## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

As was to be expected, the easier tone of the market that prevailed in January was succeeded by a tighter tendency in Fébruary. It is a regularly recurring circumstance that credit requirements during the winter and spring are considerable partly owing to lumber work and paratly to industry which is working for stock in anticipation of the actual exporting and selling season. As the uncommonly severe ice conditions prevented shipments of paper, pulp etc., fresh demands for credit were made on the banks. At the same time the reduced imports made the position easier.

Deposits in the Joint Stock banks fell off in February by 100.6 million marks, a result that is not satisfactory, even if it is borne in mind that in February deposits never increase much, but are often reduced, and that the reduction only referred to short-term deposits, while actual deposits increased slightly. The credits granted by the Joint Stock banks grew by 77.4 million marks, whereas the increase in 1928 was 235.0 millions and in $1927 \quad 52.5$ millions. In order to meet these demands for credit the banks were obliged either to increase their borrowing from the Bank of Finland again or to make use of their foreign connections.

The position of the Joint Stock banks to foreign countries showed a reduction of balances for February and an increase of indebtedness. The net foreign indebtedness was thus raised by 103.5 million marks. This is a common
occurence during this month, for instance, in February, 1928, the increase in the net indebtedness was $118: 9$ million marks and in 1927 113.1 millions. However, the net indebtedness on this occasion was larger at the end of February than in previous years, viz., 334.2 million marks compared with 77.7 millions in 1928 and 17.0 millions in 1927.

The balance sheets of the Bank of Finland also show signs of the increasing money shortage. During February its credits increased by 120.5 million marks of which 83.2 millions consisted of re-discounted bills and the rest of direct credits. At the same time the notes in circulation grew by 92.0 million marks or almost as much as last year. On the other hand the reserve of foreign currency was reduced by only 20.5 million marks as against about 110 millions during the same period last year. Owing to such circumstances the note reserve dropped in February from 352.5 to 280.3 million marks and the ordinary note cover from 55.7 to $52.8 \%$ of all liabilities payable on demand. For the sake of comparison it may be stated that the corresponding figures for the last day of De cember, 1928, were 208.7 million marks and $51.7 \%$.

During the two first weeks in March the position of the Bank of Finland was strengthened again, seeing that the reserve of foreign currency increased by about 45.8 millions to 744.3 millions, credits were reduced by 38.5 millions and the note reserve rose by 42.9 millions to 323.2 million marks.

The level of prices shows a slightly falling tendency which is usual for this time of the year. The cost of living index fell 10 points to 1,232 compared with 1,206 in February, 1928. With regard to the wholesale price index no figures are available, as the Central Statistical Office is at present engaged in working out a new index with the year 1926 as a basis.

## TRADE AND INDUSTRY.

The severe winter with the forming of unusually heavy ice has set its mark on Finland's foreign trade which is borne almost exclusively by sea. The value of imports in February amounted to no more than 333.8 million marks as against 504.5 millions last January and 527.9 millions in February, 1928. The reduction cannot, however, be ascribed entirely to the ice conditions, but is obviously due in part to the fact that the stringent credit conditions and the reduced purchasing power are inclined to reduce imports, a state of things that lad been expected. The falling off in exports, on the contrary, is, no doubt, due entirely to the severe ice conditions. The value of exports only amounted to 184.2 million marks compared with over 230 millions during the same month in 1928 and 1927. Considerable quantities of export goods accumulated at the same time in the ports of shipment in expectation of opportunities of shipment. As usual, February showed a considerable surplus of imports amounting on this occasion to 149.6 mil lion marks as against 293.6 millions last year and 127.9 millions in 1927.

Imports were smaller than last year in practically all classes of goods. In regard to exports, on the other hand, it may be said that, although these, too, show a reduction in most classes, shipments of agricultural produce increased.

This refers not only to buttex, of which $1,209.5$ tons were exported in February compared with $1,169.8$ tons last year, but also to fresh meat and cheese, the exports of which were much smaller last year than in previous years.

On the timber market greater liveliness was experienced in February. The quantities sold during that month are estimated at 120,000 standards, so that the total sales by the end of February can be estimated at about 520,000 stds. As this represents approximately $50 \%$ of this year's estimated total offerings, the position is quite satisfactory from a statistical point of view. Dealings included principally redwood and fifths, but also spruce. In regard to prices it must be said that they are far from satisffactory in view of the high cost of raw materials, a fact which is reflected in the balance sheets of the slawmills for last year. In the sales made recently it was possible in general to maintain prices, though some sales were made at reduced prices. As the offerings of spruce are expected to be reduced by more than one-third in comparison with last year, it may be hoped that an improvement of the market for these goods, occasioned by the demand, will be attained.

The position of the mechanical and chemical woodpulp markets is good from the point of view of statistics, as interest is already shown in contracts for delivery in 1930 . With regard to prices, too, some signs point to an improving tendency.

## THE LABOUR MARKET.

The state of the labour market remains unchanged. Thanks to relief work being started no great unemployment has occurred, although, of course, conditions are clearly less favourable than during the last few years, which were unusually satisfactory.

## CONTENTS OF THE TABLES.

L. MONEY MARKET.

## Bank of Finland:

Balance sheet.
Note issue.
Note circalation and foreign correspondents. Ordinary cover, note reserve and home loans.

Turnover of Stock Exchange according to figares supplied by the Stock Exchange Committee.
The figures for bankruptcies are not comparable with those published earlier in 1923. The figures above, compiled by the Central Statistical Office according to the reports sent in by the various Courts, include all bankruptcy petitions, of which only about half will lead in due course to actual bankruptcy, whereas the rest owing to agreement, lack of means etc. will be cancelled.

