

## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

There has been no essential change in the money market in the last few months. The stringency early in the year still prevailed, growing more difficult during the spring as a result of two co-existenit factors, the slow depository movement and the ever increasing demand for credit. Though during the summer months the situation did not actually become worse, it did not improve. Rediscounted bills indeed have decreased considerably in the Bank of Finland in recent times, which shows that the strain on the banks has eased since last spring, but it should be remembered that in normal times the situation of the banks is strongest at this time of year, when exporters generally repay their credits with money received for exports. The fact that the banks had to resort to the Central Bank even to this extent supports the conception that the money market is abnormail and leaves no room for optimism; rather may the money market be expected to become more difficult during the autumn and winter as business will need much more credit, for lumbering among other things.

The accumulation of deposits in the banks has continued slow in spite of purchasing power having passed freely into the hands of the public all through the summer. High taxes and increased cost of living, of course, decrease the capacity to save at present, but apparently also the desire to save is less than usual for several reasons, the strongest being still the fear of inflation. The depository
movement has been slight particularly in the Commercial Banks, while other credit institutions report more active saving. In June deposit accounts in the former increased by 224 million marks, but this may chiefly be ascribed to the semiannual interests having been added to them. In July they even decreased, in August showed a small increase by 51 million and in September decreased by 37 million. A sign of the small savings is that the increase in deposit accounts in January - August was considerably less this year than in 1945, the figures being 728 and 1,374 mililion marks nespectively. On the other hand, cheque accounts accumulated, particularly in July when the increase was 566 million. In August the amount, 259 million marks, was much smaller, but considerably exceeded the increase in deposit accounts. In September the increase was still greater or 685 million, and appears to be principally due to unusually large amounts deposited in the Commercial Banks by exporters. As already mentioned the depository movement was more active in the other credit institutions, increasing much in August. From January to August more than 3,000 million marks accumulated in their savings and current accounts, while the corresponding increase in the Commercial Banks onily slightly exceeded 1,000 million.

The demand for credit has been as great as in previous months so that credit institations have not been able to satisfy the demand fully. Credits granted by the Commercial Banks have increased very littile
during the summer months and even decreased slightly in July and August. One reason for this is that the Banks have not nenewed the Treasury bills, another that exporters and others have repaid short term credits. Consequently domestic bills and cheque accounts have been reduced, although the banks have continued to grant new business credits and increased the credits of former customers. This is seen by the increase month by month in the ordinary loan account. In January-August total credits granted by the Commerciad Banks increased by 6,328 million marks, the corresponding increase of last year being 3,581 million. As credits granted have advanced much faster than deposits, the liquidity of the Commercial Banks has considerably declined. Insufficient ability to grant loans has been characteristic of all credit institutions this year.

Reference has already been made to the relation between the Bank of Finland and the other credit institutions. Rediscountred bills amounted to only 1,679 milllion marks at the end of September having been as high as 3,034 million on June 15th. Alithough other credit institutions have not recently needed the aid of the central bank to the same extent as in Spring, total credits granted by the latter both to the State and to business concerns has increased continuously all through the summer, amounting to 33,042 million marks at the end of September as against 30,726 at the end of May and 22,397 million on December 31st, 1945. It should be noted that the stringency on the money market has lately compelled the Bank of Finland to finance such investments as are generally the work of other credit institations. Credits granted to business concerns have indeed increased more than Treasury bills. The increase in credits and especially in the need for cash have together raised the amoun't of notes in circulation again in August after a neduction in the beginning of the summer. The increase was so much accelerated in September that the highest amount of notes hitherto in circulation was recorded, 19,076 million marks; the previous peak, 18,872 million, was in August 1945. As exports increased towards the end of the summer
the foreign payment position improved somewhat.

## PRICES.

No complete price and wage stop has yet been accomplished, but prices have not increased very much in the last few months because of the truce. The cost of living index (August 1938-July 1939=100) rose from 437 in May to 466 in August or by 6.6 per cent, the corresponding figure being 49 per cent last year. Less activity on the Stock Exchange in the last few months allso suggests that the inflation is slowing down. Yet this does not exclude the danger of a new violent rise in prices due to powerful factors suich as soarcity of supplies, keen competition for dabour, and the lack of bailance in Public Finance.

## TRADE AND INDUSTRY.

Data aprailable as to the industrial trend in the second quarter of the current year show that the expansion has continued regardless of all difficulties. The output of wood products has increased as follows: sawn timber by 7 per cent, pulp by 40 per cent, cellulose by 50 per cent, paper by 80 per cent and plywood by fully 100 per cent as compared with last year. The production of the home market industry is estimated at more than 30 per cent above that of last year. The volume index for the whole industry $(1935=100)$ was 81 in the second quarter as against 61 one year earlier, an increase of 33 per cent. The supply of raw material and requisites has improved but the competition for labour has increased month by month. The shortage of labour is so great in certain places that some industrial enterprises have had to close down. Lumbering also lacks labour at present.

Foreign trade was very active in the summer. Both imports and exports have increased since last year. The value of imports was 14,849 million marks and that of exports 11,967 million in JanuaryAugust, the corresponding figures being 3,181 and 1,115 million in 1945 . The great increase in exports is particularly gratifying. But, as imports have increased simuiltaneously, foreign trade has resulted in an excess of imports, as was to be expected.

## CONTENTS OF THE TABLES.

I. MONEY MARKET.

Banle of Finland:

1. Statement.
2. Note issue.
3. Notes in circulation and foreign correspondents.
4. Right to issue notes, note reserve, and home loans.
5. Treasury bills and balances of current accounts.
6. Rates of exchange.

Commercial Bantes:
7. Home deposits.
8. Home loans.
9. Position towards foreign countries.
10. Foreign Payment Position of all Banks.
11. Deposits in Post Office Savings Bank.
12. Deposits in the Slavinge Banks.
13. Deposits in Co-operative Credit Societies and Consumars' Co-operative Societies.
14. Deposits in alll Credit Institutions.
15. Insurances in life assurance companies.
16. Changes in number and capital of limited companies.
17. Bankruptcies.
18. Stock Exchange.
19. Stock Exchange index.

## II. STATE FINANCES.

20. Public Debt.
21. State Reveniue and Expenditure.
22. Collection of Customs.
23. Collection of Exise dues.
III. TRADE AND INDUSIRY.
24. Value of imports and exports.
25. Value of imports and exports in different classes of goods.
26. Imports of the most important articles.
27. Exports of the most important articles.
28. Foreign trade with various countries.
29. Value index of imports and exports.
30. Total sales of some wholesale firms.
31. Index of industrial production.
32. Building activity.
IV. TRAFFIC.
33. Foreign shipping.
34. State Railways.

## V. IEVEL OF PRICES.

35. Wholesale price index.
36. Cost of living index.
37. Bank of Finland building cost index.

Tables 21-29 according to Finnish Official Statistics I, A, Foraign Traie of Finland, Monthly Reports.
The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

* Preliminary figures subject to minor alterations.

25.     - VALUE OF IMPORTS AND EXPORTS IN DIFFERENT CLASSES OF GOODS.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic In 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President Juho Kusti Passikivi is elected for the term March 11, 1946, to March 1st, 1952.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1945 are as follows:

Number
Soclal-Democratic party . . . . . . . . . . . . . . . . . . . . . . . . 50
Democratic League ....................................... . . 49
Agrarian party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 48
Unionist party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 29
Swedish party .............................................. 14
Progressive party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 9
Swedish Left .............................................. . . 1

## 2. LAND.

THE ABEA is 337113 square kilometres (Great Britain's area is $245000 \mathrm{sq} . \mathrm{km}$ and Italy's area $310000 \mathrm{sq} . \mathrm{km}$ ). Of the total area $9.4 \%$ are inland waters. On an average $13.5 \%$ of the land in the South of Finland is cultivated, $1.6 \%$ in the North, $7.5 \%$ of the whole land. Of the land area 21.7 mill. ha ( 53.6 mill. acres) or $70.8 \%$ are covered by forests.

## 3. POPULATION.

NUMBER OF INHABITANTS (1944): 3.9 millions (of whom 0.2 million emigrants). Sweden (1944) 6.6, Switzerland (1942) 4.3, Denmark (1944) 4.0 and Norway (1941) 3.0 millions.

DENSITY OF POPULATION (1944): In South Finland 22.4 in North Finjand 3.2 and in the whole country an average of 12.9 inhabitants to the square kilometre.

DISTRIBUTION (1944): 76.3 \% of the population inhabit the country, $23.7 \%$ the towns and urban districts. The largest towns are (1944): Helsinki (Helsingfors), the capital, 381192 inhabitants, Tampere (Tammerfors) 85 168, Turku (Åbo) 78492.

OOOUPATION (1940): agriculture $51.5 \%$, industry and manual labour $21.0 \%$, commerce $5.1 \%$, transport $4.6 \%$, other occupations $17.8 \%$.

LANGUAGE (1940): Finnish speaking $90.0 \%$, Swedish speaking $9.6 \%$, others $0.4 \%$.

RELIGION (1943): Lutheran $96.0 \%$, Greek-Orthodox $1.8 \%$, others $2.2 \%$.

EDUCATION (1945): Practically all persons over 15 years of age are literate. There are three universities (the oldest founded in 1640) and 7 colleges of university standard.

