#### THE BANK OF FINLAND INVESTMENT INQUIRIES

THE INQUIRY METHOD

Since 1962 the Bank of Finland has conducted twice-yearly inquiries into the volume of industrial fixed investment. The inquiries are designed to provide information which is used in the forecasting and policy formulation work of the Bank. The inquiry covers a sample of about 800 industrial enterprises, stratified by size and industry. All large enterprises (over 500 employees) are included in the sample; medium-sized and small enterprises are selected at random to fill up their own strata according to industry.

In the inquiries, the enterprises are asked for details of their actual investment during the previous year, their current investment plans and their anticipated rate of capacity utilization during the current year and the following one. Investment figures, measured in current prices, are to be submitted separately for building construction, for land and waterway construction, and for machinery and equipment.

The response to the inquiries — weighted by each enterprise's workforce — has generally been over 90 per cent. The data on actual investment can be considered to be very reliable. For reasons related to the inquiry and sampling techniques, the mark figures obtained through the inquiries do not exactly correspond with the figures in the Official Statistics; however, the actual annual changes have been fairly consistent with those indicated by the Official Statistics.

In the data which the investment inquiries give on industrial investment plans, there has generally appeared a degree of underestimation in direct proportion to the length of the period projected. The degree of underestimation — which is apparent in similar foreign investment inquiries as well — varies in line with cyclical and financial conditions. Underestimation may also be due to technical changes subsequently made in the investment plans, and to the firms' expectations of slower rates of price inflation.

For forecasting purposes, the degree of underestimation has been adjusted for by means of average adjustment coefficients calculated on the basis of previous inquiries and by using regression equations which take into account the cyclical and financial conditions. Changes in the values of investments have been deflated into volume figures by using the data for changes in investment prices suggested by the Bank's short term economic forecasts.

THE RESULTS OF THE NOVEMBER 1976 INVESTMENT INQUIRY

INVESTMENT IN 1976

According to the investment inquiry conducted by the Bank of Finland in November 1976, the volume of industrial investment declined in 1976 by 25 per cent from the record level of 1975. The result corresponds almost exactly with the results of the inquiry made six months earlier in May 1976. In spite of the sharp decline in industrial investment, its share in total fixed investment remained fairly large, about 30 per cent. The slackening in industrial investment activity was due to the low capacity utilization rate, the fact that demand and profitability prospects remained poor throughout the year, and also to difficulties in obtaining external finance.

Of the various industrial branches, a particularly sharp decline in investment was experienced by the metal industry and by the forest industries, with investment in the paper industry declining the most. The volume of investment in the metal industry declined by 35 per cent and that in the forest industries by 33 per cent, as compared with the figures for the previous year (see the Table). The volume of investment in other branches of manufacturing declined by an average of 27 per cent, with the most noticeable decline being experienced by the chemical industries. The volume of total

Other manufacturing	—18	27	—11	<b>—10</b>
Total manufacturing	9	-32	— 8	<u> </u>
Electricity, gas and water	31	<b>— 4</b>	—12	10

#### 2. By type of investment

	1975	1976			
			Origi- Ad- nal justed¹		
Building investment Purchases of machinery and	10	32	<b>—12 —10</b>		
equipment	12	—20	<del>- 8 - 5</del>		
Total industry	12	<u>-25</u>	<u> </u>		

<sup>&</sup>lt;sup>1</sup> The adjusted figures and the volume forecast presented in the text have been obtained by adjusting the original figures by means of investment realization functions estimated from the results of previous inquiries.

industrial investment was bolstered somewhat by investment in electricity, gas and water works, where the decline in the volume of investment was no more than four per cent.

In 1976 industrial investment activities were concentrated on the completion of investment projects started during the previous boom and on the replacement of old machinery. Accordingly, the volume of investment in new industrial buildings declined by as much as 32 per cent, while the decline in the volume of purchases of machinery and equipment was 20 per cent.

#### **INVESTMENT OUTLOOK FOR 1977**

According to the November inquiry, industrial investment activity in 1977 will be noticeably weaker than was suggested by the May inquiry. This is obviously due to the fact that the cyclical upswing has started more gradually than was anticipated and that the credit market is still very tight. The inquiry suggests — when adjustments have been made for the normal degree of underestimation in the replies — that

the volume of industrial investment will decline this year by about five per cent from the volume in 1976. This assumes that the cyclical picture improves and that the financing of investment projects can be arranged in keeping with the firms' expectations. According to the inquiry, investment in the forest industries will grow vigorously, whereas there will be a decline in other branches of manufacturing, particularly in the metal industry. Similarly, there will be a noticeable decline in the volume of investment in electricity, gas and water works, but their share in total industrial investment will still remain large.