Protested bills according to figures published in the Report of Bills Protested in Finlands.

* Preliminary figures subject to minor alterations.

## 17. - STOCK EXCHANGE INDEX.

| Year | Jan. | Febr. | March | April | May | June | July | Aug. | Sept. | Oct. | Nov. | Dec. | Year |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1926 | 144 | 147 | 152 | 154 | 153 | 157 | 164 | 172 | 175 | 172 | 177 | 178 | 1926 |

| 1928 | 270 | 265 | 267 | 257 | 255 | 257 | 255 | 241 | 235 | 223 | 213 | 229 | 1928 |
| 1929 | 221 | 215 |  |  |  |  |  |  |  |  |  |  | 1929 |

According to figures publighed in the sMercators.
This revised index series is based on the prices bid at the end of each month for 18 representative securities, viz., 4 bank, 12 Industrial and 2 other kinds of shares. By multiplying the price bid for each security by the number of shares in the corresponding company the so-called sExchange values has been arrived at for the share capital of the company, the sum of which values has been calculated in \% of the total nominal value of the share capltal of the same companies. These percentages in the above table usually show a fall during March and April owing to the payment of dividends.

| Jan.-Oct. |  |  |  |  |  |  |  |  | Jan.-Oct. |
| Jan.-Nov. Jan--Dec. |  |  |  |  |  |  |  |  | Jan.-Nov. |

The import- and export-indices have been calculated by the Statistical Dept. of the Board of Customs in the following manner: the quantities of imports and, respectively, exports for the current year have been multiplied by the average price for the class of goods in question in 1918, after which the import (or export) value for the current year has been calculated in percentage of the sum thus obtained for purposes of comparison.

The goods ohosen for the setting-up of a total-index have been divided, according to their use, into the groups: foodstuffs, olothing, agricultural requirements and other goods. The three last-named have been further divided, according to their purpose, into raw matorials, machinery and Industrial products.

This import-price index is lower than the wholesale price index because the import-price index is not influenced by the customs duties.
27. - EXPORT-PRICE INDEX.

${ }^{1}$ ）From the beginning of 1921 onwards a new official index has been drawn up differing from that pubished in the Bulletin for 1922 in that the whole first half of 1914 forms the basis（ -100 ）for the same，and that the rise in taxation is algo inciuded．

The index is calculated by the Statistical Burean of the Ministry of Social Affairs and is based on monthly reports from 21 different centres；it shows the rise in the cost of living for a workingman＇s family of normal size，the income of which amounted during the years $1908-1909$ to $1600-2000$ Fmk，assuming that the average monthly consumption within the same remained unaltered． The index for total cost of living is the average based on weight of the different indices．

35．－WHOLESALE PRICE INDEX．

| Year and Month | $\begin{aligned} & \text { 䒼 } \\ & \text { 曾 } \\ & \text { 官要 } \end{aligned}$ |  |  |  |  |  |  |  |  |  |  |  |  |

| December | 144 | 154 | 124 | 160 | 123 | 163 | 120 | 143 | 144 | $-1$ | 147 | 141 | 144 |

The index is worked out at the Central Statistical Office，－In determining the bases of calculation tor the Index the comblned value of the country＇s production and imports for 1913 are taken into account without deducting the value of exports．The figures show the change in the level of prices in relation to gold and are obtained from those previously published by dividing the latter by 7．6618．The total number of commodities included is 185，and the figures in brackets at the head of the columm indicate the number of commoditics in the corresponding groups．－In working out the index figures the method known as proportionate pricess is employed， i．e．the price of each commodity is taken in a percentage ratio to a correaponding figure for the basic period and the average is then caiculated on the basis of the resultant proportionate figures．The corresponding months in 1918 are taken as a basis．In the calculations geometrical averages are employed．No actual weighting of figures is undertakent this is carried out．however，indirectly with the aid of the list of commodities．
36. - NUMBER OF UNEMPLOYED.

This table, prepared from the weekly reports of the Labour Exchange Department of the Ministry of Social Affairs, shows the number of unemployed registered in the books of the communal labour exchanges in the majorlty of towns and a very small part of the rural centres of population at the close of the week nearest to the month's end. As agricultural labourers and skilled artisans proper register, up to the present, only in a minority of cases at the communal labour exchanges, the table does not give a complete review of the number of unemployed, but is to be regarded more as symptomatic.
37. - CESSATION OF WORK.

| February | 4 | 4 | 518 | 4 | 4 | 358 | 8 | 8 | 876 | February |

The above particulars which are of a preliminary nature, have been complled by the statistical Bureau of the Ministry of Social Affalrs. The majority of cases of cessation of work were described as strikes.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from 1154 to 1809; since 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its udependence, which was acknowledged by all the Powers including Bovlet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President L. Kr. Relander is elected for the term 1 March, 1925, to 1 March, 1981.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1927 are as follows:

|  | Number | Per cent |
| :---: | :---: | :---: |
| Swedish party | 24 | 12.0 |
| Unlonist party | 34 | 17.0 |
| Agrarian party | 52 | 26.0 |
| Progressive party | 10 | 5.0 |
| Social-Democrats. | 60 | 30.0 |
| Communists | 20 | 10.0 |

## 2. LAND.

THE AREA is $\mathbf{3 8 8 , 2 7 9}$ square kilometres $=150,005$ square miles, (Great Britain's area is $89,047 \mathrm{sq} . \mathrm{m}$, and Italy's area 117,982 sq. m). Of the total area $11.5 \%$ are lakes. On an average $10.8 \%$ of the land in the south of Finland is cultivated, $0.9 \%$ in the North, $6.2 \%$ of the whole land, Of the land area 25.8 mill. ha ( 62.5 mill. acres) or $73.4 \%$ are covered by forests.