INCREASE OF POPULATION (1.944): Births $20.2 \%$ \%, deaths $17.8 \%$ of whom civil mortality $12.8 \%$ and deaths in war $4.4 \%$ (deaths in France in $194316.4 \%$ and in Eng. Iand in $194312.1 \%$, natural increase $2.9 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOURCES (1945): The growing stock of the forests is 1370 million cub. m ( 48.379 million cub. feet). The stock of standing timber messuring 6 in , at a height of 18 ft . amounts to 1031 million trees. Of this number pine is represented by $63.6 \%$, spruce by $30.1 \%$, the conifers thus constituting $98.7 \%$ or 966 million trees; leaf-trees mostly birch,
$6.3 \%$ or 65 million trees. The annual increment is $\mathbf{4 0 . 8}$ million cub. m (1 441 million cab.ft.). The annual fellings in 1944/45 were 28 million $\mathrm{m}^{\mathbf{3}}$ ( 985 million cub. ft.).

AGRICULTURE (1945): Cultivated land 2.3 million hectares, divided as follows: area under cultivation under 10 hectares $33.1 \%, 10-50$ ha $54.4 \%, 50-100$ ha $7.2 \%$, over 100 ha $5.3 \%$. Cultivated land is divided between the different kinds of crops as follows: $\mathbf{6 6 . 2}$ \% hay, $13.2 \%$ oats, $6.2 \%$ rye, $6.1 \%$ wheat, $5.9 \%$ barley, $3.0 \%$ potatoes, $9.4 \%$ other. The number of dairies in 1944 amounted to 612.

OWNERSHIP OF LLAND (1941): The land area is distributed among different classes of owners approximately as follows: private 49.2 \%, State 41.6 \%, Joint Stock Companies etc. $7.1 \%$, communities $2.1 \%$.

INDUSTRY (1943): Number of industrial concerns 4590 , workpeople 186946 , gross value of products of industry 38477 million marks.

LENGTH OF RAILWAYS (1944): 4469 km , of which 4219 km State railways and 250 km private. The gauge is in general 1.524 m .

MREROHANT FLEET (1945): Steamships 309 (231 751 gross reg. tons), motor vessels 32 ( 6585 gross reg. tons), sailing ships with auxiliary engine 119 (11 564 gross reg. tons), other saling ships 18 (11 023 gross reg. tons). Total 478 (260 923 gross reg. tons).

## 5. FINANCE AND BANKING.

CURRENNCY. Since 1860 Finland has its own monetary system. From 1877 up to 1914 the currency maintained Its stable gold value, and after the disturbances caused by the war a gold standard was again introduced from January 1st, 1926. The unit of currency is the mark (Finnish *markkas $=$ 100 penniä). According to the monetary law of December 21, 1925, a gold coin of 100 marks' value shall contain $3^{15} / 18$ grams of fine gold. Since October 12, 1931, the redemption of bank notes in gold is, however, suspended.

STATE FINANOES. According to the finance accounts for 1944 the State revenue was 37499.3 million marks of which $21,639.6$ million marks were current revenue, and State expenditure 43903.5 million marks, of which 37526.4 million marks were current expenditure. The principal sources of revenue were as follows: direct taxes 8770.4 , indirect taxes 2582.3 , sales tax 4019.4 , interest and dividends, etc. 2790.6 , State property and undertakings (net) 1068.9 , and capital revenue 15 859.8. For Public Debt see table 20 in this issue.

MUNICIPAL FINANOES. According to the finance accounts for 1942 expenditare amounted to 3985.5 million marks. Income from taxation was 1728.2 million marks, taxed income 22159.3 million marks. The municipal income tax (non-progressive) averaged $7.8 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland (founded in 1811) is a State Bank. Its head office is in Helsinki (Helsingfors) with branches in Turkn (Abo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleaborg), Kuopio, Joensuu, Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehपs), Jyväskylä, Kotka and Lahtl (Lahtis).

THE COMMERCLAL BANKS (1945): Number 7, possess 454 offices, where all kinds of banking business is transacted. There is one banking establishment per 8095 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Oy. Pohjoismaiden Yhdyspankki - Ab. Nordiska Föreningsbanken and Helsingin Osakepankki - Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1945): Mortgage banks 5, Savings banks 470, Co-operative Credit Societes 927 and a Central Bank for the latter.

# PUBLIC ECONOMY OF FINLAND DURING THE WAR AND AFTER THE ARMISTICE. 

BY
T. JUNNILA, DOCT. PHL.

The second world war, in which Finland became involved when the Winter War broke out on November 30th, 1939, found her economic position rather unprepared in as much as public revenue did not nearly cover the varied war expenditure, the usual experience of belligerents. An unavoidable consequence of this was, of course, a considerably increased recourse to financial credits. Normal borrowings being insufficient, it became necessary to discount ever increasing amounts of Treasury bills at the bank of issue - the Bank of Finland. This meant that the increasing demand due to increased public expenditure was not entirely covered by a co-incident restriction of private demand by increased taxation and borrowings from individual savings. On the money side State expenditure was increasing, similarly the individual income, the banknotes in circulation, the funds on current accounts and, although much more slowly, deposits. The supply of goods again was reduced owing to the war. Thus the condition of public finance became an essential, although not the only, factor in the development of inflation in Finland.

Below we shall describe the development of the public economy in this country during the war and after the armistice. The first part of the survey concerns the years 1939-1944, the last year of peace, 1938, being recalled for purposes of comparison. A separate chapter will deal with 1945, when the war was over for Finland, but other difficulties had begun with burdensome war reparations and internal indemnity problems. The current year cannot be treated here since final figures are not yet available.

## PUBLIC ECONOMY IN 1938-1944.

## Public Expenditure and Current and Similar Revenue.

In the 1930's the economic situation was quite easy, the difficulties of the great
depression having been overcome. The budget was usually fairly easily balanced, and the State indebtedness was small among the smallest in the world per head of population.

The balance of expenditure and revenue was disturbed by the outbreak of war. The following table shows the movement of public expenditure and revenue in the years of war, 1938 being included as a basis for comparison. Revenue entries include all other items except loans. Both expenditure and revenue figures have been adjusted by omitting arrears of revenue and expenditure, and grants to be carried forward at the close of the year. Some other adjustments have also been made.

1. state expenditure and revenue in 1938-1944.

| Year | Expenditure <br> Mill. mk | Revenue <br> Minll. mk | Revenue in $\%$ <br> of expenditure |
| :---: | :---: | :---: | :---: |
| 193.8 | 4,933 | 4,931 | 99.96 |
| 1939 | 6,760 | 5,253 | 77.7 |
| 1940 | 17,445 | 5,286 | 30.3 |
| 1941 | 20,289 | 10,764 | 53.1 |
| 1942 | 24,978 | 17,271 | 69.1 |
| 1943 | 31,118 | 20,890 | 67.1 |
| 1944 | 38,335 | 21,305 | 55.6 |
| $1938-1944$ | 143,858 | 85,700 | 59.6 |

Whereas revenue and expenditure in the last year of peace practically balanced, revenue decreased, not absolutely but in relation to expenditure, after the outbreak of war. In 1939 Finland was at war for only the last month of the year, but the period of mobilization had caused additional outlays, similar in many respects to war expenses, and revenue fell to 77.7 per cent of expenditure. In 1940 the corresponding ratio was no more than 30.3 . To restore the balance in State finance more and more definite efforts were made. New important taxes were introduced, previous taxes were increased, and these measures improved the situation considerably in 1942-1943. In 1944, the last year of war, which was difficult in many
respects, revenue was again merely a little morle than half of the expenditure.

The great increase in public expenditure was of course chiefly due to expenditure on defence. These are included in the budget group "Government Institutions subordinate to the Mlinistry of Defence". Table 2 below shows the relation of this group to other expenditure. Here and in the following tables items are generally adjusted as above.
2. GOVERNMENT INSTITUTIONS SUBORDINATE TO THE ministry of defence and other expenditure in 1938-1944.

| Year | Expen- <br> diture on <br> defence <br> Mill. mk | Other ex- <br> penditire <br> Milll. mk | Total ex- <br> panditure <br> Mill. mk | Expen- <br> diture on <br> defence <br> in ofo of <br> total ex- <br> penditure |
| :---: | ---: | :---: | ---: | :---: |
| 1938 | 696 | 4,237 | 4,933 | 14.1 |
| 1939 | 1,798 | 4,962 | 6,760 | 26.6 |
| 1940 | 11,681 | 5,764 | 17,445 | 67.0 |
| 194.1 | 9,133 | 11,156 | 20,289 | 45.0 |
| 1942 | 14,976 | 10,002 | 24,978 | 60.0 |
| 1943 | 18,890 | 12,228 | 31,118 | 60.7 |
| 1944 | 23,368 | 14,967 | 38,335 | 61.0 |
| $1938-1944$ | 80,542 | 63,316 | 143,858 | 56.0 |

The expenditure on defence did not, in 1938, quite reach 700 million marks, repre-
senting no more than 14.1 per cent of the total expenditure. In 1939 their absolute amount had alneady risen 2.6 times, or to 26.6 per cent of total expenditure. Yet this was only a modest beginning. In 1940 the expenditure under this heading was almost 17 times as high as in 1938, and in the last year of war even: 33.6 times as high. In the latter year the expenses of defence represented over 60 per cent of total expenditure. Thus the burden of war was cleamly reflected even in the domain of finance. The relation of the expenses of defence to total State expenditure is shown on the left hand in the diagram on the next page.

