No. 9

## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

The state of the money market in August and the beginning of September was still marked by great easiness. Nothing else was to be expected, because production has been restricted in most spheres, building is dormant, imports have fallen off very much and even exports have been reduced, local trade has decreased and there is no fresh enterprise. An insignificant stringency in the position of the Joint Stock banks in August is to be explained ahiefly by the fact that the gathering of this year's harvest proceeded for the most part earlier than usual, so that the customary increase in the demand for money in the autumn already made its appearance in August.

Deposits in the Joint Stock banks fell off in August by 118.8 million marks against 31.7 millions last year. The withdrawals were due to a great extent to the continued re-investment of the proceeds of the loan of the Industrial Mortgage Bank which was referred to in previous reviews. However, there was a reduction of the actual deposits in the Joint Stock banks, an occurrence that is quite usual towrards the autumn. Credits also decreased slightly, loy 49.0 million marks compared with 40.3 millions last year. In this way the difference between credits and deposits increased iby 69.8 million marks, whereas the increase last year was no larger than 8.6 millions, but at that time the difference was $2,262.9$ million marks at the end of August, now, however, only 969.0 millions. The slight stringency caused a reduction in the cash of the Joint Stock banks. Rediscounted
bills dropped further in August by 3.0 millions to only 12.7 million marks.

In the position of the Joint Stock banks towards other countries the improvement continued that had marked the previous months. By balances growing and indebtedness dropping the net credit balances of the lbanks increased lby 12.6 millions to 259.7 million marks compared with a net indebtedness of 280.2 millions a year ago. If the foreign engagements of the Bank of Finland are included, all the banks had a net foreign credit ibalance of $1,351.3$ million marks at the end of August as against only 255.8 millions a year ago.

The position of the Bank of Finland displays a further improvement of the already strong position. Oredits dropped in August by 54.4 million marks and thus only amounted to 702.8 millions compared with $1,521.9$ millions a year before. The supply of foreign neurrency decreased, it is true, by 42.3 million marks, but was nevertheless 906.5 millions at the end of August as against 520.0 millions twelve months earlier. As the reduction in the note circulation still went on in August, the note reserve of the Bank increased by 10.6 millions to 862.0 million marks compared with only 368.5 millions a year ago. By this means the ordinary cover rose to $80.5 \%$ of all liabilities payable on demand. The corresponding percentage a year before was $50.5 \%$ and at the end of last year $60.8 \%$.

During the first week in September the reserve of foreign currency grew again by 10.4 million marks and foreign bills rose by 24.0
millions. The downward tendency in credits was also apparent during this week. On the contrary, the note reserve was reduced by 22.1 million marks to 839.9 millions.

The fall in prices continued in August. The wholesale price index dropped 1 point to 89 compared with 97 a year ago and 103 two years ago. The fall in prices was caused chiefly by the decrease in the level of prices for agricultural produce. The downward tendency was shared by prices for lboth imported and exported goods. On the other hand the cost of living index showed a rise of 16 points to 1,144 . This rise in the price of foodstuffs is a phenomenon that recurs every autumn.

## TRADE AND INDUSTRY.

Foreign trade in August was characterised by a great drop in both imports and exports. Imports, which had ibeen appreciably smaller throughout the year than last year, had a value for August of 443.8 million marks or $27.3 \%$ less than in August, 1929, and $37.9 \%$ less than in August, 1928. The reduction in the quantity of imports was rather less or $13.2 \%$ and $21.9 \%$. Exports, which had kept up well during the earlier part of this year in comparison with the previous year, fell off very much.in August. Their value only amounted to 535.9 million marks compared with 904.4 millions last year, when a record was established, the reduction amounting to $40.7 \%$. The quantities exported also fell off appreciably or by $35.8 \%$ in comparison to August, 1929. This great drop was due to a considerable extent to appreciably reduced shipments of sawn timber. Exports of cellulose, mechanical pulp, plywood and butter were also not inconsiderably less than at the same time last year. In addition, the fall in price for refined woodgoods is only now beginning to be felt gradually in the figures for exports, seeing that hitherto exports embraced parcels contracted for earlier at higher prices.

The net result of the balance of trade for August represented a surplus of exports of 92.1 million marks. This is, indeed, not as good as
usual for this month, but nevertheless satisfactory. For the past eight months the balance of trade has resulted this year in a surplus of exports amounting to 294.6 million marks, whereas the preceding years had a large excess of imports, 678.9 millions last year and $1,463.2$ millions in 1928.
The timber market proved dead in August. Buyers seem to have lost confidence in the market and live from hand to mouth, apparently in the fear of a further fall in price. Sales of sawn goods from Finland for the month only amounted to albout 25,000 standards and the total sales lby the end of August were estimated at 665,000 stds representing at least $2 / 3$ of this year's supplies. The Finnish sawmill owners resolved at a recent meeting to try to maintain present prices and to adopt a careful policy in selling supported by the banks which declared that the sawmills need have no reason, for considerations of credit, to sell off their production at low prices. This policy is based on the fact that, for instance, Great Britain has so far made contracts for about 500,000 stds less than at the same date last year.

The pulp market is still depressed. It is hoped, however, that it has touched bottom, at any rate in regard to sulphate prices which are already so ruinous that some mills are considering the advisability of closing down. The mechanical pulp industry is suffering from a shortage of water; the market is on the whole unchanged. The supply of orders for cardboard has been a little larger during the last few weeks than before, but still does not equal last year's.

## THE LABOUR MARKET.

The labour market remains unchanged. As the autumn advances unemployment grows as usual, though reaching higher figures all the time than in previous years. In the middle of September the number of unemployed registered at the municipal labour exchanges was 6,220 in comparison to 2,465 at the same date last year and only 886 in September, 1928, before the slump set in.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET.