THE AVERAGE TEMPERATURE in the coldest month is in B. W. Finland -5 to - $\mathbf{5}^{a}$ C., In Lappland - $15^{\circ}$ C. and during the warmest month $+15^{\circ}$ and $+13^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki is $+4.6^{\circ}$ (in Osio $+5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow +3.60). The ground is covered by snow in the South during about 100 days, in Central Finland during 150 to 180 days, in Lappland about 210 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1927); 3.6 millions, of which 0.3 miliion emiprants, (in Sweden (1927) 6.1, in Switzerland (1926) 4.0, in Denmark (1927) 3.5 and in Norway (1926) 2.8 millions).

DENSITY OF PUPULATION (1927): In South-Finland 18.1, in North-Hinland 2.4 and in the whole country an average of 10.4 inhabitants to the square kilometre.

LANGUAGE (1920): Finnish speaking $88.7 \%$, Swedish speaking $11.0 \%$, others $0.8 \%$.

RELIGION (1926): Lutheran 97.1 \%, Greek-Orthodox $1.7 \%$, others $1.2 \%$.

DISTRIBUTION (1927): $80.0 \%$ of the popalation inhabit the country, $20.0 \%$ the towns and urban districts. The largest towns are (1927): Helsinki (Helsingfors), the capital, 220,904 inhabitanta, Turku (Abo) 62,599, Tampere (Tammerfons) 53,121, Vipuri (Viborg) 49,912.

EDUCATION (1920): Amongst persons over 15 years of age only $1.0 \%$ are illiterate. Three universities founded 1640,1917 and 1920.

INCREASE OF POPULATION (1927): Births 21.2 \%on, deaths $14.5 \%$ (in France in $192517.6 \%$, and in Fhngland in $182512.2 \% / 80$ ), natural increase $6.7 \%$.

## 4. INDUSTRY

PROPORTIONS OF OCOUPATIONS OF THE POPULATION (1920): agriculture $65.1 \%$, industry and manual labour $14.8 \%$, commerce $3.4 \%$, other occupations $16.7 \%$.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private 52.1 \%, State $39.7 \%$, Joint Stock companies $6.5 \%$, communities $1.7 \%$.

FOREST RESOURCES. The growing stock of the forest is 1,620 million $\mathrm{m}^{3}$ ( 57,213 million cubic feet). The merchantable timber (measuring 20 cm at breast height $=6$ in. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $81 \%$, sprace by $28 \%$, the conifers thus consituting $89 \%$ or 1,384 million trees, leaftrees, mostly birch, $11 \%$ or 173 million trees. The annual increment is 44.5 million $m^{8}(1,568$ million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{2}$ ( 1,413 million cub. $\mathrm{ft}_{\mathrm{t}}$ ). In North Finland the increment is much larger than the fellings, but in South Finiand excess felling occurs locally.

AGBICULTURE. Cultivated land 2,1 million hectars, divided as follows: area under cultivation $0.4-10$ hectars $33.7 \%, 10-50 \mathrm{ha}$ $48.9 \%, 50-100 \mathrm{ha} 9.3 \%$, over $100 \mathrm{ha} 8.1 \%$. Cultivated land was divided between the different kinds of crops as follows; $46.8 \%$ hay, $20.4 \%$ oats, $11.1 \%$ rye, $5.3 \%$ barley, $3.2 \%$ potatoen, $13.1 \%$ other. The number of dairies in 1926 amounted to 595.

INDUSTRY' (1927): Number of Industrial conserns 3,789, hands 159,141, gross valus of products of industry 12,382 million marks.

LENGTH OP RAILWAYS (1927): $5,053 \mathrm{~km}$, of which 4,787 km State railways and 266 km private. The gauge is 1.624 m ,

COMMERCIAL FLEET (1927): Sailing ships 511 (70,351 reg. tons net.), steam ships 548 (109,808 r. t.), motor veasels 92 (11,095 r. t.), lighters 3,779 (277,020 r.t.). Total 4,980 (477, 329 r. t.).

## 5. FINANCE AND BANKING.

CURRIGNCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its gtable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish imarkkas) $=\mathbf{1 0 0}$ pennies. The gold value of 100 marks is equal to $\$ 2.5185=f-10 / 41 / 8 \mathrm{~d}$.

STATE FINANCES. According to the balance sheet for 1927 the State revenue was $3,986.1$ million marks of which $\mathbf{3 , 9 0 7 . 9}$ million marks were ordinary revenue, and State expenditure $3,988,5 \mathrm{mil}-$ lion marks, of which $3,329.3$ million marks were ordinary expenditure. The principal sources of revenue were as follows: State property and undertakjngs $1,438.2$, direct taxes 485,3 , indirect taxes 1,424. 2, miscellaneous taxes 244.0, charges 193.7, miscellaneous revenue 187. 1 . The value of State property in 1922 is eatimated at $11,150.6$ million marks. For National Debt see table 18 in this issue.

MUNICIPAI FINANCES. According to the Budget for 1927 expenditure amounted to 965.1 million marks. Income from taxation was 359.6 million marks, taxed income $4,925.5$ million marks. The commanal income tax (not progressive) averaged $7.0 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Abo), Porl (Björneborg), Vaasa (Vasa), Ouln (Uleaborg), Kuoplo, Joensuu, Sortavala, Viipuri (Viborg), Mikkell (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyviskyli and Kotka.

THE JOINT STOCK BANKS (1928): Number 18, possess 555 branch offices, where all kinds of banking business is transacted. Including all banks, there is one banking eatablishment per 6,300 inhabitante.