Taxes have formerly been the most important source of State revenue and this was true even more so during the years of war, as taxes were frequently incneased and new ones of various kinds introduced. Direat taxes (i.e. on income, property and inheritance) and indirect ones (customs and various excise duties, sales tax) are shown as separate groups. The rest, a quite small amount, is the yield of stamp duties of ,mixed" nature, varying from 2 to 7 per cent of the total amount of taxes.

| Year |  | $\begin{gathered} \text { Direct } \\ \text { taxas } \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | In $\%$ of total taxes | $\begin{aligned} & \text { Indirect } \\ & \text { taxes } \\ & \text { Milli } \mathrm{mk} \end{aligned}$ | $\begin{gathered} \text { In } \% \text { of } \\ \text { total } \\ \text { taxes } \end{gathered}$ | $\begin{gathered} \text { Total } \\ \text { taxes } \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | Other revenue Mill. mk | Taxes in $\%$ of total revenue |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 |  | 1,020 | 28.4 | 2,304 | 64.2 | 3,588 | 1,343 | 72.8 |
| 1939 |  | 971 | 28.8 | 2,143 | 63.5 | 3,375 | 1,878 | 64.2 |
| 1940 |  | 1,525 | 42.3 | 1,869 | 51.9 | 3,604 | 1,682 | 68.2 |
| 1941 |  | 4,965 | 55.1 | 3,813 | 42.3 | 9,016 | 1,748 | 83.8 |
| 1942 |  | 6,741 | 50.6 | 6,296 | 47.3 | 13,309 | 3,962 | 77.1 |
| 1943 |  | 8,640 | 55.1 | 6,723 | 42.9 | 15,668 | 5,222 | 75.0 |
| 1944 |  | 8,753 | 56.1 | 6,477 | 41.5 | 15,595 | 5,710 | 73.2 |
| 1938 | 1944 | 32,615 | 50.8 | 29,625 | 46.2 | 64,155. | 21,545 | 74.9 |

This table shows both the dominating position of taxes in State finance and thie rapid increase in direct tax yield. Before the war the bulk of revenue from taxation was derived from the indirect taxes, which in 1938 were more than twice the direct. But the yield of indinect taxes as such also largely increased during the war. This was above all due to the introduction of the salles tax. Some others of the indirect taxes, especially the excise duty on tobacco, also proved good sources of income. The excise on wines and spirits is very important but only a relatively small pant of it is formally
tax revenue, most of it being a profit for the Alcohol Monopoly.

The relation of the receipts from direct and indirect taxes has radically changed in spite of all. In 1944 the former kind of taxes yielded even much more thian the latter or 56.1 per cent of the total tax revenue, whereas indirect taxes supplied 41.5 per cent and the less important stamp duty 2.4 per cent. Thus, direct taxes have assumed the preponderating position previously held by the indirect. This remarkable structural change in the taxation system has involved an increase in the

direct taxes paid by the wealthier classes as against a decreasing importance of the indirect ones which are usually considered as mainly burdening the poorer people.

## Public debt in 1938-1944.

The disproportion of State expenditure and revenue during the war, very glaring in some years, meant that the former had to an ever greater extent to be financed by increasing the public debt. In consequence this has been multiplied by about twenty. Before the war it was among the
smallest in the world, even relatively, i.e. in 1938 only about 950 marks or 20 dollars per head of population, whereas e.g. in Sweden it amounted to 97 dollars and in England to 836 dollars in the same year.

Table 4 illustrates the amount of State indebtedness at the close of 1938 and 1944, and its annual growth in the intervening years. Internal and foreign debts are shown as separate items, the former with subdivisions for loans from the Bank of Finland and other loans from the internal market.
4. public debt in 1938-1944.

|  | $\begin{gathered} \text { Total } \\ \text { Public } \\ \text { Debt } \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | To the Finland Mill. mk | $\begin{gathered} \text { In } \% \text { of of } \\ \text { total } \\ \text { debt } \end{gathered}$ | Other - debt Mill. mk | $\begin{gathered} \text { In \% of of } \\ \text { total } \\ \text { debt } \end{gathered}$ | Forcign debt Mill. mk | $\begin{gathered} \text { In oi, of } \\ \text { total } \\ \text { debt } \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Total 31/12, 1938 | 3,677 | - | - | 2,596 | 70.6 | 1,081 | 29.4 |
| Increase 1939 | 2,192 | 574 | 26.2 | 941 | 42.9 | 677 | 30.9 |
| 1940 | 11,553 | 4,866 | 42.1 | 4,745 | 41.1 | 1,942 | 16.8 |
| 1941 | 10,039 | 5,223 | 52.0 | 4,206 | 41.9 | 610 | 6.1 |
| 1942 | 9,375 | 3,887 | 41.5 | 4,833 | 51.5 | 655 | 7.0 |
| 1943 | 14,760 | 1,374 | 9.3 | 12,959 | 87.8 | 427 | 2.9 |
| " 1944 | 15,504. | 1,604 | 10.3 | 13,194 | 85.1 | 706 | 4.6 |
| 'Total 31/12, 1944 | 67,100 | 17,528 | 26.1 | 43,474 | 64.8 | 6,098 | 9.1 |

The table shows clearly the immense increase in public debbt. At the end of Finland's war in 1944, it had increased more than 18 times from the pre-war level, or to 17,000 marks per head of population. The table shows further that great changes have occurred in the composition of the
debt, both in the relation of foreign and internail debits, the latter increasing, and in the structure of the internal debt. The most noteworthy financial change is that of the public debt to the Bank of Finland. The regulations of this institution, as amended in 1925 when the inflation in con-
nection with the first world war was finally overcome, prevented the Bank from discounting Treasury bills. When the Winter War broke out and the State needed money, this policy could no longer be maintained; and the regulations were amended accordingly by a law December 13th, 1939, making also State drafts negotiable and cover for banknotes. As the table indicates, this fresh source of credit was used to a very large extent in subsequent years.
The armistice was concluded with the Soviet Union on September 19th, 1944. War with the German forces in the North of the country broke out simultaneously but was practically finished before the end of the year. Finland had thus withdrawn from the war by the beginning of 1945 which was expected to cause a radical reduction of expenditure at least on defience and thus a relief to public finance. But on the other hand the armistice brought new onerous engagements. What has been the relation of these opposing trends, or in other words what was the course of the State finances in 1945?

## STATE FINANCES IN 1945.

After the adjustment of the items as shown above, State expenditure amounted to 39,014 million marks in 1945, and nevenue to 33,036 million. Revenue covered 84.7 per cent of expenditure, the deficit of income amounting to 5,978 million marks.

In 1944, the last year of war, when the burden of expenditure on defence was heaviest, the totall State expenditure was 38,335 million marks. In spite of hostilities having ceased expenditure was not reduced but on the contrary slightlly increased, notwithstanding that expenditure on defence diminished very rapidly indeed from 23,368 million in 1944 to 7,311 million or less than one-third in: 1945. The total expenditure however remained at its previous level and even rose somewhat because the fresh expenditure prescribed by the armistice in combination with some other factors outweighed the decrease in expenditure on defence.

One of the numerous sequels of the war was fresh expenditure, in the first place for the care of evacuees and evacuated
property. The population of Carelia had once more to be settled in other parts of Finland when the great Russian offensive began on the Carelian Isthmus in June 1944. Towards the end of the year the population of Northern Finland also had to move southwards because of the war with the Germans. This happened at the end of 1944 and continued all through 1945, balthough the situation eased later in that year as the Carelian evacuees found employment within the new boundaries of Finland and those from the North were returning home. Yet State relief had partly to be continued because of the sad state in which German destruction had left that part of the country.

This rise in expenditure, great as it was, was yet but inconspicuous in comparison with the expansion of other items that counteracted the radical decline in the expenses of defence and still made total expenditure rise in 1945. Above all this is the case with expenditure due to war reparations to the Soviet Union. These are to be paid in different goods, bought by a separate State office, entitled the Delegation for the War Reparation Industry (Soteva), from manafacturers mobilized for this purpose. The item termed "War Reparations and related Expenditure" rose in 1945 to an aggregate amount of 6,917 million marks, the corresponding figure for 1944 not exceeding 267 million. The increase was more than 6,600 million.
Next in amount among these new groups of expenditure are "Sundry Costs under the Armistice Agreement", 2,418 million marks, covering chiefly expenditure on so-called restitution deliveries. These were divided into two groups: A-goods are Russian property brought to Finland as spoil; B-goods propenty carried into Carelia, after its temporary recovery, from other parts of Finland but brought back during the retreat and now to be ceded to the Soviet Union with the A-goods. For such restitution goods in private ownership the Government had to pay compensation, and this as well as the cost of delivery contributed very much to the increase of State expenditure. These deliveries ceased in 1946 .

A third onerous item is the expenditure of 2,123 million manks on the stabilization of prices for agricultural produce and the
encouragement of the marketing of these products. The figure comprises State premiums to producers of ceresls, milk, butter and cheese. This outlay from taxation receipts has been necessary because the consumers' prices for these products do not cover the producers' costs, and to raise the consumers' prices would have endangered the even otherwise uncertain price and wage regulations. This item increased to fully its doubile as the rates of subventions were raised.

A similar increase was caused by expenditure on the settlement of the rural population from Carelia and other districts ceded or leased to the Soviet Union. In 1945 these items were, however, still low in comparison with the amounts to be entered for 1946 and the next few years, for the settlement only really started this year.