## Bank of Finland:

1. Balance sheet.
2. Note issue.
3. Note circulation and foreign correspondents.
4. Ordinary cover, note reserve and home loans.
5. Rediscounted bills and balances of current accounts.
6. Rates of exchange.

Joint Stock banks:
7. Home deposits.
8. Home loans.
9. Position with regard to foreign countries.
10. Position of the banks towards foreign countries.
11. Clearing.
12. Deposits in the savings banks.
13. Deposits in Post Office Savings Bank and on Consumers' Co-operative Societies' Savings Account.
14. Deposits in Co-operative Credit Societies.
15. New risks insured by Life Assurance Companies.
16. Changes in Number and Capital of Limited Companies.
17. Helsingfors Stock Exchange. Bankruptcies. Protested Bills.
18. Stock Exchange index.
II. state finances.
19. National Debt.
20. State revenue and expenditure.
21. Miscellaneous State receipts collected by Customs.

## III. TRADE.

22. Value of imports and exports.
23. Value of imports and exports in different groups of goods.
24. Imports of the most important articles.
25. Exports Frad
26. Import-price index.
27. Export-price index.
28. Index numbers for quantities of imports and exports.
29. Total sales of some wholesale firms.
IV. TRAFFIC.
30. Foreign shipping.
31. Shipping with various countries and passenger traffic.
32. Railways, goods traffic and rolling stock.
33. Railways' revenue, expenditure and traffic surplus.

## V. LEVEL OF PRICES.

35. Index number of cost of living.
36. Wholesale Price Index.

## VI. LABOUR MARKET.

37. Number of unemployed.
38. Cessation of Work.

Turnover of Stock Exchange according to figures supplied by the Stock Exchange Committee.
The figures for bankruptcies are not comparable with those published earlier in 1923. The figures above, compiled by the Central Statistical Office according to the reports sent in by the various Courts, include all bankruptcy petitions, of which only about half will lead in due course to actual bankruptey, whereas the rest owing to agreement, lack of means etc. will be cancelled.

Protested bills according to figures published in the vReport of Bills Protested in Finlands.

* Preliminary figures subject to minor alterations.

## 18. - STOCK EXCHANGE INDEX.

| Year | Jan. | Febr. | March | April | May | June | July | Aug. | Sept. | Oct. | Nov. | Dec. | Year |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1927 | 198 | 211 | 222 | 219 | 224 | 233 | 265 | 256 | 248 | 250 | 253 | 270 | 1927 |
| 1928 | 270 | 265 | 267 | 257 | 255 | 257 | 255 | 241 | 235 | 223 | 213 | 229 | 1928 |
| 1929 | 221 | 215 | 200 | 202 | 199 | 196 | 197 | 194 | 175 | 181 | 188 | 189 | 1929 |
| 1930 | 195 | 194 | 192 | 206 | 200 | 193 | 196 | 195 |  |  |  |  | 1930 |

According to figures published in the 2 Mercators.
This revised index series is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank, 12 Industrial and 2 other kinds of shares. By multiplying the price bid for each security by the number of shares in the corresponding company the so-called sExchange values has been arrived at for the share capital of the company, the sum of vhich values has been calculated in \% of the total nominal value of the share capital of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

The above table is based on the monthly report on the National Debt pablished by the Treasury in the Official Gazette.
2) Internal loans are given at their nominal value. Foreign loans are given in Finnish currency according to the rate ruling on the date of the raising of the loan.
${ }^{2}$ ) Calculated as follows: The loans raised in the country have been calculated in dollars, according to the average rate of exchange of each month. The loans, negotiated abroad, which are all issued in different currencies, are grouped according to the proportion of currencies, shown by the coupons paid, and reduced to dollars at the rate of exchange just mentioned.
20. - STATE REVENUE AND EXPENDITURE.

| Groups of revenue and expenditure | Jan.-July Mill. Fimk |  | Groups of revenue and expenditure | Jan.-July <br> Mill. Fmk |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

The term imports covers all imported goods which have been placed on the market either immediately after importation or after storage. Esports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

Preliminary figures subject to minor alterations.

| Jan.-Dec. |  |  |  |  |  |  |  |  | Jan.-Dec. |

The import- and export-indices have been calculated by the Statistical Dept. of the Board of Customs in the following manner: the quantities of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in question in 1913, after which the import (or export) value tor the current year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods chosen for the setting-ap of a total-index have been divided, according to their use, into the groups: foodstuffs, clothing, agricultural requirements and other goods. The three last-named have been further divided, according to their purpose, into raw materials, machinery and industrial products. dutiles.
28. - EXPORT-PRICE INDEX.

${ }^{1}$ ) From the beginning of 1921 onwards a new official index has been drawn up differing from that published in the Builetin for 1922 in that the whole first half of 1914 forms the basis ( $=100$ ) for the same, and that the rise in taxation is also included.

The index is calculated by the Statistical Bureau of the Ministry of Social Affairs and is based on monthly reports from 21 different centres; it shows the rise in the cont of living for a workingman's family of normal size, the income of which amounted during the years $1908-1909$ to $1600-2000 \mathrm{Fmk}$, assuming that the average monthly consumption within the same remained unaltered. The index for total cost of living is the average based on weight of the different indices.
36. - WHOLESALE PRICE INDEX.