The largest banks are: Kansallis-Osake-Pankk, Ab. Nordiska Föreningsbanken, Ab. Unionbanken and Helsingiors Aktiebank, all with head offices in the capital.

OTHER BANKS (1928): Mortgage banks 7, Savings banks 471, Co-operative Credit Societies 1,398 and a Central Bank for the latter

# THE METAL INDUSTRY OF FINLAND. 

BY<br>MARTTI KOVERO, PH. D.<br>chief director of the central statistical office.

## EARLY PROGRESS.

The earliest development of the metal industry in Finland is veiled in the Old Ages. Finds made in graves afford evidence of the early existence of an advanced metal industry in the handicraft stage, and literary records which date from the end of the Middle Ages point to the esteemed position occupied by a smith. This metal industry of early times used irom, bronze and silver as raw materials. Of these metals, however, only iron was obtained in the country namely from lake and loog ore.

Manufacture on a large scale in the metal industry did not begin to develop perceptibly in Flinland until modern times. The first iron mine of which there is reliable information available was established in the country in the early part of the sixteenth century, but actually the new development in the metal industry took its rise in the seventeenth century. In this cenitury a number of iron works with blast furnaces, hammer forges and smithies were founded, and many of these establishments are still at work. The greater part of the production in iron works was, however, dependent for raw materials upon imports from Sweden. The Government of Sweden-Finland of that time was favourably disposed towards the development of the metal industry in Finland and particularly towards that of the iron works. Although the supplies of ore in Finland were by no means comparable to those of Sweden, Finland was instead rich in forests and rapids. Cargoes of iron ore from the mines in the Swedish archipelago could be carried to the iron works on the Finnish coast by vessels taking return cargoes at cheaper rates of freight than was paid for the conveyance of ore to the Swedish works.

When Finland was joined to Russia as an autonomous state at the beginming of the nineteenth century, there were altogether 28 iron works in the country and conneated with them about ten blast furnaces, more than thirty hammer forges and more than ten manufactories. As the development of the iron industry in Finlard lad come to depend chiefly on imports of Swedish raw materials the separation from Sweden brought with it a great change in the position of the metal industry. Now the supply of raw materials to the Finnish iron !works was disturbed owing to the fact that the export of ore from Sweden to Finland was no longer free, buit dependent on periodic agreements, the renewal of which could not be counted on. For this reason the Finnish Government adopted vigorous measures for getting the local supplies of iron ore utilized as extensively as possible. In 1821 a special Board of Mining was conistituted, under the control of which systematical prospecting for new ore deposits and investigations of old ones were started. At the same time mining work was started on behalf of the Government. The Government measures for promoting the utilising of the country's own supplies of iron ore were not without result. The mining of rock ore made considerable progress particularly in the third and fourth decades of the nineteenth century. The production of lake and bog ore, too, increased at the same time. At that time new blast furnaces, hammer forges and manufactories were founded in the country. In those times the first engineering works for the manufacture of articles for sale were started. The first steam engine built in Finlland was completed in 1838. At that time already the metal industry sent a large part of its production abroad, chiefly
to Petersburg, Reval and Riga. These exports consisted.mainly of bar iron, of the produation of which already at the beginning of the fourth decade of the 19 th century more than half was exported. In addition to bar iron, pig iron and cast inon and also blackwork and hardware were exported from the country.

Already at the end of the 'forties, however, competitors to the Finnish metal industry appeared both in the home market and in its export markets. The great rise of the metal industry in Western Europe and particularly in England, which occurred in the early part of the nineteenth century and which was a consequence of technical improvements, began at that time to affect the remote places on the Finnish Gullf. As the ore which was obtained from the Finmish iron mines generally was considerably inferior in quality to the foreign products, the prospects for the development of the iron industry in the country were not of the brightest. In the 'fifties, however, a new method for melting iron, which is known as the puddling process, came to be used in the country by means of which bar iron of quite a satisfactory quality could be oibtained from bog and lake ore. At that time the thelief had gained ground that the supplies of bog and lake ore in Finland were practically inexhaustible, so that the prospects iwere again in favour of the home metal industry.
In the fifth, sixth and seventh decades of the nineteenth century the Finnish metal industry made quite remarkable pnogress chiefly on the basis of refining bog and lake ore. Only a fractional part of the production of pig iron was at the end of the fifth decade of the nineteenth century dependent upon imported raw materials and the output of iron showed a great advance on the quantity of production at the loeginning of the decade. In the middle of the 'seventies lake and bog ore of local origin were the chief raw materials used in the iron works. The production of iron in the middle of the 'seventies was in regard to quantity approximately six times larger than at the beginning of the 'fifties. Already in the 'seventies the prices of iron began to decline
rapidly in foreign markets in consequence of the exceptional increase in the production of iron. In the Finnish metal industry the ensuing difficulties in the way of disposing of the output amade themselves distinctly felt in 1877. In that year, the prices of Finnish pig and bar iron plainly came down with a run in the Petersburg market, the best export district of the Finnish metal industry. The fall in prices was followed by a long period of depression, during which a great part of the iron works in the country gradually closed down.

Under these changed circumstances the Finnish iron works, the production of which was based on the use of lake and bog ore, could not possibly enter into competition with the foreign iron works. The ore had to be raised from the lakes and bogs by hand, a method of working which was, of course, both expensive and slow. As a consequence, the importance to the metal industry of the locally produced ore was again reduced. After the turn of the century iron ore of local origin became a negligible quantity to the metal industry.