The expansion of expenditure in 1945 in spite of the reduced costs of defence has above been ascribed chiefly to new entries due to the situation created by the armistice. But there was also another reason for the increasing expenditure, viz. the rapidly progressing inflation. Figures throughout the budget have been affected, partly because of the rise in prices, partly and chiefly because inflation has compelled the State to raise the pay of its numerous employees. The level of wages doubled in several branches, in some even more than doubled. Although State salaries did not nearly keep in step with these, their rate had to be thoroughly regulated after the rapid increase in other wages and salaries, and hence, of prices.

It was noted above that 84.7 per cent of expenditure, in spite of its increase, could be covered with current revenue in 1945. The corresponding figure for 1944 was merely 55.6 per cent. The absolute amount of current revenae was 33,036 million marks in 1945, as against 21,305 million only in 1944. While State expenditure had increased very slightly, revenue had risen by a good third. The position of public finance has, in other words, been strengthened since the end of the war, notwithstanding all the new difficulties.

This result is to be attributed mainly to the very vigorous growth of receipits from taxation, from 15,600 million in

1944 to 25,000 million in 1945. The improvement is due to higher receipts from the two main groups of the present taxation system, viz. the tax on income and property, which increased from 4,744 million marks in 1944 to 10,691 million or more than double in 1945, and the sales tax which, amounting to 5,149 million, exceeded the yield 4,017 million of the previous year.

The main reason for this rapid rise in the yield of the taxes on income and property was the accelerated inflation, for the records of Finnish money will recall the year 1945 as a black page, telling how wages with prices in their track were roughly doubled. This meant a considerable increase in all nominal values including the yield of the tax on income and property, above all that part that is collected in advance direct from the source of income. One of the reasons for the speed of this whole process was the progressive scale followed in the taxation of both income and property of physical persons, involving an increase in the percentage collected for increased nominail income and property.

Inflation did not, of course, limit its action to wlages and salaries or income generally, but it also affected turnover. This had a direct effect on the yield of the salles tax which is collected at different stages of production and distribution and which increased in 1945 although not so much as the tax on income and property. Another reason was that an amendment of the law concerning the sales tax came into force in the beginning of July 1945 prescribing, as the most important increase, the doubling of the tax on retail trade from 5 to 10 per cent.

As allready stated, income in 1945, great as the increase was, did not cover the whole of expenditure but large credits were necessary. Public debt grew quickly in 1945 , or by 18,256 million marks, i. e. much more than the deficit of current revenue below expenditure. The explanation is, in the first place, the increase in the former foreign debt by 12,500 million in 1945 because of raised rates of exchange, this increase not being here included in expenditure; secondly, the swelling of the total indebtedness is
also referable to an increase in the so-called indemnity loan, i.e. State bonds issued to the evacuees from the ceded territory as indemnity for their lost propenty. Nor has the latter increase been included in expenditure above (these bonds could be considered as State expenditure either when distributed or at their redemption, and the latter alternative has been adopted).

Also in 1945 it proved necessary to borrow from the central bank, the increase being 923 million marks. This amount was not very large because of the exceptional fact that an exchange of banknotes was carried out at the close of the year. Premature revelation of plans for this exchange induced the public to increase deposits with the banks to a very great extent - the banknotes began to burn in their pockets so that the State could borrow more from credit institutions and pay a large instalment to the Bank of Finland in the last month of the year. Consequently the reduction of this line of credit cannot be considered as a sign of recovering finances.

On the right hand in the diagram there is a comparison of the different methods of financing State expenditure during the whole 8 years' period treated above. The diagram shows the contribution of current revenue, credit from the central bank and other kinds of credit in State expenditure during 1938-1945.

State finances did not improve quite satisfactorily, regardless of salutory efforts, even. after the conclusion of the armistice. In 1946 the financial situation has further deteriorated. Difficulties have remained very serious. Reparations are almost overwhelming for the country and, furthermore, its resources are stnained by difticulties due to the internal indemnity problem. Continuing inflation has also a disadvantageous influence on financial development. It is an old experience that State revenue tends to lag behind expenditure in the inflation phase. Nevertheless we may notice a diminution of the disproportion of expenditure and revenue in comparison with the worst years of war.

# INDUSTRY DURING THE WAR. 

BY
YNGVAR HEIKEL, MAG. PHIL.

## GENERAL TREND.

In 1937 industry showed better results than ever before both in volume and in value. The former was estimated at 46 and the latter 57 per cent higher than the previous peak in 1928. In 1938 industry did not as a whole show such high figures as the year before, but the various branches developed diversely. In the first half of 1939 there was a slight improvement over the same months of 1938. Then, in September, the second World War began, so destructive to Finnish industry, particularly to that of export. Already the war between the Great Powers had hampered the commercial intercourse with countries not bordering the Baltic. The chief "export articles, wooden goods, paper, cellulose and pulp, were proclaimed contraband by the belligerents and the limits set to them became more and more strict
so the opportunities for export decreased. During the Winter War December 1939-March 1940 exports almost entirely stopped so that many factories working for foreign markets either closed down or were running at part capacity only. The military calling up also greatly affected exports.

By the peace of Moscow very important territories were lost. The following figures indicate losses of industry, especially that of export, by the cession of Carelia. In 1938 the ceded territory had 432 industrial establishments with more than 25,000 workers or 11.7 per cent of the total industrial population. Based on an abundant supply of forests and water power these factories produced 10 per cent of the country's total industrial output, of which the lost mills' share was as follows: sulphate cellulose $26.4 \%$, sulphite cel-
lulose $24.5 \%$, plywood $14.3 \%$, sawn and planed timber $12.7 \%$, pulp and cardboard $11.5 \%$, and paper $5.4 \%$. Besides this large power stations were lost which produced more than half the power then distributed, also the only factory producing artificial fibres, the only soapstone factory, one of two raw sugar factories and one of four Martin works, 30.6 per cent of the flour and groats mills and 35.2 per cent of the potato flour and starch mills. The Carelian share in the total output is illustrated by the following percentages: boilts 50, sand-lime bricks 37, candles 49, bone dust 53 , water-glass 96 , chlorin 53 , roofing felt 44, and other felts 48.

In the latter part of 1940 and the spring of 1941 industry was slowly recovering but was still recording only-a fraction of the pre-war production when the fresh outbreak of war hampered it, especially the export industry, foneign trade becoming on the whole limited to the Baltic countries and their connections. In Spring 1941 a new route to America had been opened by way of Petsamo but the war closed it again.

Production in the export industry was hampered by the restricted export possibilities but also ass in many other branches by the shortage of raw material, fuel and labour. This last was one consequence of so many able-bodied men being in military service, another was that floating and lumbering dropped to a fraction of the pre-war position. Transport difficulties had their share in that the timber that was cut could not be carried to the mills. All liquid fuel was reserved for military use so that civil buses and cars were reduced to a minimum and had to use wood. The railways had to burn wood although they were overloraded by heavy military transports on lines extended beyond the frontiers and by the goods and passenger traffic formerly carried by other means. The difficulties were still greater because tyres were lacking and cars could not be repaired or renewed. Owing to the low level of the water in the rapids, coal had to be used to produce electric power in the first years of war, and pulp wood was used as fuel when the firewood was exhausted. Of the home market industry many branches lacked raw ma-
terials, because imports were reduced or interrupted. This was partly due to lack of foreign currency that led to regulations based on licences and clearing.

Later the water supply in the rapids improved resulting in increased distribution of electricity, and milder winters eased the fuel situation. In September 1944 the armistice terms interrupted foreign trade almost entirely and not until December did trade with Sweden and the Soviet Union start. The territory ceded according to the armistice agreement cut off about the same industrial establishments as the peace of Moscow. The direct damage caused to industry by bombing is estimated at about 1,500 million marks.

When the army was disbanded in Autumn 1944 most of the men could return to their former occupations so that there was no unemployment, while many women left their war jobs and went back home or to other work. But so many had been killed or disabled that the labour continued short.

The changes in the labour supply for the whole industry, both of the woodworking and paper industries and other branches in all are shown by the following figures. They show the average number of workers on the first of January, April, July and October, so that the Winter War did not very much influence the figures for 1939 nor the disbanding of the army in Autumn 1944 those for 1944.

|  | Total <br> industry <br> 1,000 | Wood-. <br> working <br> 1,000 | Paper <br> industry <br> 1,000 | Other <br> industry <br> 1,000 |
| :---: | :---: | :---: | :---: | :---: |
| 1938 | 214.4 | 53.4 | 22.2 | 138.8 |
| 1939 | 191.0 | 43.9 | 18.0 | 129.1 |
| 1940 | 175.6 | 28.8 | 15.4 | 131.4 |
| 1941 | .179 .6 | 31.5 | 15.8 | 132.3 |
| 1942 | 176.5 | 33.2 | 1.7 .7 | 125.6 |
| 1943 | 186.9 | 36.9 | 19.7 | 130.3 |
| 1944 | 180.5 | 35.1 | 17.6 | 127.8 |

While total industrial labour remained at about $80-90$ per cent of the 1938 level all through the war, it was down to 54 per cent in wood-working in 1940 and then rose to about $60-70$ per cent in the following years. In the paper industry the reduction was smaller, to 70 per cent in 1940-1941, from which lowest point there was an increase to 89 per cent in 1943. In all other branches the number of workers varied between 90 and 95 per cent. In the home market industry the
number of workers was most reduced in lime and brick factories and in the textile, particularly in the cotton industry, in sugar and sweet factories, in the manufacture of tobacco, margarine, dye and varnish, and of oil, candles and soap. In the glass, cement and pottery factories as in the wool factories and the rubber, leather and footwear factories the decrease was smaller. In the metall and machine industry, on the other hand, the number of workers increased very much, especially in mining and carburizing, similarly in the production of drinks, in technochemistry and certain other chemical factories and in the printing trade.