The wholesale price index is worked out at the Central Statistical Office. - The first group of indices is based on the quantity of goods in local wholesale trade in Finland, whereas the indices for imported and exported goods are based on the total quantities of goods imported or exported, including the movement of such goods as are in no way intended for wholesale trade in Finland. The average prices for 1926 are taken as a basis. There is no direct weighing of the data regarding prices, but indirect weighing has been carrled out by each class of goods being represented by the number of commodities which corresponds to the calculated importance of the_class in wholesale trade. The averages are arithmetical averages.
37. - NUMBER OF UNEMPLOYED.

| Ind of Month | 1928 |  |  | 1929 |  |  | 1930 |  |  |  | End of Month |

| July | 415 | 347 | 762 | 872 | 412 | 1284 | 3073 | 953 | 4026 | + 473 | July |
| August | 491 | 366 | 857 | 1297 | 562 | 1859 | 4000 | 1288 | 5288 | + 1262 | August |
| September | 603 | 343 | 946 | 1954 | 757 | 2711 |  |  |  |  | September |
| October | 992 | 608 | 1600 | 4147 | 1490 | 5637 |  |  |  |  | October |
| November | 2117 | 928 | 3045 | 7507 | 1988 | 9495 |  |  |  |  | November |
| December | 2220 | 648 | 2868 | 7114 | 1403 | 8517 |  |  |  |  | December |

This table, prepared from the weekly reports of the Labour Hxchange Department of the Ministry of Social Affairs, shows the number of unemployed registered in the books of the communal labour exchanges in the majority of towns and a very small part of the rural centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled artisans proper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.

The above particulars which are of a preliminary nature, have been compiled by the Statistical Bureau of the Ministry of Social Affairs. The majority of cases of cessation of work were described as strikes.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; after 1809 it was an autonomous Grand Duchy connected with Rusgia up to December 6th, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a repablic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President L. Kr. Relander is elected for the term 1 March, 1925, to 1 March, 1931.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1929 are as follows:

|  | Number | Per cent |
| :---: | :---: | :---: |
| Swedish party | 23 | 11.5 |
| Unionist party | 28 | 14.0 |
| Agrarian party | 60 | 30.0 |
| Progressive party | 7 | 3.5 |
| Social-Democrats | 59 | 29.5 |
| Communists | 23 | 11.5 |

## 2. LAND.

THE AREA is 388,279 square kilometres $=150,005$ square miles, (Great Britain's area is 89,047 sq. m. and Italy's area 117,982 sq. m.). Of the total area $11.5 \%$ are lakes. On an average $10.8 \%$ of the land in the south of Finland is cultivated, $0.9 \%$ in the North, $6.3 \%$ of the whole land. Of the land area 25.3 mill, ha ( 62.5 mill . acres) or $73.4 \%$ are covered by forests.

THE AVERAGE TEMPERATURE in the coldest month is in S. W. Finland - $5^{\circ}$ to $-6^{\circ}$ C., in Lappland $-15^{\circ} \mathrm{C}$. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki is $+4.6^{\circ}$ (in Oslo $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the South for about 100 days, in Central Finland for 150 to 180 days, in Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1928): 3.6 millions (of which 0.3 million emigrants), Sweden (1928) 6.1, Switzerland (1927) 4.0, Denmark (1928) 3.5 and Norway (1928) 2.8 millions.

DENSITY OF POPULATION (1928): In South-Finland 18.4, in North-Finland 2.4 and in the whole country an average of 10.5 inhabitants to the square kilometre.

LANGUAGE (1920): Finnish speaking $88.7 \%$, Swedish speaking $11.0 \%$, others $0.3 \%$.

RELIGION (1928): Lutheran $96.8 \%$, Greek-Orthodox $1.7 \%$, others $1.5 \%$.

DISTRIBUTION (1928): $79.6 \%$ of the population inhabit the country, $20.4 \%$ the towns and urban districts. The largest towns are (1928): Helsing (Helsingfors), the capital, 227,375 inhabitants, Turku (Åbo) 63,918, Tampere (Tammerfors) 54,015, Viipuri (Viborg) 54,120.

EDDUCATION (1920): Amongst persons over 15 years of age only $1.0 \%$ are illiterate. There are three universities founded 1640, 1917 and 1920.

INCREASE OF POPULATION (1928): Births $21.5 \%$, deaths $13.5 \%$ (in France in $192716.6 \%$ and in England in $192712.8 \%$, natural increase $8.0 \%$.

## 4. INDUSTRY.

PROPORTIONS OF OCCUPATIONS OF THE POPULATION (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $3.4 \%$, other occupations $16.7 \%$.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$.

FOREST RESOURCES. The growing stock of the forest is 1,620 million $\mathrm{m}^{*}$ ( 57,213 million cubic feet). The merchantable timber (measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $61 \%$, spruce by $28 \%$, the conifers thus constituting $89 \%$ or 1,384 million trees, leaftrees, mostly birch. $11 \%$ or 173 million trees. The annual increment is 44.6 million $\mathrm{m}^{\mathbf{2}}(1,568$ million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{2}$ ( 1,413 million cub. 1t.). In North Finland the inerement is much larger than the fellings, but in South Finland excess felling occurs locally.

AGRICULTURE. Cultivated land 2.1 million hectaxs, divided as follows: area under cultivation $0.4-10$ hectars $33.7 \%, 10-50$ ha $48.9 \%$, $50-100$ ha $9.3 \%$, over $100 \mathrm{ha} 8.1 \%$. Cultivated land is divided between the different kinds of crops as follows: $46.8 \%$ hay, $20.4 \%$ oats, $11.1 \%$ rye, $5.3 \%$ barley, $3.2 \%$ potatoes, $13.1 \%$ other. The number of dairies in 1928 amounted to 630.