During the current year, it seems that industrial investment activities will still be concentrated on purchases of machinery and equipment. The growth in the investment activities of the forest industries will be based purely on a substantial increase in purchases of machinery and equipment. Building investment will only grow in other branches of manufacturing: building plans in the food, drink and tobacco sector and in the chemical industries are clearly larger than last year's projects.

#### THE RATE OF CAPACITY UTILIZATION

According to the inquiry, the average rate of capacity utilization in industry in 1976 remained at the rather low level prevalent during the second half of 1975. An increase in the rate of capacity utilization during the first half of 1977 is expected by only a small number the respondent firms; however, 47 per cent of the firms (weighted by workforce) estimated that their rate of capacity utilization would rise towards the end of the year. Considered by sector, the rate of capacity utilization is expected to rise in most of the forest industry firms during the first half of 1977, with the rise continuing into the second half of the year in 77 per cent of firms. On the other hand, the rate of capacity utilization in the metal industry is expected to decline throughout the year.

#### **EXPLANATIONS RELATING TO THE STATISTICAL SECTION**

#### BANK OF FINLAND

The balance sheet of the Bank of Finland was revised on Dec. 31, 1974 in connection with the revision of accounting legislation. New series have been built according to the revision. When the figures are not fully comparable to the previous ones, the series is broken by a line.

Page 4. Foreign sector: Gold and convertible exchange receivables = Gold + Special drawing rights + IMF gold tranche + Convertible currencies.

Gold and convertible exchange reserve = Gold and convertible exchange receivables — Liabilities in convertible currencies.

Non-convertible exchange reserve = Receivables in tied currencies — List illities in tied currencies.

Other receivables = Foreign bills + Foreign bonds + Currency subscription to Finland's quota in the IMF.

Other liabilities = IMF mark accounts + Allocations of special drawing rights.

Public sector: Receivables = Total coinage + Other public sector receivables + Bonds.

Liabilities = Cheque accounts + Counter-cyclical reserves + Import deposits + Other public sector liabilities.

Deposit certificates are interest bearing, freely transferable, term liabilities of the Bank of Finland. Their maturities range from one week to one year.

Page 5. Domestic financial sector: Other receivables = Call money market advances + Bonds + Other financial institution receivables. Other liabilities = Call money market deposits + Other financial institution claims.

Corporate sector: Receivables = New export bills + Financing of suppliers' credits + Other corporate receivables + Bonds.

Liabilities = Investment deposits + Counter-cyclical withholdings + Capital import deposits + Import levy deposits + Other corporate claims.

#### DEPOSITS BY THE PUBLIC — ADVANCES TO THE PUBLIC — MONEY SUPPLY

Figures for deposits and advances are supplied by the Central Statistical Office. From the beginning of 1974 the figures include deposits by and advances to other credit institutions.

Page 6. Cheque accounts in all credit institutions relates to commercial banks, savings banks and co-operative banks.

Page 7. Money supply = Finnish notes and coins in circulation — Finnish notes and coins held by the banks + Cheque accounts of the public + Postal giro accounts of the public.

From 1974 the money supply includes estimates of Finnish notes and coins held by the savings and co-operative banks. Exact figures are not available.

#### STATE FINANCES

Page 8. Official figures computed by the Economic Department of the Ministry of Finance. First date of publication: Bulletin No. 8. 1968. Revenue and expenditure: Extra-budgetary funds and the aggregated net current deficit of State enterprises are included. Figures are reported on a cash payment basis. Debt: Foreign debt includes promissory notes given to international organizations. Index-tied bond loans are taken at nominal values. Cash debt (net) = net debt to the Bank of Finland plus short-term debt to Postipankki less cash holdings (net) of State departments and funds.

#### FOREIGN TRADE

Pages 9—11. Figures supplied by the Board of Customs. *Indices* (p. 9). The volume indices are calculated according to the Paasche formula and the unit value indices according to the Laspeyres formula. *Terms of trade:* the ratio of export indices to import indices. *Poreign trade by countries* (p. 11): imports by countries of purchase exports by countries of sale.

#### BALANCE OF PAYMENTS

Pages 12—13. Figures are calculated by the Bank of Finland. In addition to the Board of Customs figures, exports include grants in kind but exclude stevedoring expenses and imports include seamen's duty-free imports, non-monetary gold, grants in kind and adjusted allowance for smuggling.