## EXPORT INDUSTRY.

The production of the export industry is illustrated by the Unitas volume index as follows for the period under review $(1935=100)$.

|  | Total <br> export <br> industry | Sawn <br> tlmber | Plywood | Produce of <br> the paper <br> industry |
| :---: | :---: | :---: | :---: | :---: |
| 1938 | 105 | 85 | 125 | 120 |
| 1939 | 93 | 68 | 119 | 10.6 |
| 1940 | 37 | 33 | 58 | 38 |
| 1941 | 39 | 36 | 49 | 40 |
| 1942 | 43 | 40 | 48 | 42 |
| 1943 | 48 | 45 | 57 | 47 |
| 1944 | 40 | 39 | 50 | 37 |

The output of the most important export products, in 1,000 tons, was as follows:

|  | Sawn timber | Birch Slywood | Pulp | Sulphite cellulose | Sulphate cellalose | Paper, all kinds | Oardboard |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 1,031 | 171 | 639 | 919 | 562 | 568 | 141 |
| 1939 | 796 | 135 | 612 | 670 | 332 | 617 | 115 |
| 1940 | 378 | 78 | 124 | 2988 | 235 | 203 | 86 |
| 1941 | 447 | 66 | 88 | 353 | 237 | 223 | 109 |
| 1942 | 459 | 66 | 161 | 304 | 198 | 262 | 120 |
| 1943 | 542 | 97 | 223 | 275 | 230 | 371 | 146 |
| 1944 | 444 | 66 | 158 | 249 | 185 | 283 | 113 |

Production reached its lowest point already in 1940 in regard to sawn timber, sulphite cellulose, all kinds of paper, and carboard, but not until 1941 in regard to pulp. The production of plywood was smallest in 1941-1942 and 1944, that of sulphate cellulose in 1944 after certain fluctuations. For most kinds of goods an increase was recorded in 19421943 and a universal decrease in 1944. The cellulose industry lacked lime and certain other chemicals, hoop-iron and baling wire. The saw-mills and plywood factories
lacked labour and also glue. The pulp and cardboard mills suffened from lack of water and shortage of raw materials and labour. The supply of raw material and requisites of the paper mills was almost completely exhausted by the end of 1944.

## HOME MARKET INDUSTRY.

The home market industry had a quite different and more favourable development than the export industry and was better able to maintain production, although the course varied very much in different branches. The Unitas value index of production rose almost continuously from 147 points in 1938 to 225 points in 1944, or by 53 per cent. But as the index of the wholesale prices of the correponding products had risen by 155 per cent at the same time, production really declined by about $2 / 5$ through the effects of the war.

The Unitas value index of the home market industry and certain of its groups are as follows $(1935=100)$.

|  | Total home <br> market <br> industry | Metals, <br> machines | Textiles | Food, <br> drinks, <br> tobacco | Building <br> material |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 147 | 183 | 124 | 145 | 173 |
| 1939 | 158 | 201 | 130 | 151 | 187 |
| 1940 | 189 | 232 | 163 | 180 | 151 |
| 1941 | 182 | 215 | 138 | 230 | 174 |
| 1942 | 189 | 268 | 113 | 241 | 154 |
| 1943 | 208 | 297 | 169 | 219 | 178 |
| 1944 | 225 | 330 | 197 | 219 | 186 |

The index of metals and machines has risen relatively most, to 175 per cent, that of textiles coming next with 159 per cent of the 1938 level, but these figures are very much affected by the rise in prices.

The metal and machinery industry, which showed an increase in production already in 1938-1939, and was very active during the war owing to army orders, continued to augment year by year, its volume passing the level of the normal year 1935 in 1942. Works were enlarged, new ones erected and new machinery acquired as far as possible. After the armistice production had to be renewed and very much enlarged for the manufacturing of war indemnity goods. But the shortage of raw material and the difficulty of getting enough reserve parts and new machines hindered production.

The production of building material, including such branches as the stone, clay and glass industry, was booming up to September 1939 when it declined owing to the call-up of workers, the difficulty of obtaining raw material and the growing uncertainty of economic conditions. Sales of cement reached top figures that year but fell heavily during the autumn. In the beginning of 1940 activity declined further until reconstruction was started during the second half of the year. This went on up to June 1941. When war began again building was stopped, the workers were called up and fresh difficulties were met in getting raw material. In Autumn 1941, after the reconquest of Carelia, reconstruction started there buit was not really on the way until the next summer. Elsewhere this branch was almost paralyzed, showing only small signs of revival. The limestone quarries and cement factories have had difficulties in getting milling wheels and fuel, i.e. coal which has partly been replaced by peat and wood. The production of the brickworks fell to a fraction of the pre-war level when building stopped. The pottery industry has had difficulties in getting several kinds of raw material. Before the war kaolin and clay were imported from England and during the war up to the armistice from Germany. Before the war the pottery industry exported about 50 per cent of its output, during the war only about 20 per cent. The glass factories had large supplies of raw material at the beginning of the war and later got more from Germany so that they could make large quantities of window glass needed for repairing bomb damages. After the armistice imports of raw materials were stopped and there was a lack of soda, potash and other chemicals.
The most important products of these branches of industry are shown in the following table.

|  | $\begin{aligned} & \text { Lime- } \\ & \text { stone } \end{aligned}$ | Quick | $\begin{aligned} & \text { Burnt } \\ & \text { lime } \end{aligned}$ | Cemont | Bricks, all kinds | Window glass |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1,000 | tons |  | Mcilions | 1,000 sq.m |
| 1938 | 1,288 | 230 | 42 | 500 | 174 | 1,097 |
| 1939 | 1,165 | 148 | 46 | 563 | 155 | 995 |
| 1940 | 761 | 103 | 30 | 301 | 94 | 1,183 |
| 1941 | 716 | 100 | 33 | 307 | 86 | 1,779 |
| 1942 | 531 | 84 | 32 | 179 | 80 | 2,162 |
| 1943 | 677 | 102 | 33 | 238 | 74 | 1,942 |
| 1944 | 551 | 62 | 28 | 180 | 55 | 1;670 |

In comparison with 1938 the production of various articles was as follows in 1944: limestone 43, quick lime 27, burnt lime 68, bricks 32 and cement 36 per cent. The output of pottery and window glass had increased.

The textile industry was on the whole on the same level in 1939 as in 1938. Owing to military orders production was active in the beginning of 1940 but later declined as raw material grew short. This was particularly true of the cotton industry, while the wool industry still had raw material and various substitutes in 1941.

The linen, cotton and wool industries being key branches on which the other textile industries are very dependent, their development will be described in more detail for the period in question.

The linen industry used about 70 per cent foreign flax before the war, but only about 35-40 per cent of this quantity was imported during the war. Imports were intermittent and stopped entirely in September 1944. Domestic flax has been harvested in increasing quantities instead and has been delivered to the factories on condition that 75 per cent shall be returned as linen yarn. The remainder was mostly used for the army, leaving very little for civil consumption. The linen factories have produced cloth from spun paper, a very useful substitute for the manufacture of such articles as uphoIstery materials, carpets, shoe-tops and bags.

The following figures show the output of the most important products of the linen industry and how ordinary production fell off and substitutes were used, in tons.

|  | Linen | Hemp | Paper | Linen and hemp clot | Oloth <br> of arti- <br> ficial | Paper |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 1,653 | 143 | yan | 472 |  |  |
| 1939 | 1,758 | 258 | - | 564 | - | - |
| 1940 | 1,616 | 143 |  | 769 | - |  |
| 1941 | 788 | 141 | 852 | 298 | - | 53 |
| 1942 | 590 | 23 | 2,297 | 167 | - | 8.63 |
| 1943 | 828 | 38 | 2,60.0 | 150 | 78 | 1,546 |
| 1944 | 974 | 5.9 | 2,316 | 217 | 64 | 1,019 |

The cotton industry, which used little else than foreign raw material before the war, suffered greatly as imports decreased immediately at the outbreak of war. The last consignment of any significance came by way of Petsamo in 1941. In consequence production declined to
$30-35$ or at the most 40 per cent of the normal．Of late years only artificial fibres have been available though not enough，especially when imports stopped， first from Italy in Summer 1943 and then from Germany in September 1944．Hitherto only small amounts of artificial fibres are manufactured at home．In Autumn 1944 an agreement was signed with Sweden for the delivery of cotton and artificial fibres，and in December of that year the first consignments were received．

The following table shows the output in tons of the chief cotton products show－ ing clearly the change over from peace time goods to substitutes．

|  | Coston yarn | Artificial ［fibres yarn | $\begin{aligned} & \text { Paper } \\ & \text { yarn } \end{aligned}$ | Cotton cloth | Artificia fibres clo | $\frac{\text { Mixed }}{\text { cloth }}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 12，318 | － | － | 8，493 | － |  |
| 1939 | 11，993 | － | － | 7，874 | 31 | － |
| 1940 | 11，387 | － | － | 8，240 | 16 | － |
| 1941 | 6，362 |  |  | 5，079 | 30 |  |
| 1942 | 291 | 2，191 | 115 | 335 | 1，544 | 1，052 |
| 1943 | 23 | 4，203 | 1，978 | 93 | 3，281 | 244 |
| 1944 | 7 | 5，221 | 1，583 | 25 | 3，648 | 146 |