INDUSTRY (1928): Number of industrial concerns 4,021, hands 169,729 , gross value of products of industry 13,721 million marks.

LENGTH OF RAILWAYS (1930): $5,381 \mathrm{~km}$, of which 5,065 km State railways and 266 km private. The gauge is 1.524 m .

COMMERCIAL FLEEET (1929): Steamships 529 (140,537 reg. tons net), motor vessels 132 ( 14,714 r. t.), sailing ships 377 ( 67,916 r. t.), lighters 3,992 ( 282,628 r.t.). Total 5,030 (505,795 r.t.).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish smarkkas) $=100$ pennis. The gold value of 100 marks is equal to $\$ 2.6185=£-10 \mathrm{s.4} 1 / 5 \mathrm{~d}$.

STATE FINANCES. According to the balance sheet for 1929 the State revenue was $4,342.1$ million marls of which $4,302.4$ million marks were ordinary revenue, and State expenditure $4,508.1$ million marks, of which 3.642 .8 million marks were ordinary expenditure. The principal sources of revenue were as follows: State property and undertakings $1,583.4$, direct taxes 544,2 , indirect taxes 1,557.8, miscellaneous taxes 246.6, charges 215.8, miscellaneous revenue 183.8. The value of State property in 1922 is estimated at 11,150.6 million marks. For National Debt see table 18 in this issue.

MUNICIPAL FINANCES. According to the Budget for 1929 expenditure amounted to 1,$245 ; 1$ million marks. Income from taxation was 428.4 million marks, taxed income $6,380.2$ million marks. The communal income tax (not progressive) averaged $6.7 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleâborg), Kuopio, Joensuu, Sortavala, Vipuri (Viborg), Mikkeli (S:t Michel), Tampere (Tammerfors), Hameenlinna (Tavastehus), Jyvaskyla and Kotka.

THE JOINT STOCK BANKS (1930): Number 17, possess 589 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 5,700 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska Föreningsbanken, Maakuntain Pankki Oy., Ab. Unionbanken and Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1929): Mortgage banks 7, Savings banks 477 Co-operative Credit Societies 1,419 and a Central Bank for the latter.

# THE TENDENCY OF PRICES IN FINLAND IN THE LIGHT OF THE GENERAL FALL OF PRICES. 

BY<br>M. EKHOLM, M. A.<br>ASSISTANT STATISTICIAN TO THE BANK OF FINLAND.

## INTRODUOTION.

The fall of prices throughout the world is attracting general interest as the chief problem of the existing economic depression. An attempt is made in this article to examine, in broad lines, the falling tendency of the level of prices in Finland in comparison to the development of prices during the same time in several other countries. The investigation is limited to the actual movement of prices and the level of prices in 1926 has ibeen chosen as a starting point without going into the question as to how the status of prices in Finland at that time in reality compared with that of other countries.

A few further reservations must be made in regard to the statistical method employed. As a measure for the level of prices the wholesale price index calculated by the ofificial statistical institutions in the different countries has been used, although other calculations of indices are also often available. Naturally, whatever index is chosen, its value as a general measure of prices will always be more or less relative. All the indices quoted here are lbased on the present gold parity of the different currencies. As, in addition to the new wholesale price index for Finland calculated lby the Central Statistical Office, only those for the United States and Canada are directly based on prices in 1926, the other indices, which refer to prices in 1913, have been converted, taking the corresponding annual averages for 1926 as a basis.

The selection of countries for comparison must, of course, ibe looked upon as to some extent arbitrary. The countries that are most developed economically have mainly been chosen, but among extra-European countries, besides, of course, the United States, only Canada is included, so that the pronounced fall in prices in some large countries producing raw materials is in this way only indirectly apparent.

## THE TENDENCY OF PRICES SINCE 1926.

The changes in the level of prices in the United States and other countries enumerated here compared with the price curve for Finland are illustrated month by month by the diagrams on pages 23,24 and 25 . In its main points the tendency of prices is seen in table $I$ on the following page.

In the United States the level of prices rises (see diagram I) after a wavetrough in 1927 with a price index in April-July of 94 , to the average level of 1926 and in September, 1928, the index reaches 100. Although the subsequent tendency is downward, the September index in 1929 is still 98, but from the next month the great drop in prices sets in definitely, and by June, 1930, the price index has dropped to 87 . Speaking generally, the price curve just described for the United States, with its rise in 1928 and its subsequent fall, becoming regular from the autumn of 1929, is fairly typical also

for the other countries and can therefore be considered to reflect the variations of prices on the world's markets.
For the sake of clearness the other countries included in our comparison may be grouped as countries with a rehabilitated and a depreciated currency. The former group includes Great

Britain, Holland and Oanada (see diagram I) and Sweden, Denmark and Norway (see diagram II), while the latter group embraces Germany, France, Italy and Czechoslovakia (see diagram III).

The tendency of prices in countries with a rehaibilitated currency entirely resembles the

TABLE 1

corresponding line of movement in the United States in so far as - with the exception of Holland - prices approach or attain the level of 1926 only during the period of ascent in 1928. The preponderating tendency after the former year is in general a falling one in these countries, so that the rise in 1928, clearly discernible only in Holland and Sweden, is less typical and the drop from the autumn of 1929 more pronounced than in the other countries. In June, 1930, for instance, the price index for Great Britain and Sweden, compared with 1926, had dropped 18 and 17 points respectively. In the case of Denmark and especially of Norway the corresponding index figures are misleading; it is better to follow the indices ibased on prices in 1913, for deflation in those countries, which only returned to a gold ibasis at the pre-war parity in 1927 and 1928, renders their high price level of 1926 unsuitable as a basis.