#### PRICE INDICES

Page 14. All indices calculated by the Central Statistical Office.

#### WAGES -- PRODUCTION

Pages 15-16. Figures supplied by the Central Statistical Office. Page 16. Index of industrial production calculated by the Central Statistical Office. The grouping by branches of industry is in accordance with the Standard Industrial Classification (SIC) which is a version of the 1968 edition of the ISIC. The SIC facilitates international comparisons between Finnish statistics and corresponding data from countries which use the ISIC. The seasonally adjusted series is calculated by the Bank of Finland on the basis of the index of industrial production per working day according to a method resembling the U.S. Bureau of Census Method II. Commodities according to use: Investment goods weight 7.0, other producer goods weight 67.0 and consumer goods weight 26.0. The weights fot the special manufacturing indices are food manufacturing (SIC 311-2) 9.8, manufacture of wood, and wood and cork products (SIC 311-2) 8.0, manufacture of paper and paper products (SIC 341) 15.2, manufacture of industrial chemicals (SIC 351-2) 5.2, manufacture of non-metallic mineral products except products of petroleum and coal (SIC 361-9) 3.6 and metal industry (SIC 37-38) 25.9.

#### SOME PARTICULARS ABOUT FINLAND

#### FORM OF GOVERNMENT

From 1155 to 1809 Finland formed a part of the kingdom of Sweden. Connected from 1809 with Russia, Finland was an autonomous country with the Emperor as Grand Duke until December 6, 1917. the date of Finland's declaration of independence. The republican constitution was adopted in 1919. The legislative power of the country is vested in Parliament and the President. The highest executive power is held by the President, elected for a period of 6 years. Mr. Urho Kekkonen has been President for three 6-year periods. His last term of office was extended by four years and will end on March 1, 1978.

Parliament, comprising 200 members, is elected by universal suffrage for a period of 4 years. The number of seats of the different parties in Parliament elected in 1975 is as follows: Social Democrats 54. People's Democrats 40. Centre Party 39, Conservatives 35, Swedish Party 10, Liberal Party 9, Christian League 9 Finnish Farmers Party 2, Finnish People's Unification Party 1 and Finnish People's Constitutional Party 1.

#### INTERNATIONAL ORGANIZATIONS

Finland became a member of BIS 1930, IMF 1948, IBRD 1948, GATT 1950, UN 1955, IFC 1956, IDA 1960, EFTA 1961, ADB 1966 and OECD 1969.

#### LAND

THE AREA is 337 000 square kilometres (Great Britain's area is 245 000 sq. km and Italy's area 301 000 sq. km). Of the total, inland waters form 9.4 %. Of the land area (1970) 2.7 mill. ha (9.6 %) are cultivated and 19.1 mill. ha (68.4 %) are covered by forests.

OWNERSHIP OF LAND (1970): The total land area was distributed among different classes of owners approximately as follows: private 60.7 %, State 29.4 %, joint stock companies etc. 8.0 %, municipalities and parishes 1.9 %.

#### POPULATION

NUMBER OF INHABITANTS (1975): 4.7 million. Sweden 8.2. Switzerland 6.4, Denmark 5.1 and Norway 4.0 million.

DENSITY OF POPULATION (1975:) In South Finland 46.1, in East and Central Finland 13.3, in North Finland 4.0 and in the whole country an average of 15.5 inhabitants to the square kilometre.

DISTRIBUTION BY AREA (1975): 41 % of the population inhabit the rural areas, 59 % towns and urban districts. The largest towns are: Helsinki (Helsingfors), the capital 496 872 inhabitants, Tampere (Tammerfors) 165 928, Turku (Åbo) 163 981.

EMPLOYMENT (1975): Agriculture and forestry 15 %, industry and construction 36 %, commerce 16 %, transport and communications 7 %, services 26 %.

LANGUAGE (1974): Finnish speaking 93.3 %, Swedish speaking 6.5 %, others 0.2 %.

EDUCATION (1976): Practically all persons over 15 years of age are literate. There are 6 universities (the oldest founded in 1640) and 12 colleges of university standard.

CHANGE OF POPULATION (1975): births 14.1  $^{\circ}$ /<sub>00</sub>, deaths 9.4  $^{\circ}$ /<sub>00</sub>, change + 3.8  $^{\circ}$ /<sub>00</sub>, net em<sup>1</sup>gration 0.9  $^{\circ}$ /<sub>00</sub>. Deaths in France 10.4  $^{\circ}$ /<sub>00</sub> and Great Britain 11.9  $^{\circ}$ /<sub>00</sub>.