## DEVELOPMENT OF THE MODERN METAL INDUSTRY.

In spite of the fact that the metal industry of Finland had from the latter part of the 'seventies, had to suffer from hard times it nevertheless made remarkable progress during the following decades. In regrard to the iron industry particular mention should be made of the introduction of the Martin furnaces. The first Martin furnace was installed in 1879. The use of Martin iron and steel did not become a general practice until the 'nineties, and at the end of the same decade the manufacture of these products exceeded in quantity that of puddled iron. At the same time the engineering industry made very rapid progress. The gross value of the production of the engineering works and foundries, which was 5.4 million marks in 1886, rose by the end of the century to 28 million marks in the currency of that time. This brisk development in the metal industry was based mainly on the home market. The development of the metal industry was very favourably affected by the transition among farmers from

elementary conditions to a system of exchange, which in turn was most effectively promoted by the great increase in the exports of woodgoods and the rise of the dairy industry. At the same time, of oourse, the growing traffic and the developing industry of the country effectively contributed to the rise of the metal industry.
Under these new circumstances the metal industry of Finland changed from an export industry to one relying on the home market. While the Finnish metal industry, as late as the beginning of the 'eighties, exported more than half of its production, the greater part of the output was placed in the middle of the same deoade on the home market. In spite of the rapid development of the metal industry the corresponding imports during the period mentioned also increased greatly. Particularly in the 'nineties both iron and steel and machinery began to be purchased from abroad on an ever increasing scale. The imports of these goods grew more than threefold during the period 1889-1899. The demand for metal goods had thus grown even more rapidly than the local metal industry. At the end of the century the Finnish metal industry was in a position to satisfy approximately one-half of the total home consumption of iron and metal groods.

At the beginning of the new century conditions in the metal industry became less stable.

A noticeable improvement in the position was not experienced until the years immediately preceding the outbreak of the Great War. The gross value of production in the metal industry amounted in 1913 to 75.7 mill. mks. in the currency of that time, after having been at the end of the century approximately 45 mill. mks. It is characteristic of this period that the engineering industry becomes the main branch of the metal industry, displacing more and more the manufacture of iron.

Of the gross value of production in the metal industry in 1913 approximately two-thirds fell to the share of the engineering industry. In the manufacture of iron the pudding furnaces were now altogether displaced by Martin furnaces. At the same time the use of iron ore of hocal origin as raw material decreased more and more, so that by the time immediately preceding the Great War it had lost every importance. In place of that scrap iron began now to be used in the manufacture of iron as the principal raw material of local origin.

The rise of the metal industry which set in during the years 1911-1913 was interrupted by the outbreak of the Great War in 1914. The industry of the country, however, soon began to receive orders for war materials from the Russian Government and particularly the engineering industry now experienced a few rears of feverish activity. The number of workpeople, which in 1913 was 15,969 , rose in the
${ }^{1}$ ) The figures for $1900-1925$ converted into present curroncy according to the wholesale price index.

metal industry from year to year reaching 27,066 in 1917. The business in war materiads, however, came to an end in the same year and in the following year the metal industry was in a state of complete paralysis owing to the war which at that time raged within the boundaries of the country itself. Even after the restoration of peace a long succession of years with adverse conditions was experienced, the effect of the world-wide eoonomic depression which followed the Great War being severely felt in the economic life of the country. The output of the Finnish metal industry did not return to the level reached before the Great War until 1922. The increase in the gross value of production and the number of workpeople during the last few years is seen in the following table.

| g |  | e of produ |
| :---: | :---: | :---: |
|  | Workpeople. | Mill. mks. |
| 1922 | 21,595 | 923.5 |
| 1923 | 22,849 | 991.4 |
| 1924 | 22,260: | 1,044.8 |
| 1985 | 22,545 | 1,128.9 |
| 1926 | 24,102 | 1,223.5 |
| 1927 | 23,095 | 1,246.8 |

The number of workpeople employed in the Finnish metal industry in 1927 was 44.6 \% greater than in 1913, whereas the increase in the gross walue of production was $49.7 \%$ for the corresponding period, taking into account the depreciation of the currency. The development of the metal industry in 1927 was disturbed by a lockout which began in the early part of the year :and which nominally did not end until the following year. On the whole the
metal industry in Finland is at present considerably more developed than during the years immediately preceding the Great War.

## THE MAIN BRANOHES OF THE METAL INDUSTRY.

If the branches of the metal industry are divided into four groups according to the scope of operations, viz., into industries engaged in 1) mining, ${ }^{\circ}$ 2) smelting and metal refining, 3) engineering and 4) the production of finer manufactures, we arrive at the following results for 1927:

|  | Workpeople | produc. |
| :---: | :---: | :---: |
| Mining industry | 206 | 3.4 |
| Smelters and metal refin- |  |  |
| ing establishments .... | - 4,076 | ${ }_{952.2}^{279.1}$ |
| Finer machine industry | 228 | 12.1 |

At present, therefore, ore raising represents a comparatively insignificant branch in the Finnish metal industry. In 1927 this branch of the metal industry consisted of only one copper mine and two plants for concentrating zinc ore.
The share of the smelters and metal refining establishments in the aggregate gross value of production in the whole metal industry amounted in 1927 to 22.4 \% of the whole. The gross value of the production of these establishments in the latter year was approximately the same as in 1913 and in 1926 one-third larger than in 1913. The quantities of ore, pig iron and scrapiron used particularly in the manufacture of iron during the years 1913, 1925-1927 are shown in the table on the following page.

|  | Lake ore. 1000 kgs . | Rock ore. 1000 kgs . | Pig iron. 1000 kgs . | Scrap-iron. 1000 kg . |
| :---: | :---: | :---: | :---: | :---: |
| 1913 | 5,278 | 13,276. | 15,289 | 19,456 |
| 1925 | 965 | 2,947 | 10,297 | 34,400 |
| 1926 | 1,270 | 1,650 | 9,223 | 33,389 |
| 1927 | 548 | 4,081 | 3,772 | 18,543 |

During these years the manufacture of iron thus shows scarcely any increase. In 1927 it was considerably less than during the last year preceding the Great War. In the manufacture of iron, however, remarkable teehnical improvements have been made. Thus, to a large extent use is made at present of electric furnaces and electric simelting furnaces in the manufacture of iron. The first electric furnaces were installed in 1916, and the production of these furnaces has increased constantly. At present the annual output of the electric furnaces amounts to more than 10,000 tons of pig iron. Of the quantity of ore and pig iron used in 1926 in the manufacture of iron close upon one-half, and of the quantity of scrap-iron used for the same purpose more than one-half was of local origin.