If we make a reservation also with regard to the influence of currency conditions on the level of prices in both France and Italy, the former having gone over to a new and lower gold partity in 1928 and the latter in 1927, the countries with a depreciated currency enumerated here display, on the whole, a fairly even movement of prices. The level of prices throughout 1927 keeps albove the average for 1.926 and attains its crest - in conformity
with the general development - in 1928 along a slowly ascending line. The price indices for Germany and France for August in that year are 106 and 108. Subsequently there is a downward tendency, fbut in October, 1929, when the fall in prices had already set in in the United States, the index is still 102 in Germany and 103 in France. After the turn of the year 1929/30 the downward movement, although fully under way, is nevertheless not as violent in these countries as in the countries belonging to the other group.

The grouping we have made is fully justified also, if the price curve for Finland is directly compared iwith that for other countries (see diagrams I, II and III). It will be found that the movement of prices in Finland, where the currency devaluation occurred in 1925, distinctly joins and in its main points follows the same line as the other countries with depreciated currency. As late as August, 1930, the price index for Finland had not dropped more than 11 points since 1926. As regards Finland in particular we need only especially remark that the fall in prices, once it had begun in September, 1928, does not show any temporary recovery, but describes an evenly descending line. It is to this characteristic circumstance that we will devote our attention.

## THE ACTUAL FALL IN PRIOES.

It has been stated above that, on the one hand, the autumn of 1928 - in the case of Finland, more particularly, August/September - marks the turning point towards a reduction of the general level of prices, and on the other, that the autumn of 1929 - for the United States September/October - registers the time, when the great fall in prices asserted itself. An idea of how - with what rapidity and strength - the movement of prices in the different countries developed since these two dates, is gained from the following table.

TABLEII

| Country | Index of Price Level |  |  | Decrease |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \text { 1928, } \\ & \text { August } \end{aligned}$ | $\begin{gathered} 1929, \\ \text { Soptem- } \\ \text { ber } \end{gathered}$ | $\begin{gathered} \text { 1930, } \\ \text { June } \end{gathered}$ | $\begin{gathered} \text { since } \\ 1028, \\ \text { August } \end{gathered}$ | $\begin{array}{\|c\|} \hline \text { since } \\ 1929, \\ \text { Septem- } \\ \text { ber } \\ \hline \end{array}$ |
|  | Points | Points | Points | \% | \% |
| U. S. A. | 99 | 98 | 87 | 12.1 | 11.2 |
| Great Britain .. | 139 | 136 | 121 | 12.9 | 11.0 |
| Holland | 145 | 141 | 118 | 18.6 | 16.3 |
| Canada | 95 | 97 | 88 | 7.4 | 9.3 |
| Sweden | 149 | 140 | 123 | 17.4 | 12.1 |
| Denmark | 154 | 150 | 130 | 15.6 | 13.3 |
| Norway. | 162 | 154 | 143 | 11.7 | 7.1 |
| Germany | 142 | 138 | 125 | 12.0 | 9.4 |
| France | 128 | 124 | 110 | 14.1 | 11.3 |
| Italy | 132 | 128 | 112 | 15.2 | 12.5 |
| Czechoslovakia . | 146 | 132 | 119 | 18.5 | 9.8 |
| Finland: |  |  |  |  |  |
| Goods in the |  |  |  |  |  |
| home market . | 103 | 96 | 90 | 12.6 | 6.3 |
| Imported goods | 98 | 95 | 82 | 16.3 | 13.7 |
| Exported goods | 99 | 97 | 92 | 7.1 | 5.2 |

Reckoning from August, 1928, to the middle of 1930 the reduction in prices in Finland ( $12.6 \%$ ) is thus in striking agreement with the corresponding reduction in Germany (12.0 \%), Great Britain (12.9 \%) and the United States (12.1\%), i. e. the three great trading countries to whose share approximately two-thirds of our foreign trade fall. But, whereas the actual fall in prices confined itself to the later nine months in most countries, the level of prices in Finland only dropped 6.3 \% then, $i$ e. it fell at the same pace as during the preceding period.

The important point in this connection is that the effects of the fall in prices were more evenly distributed in Finland, the decline being more pronounced in the beginning and subsequently less heavy than in the majority of the countries referred to. It is worth mentioning, too, that the level of prices in Finland has not dropped since the autumn of 1928 to anything like the same extent as, for instance, in Holland, Sweden and Ozechoslovakia as well as in many countries outside Europe.

## INTERNATIONAL INFLUENOE ON PRICES IN FINLAND.

Hitherto, as the object was to examine the changes of the existing level of prices itself

in Finland, the Finnish wholesale price index for goods in the home market has been employed exclusively. However, in order to obtain an idea as to how prices in foreign markets influenced the development in Finland, we must in addition take into consideration the price indices for goods in Finnish imports and exports. These will be found in tables $I$ and II on pages 23 and 25 and are illustrated by the diagram above.

As is only natural, the import price index directly reflects what is typical for the international movement of prices. The mere fact that of the fall in price for Finnish imported goods, amounting to $16.3 \%$ since the autumn of 1928, as much as $13.7 \%$ refer to the latter period, makes the coincidence clear. The decline which might appear rather severe in comparison with the fall on foreign markets, estimated iby us above at a little over $12 \%$, displays its dependence on the general tendency of prices even in this, for the list of goods drawn up for this index on the basis of the quantities imported in 1926 (for details see the article in Bulletin No. 6 of this year) includes to a considerable extent such commodities as grain, colonial produce and certain raw materials that have been chiefly hit by the fall in price.

