the changes in the purchasing power of our currency on the other, i.e.. in this case the fall in the cost of living. The trend is clearly visible in the diagram on page 27, in which the indices of real wages in the main categories of industry are shown in

1922-1934. The year 1928 has been chosen as the basic year in spite of its being a typical year of prosperity, for the reason that it represents the time just before the depression.

The diagram shows that the indices of real wages among industrial workmen during the depression were, in spite of the reduction in wages, above the level of the rising period. The curves for home industry and for total industry are appreciably higher than in 1928. It is only the curve for the exporting industries in 1932 - $\mathbf{- 1 9 3 3}$ that is below the level of 1928 , though higher than, e.g., in 1927 . In 1934 the average real wages in the exporting industries, too, clearly exceeded the level of 1928.

It can therefore be established that the drop in the cost of living was greater than the reduction of wages in industry. In total industry the real wages, according to the insurance company's statistics, were 9 per cent higher in 1934 than in 1928. In practice this is usually not noticed, for people are inclined to "hold fast" to the nominal amount of wages without in the least thinking that fluctuations in the level of prices can affect the standard of living even more than changes in the level of wages.

The greater fall in wages in the exporting industries is naturally due to the unfavourable course of prices for their products, to which we have already referred in connection with wages for lumber work. The level of prices for products of home industry was steadier, as their - prices were on an average only 7 per cent lower in 1934 than in 1926. In these circumstances it is particularly interesting to note that there is no great difference between the level of wages in the exporting industries and in home industry, although it is a general rule in industrial countries that the level of wages in the exporting industries is considerably lower than in home industry.

## COMPARISON OF WAGES IN FARM <br> AND LUMBER WORK TO WAGES IN INDUSTRIAL WORK.

Having examined wages in farm and lumber work and wages in industrial work separately, we must now consider them in relation to each
other. The comparison is made in the diagram on page 23 .

In 1920-1923 the curves for wages are fairly close to each other. As the working population engaged in farm and lumber work represents unskilled labour from the point of view of industry, ; we can draw the conclusion that during the period of inflation the wages of skilled and unskilled labourers tend to approach each other and that only on the conclusion of the process of inflation the curves begin to separate again more noticeably.

During the depression wages dropped much more in farm and lumber work than in industrial work. This was, of course, due to the exceptionally great extent of unemployment in the rural districts and to the supply of lumber work being greatly restricted in the worst years. of the depression. Wages for seasonal farm work fell off still more than wages for lumber work and their rise during the period of recovery was slower and later than the rise in wages for lumber work.
The limit for the level of wages in farm and lumber work is imposed in the first place by the ability of agriculture to pay wages. It appears to be characteristic of the fixing of wages in the rural districts of Finland that the woodworking industries organise their terms of production in such a way that in lumber work, in which they employ the same workpeople as farmers in their seasonal work, they pay approximately the same wages as farmers for such work, in which they employ temporary labour most. The tendency is to pay the same wages for the same kind of work, and as farm and lumber work are generally considered to be similar, the consequence is that the wages for them are maintained on the same level. It is, however, natural that wages in industrial and lumber work should also influence :wages in farm work. Thus, the level of wages in farm work in industrial localities, in which there is a large demand for labour, is higher than at a distance from such centres, but being the largest employer of labour in Finland agriculture is, nevertheless, the factor that, apart from the supply of labour, has the most decisive influence on the level of rural wages.

## INTERNATIONAL OOMPARISONS OF WAGES.

As the insurance company's data regarding daily wages are lower than the actual wages, they cannot be used as a basis for making a comparison between the level of wages in Finland and in other countries. In international correlations, therefore we must turn to other sources. In this connection we refer for that reason to a special report on the standard of living among the working classes in different countries, issued by the International Labour Office.

This report was published in the journal of the International Labour Office "Revue internationale du Travail" in November, 1933. The object of the investigation was to ascertain the proportion of different groups of expenditure to the earnings of the working classes in different countries and on that basis to establish the standard of living of the working classes in those countries. The investigation is based on the so-called Engel's law, according to which the ratio of expenditure on food decreases as income increases, the ratio of expenditure on rent, heating, lighting and clothing remains comparatively unchanged in different classes of income, but the ratio of sundry expenditure grows in proportion to the increase in income. The standard of living is, therefore, highest in those countries, in which the ratio of expenditure on food is least and the ratio of "sundry expenditure" is correspondingly largest.