The principal branches of the smelting and metal working industry and their output in 192.7 is illustrated by the following table:

Mill. mks.

| Nail and steel wire mills . . . . . . . . . . . . . . . . . . . | 67.4 |
| :--- | :--- |
| Rolling mills . . . . . . . . . . . . . . . . . . . . . . . | 38.3 |
| Groldsmiths' workshops . . . . . . . . . . . . | 34.7 |
| Blacksmiths, and black ironware shops . . . . . | 34.4 |
| Sheet-iron, plase and copper workshops . . . . . . | 29.8 |

The development of the engineering industry has far surpassed that of the smelting and metal working industry. Its gross value of production
during the years $1913,1922-1927$ is seen in the following table, for the sake of comparison the figure for 1913 having been multiplied by 11, in accordance with the general wholesale price index:

|  | Mill. mks. |
| :---: | :---: |
| 1913 | 567.6 |
| 1922 | 641.1 |
| 1923 | 694.2 |
| 1924 | 744.9 |
| 1925 | 764.7 |
| 1926 | 875.5 |
| 1927 | 952.2 |

In 1927 the gross value of production in the engineering works was thus $167.8 \%$ of the corresponding value in 1913. The consumption of pig iron, scrap-iron and iron, steel sheets and crude castings used as raw materials in engineering works is consequently at present considerably greater than before the Great War. While the total consumption of pig iron and serap iron in the engineering works in 1913 amounted to 16,322 tons and the total consumption of iron, steel, iron sheets and crude castings to 21,504 tons, the corresponding quantities in 1926 wwere 25,775 and 36,485 tons and in 192719,656 and 31,899 tons.
The main branches of the engineering industry and their output in 1927 is shown in the following table:

|  | Mill. mass. |
| :---: | :---: |
| Foundries, machine shops \& shipyards | 625.3 |
| Pipe mills | 142.3 |
| Repair shops | 83.6 |
| Works for manufacturing electrical m \& apparatus | 82.0 |

Foundries, machine shops \& shipyards ...... 625.3
Pipe mills . . . . . . . . . . . . . . . . . . . . . . . . . . . . 142.5
Works for manufacturing electrical machinery
\& apparatus

[^5]
## IMPORTS AND EXPORTS OF METAL GOODS.

In spite of the rise of the metal industry the imports of metal goods are still considerable. l'he development of these imports is seen in the following table.

|  | Metals and metal <br> goods. <br> Mill. mks. |  <br> apparatus. <br> Mill. mks. | Means of <br> transport. |
| :---: | :---: | :---: | :---: | :---: |
| Mill. mks. |  |  |  |

Particularly during the last few years the imports of metal goods have increased rapidly. It is true that this rise in imports is partly due to the exceptionally lively building operations carried out in recent years, but there is no denying the fact that the increase is largely due to a constantly growing demand. In 1928 the value of metals and metal goods imported into the country was more than double and the value of machinery and apparatus almost double the corresponding value of imports in 1913. The imports of means of transport, especially those of motor cars, are at present many times larger than in pre-war days.

In recent years the local production of unworked iron particularly for purposes of construction has no longer satisfied the home demand to the same extent as it did before the Great War. Imports of bar iron and shape iron particularly have increased greatly. While the imports of these goods in 1913 were 28,457 tons, in 1926 they were already 69,805 , in 192778,400 and in 1928 close upon 97,000 tons. The present imports of bar inon and shape iron are thus about $81 / 2$ times as large as in 1913, whereas the imports of iron and steel sheets for the corresponding period have more than doubled.

Thus the metal industry of Finland has become more and more dependen't during the last few decades for raw materials upon imports from abroad. It is, however, not at all unlikely that a change for the better will occur in this respect. As soon as the Outokumpu copper extracting plant is in full work considerable quantities of easily utilisable iron ore will be obtained from the slag, which is formed in the roasting process. Projects are afoot for utilising the Outokumpu iron ore, and time will show if they can be carried out.

The Finnish metal industry is at present best placed for satisfying the home demand for agricultural machinery. During the last few years the value of imports of agricultural machinery has amounted to about half the value of the local production, so that the metal industry in Finland satisfies approximately two-thirds of the total home demand for these commodities. Only dairy machinery and mowing machines have been imported into the country in considerable quantities. The manufacture of machinery for sawmills and other woodworking industries is also remarkably well advanced in the country. Only a small fraction of the requirements for electric machinery and apparatus is supplied by the home industry. The large imports of means of transport are chiefly due to the importation of motor cars. On the other hand, the construction of railway carriages, locomotives and steamships has been raised to a high standard in the country.

With regard to the exports of articles produced in the metal industry, these have been insignificant of recent years. The value of exports of metals and metal goods in 1928 amounted to 19.0 million marks, the value of exports of machinery. and apparatus to 18.3 millions and the same for means of transport to 2.2 million marks. Among the exports of machinery separators represent the most important group.

# THE HARVEST IN 1928 AND SPECIAL MEASURES. 

BY<br>J. G. HIRVENSALO,<br>Government controller of agriculture.