Finnish exported goods, on the other hand, consisting principally of timber, paper products
and butter, belong to those kinds of goods that have, on the whole, maintained their position in the world's markets well since 1926, although, of course, since the beginning of 1930 they have not been able to avoid being infected by the consecutive fall in prices. Since the autumn of 1928 the export price index has only dropped

## $7.1 \%$.

The above remarks should make it sufficiently clear that the tendency of prices abroad has caused - thanks to the natural economic conditions of the country - a comparatively favourable adjustment for Finland between the prices of its imported goods on the one hand and its exported goods on the other. This influence has made itself felt from the beginning of the actual fall in prices and consequently contributed towards softening the effects in Finland of the general fall in prices since the autumn of 1929.

## CONCLUSION.

The dissimilarity we have already referred to in the tendency of prices in countries with a rehabilitated currency and those with a depreciated currency, has led to the conclusion, put forward among others by Professor Ohlin ${ }^{1}$ ), that since 1926 a process of adjustment is going on between the levels of prices in the two groups of countries in such a way that the level in

[^1]the former tends to approach the level of the latter countries. In part, therefore, the protection that Finnish trade has enjoyed during a perplexing time owing to the comparatively gentle advance of the fall in prices, may be ascribed to the fact that Finland stabilised its currency at a relatively low level of prices.

We have pointed it out as typical that the fall in prices in Finland has not been accelerated, but proceeded at an even pace. The tendency of prices for exported goods alone cannot lbe taken to explain this. It is obvious that the fall of the wholesale price index was counteracted most strongly by the tendency of prices for products of the home industry; their group index still indicates 96 in June, 1930. This circumstance can again be ascribed to the tendency, common so far to all countries, for the general fall in prices to affect finished goods more lightly than raw materials. Gradually, therefore, as the downward trend may possibly spread and embrace our articles of export and on the whole manufactured goods, the level of prices in Finland is not likely to escape being affected more severely than hitherto by the world's fall in prices.

As regards the even progress of the tendency of prices in Finland, perhaps a footnote should be added to the effect that the striking absence of temporary variations in the Finnish price curve should, in all probability, be ascribed to a certain insensibility of the index itself. The tendency, however, is evident and prices in the country, which - it must not be forgotten have been exposed to the effects of the crisis that set in here already in the middle of 1928, were also determined iby other factors which were able to counterbalance the fall in prices. To point in this connection to the bank rate policy would demand a more thorough investigation than the limits of this article permit, but in connection with the importation of foreign capital a great deal of influence certainly could lbe ascribed to it. It does not seem impossible, too, that the higher rates of customs duty introduced in Finland at the end of last year, acted in the same direction. But a country with Finland's economic structure and power can, of course, never regulate its level of prices independently; the movement is and remains dependent on the tendencies of prices throughout the world.

# MEASURES FOR IMPROVING THE QUALITY OF EXPORT BUTTER AND THE RESULTS ALREADY ACHIEVED. 

BY

KALLE JÄNTTI,<br>AGRICOLTURIST.

## INTRODUCTION.

As an article of export dairy produce ranks second in Finland only to products derived from the forests. Their share in the total annual value of exports is approximately $10 \%$. Of the milk supplied to the dairies about $80 \%$ is used for the manufacture of butter, about $5 \%$ is made into cheese and about $15 \%$ sold in the form of milk and cream. A great part of the butter made is exported, the total quantity of such exports during recent years being in the neighbourhood of $14-15$ million kilos per an-
num. Last year a new record figure of 16.6 million kilos was reached.

Because of the extremely fierce competition in the butter markets abroad, intensive efforts have been made, especially since the war, to improve and standardise the quality of Finnish butter, both on behalf of the Government and of the various organisations working in this field. Thus, to take one example, the central organisation of the co-operative dairies, the Co-operative Butter Export Association Valio, founded. a special advisory organisation in 1920 , which now
employs 16 dairy economy advisers; further, the local dairy leagues, of which there are fourteen in the country, also maintain their own expert advisers. In addition to actual advisory work, the Valio organisation and the dairy leagues promote different types of competitions in which prizes are awarded, butter exhibitions, educative excursions, etc. (See also special articles in Nos. 7, 1928, and 11, 1929, of this Bulletin).

## IMPROVEMENT IN THE QUALITY OF THE MILK USED.

High quality butter with good lasting qualities can be made only from the highest grade milk. Work was therefore concentrated at first on inducing the dairies to adopt a system of payment iby quality in paying for their raw material. Several years of unceasing effort were needed to establish the system, but the results achieved have been highly satisfactory. The number of dairies which pay for their milk on a quality-basis has steadily increased, until now over $90 \%$ of the dairies making butter for export, grade the milk bought by them not only according to its milk-fat contents, but also according to its hygienic quality. In no other country in Europe has the system of paying for milk according to its quality been adopted as universally as in Finland, though every country with a large dairy industry strives to attain that end. The result of the adoption of this system of milk-examination and of payment on a quality-basis has been that only in rare cases do the co-operative dairies now receive milk of inferior quality, whereas earlier a high proportion of the total supply was of poor quality.

## BONUSES FOR QUALITY.

Side by side with work for improving the quality of the raw material used, several methods have been employed for raising the quality of the finished product. A measure that has proved extremely effective is the distribution to buttermakers of bonuses for quality. Buttermakers receive bonuses on a sliding scale for each cask
of butter according to the number of qualitypoints awarded it at the official examination. The better the quality of the butter, the larger, naturally, the bonus, which at its highest can represent, even in a medium-sized dairy, an addition of several thousand marks a year to the dairyman's salary. In addition, the dairies and dairymen with the best results for the year as regards quality receive special awards of honour, which entitle the respective dairymen to an arward in money in case they can repeat the success.