#### TRADE AND TRANSPORT

NATIONAL INCOME (1975, in million marks): Gross domestic product at factor cost by industrial origin: agriculture 5 625 (6 %), forestry and fishing 5 025 (6 %), manufacturing 28 290 (32 %),

construction 9 310 (10 %), transport and communication 8 841 (10 %), commerce, banking and insurance 11 964 (13 %), public administration 4 313 (5 %), ownership of dwellings 3 299 (4 %), services 13 035 (14 %), total 89 702. Index of real domestic product 159 (1964 = 100).

FOREST RESOURCES (1975): The growing stock comprised of 1513 million m³ (solid volume with bark), of which 44 % was pine and 38 % spruce, the remaining 18 % being broad-leaved trees, chiefly birch. Of the growing stock, 656 million m³ was up to the standard required for logs, 55 % of these being pine. The annual growth was 57.5 million m³ and the total removal, calculated on the basis of roundwood consumption, was 40.1 million m³.

AGRICULTURE (1974): Cultivated land 2.6 million hectares. Number of holdings 258 600, of which 172 400 are of more than 5 ha. Measure of self-sufficiency in bread cereals 116 % in the crop year 1974/75.

INDUSTRY (1973): Gross value of industrial production 54 650 mill. marks, number of workers 417 884, salaried employees 119 436, motive power (1973) 6.0 mill, kW. Index of industrial production 122 for 1973 (1970 = 100).

STATE RAILWAYS (Jan. 1, 1977); Length 5 920 km.

MERCHANT FLEET (Dec. 31, 1976): Steamers 23 (10 300 gross reg. tons), motor vessels 363 (977 800 gross reg. tons) tankers 56 (1 102 400 gross reg. tons). Total 442 (2 090 500 gross reg. tons).

MOTOR VEHICLES (Dec. 31, 1975): Passenger cars 996 300 lorries and vans 128 400, buses 8 600, others 6 600. Total 1 139 900 FINNISH AIRLINES (Feb. 10, 1976): Finnair and Kar-Air have in use 4 DC-8-62s. 1 DC-6. 10 Super Caravelles, 9 DC-9s, 3 DC-9-51s, 2 DC-10-30 and 5 Convair Metropolitans. Companies have scheduled traffic outside of Finland to 27 airports and to 20 domestic airports.

#### FINANCE AND BANKING

CURRENCY. Since 1860, Finland has had its own monetary system. From 1877 until 1914 the country was on the gold standard, and returned to it in 1926. In 1931, the Central Bank's duty to redeem bank notes in gold was suspended and at the end of 1962 was entirely cancelled. The monetary unit is the mark (Finnish markka). Since Oct. 12, 1967, the par value of the mark is 0.21159 grams of fine gold per mark (equivalent to 4.20 marks per one SDR). On Feb. 15, 1973 a central rate of 3.90 marks to one U.S. dollar was set, and since June 4, 1973 the mark has been allowed to float.

THE CENTRAL BANK. The Bank of Finland (estab. 1811) functions under the quarantee and supervision of Parliament. Its Board of Management is appointed by the President of the Republic; the Bank Supervisors, nine in number, are elected by Parliament. The Bank has a head office in Helsinki and 12 branches in other towns. OTHER CREDIT INSTITUTIONS (Dec. 31, 1975). There are two big and five small commercial banks with in all 864 offices, 283 savings banks 384 co-operative banks, six mortgage banks, Postipankki and five development credit institutions. The co-operative stores accept deposits from their members. The Social Insurance Institution and fifty-nine private insurance companies also grant credits.

RATES OF INTEREST (Jan. 1, 1975). The official discount rate of the Bank of Finland (the basic rate applied by the Bank of Finland for discounts and rediscounts of commercial banks) is 9 % %. The range of rates for other credits granted by the Bank of Finland is between 7 ½ and 10 ½ %. Other credit institutions; term deposits 5 3/4 %; 6 month deposits 6 ½ %; 12 month deposits 6 3/4 %; 24 month deposits 7 3/4 %; 36 month deposits 9 % + savings premium; 36 month deposits 8 ¼ % + tax concession and sight deposits 1 ½ %; highest lending rate 12 ½ %.

#### **GROWTH PROSPECTS FOR THE FINNISH ECONOMY TO 1981**

by Kauko Mannermaa, Head of Office, and Timo Belander, Director-in-Chief

Economics Department Ministry of Finance

Every year, as a supplement to the Budget Proposal, a survey of the 5-year economic outlook is prepared, outlining the expected trends in the Finnish economy and the future pattern of fiscal policy. With increasing attention being paid in policy formulation to long-term aspects, the importance of this annual survey is growing. At the same time, attempts are being made to forecast more precisely the effects of short-term fluctuations, and to take full account of the monetary and fiscal policy measures taken on the basis of the forecasts.