In addition 4,492 and 457 tons of paper cloth were produced in 1942－1944．Thus the transition to substitutes became almost complete in those three years．The lack of cotton has caused many difficulties in other branches ：for example fishing－tackle has been lacking．

The wool industry，which used about 70 per cent foreign raw material before the war，has been able to work to $50-70$ per cent of its capacity thanks to the domestic production of wool and the supply of rags． Artificial fibres have been partly used but the supply has been quite insufficient．In Autumn 1940 the wool factories formed a co－operative undertaking for the purchase of rags，and considerable quantities have been collected，but the quality of the products has declined．

The following figures show how the production of the wool factories has decreased and gone over to substitutes，in tons．

|  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $$ |  |  |  | Z | $\begin{aligned} & \stackrel{8}{4} \\ & \text { 薄 } \end{aligned}$ | $\begin{gathered} \text { 曷总总 } \\ \text { 畐 } \end{gathered}$ | $\begin{aligned} & \text { W.4. } \\ & \text { 名 } \end{aligned}$ | $\begin{aligned} & \text { 菊 } \\ & \text { N } \end{aligned}$ |
| 1938 | 5，255 | 95 | 6 | － | 3，582 | 95 |  | 89 |  |
| 1939 | 4，709 | 31 | 7 | － | 3，216 | 69 | － | 69 |  |
| 1940 | 5，425 | 12.1 | 8 | － | 3，739 | 54 | － | 61 |  |
| 1941 | 4，358 | 80 | － | － | 3，249 | 11 | － | 49 |  |
| 1942 | 2，928 |  | 221 | 52 | 2，002 | 56 | 59 | 62 | 39 |
| 1943 | 3，240 | － | 372 | 526 | 2，195 | － | 168 | 75 | 399 |
| 1944 | 3，882 | － | 720 | 271 | 2，989 | － | 203 | 31 | 216 |

As to the rubber，leather and footwear industry，the rubber industry annually used about 7,500 tons of rubber for foot－ wear and its soles in 1938－1939，and the leather industry about 16,000 tons of hides，of which about 11,800 foreign goods． No reserves had been collected before the war．In 1941 there was as yet no lack of leather，the supply being exceptionally large partly because so much of the live stock had to be slaughtered when Carelia was evacuated in Spring 1940．In 1941－ 1942 scarcely any hides were imported． Old rubber was collected in large quanti－ ties and in 1943 German hides and arti－ ficial rubber were obtained for the army and some for civil consumption．The leather industry lacked raw material in the late years of war，especially hides but also chrome salts，tanning material and lubricants．Before the war the shoe industry supplied almost the whole of the domestic market，and at the outbreak of war the shops had large supplies of shoes． All sole leather was domestic while certain special leathers，lasts and other requisites were imported．During the war，there being no imports，there was not sufficient leather for civilian use．Substitutes were produced with wooden soles and tops of paper cloth．In February 1943 the supply of leather footwear was at its lowest． At the turn of the year 1944－1945 hides， sole－leather，footwear and rubber soles were imported from Sweden but only in insufficient quantities．At the fresh eva－ cuation of the ceded territories more cattle were slaughtered but even this did not relieve the shortage of raw materials．

The output of the rubber and leather factories is seen from the following fi－ gures．

|  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1938 | 2，852 | 1，173 | 34 | 2，812 | 375 | 8，471 |
| 1939 | 2，181． | 418 | 55 | 2，878 | 1，406 | 8，411 |
| 1940 | 2，078 | 507 | 166 | 2，938 | 3，189 | ．14，160 |
| 1941 | 982 | 214 | 20 | 1，872 | 1，867 | 7，606 |
| 1942 | 67.0 | 408 | 25 | 832 | 1，354 | 4，015 |
| 1943 | 1，30：1 | 217 | 36 | 920 | 2，428 | 5，242 |
| 1944 | 1，274 | 120 | 37 | 821. | 2，338 | 5，918 |

The production of rubber shoes of dif－ ferent kinds decreased to 23－45 per cent in 1942－1944 as compared with 1938
whereas the output of bicycle tyres was down to 10 per cent in 1944. The production of sole leather was 29 per cent of the base level in 1944, while rather much dubbed leather was produced all through the war, in 1940 even 8.5 times as much as in 1938. The production of other top leather was 67 per cent above the base level in 1940, then decreased to 47 per cent of the 1938 quantity in the next two years and was 62-70 per cent in 19431944.

The output of the shoe factories is seen from the following figures, in 1,000 pairs.

|  | Shoes for men, women and children | Shoes for skiing and hiking | Substitute shoes |
| :---: | :---: | :---: | :---: |
| 1938 | 2,40.6 | 486 | . - |
| 1939 | 2,338 | 509 | - |
| 1940 | .1,716 | 1,318 | - |
| 1941 | . 1,897 | 915 | 61 |
| 1942 | 1,277 | 618 | 795 |
| 1943 | 805 | 931 | 2,187 |
| 1944 | 1,163 | 1,133 | 1,719 |

The production of civilian footwear, especially shoes for men and women, was substantially reduced in 1942 and 1943, to $1 / 3$ of the pre-war amount, but in 1944 recorded an increase to 48 per cent with the increase in the supply of leather. The output of boots and shoes for skiing and hiking increased very much in 1940 because of the Winter War. The next year it was still exceptionally high but declined and reached its lowest point in 1942, then increasing again. The production of substitute shoes was greatest in the years of the greatest lack of leather.

The food industry, including the production of drinks and tobacco, was very active, factories and store rooms being
enlarged and new machines bought. In laboratories intensive research work was carried on, and all kinds of substitutes were devised and manufactured. This branch developed most in 1941 and was very active in 1942, the volume surpassing the level of 1935.

The chemical industry has had difficulties in regard to fuel, certain raw materials and chemicals such as common salt, soda, sulphate of aluminium, raw phosphate and kali salts. With the aid of research new articles and substitutes have been devised and manufactured.

## CONCLUSION.

The data presented above show that the war has seriously affected Finnish industry, particularly that of exports but also certain branches of the home market. Since 1944 many branches have still been short of labour, lacking also raw material, machines and reserve parts as the currency situation does not allow imports even when goods are available. Thus the slowly recovering foreign trade is being checked by the shortage of foreign valuta, which in turn may be ascribed to the fact that exports very largely consist of reparation goods for which no income is recorded in the balance of payments. In order to comply with the armistice terms the metal and machinery industry has been very much enlarged which may be of lasting benefit when the reparation period has ended. If peace is signed and new credits can be arranged so that imports are stimulated there is no reason why our difficulties should not be overcome and industry recover.

## FINLAND'S BALAN CE OF PAYMENTS FOR 1945.

BY<br>RAGNI BÄRLUND, MAG. PHIL.

Even in normal times the calculations of the balance of payments offer many difficulties and have in some matters to be based on rough estimates. This has naturally been the case in the exceptional
conditions prevailing during and after the war. Yet in order to make possible an examination of the development of foreign payments and to get at least a general idea of this economic sphere, the Central

Statistical Office has computed regular figures showing the balance of payments of Finland for every year; which data, however, should be used with great discrimination. The wide changes in present external conditions, such as the interference with the commercial, and other kinds of intercourse with many countries, and still more the decline in the value of the Finnish mark make the reliability of any comparison between the figures for different years very doubtful.

## PRINCIPLES OF CALCULATION.

The same method and principles have been employed now as in former years in calculating the balance of payments. This calculation only includes the actual income from abroad and the expenditure there, but not loan issues nor debt redemption nor any other items that in their essence represent the movement of capital. Nor was it intended to record the actual payments made between Finland and other countries during this period, but an attempt has been made to set out, what Finland's balance of payments would have been if all payments had been made in cash. The fluctuations in the value of foreign currencies always introduce an element of uncertainty into the calculations, and this was particularly true during 1945 when the exchange value of the mark was changed three times. Nevertheless, as far as possible all amounts in foreign currency have been convented at the rates actually paid.

The calculation of the balance of payments has never been considered exact in its details. In some respects income and expenditure are based on precise statistical data but in others on only more or less summary calculations. On the whole, however, they normally provide a correct idea of this balance and the changes occurring in it from time to time. Now the result is undoubtedly weaker, but its validity is difficult to estimate.

## INCOME.

The income in the balance of payments has been calculated at the following amounts for 1945:

|  | $\underset{\text { mill }}{\text { Mill }}$ | $\underset{\text { Mill. }}{\substack{\text { Min }}}$ |
| :---: | :---: | :---: |
| Exports | 5,230 |  |
| stowage charges not included | 15 | 5,245 |
| Sale of gold |  | 240 |
| Harbour charges |  | 80 |
| Shipping freights |  | 550 |
| Emigrants' remittances |  | 60 |
| Gifts in kind from abroad |  | 170 |
| Money gifts from abroad |  | 170 |
| Foreign travel |  | 90 |
| Foreign insurance |  | 330 |
| Post Office, Telegraph Office and State Railways' revenue from abroad .............................. |  | 5 |
| Foreign diplomatic expenditure |  | 20 |

Altogether the income for 1945 amounted to 6,960 million marks. Considering the present value of the mank, the actual income of last year was lower than in any year for which there are calculated records, or since 1922. The low income may chiefly be ascribed to the limited amount of exports for which payment was received, amounting only to 5,245 million marks. The reparation deliveries, valued at 8,170 million marks in 1945, are entirely outside the balance of payments, as they do not produce any income. Shipping freights also gave a small return, only 550 million marks. This item has been larger in recent years, for instance 1,000 million in 1943 and 940 million in 1940, but the delivery of a large number of vessels as war indemnity and other reductions of the merchant fleet have decreased its earnings. Since the outbreak of war Finland has received valuable gifts from abroad, at first mostly of large sums of money but lately very much of goods. All gifts are included in the balance of payments as income and the value of the gifts in kind as expenditure because they are comparable with imports. Thus they do not influence the final balance. The value of such gifts has been estimated at 170 million marks for 1945, and the cash gifts amounted also to 170 million. Further the Bank of Finland sold gold held abroad for 240 million marks.