By means of this method of investigation it is, of course, impossible to make exact calculations, but on the basis of it approximate comparisons can be made between the standards of living in different countries. The data concerning Finland in the original international investigation, unfortunately, refer to 19201921, when we still had an exceptional system of control, but subsequently a fresh investigation was made, referring to 1928, which shows that the standard of living in Finland had improved very much during 1921-1928. The results of this new investigation were published in the journal of the International Labour Office, but unfortunately not until August, 1934. As the ratios of expenditure on food and "sundry expenditure" are usually employed as a standard measure in international comparisons, only the ratios referring to them are quoted in the following table:-

|  |  | Year, to <br> which data <br> refer. |
| :--- | :---: | :---: | :---: | :---: | | Expenditure <br> on food. <br> $\%$ |
| :---: | | Sundry |
| :---: |
| expenditurc. |
| $\%$ |

. The table shows that the standard of living among the working classes in Finland in 1928 was the same as in other civilised states in Europe. Although 'wages in Finland are lower than in many other countries, the low cost of living should also be borne in mind, as on account of it the standard of living is no lower in Finland than in those countries, in which
the level of wages itself is highest. It has already been mentioned that the real wages of the working classes in Finland are at present on the 1928 level or higher, so that their standard of living is at present at all events not lower than immediately before the world depression.

## ITEMS.

State finances. Acoording to preliminary information the current revenue of the State during the first three quarters of this year amounted to $\mathbf{2 , 1 6 1}$ million marks in comparison with 2,248 millions during the same months in 1934. The principal oapital revenue amounted to 130 million marks as against 382 millions last year, when loans issued were included. During the same period the current expenditure amounted to 1,843 million marks and the capital expenditure to 354 millions as compared with 1,795 and 516 millions last year.

The principal items of revenue were as fol-lows:-

|  | 1935 | 1934 |
| :---: | :---: | :---: |
|  | Mill, mks. | Mill. |
| Income and property tax | 56.2 | 60.3 |
| Import duties .. | 1,180.7 | 1,147.2 |
| Excise on tobacco, matches and sweetstuffs | 164.9 | 152.9 |
| Excise on malt beverages, spirits and wines | 83.5 | 85.6 |
| Stamp dues | 130.8 | 127.5 |
| Interest and dividends | 177.7 | 141.0 |
| State Railways, net income | 1.03.0 | 101.9 |
| Posts and Telegraphs, net income | 27.3 | 21.6 |
| State Forests, net income | 59.1 | 81.0 |

As far as can be judged by the results for the three completed quarters, the State finances seem likely to close this year, too, with a surplus of revenue, though it will not be as large as last year. The greater part of it will, however, probably be employed for purposes specified in the supplementary Budget for the present year.药

State timber sales. At the timber auctions in September the Board of Forestry offered
$1,000,075$ trees of standing timber and $1,408,704$ trees for delivery. The greater part or 941,074 trees of standing timber and $1,315,307$ trees for delivery were sold either at the auctions or in accordance with bids made later. The average price, according to the deals reported so far, is Fmk. 2:37 per English cubic foot for standing timber and Fmk. 3: 67 for delivered logs. The corresponding averages last year were Fmk. 2:94 and 4:23 and for 1933 Fmk. 2:52 and 3:88. The level of prices is therefore considerably lower than in the preceding years.

New bond loan. The city of Viipuri (Viborg) has issued a new internal bond loan to an amount of 25 million marks that is to bear a nominal rate of interest of $51 / 2$ per cent. The loan is to be redeemed in the course of 1936-1955 and the right of conversion comes into force in 1940. The rate of issue for the loan is $991 / 2$ per cent net. The proceeds of the new loan are to be employed by the municipality for redeeming its short-term credits.

Increase of capital. Suomen Gummitehdas Oy. - Finska Gummifabriks Ab. has decided to raise its capital from 42 to 63 million marks by issuing bonus shares. The balance sheet total of the company at the end of 1934 amounted to 141.6 million marks, of which 34.8 millions represented indebtedness. The profit for 1934 was 7.3 million marks and the dividend paid to shareholders 14 per cent.

Kymmene Ab. Oy. Kymi-Kymmene Ab. recently ordered a 3 -roll newsprint machine of a working width of $210^{\prime \prime}$ net from England. The new machine is intended for the Voikka mill, where a sister-machine was started a short time ago.

Ab. Wärtsilä Oy. The $A b$. Wärtsilä Oy. company recently purchased a controlling interest in Maskin och Bro Ab . By the acquisition of these shares the former company has taken its place at the head of our largest combine in the metal industry, for Maskin och Bro Ab. owns a controlling interest in Ab . Sandvikens Skeppsdocka och Mekaniska Verkstad, in Ab. Crichton-Vulcan Oy. and in Kotka Mekaniska Verkstad. The sphere of activity of the new combine thus embraces ironworks, rolling mills, foundries, bridge building and other large iron construction work, platelaying works including the manufacture of steam boilers, cellulose boilers and cisterns, separator works and a factory for locks.

Ab. Wärtsila Oy . has a capital of 30 million marks and at the end of last year its assets were valued at 59.4 millions. For the last two years the dividend paid was 5 and 6 per cent.

The capital of Maskin och Bro Ab. amounts to 40 million marks and its assets amounted to 131.2 millions according to the balance sheet on September 30th, 1934. For four years in succession the company has paid a dividend of 6 per cent.