Based on the survey attached to the 1977 Budget Proposal (issued in October 1976 and approved in January 1977), this article assesses the Finnish economy's growth prospects up to 1981. The estimates presented are not forecasts proper, the Survey is a target-setting examination of the chances of eliminating the imbalances prevailing in the economy and achieving stable long-term economic growth. In the Survey, attention is also paid to the demands and the restraints placed on public and particularly state - finances by the set of targets chosen. In the spring and summer of 1976, a preliminary version of the survey was used as background information in economic policy-making.

#### PROSPECTS FOR THE EXPANSION OF PRODUCTION

The propects for expanding production in Finland are still fairly good. It is estimated that between 1976 and 1981 the supply of labour could increase by some 85 000 persons, i.e. by 0.7 per cent annually (this assumes no net emigration), and the total labour input is likely to grow only slightly more slowly than the number of persons employed. Moreover, the

age structure of the population of working age is favourable from the point of view of the expansion of production.

Because of the current low capacity utilization rate and the fairly large industrial investments made in recent years, there is much scope for increases in productivity. On the other hand, there are a number of factors which will tend to hold back the growth rate of productivity: there will be a slowdown in the shift of labour out of low productivity sectors such as agriculture; at the same time, industries with productivity growth lower than the average, like services, will account for an increasing share of total output and labour. Furthermore, uncertain international economic prospects may hold back industrial investment, causing further restraints on productivity growth.

Given favourable circumstances, the potential long-term growth of total output - calculated from labour input and productivity - could be nearly 4.5 per cent per annum. As the utilization rate of productive capacity was low in 1975 and 1976, and total output thus much smaller than productive capacity would have allowed, gross domestic product could grow taking the actual 1976 level of output as the basis — by nearly five per cent annually between 1976 and 1981. With unemployment, inflation and the current account deficit being the main problems of economic policy, it will not be easy to pursue a course with results favourable in every respect. A rapid growth of domestic demand would be desirable for several reasons, but it would very likely result in a surge in imports, thus hampering progress back to current account balance. Thus, in the period under review, the need to restore a current account balance will set limits to the growth of production. A substantial and durable reduction in the current account deficit will also require an increasing part of the growth of output to be devoted to expanding exports. Accordingly, the growth in the volume of domestic demand should be smaller than the growth of the volume of output.

ESTIMATES OF INTERNATIONAL ECO-NOMIC DEVELOPMENTS AND FINNISH EXPORT PROSPECTS

It is assumed in the survey that the real growth of gross domestic product in the OECD area will be some five per cent per annum in 1976—1981, with more than one percentage point of this being a consequence of the exceptionally low base level in 1976. Growth in Sweden and the United Kingdom will be slower than the average, producing a growth rate weighted by shares in Finnish exports of four per cent per annum. The growth may well turn out to be smaller than estimated, however. There will also be a number of problems to be faced, particularly since the level of unemployment in the OECD countries is likely to remain very high for a long time.

Both growth rates and price developments will vary greatly between countries and this will cause severe problems for international economic development. If methods are not found to level-off these diverging trends, at least to some extent, then the adjustment mechanisms of the international economic system will come under substantial strain. In the coming years, the foreign trade environment will thus be characterised by great uncertainty.

Although there has been rapid export growth for certain products, the market shares held by Finnish exports in general have declined in the 1960s and 1970s. However, in recent years export capacity has been increased substantially; on the basis of estimates of international economic developments and the growth of Finnish export capacity, the potential average annual growth of the volume of commodity exports is some seven per cent.

For forest industry exports, the importance of more-processed products will grow further during the period under review. Pulp and sawn goods will account for a declining share in total exports, while the share of paper industry products will grow. Owing to a growth in exports to the Socialist countries, exports of metal products and machinery will grow quite

rapidly during the first years of the period under review. If the revival of economic growth induces a vigorous investment boom in Western countries — as yet there are no clear signs of this — then Finnish exports to Western countries might also expand considerably. The increased processing capacity in the chemical industry is likely to maintain a rapid rate of growth of the exports of chemical products.

It seems likely that under the Framework Agreement with the Soviet Union for 1976—1980, the increase in trade will take place mainly during the first half of the agreement period; hence, unless new measures are taken to boost the trade before the following recession, exports to the Soviet Union will not necessarily be a stabilizing influence on Finnish economic development to the same extent as they have been during the current recession.