## OLIMATIC OONDITIONS.

In Finland, as in the countries of Northern Europe generally, the summer of 1928 was cold and rainy with very few sunny days. Summer set in, it is true, at the usual time, so that field work could be begun in good time in May, but already in the latter part of May heavy falls of snow and rain occurred in the provinces of Varsinais-Suomi (Egentliga Finland), Häme (Tavastland) and South Ostrobothnia, : the oldest agricultural districts of the country, which interrupted and retarded the sowing of low lying clayey and black soil fields, in particular, by not less than 2-3 weeks. In consequence of the weather conditions during the period of growth the delay in the work of sowing proved rather disastrous.

The accompanying table "Climatic conditions in $1928^{\prime \prime}$ which is based on information obtained from the Central Meteorological Station, indicates the temperature of the atmosphere in Centigrade and the rainfall in millimetres in 10 places in different parts of the country during the period May-September and the deviations from the normal figures for the same places, averaged from observations during thirty years (1886-1915). In addition, the mean temperature during 1928 and the deviation from the normal figure, as well as the corresponding figures for the rainfall have been worked out. The results of these records indioate the climatic conditions in the whole country, although the figures for certain places may show great variations.

| Kuopio | 35 | -7 | 89 | +32 | 132 | +63 | 85 | +11 | 57 | -4 |
| Oulu | 38 | + 2 | 74 | +30 | 83 | +19 | 50 | -25 | 11 | -46 |
| Kajaani ............. | 51 | +13 | 53 | -4 | 158 | +72 | 58 | -29 | 38 | -27 |
| Average figure. | 60 | +19.7! | 80.91 | +28.5\| | $92.1{ }^{\text {i }}$ | +24.3 | 87.1! | + 9.9 | 45 | -18.3 |

It will be seen from the table that the deviation of the temperature from the normal figures in the places mentioned averages -0.1 in May, -3.5 in June, - 3.2 in July, - 0.4 in August and $\pm 0^{\circ} \mathrm{C}$. in September. The corresponding deviation in the rainfall is +19.7 in May, +28.5 in June, +24.3 in July, +9.9 in August and -18.3 mm in September.

The figures in the table show that the deficiency in the amount of heat was greatest in June and July and that August, too, was cooler than usual, while the mean temperature for September was fairly normal. In the northern parts of the country, however, a few nights of frost in August lowered the mean temperature for that month and caused a grood deal of damage to the seedplants. More damage was done iby the rather severe frosty weather which prevailed at the end of and even as early as the middle of September, during which period the temperature fell as low as $-10^{\circ} \mathrm{C}$. In normal years the harvesting of cereals and root crops is finished by that time, but on this occasion the crops had been retarded, and in the southern and western parts of the country, especially, a large part of the crops of oats and potatoes had not been got in.

The retarding of the crops was chiefly due, besides the late time of sowing and the cold weather, to the heavy rainfall which caused rather thriving growth, so that a harvest above the average might have been expected, particularly as regards spring sowings.

## THE HARVEST A PARTIAL FAILURE OF CROPS.

How did the year's harvest finally turn out? It is too early yet to give a definite reply to this question, as the threshing of the grain of spring sowings has partly not been completed. According to an estimate made by the Statistical Office of the Board of Agriculture, the figures for the crops of the various cultivated plants are given below in comparison with the final results for 1927 and the average figures for the
five years 1921 - 1925 published by the same office, in millions of kilogrammes:

| Cultivated plant. | 1928. | 1927. | 1921-1925. |
| :---: | :---: | :---: | :---: |
| Wheat | 24 | 28.9 | 20.1 |
| Rye | 278 | 327.5 | 287.5 |
| Barley | 128 | 143.1 | 125.9 |
| Oiats | 5110 | 633.0 | 501.2 |
| Mixed grain | 13 | 16.0 | 18.8 |
| Legruminous plants | 14 | 16.5 | 13.5 |
| Potatores | 659 | 758.0 | 593.6 |
| Turnips | 404 | 500.3 | 361.2 |
| Sown hay | 2,244 | 2,682.7 | 2,149,0 |
| Meadow hay | 436 | 482.5 | 588.8 |

It will be apparent at the first glance that the harvest in 1928 was considerably smaller than the harvest of the previous year, although in some respects it exceeded the average harvest for the five year period. In addition it must be taken into acocount that in 1928 the area of tilled land was 20,000 hectares larger than in 1927 and approximately $80,000 \mathrm{ha}$ in excess of the average figure for the five years referred to. It should also be noted that the estimate of the harvest for 1928 was based upon information received by 'the Board of Agriculture in the middle of September, so that the damage caused to the crops by the frosty weather towards the end of September was not taken into consideration in the estimate: The inferior quality of the crops, which is clearly marked in the case of wheat, rye and oats, is not evident from the estimate referred to. Notwithstanding this, according to the estimate made by the Board of Agriculture, the value of the harvest in 1928 is close on 750 million marks less than the value of the harvest in 1927, so that it can be established by this.fact alone that the country had experienced a partial failure of the crops caused by the exceptional weather conditions.

On the other hand the gratifying fact is worth noting that the pastures gave a good yield during the summer of 1928 solely owing to the weather conditions, in consequence of which butter exports began to exceed exports in 1927 from July onwards. For the period JulyDecember butter exports were about 6.2 million kilogrammes compared with 5.3 million kgs in 1927 during the same period. To all appearances
this year should establish a fresh record in butter exports.