## EXPENDITURE.

The following table shows the principal items of expenditure in the balance of payments for 1945:

|  | $\underset{\mathrm{mk}}{\text { Mill. }}$ | $\underset{\mathbf{m k}}{\mathrm{M}} \mathbf{i l l}$ |
| :---: | :---: | :---: |
| Imports | 6,820 |  |
| less: marine and transport insurance paid to Finnish companies | 20 | 6,800 |
| Smuggling |  | 30 |
| Imports of gifts in kind |  | 170 |
| Post Office, Telegraph Office and State Railways' expenditure abroad |  | 25 |
| Diplomatic expenditure abroad and share in international expenses .. |  | 65 |
| Travel abroad |  | 50 |
| Insurance premiums and claims .... |  | 310 |
| Interest <br> of which: |  | 27.0 |
| State | 150 |  |
| Municipalities | 10 |  |
| Others | 110 |  |

The tatal expenditure last year amounted to 7,720 million marks of which, in spite of the falling currency even the nominal value was smaller than since 1936. The reason was that imports, being the most important item, were very low as was clear from the scarcity of all kinds of goods in the shops. During the years of interrupted connections with the United States and England interest payments were rather unimportant, because the amounts due could not be transmitted to the lender, besides which in later years certain interests were blocked in Finland. In 1945 the expenditure on interest was larger than for many years, amounting to 270 millhion marks. This sum includes certain: interest amounts that had fallen due in previous years, while other payments are still blocked.

THE DIFFERENCE BETWEEN INCOME AND EXPENDITURE.
In 1945 the positive net items in the balance of payments, obtained by deducting the expenditure from the corresponding income, consisted chiefly of shipping freights 550 million marks, harbour charges 80 million, and emigrants' remittances and money gifts 230 million. The principal negative net items, obtained by deducting the income from the corresponding expenditure, consisted of the surplus of imports, including smuggling and the income of the sale of gold, 1,375 million marks, interest 270 million, and diplomatic expenditure 45 million.

The total balance of payments shows a surplus of expenditure of only 760 million marks, which is less than for many years. It should be remembered that this does
not imply any easing of the payment position as no reparation deliveries are recorded in the balance of payments, and they wene not very large until 1945.

REVIEW OF THE YEARS 1922-1944.
The foreign payment position of Finland has greatly changed during the period for which it has been statistically investigated. From 1922, the first year studied, to 1930 the balance of payments ended either in a slight annual surplus of income, or in some years in a surplus of expenditure that at times was very large. In 1928 it even exceeded $1,6: 00$ million marks. This was a period of internal construction, for which large sums of foreign capital were employed. Then there followed a period of quite another character. The years from 1931 up to the outbreak of war were distinguished by a positive balance of payments. The capacity of the woodworking industry continually increased during those years, and its products were in demand on the foreign markets. Thanks to this there was a considerable annual income surplus, until the war put an end to this development by cutting off the connections with the chief buyers. The largest net income was in 1934 when income exceeded expenditure by 1,570 million marks. F'or the whole period 1931-1939 the total surplus of income was nominally 9,330 million. Year by year this surplus was used to reduce the country's foreign indebtedness until it was a mere trifile, only a net amount of 420 million being left by the end of 1939.

The balance of payments for the years of war was presented in the items of Nos. 1-3, 1946, of this Bulletin. For 1940-1944 the figures, now slightly corrected, ended in a surplus of known expenditure over known income amounting to 17,795 million marks or an annual average of 3,559 million. As in normal years foreign trade dominated the balance, the net expenditure being 24,530 million marks on imports, not including war material, the value of which has not been finally fixed. This net expenditure was partly counteracted by some items of income. Chief among these were the net freights earned by the merchant fleet, 4,225 million marks, gifts in cash and kind
received from abroad to an amount of 2,755 million, and 1,030 million obtained as foreign currency by the sale of gold abroad.

These circumstances are more clearly illustrated by the following table, which shows the average income and expenditure of the balance of payments for the three periods mentioned and for 1945:

|  |  | $\begin{gathered} \text { Income } \\ \substack{\text { Milll. } \\ \text { mk }} \end{gathered}$ | Expenditure | Surplus of income ( + ) or expenditure |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Mill. | $\frac{\text { Mill. }}{\text { mk }}$ | Mill. |
| 1922-30, | aver. |  | 6,288 | 6,399 | - 111 | - 3.1 |
| 1931-39, | " | 7,705 | 6,669 | +1,036 | +21.2 |
| 1940-44, | " | 7,647 | 11,173 | -3,526 | -72.1 |
| 1945 |  | 6,960 | 7,720 | - 760 | $-8.5$ |

By using a more stable standard of measurement than the mark, a clearer conception of the development of the foreign payment position may be arrived at than that provided by the nominal figures quoted. The income and expenditure of every year since 1922 has been converted into dollars at the current rate of exchange, and the average net result is given in the last column of the table above. In 19221930 the country's net annual surplus of expenditure amounted to 3.1 million dollars, while in the nine years following there was a net annual income of 21.2 million dollars. The war years demanded an annual surplus of expenditure of $72.1 \mathrm{mil}-$ lion dollars. In 1945 that surplus had decreased to 8.5 million dollars.

## BALANCE OF PAYMENTS AND MOVEMENT OF CAPITAL.

The balance of payments does not in: clude the movement of capital. If complete and exact particulars regarding all the income and expenditure in the balance of payments and the actual movement of capital are shown, the latter should correspond exactly to the net result of that balance. In practice this is, of course, not the case, but in normal times the correspondence was rather close. For 1945 the figures deviate more than usual, apparently because it has not been possible to eliminate the effects of the great alterations in the exchange rates during the year.

During the war, the redemption of foreign loans could not be regularly effected, all payments to England and the

United States being interrupted for several years. Besides this there was a moratorium on some American loans, and payments on loans could not be transferred to Sweden because of a special agreement. But towards the end of 1945 connections were re-opened and agreements made regarding the gradual payment of the redemptions ovendue. During last year the State repaid .one dollar loan of 1923 and reduced another of the same year. In addition the city of Helsinki repaid some Swedish credits. Including certain minor amounts the total redemption of foreign credits aggregated 120 million marks in 1945.

On the other hand the State negotiated new credits in Sweden. The debt was incurred month by month, as current imports from that country had to be financed. The total increase in foreign long term indebtedness was nearly 1,430 million marks. It is therefore calculated that the country's funded foreign debt increased last year by 1,310 million marks. In computing these figures the exchange rates actually paid have been used as far as they have been known. In regard to the short term balances and claims this is not practicable, as the operations taking place in the year are too mumerous to be checked singly. Thus the net change for the whole year is recorded. The claims were calculated at 1,880 million marks at the beginning of 1945 and 3,950 million at the end of the year, but it would seem rash to conclude that there has been an actual increase of 2,070 million in the claims as the changes in the exchange rate are certain to have influenced these figures. Similarly the short term foreign indebtedness is calculated to have increased nominally by 4,780 million marks, or from 4,640 million to 9,420 million. At the end of the year the net short term indebtedness was 5,470 million marks according to the exchange value of that time.

## FOREIGN INDEBTEDNESS IN 1921-1945.

During the years under review the foreign debt and claims have been subject to many changes. At the end of 1921, when the balance of payments first began to be calculated, the total net indebtedness equalled 159.9 million dollars and, because
of the negative balance of payments for the first 9 -year period, it increased further until it was 205.5 million dollars at the end of 1930 . Thaniks to the highly active balance of the next nine years foreign indebtedness could be reduced. The long term debt was redeemed to a considerable extent, and in particular the short term debt was reduced, while simultaneously the short term claims were very much increased. The total foreign net indebtedness was only 12.1 million dollans at the end of 1939, a circumstance that was of great importance as then a new period of lending began,
when the surplus of expenditure in the balance of payments in the war years had to be financed. In spite of the great annual surplus of expenditure of the last few years the net foreign indebtedness has not reached very high figures if compared with the previous peak about 1930. At the end of 1945 it amounted to 177.4 million dollars, a sum that in the light of the above data does not seem excessive for the economy of the country. A quite considerable increase is however to be expected in the next few years when the effects of the war are being eliminated.