The effective balance attained during 1975—1976 in Finland's trade with the Soviet Union implies that the growth prospects of Finnish exports to the Soviet Union are once again closely connected with the growth prospects of imports. It is estimated that exports to the COMECON countries will continue to expand, although more slowly than in recent years.

#### THE GENERAL COURSE OF ECONOMIC POLICY

The prevailing economic problems — the current account deficit, unemployment, inflation, and the weak position of state finances — limit the choice of economic strategies which can be followed. An improvement in the employment situation would be brought about by vigorous output growth; on the other hand, the Finnish economy is highly dependent on imports, so that a growth of production and demand spills over quickly into a rapid rise in imports. For this reason, the growth of production should be based primarily on the vigorous promotion of exports and on an expansion of import-substituting industries. The growth prospects for domestic demand will

depend closely on the development of the current account. At present, the need to improve price competitiveness necessary to expand exports and curb imports allows only very few alternatives on the incomes policy front as well. There are, in principle, various ways in which the current account problem could be solved. Firstly, a solution could be looked for without intervening in the present system of foreign trade. Secondly, it would be possible to introduce import restrictions. Thirdly, industry's price competitiveness could be improved by means of devaluation.

Since permanent import regulation and devaluation would both involve many uncertainties and disadvantages, several economic policy measures designed to curb both public and private demand have been implemented since March 1975; these measures have aimed at reducing the current account deficit and at checking inflation. In the early part of 1976, it was also considered necessary to examine the possibilities of solving the prevailing economic problems through intensified demandmanagement policies, particularly since exports were recovering and import pressures, at least for the time being, were decreasing.

In what follows, it is assumed that similar policies will continue to be pursued and, in addition, that income and price policies will be such as to keep the rate of inflation within the range required to ensure that Finnish exports will continue to be competitive in international markets.

#### AGGREGATE DEMAND AND SUPPLY

It seems likely that Finland's foreign debt will grow further in the coming years, although the situation has improved slightly, partly for cyclical reasons. If the growth of the debt is to be checked and the dependence on foreign creditors to be reduced, then the current account deficit must be brought down to a moderate level before the end of the period under review.

This would mean that the rise in the ratio of foreign debt to gross domestic product would be halted by 1980. Even if this target were to be reached, net foreign debt would still amount to almost a quarter of annual GDP. More dramatic progress than this can hardly be expected, because, the growth of domestic demand would then be insufficient to restrain emigration and increase productive capacity.

To achieve the desired growth of exports, general export-boosting measures must be intensified. Particular questions to be dealt with include the arrangement of imports from the Soviet Union to correspond with the increase in exports to be supplied, and productive capacity must become sufficiently flexible to be able to take full advantage of foreign demand during future boom periods.

It will also be necessary to curb the growth of imports. Because of obligations under international trade agreements, this cannot easily be done without holding back the growth of domestic demand. This, in turn, would exacerbate the employment situation, although the negative impact could be somewhat weakened by channelling demand towards domestic products. The growth of domestic demand will have to be kept moderate, because a large part of any extra output will have to be used for the elimination of the current account deficit and not for great improvements in living standards. Hence, it will be necessary to consider very carefully how the reduced potential growth of domestic demand should be distributed, both between consumption and investment, and between the private and the public sectors.

In recent years, investment (incl. stockbuilding) has accounted for a substantial part of gross domestic product. In 1974 the rate of gross investment was 38 per cent and in 1975 37 per cent. The corresponding rates of gross saving were 33 per cent and 29 per cent. Because of declining investment in energy and housing and the difficult financing situation, the rate of investment will decline in the coming years; the willingness of enterprises to invest is, however, likely to remain fairly strong.

The efficiency of investments in Finland has not been competely satisfactory; the resultant increases in output have been smaller than in many other countires, although this is due in part to the differing economic structures. In order to restore the balance between investment and saving, fixed capital formation will have to be held back. It seems possible that investment in some service sectors, as well as certain public investment, could be restrained without causing any significant harm to competitiveness or to the growth prospects of the economy. As a result, the share of fixed investment in gross domestic product is likely to be about 25 per cent in 1981, five percentage points smaller than in 1975.