## DEVELOPMENT OF PROFESSIONAL SKILL.

It has, of course, also been necessary to pay attention to the development of professional skill among dairymen. The ordinary professional training has been made as complete as possible, in addition to which short training courses have been arranged in different parts of the country. With the aid of competitions and exhibitions and the lectures held on such occasions, the attention of buttermakers has been drawn to possible deficiencies and the means for remedying them. Obsolete dairy lbuildings and plant have been renewed all along the line since the war.

## THE INSPECTION OF BUTTER.

An important part is played in connexion with the work for improving the quality of butter by the official inspection of butter and the measures necessitated thereby. Occasional inspections of butter have been held on behalf of the authorities since 1896, but the regular weekly inspection of export butter only dates from 1913. Up to 1928 this inspection was, it is true, optional on the part of the dairies, but actually, nearly all the butter exported has passed through this control. The inspection and grading of butter is carried out by a board of three inspectors, two of whom represent the State Butter Control Station and one the respective export firm. A scale of $1-15$ is used in grading butter, 1 representing the lowest gnade butter and 15 the highest. In practice,
however, 13 has become the highest figure awarded, and it is only rarely that more than 12 points are gained. According to the regulations governing the inspection, grading is done in such fashion that each of the inspectors gives his own separate estimate on the basis of a sample, and an average is then struck of the points awarded. The final award can thus result in a whole figure or in 3 or 7 decimals above that. The Government Inspectors have two votes, against one on behalf of the producer, which guarantees an impartial criticism. Butter is tested in respect of its appearance, odour and taste, the requirements regarding taste having recently been made somewhat more stringent than hitherto, in addition to which certain other requirements have been added at different times to the granting of a quality-mark, a distinguishing mark given to all first-class butter, a matter which will be dealt with in greater detail further on.

The demands originally formulated in 1913 for the granting of a quality-mark were the following: 1) the butter was required to achieve a consecutive level of at least 10.5 points. (in actual practice, thus, 10.7) at the weekly inspections; 2) the butter must lbe unadulterated and must not contain more than $16 \%$ of water. Butter from a particular idairy that had been graded as first-class for a long period, might temporarily, not however for longer than two weeks at a stretch, sink into the second class - not however below 10 points - without forfeiting its quality-mark. At the beginning of 1926 this rule was altered, and now, butter that fails to gain 10.7 points is in no case granted the right to a quality-mark. Butter awarded less than 5 points is regarded as unfit for export.

## THE REGULATIONS OF 1928.

At the beginning of 1928 the law relating to the exportation of butter was amended and stricter demands applied to export butter. To begin with, the official inspection became compulsory. Further, it was enacted that only butter which had gained a quality-mark on its
inspection at the State Butter Control Station, i. e., only first-class butter, could be exported. Only in special cases was it left open to the Ministry of Agriculture to grant, at the request of the Board of Agriculture, and on conditions to be laid down by the Ministry in question, permission for the exportation of butter that had not gained a quality-mark. One condition in this respect was that the butter for which permission to export is requested, shall have gained at least 8 points - since 19299 points from the official examiners; the exportation of third-class butter, in which class country-butter is included, has thus not been permitted.

At the same time as the new statute governing the exportation of butter came into force at the beginning of 1928, a number of special rules were issued in respect of grading and the granting of quality-marks which denoted a considerable tightening-up of the demands as regards quality. Thus, the results of the weekly inspection, on the basis of which the qualitymark is granted and the dairies are paid by the exporter, were combined with the results of a keeping test in such a way that, if the decline in quality during the period of the test, viz., a fortnight, exceeded 2 points, the excess above the two points allowed was to be deducted from the points awarded at the weekly inspection. This deduction was to be continued weekly until the keeping test again showed a maximum decline in quality of 2 points. A deduction of this nature can in certain cincumstances denote a loss of several thousand marks to the dairy concerned, but the measure in question is an effective means of eliminating faults in the keeping qualities of butter. In addition, the condition was attached to the granting of a quadity-mark that the butter to which it was granted had to be prepared from raw material pasteurised at a temperature of $80^{\circ} \mathrm{C}$. The fulfilment of this condition is controlled by a special test. The new statute further required that quality-mark butter had to be carefully packed in clean and new casks and that no mould was to be apparent in either butter or packing.

## STRICTER DEMANDS AS REGARDS QUALITY.

Already in the beginning of 1929 the demands placed on export butter as regards quality were again made more severe. Thus, a normal standard of weight was added to the requirements for a quality-mark. Each cask had to contain at least 50.8 kilos of butter plus an overweight of at least 0.3 kilos to provide for a possible loss of weight lby evaporation. This new inspection in respect of weight provided a good opportunity for controlling the packing methods employed by the dairies, attention to which had previously been paid only in connexion with the keeping test. It was demanded that the mass of lbutter in the cask had to present an even surface and to be compact, that the cask had to be neat and treated on its inner surface with salt-paste, that the parchment paper used was of good quality and treated with salt, and that the marks on the lid were carefully made and neat.

At the beginning of the present year a rule of some severity was added to these requirements. The method used during the two previous years of deducting from the weekly quality-award any loss in quality-points during the keeping test exceeding 2 points, was altered to allow of a maximum decline during the fortnight's test of only 1.3 points; the decline in excess of 1.3 points is deducted as before from the weekly quality-award and continues to be deducted until the keeping test shows the maximum decline allowed. In practice, this rule has proved to be a severe one.