## ITEMS.

The Diet. During the spring session of the Diet, from February 1st to July 12th, several bills of economic consequence were passed. These include: one according to which fishing for one's own consumption is provisionally allowed to everybody regardless of the ownership of fishing waters; one combining the metal works owned by the State into one concern, the Me tal Factories of the State; one introducing a restricted labour duty by virtue of which it is possible to compel work-shy persons to work; one concerning the payment of compensation of the former Finnish owners of goods now restored to the Soviet Union; one by which each worker is entitled to a holiday of up to 18 days annurally - instead of the earlier 12 days; one revising the law concerning the collective labour agreements and widening the group of organisations authorized to make such agreements; one to establish a Labour Court; the law concerning the Committees of Production referred to in the preceding issue of this Bulletin; and a law concerning conciliation in labour disputes mainly intended to make the present procedure more effective.

Further there are amendments to the budget for the current year: the first supplementary budget and increases in the salaries of civil servants.

On September 3rd the Diet reassembled for its autumn session during which it will deal with a number of economic and financial questions; e.g. amendments to the
income and property tax law, and the State Budget for 1947.

The building problem and building policy. Before the second World War the chief object of the building policy in Finland was to lessen the general overcrowding and above alll to provide hygienic housing conditions for large families. To this end a number of new laws were passed in 1940 after the Winter War to oblige the central and local government authorities to assist considerably certain building enterprises of general import. The activity resulting from these laws was well on the way when it was for the greater part stopped by the fresh outbreak of war in Summer 1941. The necessity of concentrating the resources of the country, labour as well as real capital, on war requirements very much reduced civil building, particularly for housing purposes in towns and densely populated localities. As yet no noteworthy recovery is recorded, as is seen from the following figures which show the number of dwellings completed in the towns in the last few years.

To some extent the past years have altered the aspect of the urban residential building. Although great overcrowding appeared in certain parts already before the war, there was no real shortage of dwellings. Accordingly the aims of the building policy were mainly qualitative in character, whereas at the present day they are above all quantitative; the serious lack of dwellings must first be made good; for it is now greater than ever, greater even than after the first World War. Other reasons for the decline in building activity are the damage done during the war and above all the need for the towns to house the former urban population of the districts ceded to the Soviet Union under the armistice terms.

Calculations show that at least 15 years of exceptionally active building will be needed to cover the present lack of dwellings in the towns and to restore approximately the pre-war situation in this respect. This enormous task is very much impeded by several factors, the most serious of which is the shortage of building materials. Almost all the most important of these and other requisites are lacking, partly because they are needed for the production of reparation goods. Consequently requirements as to size and quality must be greatly reduced. Improvements in quality gained in the last few decades must be abandoned, and the housing habits of the 1890's again accepted. The commonest type will be a rather modest wooden building containing flats of two rooms to be let, with a maximum of 40 square meters of floor space. They are to be built by local governments and public societes. A special law of December 1944 lays it down that the former shall provide free sites for them and that the State shall assist their erection with cheap loans. But being of a very unsatisfactory quality they should be regarded only as post-war emergency houses.

In addition to these war and post-war steps to promote production, certain regulative measures have become more and more important in building policy. By the regulation of rents, started ailready in 1941, and otherwise, the freedom of renting and letting has been gradually restricted in order to find room in the existing houses
for the homeless persons. Thus the occupant of a dwelling, whether he owns or rents it may at present have at his disposal only a certain number of rooms for his own familly. The rest have to be given up for persons unable to find accomodation, to a special housing authority. Yet, experience has shown that these regulations have greatly increased the inconveniences of overcrowding without really easing the shortage of dwellings. An example of the present situation is the fact that numerous persons in Helsinki are temporarily inhabiting air raid shelters built during the war. It will depend chiefly on the supply of building material and requisites whether it will be possible speedily to improve the standard of housing or whether the situation will deteriorate further.

In rural districts circumstances are not much easier although housing is much more elastic than in the towns. It has been estimated that as in the towns about 15 years of active building will be needed before the housing shortage is made good in the rural districts. In the near future the building of houses will be closely connected with the current great land reform, by which land will be supplied to the former inhabitants of the rural districts ceded to the Soviet Union. The problems connected with this reform are rather different in character from those of urban housing.

Increase of merchant fleet. The negotiations between the Finnish Government and the Occupation Authorities of the British Zone of Germany concerning Finnish ships confiscated by the Germans in Autumn 1944 ended in June this year with an agreement according to which the Finnish vessels in the harbours of Flensburg, Hamburg and Kiel shall be returned to their owners. These ships, six in number ( 10,885 gross reg. tons in all), are said to be in relatively good repair and some of them are back in Finland already. One vessel, however, which the Germans sailed to Copenhagen, cannot be repaired. The fate of the two Finnish vessels in the American Zone, sunk in the harbour of Bremen, is not yet decided.

In July the United States consented to liberate fourteen Finnish vessels
embargoed in American harbours (twelve steamships and two motorships, 39,540 gross reg. tons in all). Of these, seven steamships ( 17,982 gross reg. tons in all) had arrived in Finland by the beginning of September, and one motorship should be back in the near future.

From the surplus property of the United States Army the State has bought 24 tug boats built during the war. These vessels, 18 of which have an engine of 400 HP , and 6 of 650 HP , will be sold to private shipowners.

Finnish shipowners have bought from England three small tank vessels (the tank capacity of each vessel being $500 \mathrm{~m}^{3}$ ), formerly belonging to the Invasion Fleet. Two more tank vessels have been ordered in Holland, each with a tank capacity of $700 \mathrm{~m}^{3}$. One of them will be ready before the end of this year, the other one in 1947.

Owing to the demands made on our shipbuilding industry by war reparations only a few new vessels have been built this year, i. e. four steamships (the largest one of 1,561 gross reg. tons, the others considerably smaller, 1,968 gross reg. tons in all) and three motorships ( 749 gross reg. tons).

The total increase of the Finnish merchant fleet from the beginning of the year is about 30,000 gross reg. tons, this figure including only such vessels as are already in Finnish use. The whole present tonnage comprises 513 vessels of a total of 290,445 gross reg. tons.

Delivery of farm products. On August 8th the Government approved the principles of a new system of surrendering farm products. According to the former provisions the minimum amounts to be delivered by each farm were fixed separately for every product. Any amount not reserved for the household of the farmer was also to be delivered. The new system is based on a socalled "total delivery principle": for every farm the totail amount of products to be delivered is fixed in "delivery units", one such unit corresponding to one kilogram of rye. The amounts of other products to equal one delivery unit shall be fixed by the Ministry of Supply. In general the farmer can choose in what proportions he
will deliver his various products. As to grain, potatoes, meat and millk products, however, the choice can, if necessary, be restricted by the Ministry of Supply for the sake of safeguarding the delivery of the main foodstuffs necessary for public consumption.

According to a Government decision of June 20th in connection with the latest adjustment of farm wages and prices, the farmers shall be entitled to sell free of price control those products which exceed the compulsory deliveries.

Detailed rules are being worked out for the execution of these decisions, the aim of which is partly to compensate the farmers for the new increased wages to farm hands, partly to encourage them to increase their production, and partly to render action against the black market more effective.

Weather conditions and crop prospects. Until the middle of August this summer can be divided into two periods in regard to weather conditions and their effect on crop prospects. After the rainy and cool spring the end of June started a period of fine weather which lasted to the end of July. The temperature was above the average in the whole country while the amount of rain was only one half the normal in South Finland and about three-fourths of normal in North Finland. In the second period rain was more abundant, exceeding the normal in the south and being only a lititle bellow the average in the north. In the latter half of August the weather was rellatively advantageous to farming. The weather was generally fine and the amount of rain moderate. In the second week of September a new period of rain started.

In the middle of September prospects for most crops ane bellow the average mainly because of the long period of drought. Autumn rye sowings grew up very early this year in consequence of the fine weather in early summer and therefore could not be improved by the rain in August and their crops are estimated to be below the average: Autumn wheat is expected to give a considerably better crop than rye, and it is the onily cereal in regard to which the prospects somewhat exceed the average.

The drought was disadvantageous, in part disastrous especially for the spring sowings. Prospects are best for wheat though not so good as for the autumn sowings, and barley. The oat crop is expected to be considerably smaller. The potato yield will be about the same as for spring wheat or allmost the average. Root crops have also suffered from pest: prospects are clearly below the average. The hay crop is estimated to be allmost average, while the quality is good.

The following table from the Board of Agriculture shows the crop prospects. in the middle of September. ( $8=$ very good, 7 $=$ good, $6=$ above average, $5=$ average, $4=$ below average, $3=$ poor, $2=$ almost failure, $1=$ failure.)

The debts due to Sweden. According to a preliminary agreement concerning the Finnish debt to Sweden the repayment will begin in 1954. It has been estimated that the debt will exceed 700 million
crowns in Autumn 1949 when a definite agreement will be made about repayment. Of this amount 500 million are public debt, the repayment of which takes place in thirty years. The remaining . 200 million crowns are private debt and have to be repaid in twenty years.

Economic Council. In connection with the proclamation of the price and wage stop in force as from July 1st, the Government began to plan a general program to raise production and the standard of living. For the supervision of this planning and later, for its execution a new body has been set up called the Economic Council and comprising a chairman and sixteen members.

Year Book of the Bank of Finland. The twenty-sixth volume of this Book has been published in Finnish and Swedish. It is mainly arranged on the same plan as former issues and contains, in addition to the tables, a review of the economic position of the country and of the Bank's business in 1945. The English edition at present under preparation will include the same information for the years 1943 to 1945. The Year Book is published by the Institute for Economic Research of the Bank of Finland, and it is supplied free of charge on application.

## THE BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 10 marks per copy. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland Institute for Economic Research.