Due to decisions already taken, upward pressures on public expenditure will be very strong. According to plans made at the end of 1975 by the various administrative sectors, the average annual real growth of state expenditure will be about four per cent. Such a rapid growth in public demand would leavy very little scope for the growth of private consumption, with increasing expenditure calling for substantial rises in tax rates. Furthermore, it would tend to accelerate inflation and to worsen the current account situation. To avoid this, the management of public-sector demand must become more stability-minded, and a critical view must be taken in the justification of expenditure. As a result, the annual growth of the state's current expenditure should be limited to about two per cent. After the substantial quantity of public investment motivated by employment policy considerations in 1975-1977, there could now take place a gradual reduction in the volume of state investment.

It should be possible to control the growth of local government expenditure through cooperation with the local authorities and, if necessary, by restricting central government financial contributions. Nevertheless, it is clear that local expenditure will grow more rapidly than central government expenditure; it seems that the system of local authority financing should be altered so that it no longer gives rise to pressure for expenditure increases. Transfer payments to the household sector should be allowed to increase to the extent necessary to maintain their current relative share in the provision of disposable income to that sector. On the other hand, the share of gross domestic product going in subsidies should be gradually reduced to the level prevailing at the beginning of the 1970s.

Concerning state revenue, it is assumed that excise tax rates will be increased in line with the upward movement of the general price level, and that the income and wealth tax schedules are revised annually to remove the extra degree of progression due simply to inflation. If expenditure items — subsidies in particular — follow the fairly strict course assumed above, there will be no need for any other significant changes in taxation.

In the medium-term Survey, attempts have been made to examine broadly the prospects for restoring current account balance and dealing with potential problems involved in the process, although the necessary measures have not been dealt with in detail. The estimate of developments in the Finnish economy presented in Table 1 is based on the assumptions and targets set forth above.

According to this estimate, total output will grow more slowly than the theoretical growth prospects would allow. Private consumption would grow at the same rate as public consumption, by slightly more than three per cent per annum.

It is estimated that the employment situation will remain somewhat unsatisfactory, and it seems clear that it will not be possible to reattain the low unemployment rates of the early 1970s. However, the estimates for unemployment are highly uncertain, since the rate of unemployment is very sensitive to even the slightest inaccuracies in the estimates of labour demand and supply.

The gross tax burden is expected to remain at its present level until 1981, assuming that state expenditure grows by only the moderate

Growth rates have been calculated by using an exponental trend determined on the basis of the estimates for 1976—1981.

amount envisaged above. A factor influencing to this result is the fact that the prices faced by public expenditure tend to rise slightly faster than the average price level, mainly as a result of the labour-intensive nature of the public sector and its slower rate of productivity increase. There is always a tendency for private consumption to increase more than do production prospects, so if state expenditure grows faster than is assumed, then the weakening in real personal income induced by the increased tax burden would inevitably result in strengthened claims for rises in nominal income and an acceleration of inflation. If that should happen, then the chances of restoring balance to the economy on the lines presented above would disappear. To avoid such an

increase in the tax burden, it will therefore be necessary to consider every method of raising the rate of saving and/or reducing the rate of investment

If the private sector's share of total saving can be increased, there will be no need to keep the tax burden at the level envisaged above; the investment funds needed could then be obtained, to a greater extent than at present, from sources other than the public sector and the international capital market. Significant changes are taking place in the saving and consumption behaviour of the household sector, but some of them are more likely to lower than to raise its rate of saving.

Unless more efficient ways are found to expand and diversify the structure of production, particularly in the open sector of the economy. then the scope for discretion in economic policy will be limited. With structural renewal measures having their effects only in the long term, economic policy will have to concentrate fairly strongly on demand-management. Whether the diversification of production reaches the targets set will largely depend on the channelling of investment. There are signs that events during the coming years will contribute to the solution of this problem. Perhaps the chief sign is that investment needs will decrease in many sectors: housing production can be gradually reduced; the peak in energy investment has been passed, at least for the time being; and heavy infrastructure investment projects in several sectors are now more-or-less complete.

The scenario presented above does envisage statisfactory economic progress, but this depends both on favourable external developments and on the implementation of an economic policy vigorously aimed at the targets as presented in the survey. This will involve particular strains during any forthcoming cyclical upswing, when there is likely to be a temporary improvement in the current account. If as a result of that, demand and price pressures are allowed to break loose, they will completely ruin the chances of reaching equilibrium via

<sup>&</sup>lt;sup>2</sup> Investments by public corporations are included in private investment.

the strategy suggested. More efficient demandmanagement is a necessary part of balancing the economy, but a long-term solution to the chronic problem of the current account deficit can only be found by strengthening the structure of production. For this purpose, attention has to be paid not only to the promotion of exports and the channelling of investment, but also to the domestic competitive position of Finnish products.