## IMPROVEMENT IN THE QUALITY OF BUTTER.

A good idea of the effect on Finnish export butter of the advisory and other work carried out for the purpose of raising the quality of the butter produced, is obtained from the statistics kept by the State Butter Control Station. In these statistics butter is grouped into three quality-classes, the first class including butter entirely free from faults or
with minor deficiencies only, the second class butter of poorer quality and poorer keeping qualities and the third class altogether inferior butter. In 1914, the last fairly normal year before the war, the total quantity of butter inspected comprised $60.5 \%$ of first-class butter, $31.6 \%$ of second-class butter and $7.9 \%$ of thirdclass butter. During the war quality declined considerably and it was not until 1921 that the level attained in 1914 was again reached, the proportion of the different groups being now: first-class $65.1 \%$, second-class $30.9 \%$ and thirdclass $4.0 \%$. Since then the average quality has continued to improve, until during the past few years it has been possible to export almost solely first-class butter. Butter exports during the past few years have been divided in respect of quality, according to the statistics kept by the State Butter Control Station, as follows:

|  |  | First-class. | Second-class. | Third-class. |
| :---: | :---: | :---: | :---: | :---: |
| 1926 | $\ldots \ldots \ldots$ | $95.4 \%$ | $4.0 \%$ | $0.6 \%$ |
| 1927 | $\ldots \ldots \ldots$ | $9.6 .0 \%$ | $3.3 \%$ | $0.7 \%$ |
| 1928 | $\ldots \ldots \ldots$ | $97.5 \%$ | $2.5 \%$ | $0.0 \%$ |
| 1929 | $\ldots \ldots$. | $96.4 \%$ | $3.6 \%$ | $0.0 \%$ |

No third-class butter has thus been exported during the past two years, and only a very little second-class. The results of the keeping tests imposed by the Control Station reveal a marked improvement in keeping qualities during the past few years. During the period 1924-1926 the decline in the quality of Finnish export butter during the fortnight covered by the test averaged 0.71 points, whereas during the following three-year period, 1927-1929, the average decline was only 0.47 , which denotes a considerable raising of the standard in this respect.

The above will serve to show that work of special intensity is being done for raising the quality of Finnish export butter to a high standard. The results achieved are beginning to be apparent not only in the statistics kept of butter exports, but also in the fact that the position of Finnish export butter in the world's markets has become more stable even than it was.

## ITEMS.

Government timber auctions. In order to supplement the information in the last issue of this Bulletin, we can state the following facts. The average bids for standing timber for sawing at this year's auctions amounted to Fmk 14: 87 per $\log$ compared with Fmk 21: 18 last year. The corresponding average per cubic foot was Fmk 1: 32 this year as against Fmk 2: - last year. In the case of timber for delivery the drop in price was also very marked. The average price this year per cuibic foot was $\mathbf{F m k}$ 3:34 compared with Fmk 4: 12 last year. - Among the owners of sawmills it is considered that the price of raw materials must drop still further for sawmilling to become profitable again at the present low prices for finished goods.

The harvest. During the latter half of August and the first half of September the weather conditions were for the greater part favourable both for growth and for the work of harvesting. Early in September there was frost, indeed, in many places, but the ripe corn could no longer be damaged iby it. It rwas only potatoes that were damaged noticeably in the northern part of Finland. Thanks to the favourable weather during the time of growth the autumn crops ripened early; the corn was harvested already in August. On the whole the rye crop is satisfactory in regard to quantity and good in quality. The autumn sowing was done at the normal time and thanks to the rain the rye has sprouted 'well and the new sowings promise well. The harvesting of ibarley and oats could also be carried out earlier than usual, for the most part, already in August, in spite of rain having partly delayed the work. The rain that fell late in the summer improved the potato plants appreciably, after they had suf-
fered from drought. Potato rot has, however, damaged the crop to some extent.

The crop prospects in the middle of September are given in the following table drawn up by the Statistical Department of the Board of Agriculture. As usual, a scale of figures has been used, 8 signifying very good, 7 good, 6 above medium, 5 medium, 4 below medium, 3 poor crop, 2 almost a failure of crop, and 1 a failure of crop.

This shows that, on the whole, the harvest is estimated to be a little above medium. In the case of most cultivated plants the result is better than last year and much more favourable than in 1928.

Finnish vessels take part in deep-sea fishing. For the first time a flotilla of Finnish vessels took part last summer in the herring fishing in the waters near Iceland. The four vessels were equipped with the most up-to-date fishing tackle and other requisites and were manned by Finnish seamen, though one of the most experienced Norwegian fishermen had been engaged as leader. The catch was remarkable, being even larger than the vessels could carry, so that part of the catch was handed over to other vessels, about 200 in number, which were herring fishing in the same waters. The greater part of the catch, altogether over 10,000 barrels, consists of salted, seasoned herrings. It is intended to despatch part of the fishing
vessels again immediately to Petsamo to continue the fishing.

The Finnish Timber and Paper Calendar, 1930. The third, enlarged edition of this reference !book, published in English, has just appeared. The work, which contains close on 500 pages, first gives some details about the form of government, population, State finances, financial institutions and economic conditions in Finland, special importance lbeing given to a description of the forest resources, consumption and refinement of timber and exportation of
woodgoods and products of the woodworking industries. The main part of the book consists of a compilation of the most important data regarding the Finnish sawmills, plywood factories and spool and bobbin mills and their central organisations. In the last section similar data are supplied with regard to the paper and pulp mills and their selling organisations. The book also contains information as to forms of contracts, shipping marks, loading places etc. As the information is authorised by the different central organisations, the book may well be recommended to all who may require such information in this sphere.

## THE

## BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, IIelsinki (Helsingfors), Finland.