## GENERAL MEASURES ON ACCOUNT OF THE POOR HARVEST.

Early last autumn already the opinion was current in the country that certain measures were necessary in order to mitigate the results of the poor harvest, especially in regard to the northern part of the country which had suffered most from the failure of the crops. Some anxiety and uncertainty was felt particularly as to the question of seed. In order to ascertain the exact position the Government Seed Control Institution was authorised to examine, free of charge, the power of germination of such samples of oats and other cereals as were submitted by private farmers by instructions from the local agricultural assaciations.

About 8,000 samples were received and on the basis of these samples it could be established that some shortage would be experienced of oat seed and seed peas, while other kinds of seed were generally available in the country. It is estimated that about 12 million kilogrammes of oat seed will have to be imported from abroad, a quantity that has already been purchased, the total requirements of oat seed being 90 million kgs. The lowest limit for the power of germination has lbeen reduced for this year to $80 \%$ for local oat seed, whereas the corresponding limit for normal years was $90 \%$ and more. With a view to rendering financial support to poor farmers 20 million marks have been set aside for granting loans for the purchase of seed through the medium of communes and co-operative rural credit societies. On such loans the commune or the co-operative rural credit society pays $4 \%$ interest and is not allowed to charge private
borrowers a higher rate than $5 \%$, loans being granted for 3 to 5 years. In view of the present shortage of seed the State railways have granted a rebate of $50 \%$ from the ordinary rates of freight on seed, provided goods are despatched in truckloads, and a rebate of $331 / 2 \%$ for transporting smaller lots.

Another matter which was thought to require special attention already last autumm on account of the poor harvest, was the relief of unemployment. Last December the Diet granted a sum of 15 million marks for organising public works in places in which unemployment might occur. At the same time 20 million marks were granted, as stated above, for loans for the purchase of seed and 5 million marks to be disposed of by the Board of Agriculture as occasion arose.

A considerable reduction in lumber work has; however, been made this winter by timber exporters, which has contributed towards increasing the number of unemployed. For this reason the above mentioned grant of 15 million marks has proved insufficient, in spite of the fact that considerable appropriations for this purpose had been made in the Budget, for instance, 10 million marks for the relief of unemployment, and in a proposal submitted to the Diet in February the Government has asked for an additional grant of 10 million marks for this purpose. The public work for which these appropriations have been and will be used, takes the form chiefly of the construction of roads and bridges in the northern and eastern districts. in which ways and communications are very unsatisfactory, as well as the clearing of rivers and the drainage of swamps. In this way the funds employed for such purposes may be considered as investment of capital which should yield a return in the future.

## ITEMS.

The funds of the Bank of Finland. At the beginning of this year the Bank of Finland's own funds came up to the sums fixed by the Bank regulations, the Reserve Fund having attained the amount of 500 million marks which the Capital had already reached some time ibefore. According to the regulations one-third of the annual profit is to be transferred henceforward to the Reserve Fund, while the Diet has the right to decide as to the disposal of the balance. In order to strengthen the position of the Bank of Finland the Bank Supervisors recently submitted a proposal to the Diet for increasing the Bank's funds more rapidly than is obligatory according to the regulations referred to. The gist of the proposal is that the Capital should be raised to 1,000 million marks by a transfer from the Reserve Fund and that half the annual profit should be transferred to the Reserve Fund until such time as the latter also reaches 1,000 million marks. In a fairly short time, therefore, the Bank of Finland's own funds would amount to 2,000 million marks which would materially increase the Bank's opportunities of fulfilling its purpose.

Taxation of companies. The subject of altering the principles for taxing limited liability companies on income and property has already been under discussion for a long time, one of the principal arguments being that the present form of taxation is a heavy burden in particular for large enterprises and for the accumulation of capital in general. To look into this important question the Government appointed a commission recently with Mr.J. K. Paasikivi as chairman.

Shipping and ice conditions. The unusually severe ice conditions that marked the second half of February, continued up to the middle of March. In addition to Finland sending the
ice-breaker „Sampo" to the Danish sounds to keep traffic open, it was necessary to resort to. the help of ice-breakers on voyages from the Gulf of Finland to Danish waters. At the end of February the ice--breaker „Jääkarhu" started to convoy a large number of ships which could not proceed by themselves. During the voyage the „Jääkarhu" was able to render. assistance to several vessels that were frozen in and in a dangerous situation. From Danish waters the „Jääkarhn" again convoyed a number of ships into Finnish waters. By these means traffic became lively once more in the Finnish winter ports, where traffic had dwindled to scarcely more than the regular route traffic that had been maintained all the time without any particular interruption. - In the middle of March a sudden change occurred in the weather with a lasting high temperature which is uncommon for the time of year. The ice conditions, even in the Danish waters, became much easier. Thanks to favourable winds the port of Hanko (Hangö) has been quite free of ice, while most of the Baltic ports were still closed by ice.
*
The Stock Exchange in 1928. Business on the Helsingfors Stock Exchange was considerably less in 1928 than in 1927, but still much larger than in previous years. The progress of business is shown by the following figures:

| Year. | Business done Mill. mks. |
| :---: | :---: |
| 1924 | 119.1 |
| 1925 | 145.5 |
| 1926 | 343.1 |
| 1927 | 784.5 |
| 1928 | 510.8 |

The falling tendency during 1928 is seen more clearly, if the monthly figures are examined (see table 16). -- The way in which business was divided between shares and ibonds and between different classes of shares was as follows (in million marks):

## THE <br> BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.

[^0]:    - Preliminary figures aubject to minor alterations.

[^1]:    - Proliminary figures sabject to minor alterations.

[^2]:    ${ }^{2}$ ) Fresh meat, excluding pork.

    * Preliminary figures subject to minor alterations.

[^3]:    * Preliminary tigures aubject to minor alterations. $\boldsymbol{}^{1}$ ) Dry weight.