#### **SUMMARY**

The prospects for balancing and developing the Finnish economy during the coming fiveyear period have been dealt with above. The most essential targets implied can be summarized as follows:

- the current account should be balanced so that, the ratio of foreign debt to GDP stops growing before the end of the period under review and declines after 1981;
- the growth of production should be sufficient to maintain a satisfactory level of employment;

- both public and private consumption must be allowed to grow sufficiently to remove any tendency towards net emigration;
- price inflation should be slowed down, or at least kept at the average level prevailing in Finland's competitor countries.

Examination shows that it will be possible to reach these targets, but only on very strict assumptions and conditions, of which the following are the most important:

- that output growth picks up somewhat in the market economics, although the capacity utilization rate will be lower than it was in the 1960s:
- that incomes and prices policies (which greatly affect the rate of price increases) are used actively — and successfully — as weapons against inflation;
- that import-substituting industries are steadily expanded and diversified; and
- that economic policy continues to follow the guidelines issued by the Government on April 1, 1976, i.e., to ensure that the growth of domestic demand in 1976—1981 is slower than in previous years, and specifically that it is slower than the growth of output.

#### **ITFMS**

Finland's balance of payments January-September 1976. According to the Bank of Finland's preliminary figures, the current account deficit amounted to 3 360 million marks in January-September, slightly over half the deficit in the corresponding months of 1975. The deficit for the third quarter itself amounted to 1 300 million marks. The current account deficit was financed by the inflow of long-term capital which, in net terms, amounted to 3 300 million marks. The foreign exchange reserves of the Bank of Finland declined by 151 million marks

The deficit on the trade account was only 3 100 million marks, compared with a 6 400 million mark deficit in the same period in 1975. Export earnings were up by 18 per cent, due both to volume growth and to the continuing of the trend of rising prices which had started during the second quarter. The value of imports grew more rapidly during the third guarter than during the first two, but for the three quarters together was still three per cent below the figure for January—September 1975.

The surplus on the services account amounted to 1 130 million marks; receipts grew slightly faster than expenditure last year, and thus the surplus was 255 million marks more than one year earlier. As a result of the revival in exports. transport receipts increased by 18 per cent from the previous year. Travel receipts amounted to 1 018 million marks, an increase of only seven per cent, whereas travel expenditure was 15 per cent up, at 963 million marks, The surplus on the travel account, which had been 112 million marks in January—September 1975, thus declined to 55 million marks for the same period of 1976.

There was a net increase of 25 per cent in payments of interest expenses and dividends abroad. The deficit on the investment income and transfer payments account amounted to 1 350 million marks.

Drawings of long-term foreign loans totalled 4 739 million marks and amortizations 1 336 million marks. Export credits granted to foreign

<sup>&</sup>lt;sup>1</sup> Preliminary figures

customers totalled 460 million marks, while redemptions of similar loans outstanding amounted to 320 million marks. Foreign direct investment in Finland amounted to 147 million marks, while Finnish direct investment abroad was 86 million marks.

The net inflow of short-term capital (incl. statistical discrepancy) amounted to 500 million marks, only some 20 per cent of the inflow of short-term capital in the corresponding period of 1975.

The surplus on the Overall Balance amounted to 383 million marks. The foreign exchange reserves of the Bank of Finland declined by 151 million marks, while the foreign exchange liabilities of other foreign exchange holders were reduced by 534 million marks. The Bank of Finland's tied foreign exchange reserves amounted to 355 million marks at the end of September 1976, and its convertible foreign exchange reserves amounted to 1 272 million marks, declines of 13 million marks and 138 million marks respectively since the end of 1975.

Aarre Simonen. Mr. Aarre Simonen, Lic. Jur., Deputy Governor of the Bank of Finland, died in Helsinki on February 3 at the age of 63. Mr. Simonen was appointed to the Board of Management of the Bank of Finland in 1957 and became Deputy Governor in 1972. Mr. Simonen was a Cabinet Minister five times, a Member of Parliament for over ten years and was elected three times to the Electoral College to choose the President of the Republic. In addition Mr. Simonen held some other directorships and served on the Advisory Boards of many state-owned companies.

# Appointment of a Director at the Bank. On December 17, 1976, the Bank Supervisors delegated by Parliament appointed Mr. Kari Nars, Lic. Pol. Sc., Director of the Council of Economic Organizations in Finland, to the post of Director of the Bank of Finland as from February 1, 1977. Mr. Nars succeeds Mr. Jorma Aranko, who has taken up a post as Member of the Board of Management of the Central Bank of the Co-operative Banks of Finland Ltd.