The harvest. The Board of Agriculture has now made a preliminary estimate of the quantities of this year's harvest. The following table gives the result of this estimate in comparison with the final data for the previous years (in millions of kg ):-

|  | 1935 | 1934 | 1933 | 1932 |
| :---: | :---: | :---: | :---: | :---: |
| Autumn wheat | 43.6 | 41.1 | 36.6 | 22.8 |
| Spring wheat | 49.9 | 48.1 | 30.4 | 17.5 |
| Rye | 359.1 | 394.8 | 372.7 | 329.4 |
| Barley | 173.1 | 208.6 | 178.5 | 178.9 |
| Oats | 641.4 | 776.3 | 635.5 | 6169.5 |
| Potatoes | 1,317.0 | 1,189.4 | 1,281.8 | 983.4 |
| Meadow hay | 3,385.3 | 3,070.9 | 2,753.1 | 3,016.2 |

As indicated by these figures, the crop of meadow hay and potatoes is estimated to exceed
the crop of the year before. In the case of wheat, too, the result is rather better than last year, but for other kinds of grain the crop was considerably smaller than in the record year 1934. In comparison with 1933 and 1932 the result of the harvest is in general satisfactory.

According to preliminary estimates the value of this year's harvest is calculated to amount to 4,872 million marks. This is less than in the previous years, in which the value amounted to the following sums according to final calculations: 5,223 million marks in 1934, 5,116 millions in 1933, 5,312 millions in 1932, 4,820 millions in 1931 and 4,676 millions in 1930.

Profits of agriculture. The Board of Agriculture has now completed a calculation of the profits yielded by agriculture during the past accountancy year 1934-1935. According to the calculation that is based on the accounts of 200 farms in different parts of the country, the gross yield per hectare averaged 2,252 marks in comparison with 2,122 marks for the accountancy year 1933-1934. The gross yield had thus improved by 140 marks or 6.6 per cent. The increase was due principally to the good harvest of 1934 , especially in the case of hay and oats. Besides, the prices for milk, butter and beef were slightly higher than during the previous accountancy year.

Expenditure also recorded a slight rise, from 1,642 marks per hectare to 1,670 marks, making 28 marks or 1.7 per cent. The increase was mainly a result of higher wages and would have been even larger, if the use of bought cattlefood had not decreased at the same time owing to the good harvest.

The net yield was calculated to average 582 marks compared with 470 marks in the previous accountancy year. There was consequently an appreciable improvement or on an average 112 marks per hectare representing an increase of 23.8 per cent. The net yield thus amounted to 6.1 per cent of the active capital. The corresponding yield for the accountancy year 1933 - 1934 was 5.0 and for $1932-19334.6$ per cent. The result for last year was, therefore, quite satisfactory.

Shipping in 1934. A report on Finnish shipping during last year has just been published and shows that it was larger than during any previous year. The number of vessels arriving was 7,664 , of which 3,349 were Finnish and 4,315 foreign, and the number of vessels sailing was 7,650 , of which 3,375 were Finnish and 4,275 foreign. Altogether the vessels amounted to $10,721,000$ net tons, representing an increase of $14 . \mathrm{f}$ per cent since 1933. The increase in the Finnish tonnage was 5.9 per cent and in the foreign 18.6 per cent. The greater increase in foreign tonnage is due to a much larger demand for tonnage owing to lively timber shipments. From 1929 to 1934 the share of Finnish tonnage in the imports has risen from 28 to 50 per cent. On the other hand the share of Finnish tonnage in the exports is less, amounting to 30 per cent for 1934. Traffic was heaviest in the following ports: Helsinki (Helsingfors) 2.8 million net reg. tons, Kotka 2.7 million, Viipuri (Viborg)-Uuras 2.5 million,

Turku (Ảbo) 1.3 million, Rauma 0.8 million, Pori (Björneborg) including Mäntyluoto-Reposaari 0.6 million and Hanko (Hangö) 0. f; million net reg. tons.

New ships. Ab. Finland-Amerika Linjen re-. cently signed an agreement to take over the British cargo steamer "Towerdale". The ressel is 5,570 gross reg. tons and 3,352 net reg. tons. Built in 1921, the ship has been equipped this year with entirely new engines and has been given a new classification. It will be employed on the Finland--South America line, which will then be served by nine steamers.

The Finska ingfartygs-Ab. recently concluded a contract for the purchase of the Swedish cargo steamer "Maud", measuring .2,200 tons deadweight and 1,400 gross reg. tons. The steamer, which was built in 1933, is registered in the highest class in Veritas and is strengthened against ice.

## THE BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.

[^0]:    ${ }^{\text {1) }}$ Included in home loans, see table 4. Re-discounted Bills according to the monthly statements of the Bank of Finland, The figures in brackets [ ] indicate the position at the end of the previous year.
