

## THE FINNISH MARKET REVIEW.

## THE MONEY MARKET.

The tendency towards a greater tightening of the money market that was visible during January and February, gave way to increasing easiness in March. Deposits in the credit institutions became livelier again, when the second instalment of the State taxes had been paid in February and dividends from banks and business companies began to come in.

The total deposits in the Joint Stock banks increased in March by 236.2 million marks. The increase was less, indeed, than in the previous year, 340.7 million, but shows a considerable improvement on the increase of 49.1 million in January and the reduction of 98.4 million in February. It is worth noting that deposits from other credit institutions increased again, an indication of their position, too, having become easier. The credits granted by the Joint Stock banks increased by 108.1 million marks as against 82.4 million in March, 1.938, but 184.7 million during the same month in 1937. The increase was slightly larger than in January and February. Owing to these changes the margin of deposits in the Joint Stock banks grew by 128.1 million marks in March to $1,461.4$ million as compared with 1.497.2 million a year ago. The foreign payment position of the Joint Stock banks did not experience any great change in March,
both their indebtedness and balances falling off slightly.

To illustrate the smaller accumulation of capital it may be mentioned that deposits in the Joint Stock banks, Savings banks and other savings institutions increased by approximately 350 million marks during the first quarter of this year in comparison with about 1,030 million during the same time last year. The greater number of protested bills and bankruptcies also indicated that the general economic position was slightly weaker than last year, when a boom characterised the situation on the whole. However, the figures are still very low in comparison with the last depression.

The position of the Bank of Finland did not undergo any great changes in March. Credits increased as usual at this time of year, viz., by 58.7 million marks as against 124.4 milliou last year and 34.1 million in 1937. During the first half of April credits grew by a further 20.3 million marks. The note circulation also grew, following almost the same curve as last year. In March the increase amounted to 123.7 million, but during the first half of April the notes in circulation fell off again by 17.0 million. The Bank's reserve of foreign currency increased in March by 20.8 million marks, but decreased in the first half of April by 96.7 million in consequence of the central bank
having participated in subscribing to the Sw. crown loan issued by the State. Consequently, the note reserve, which fell off in March by 14.1 million marks, was also reduced during the first weeks of April by 114.5 million, but was nevertheless as large as $1,420.0^{\circ}$ million.

The level of prices remained almost unchanged. The rise of 5 points in the price index for forest products was alone of any importance. Owing to this the index for articles of export rose 1 point and stood at 114 as against 130 in March, 1938.

## TRADE AND INDUSTRY.

Foreign trade was livelier in March than during the two previous months, though its value fell below the value for the same month last year. The value of imports in March amounted to 647.2 million marks as against only 486.6 million in February, but 680.3 million in March, 1938. Exports amounted in value to 530.2 million marks in comparison with 480.3 in the previous month and 545.4 million a year ago. Thus there was a surplus of imports in March of 117.0 million marks as compared with 134.9 and 85.4 million respectively in 1938 and 1937.

During the first quarter of the present year exports 'were about 3 per cent larger in volume than during the same period last year, but owing to the falling level of prices the value of exports was slightly reduced, viz., to $1,510.5$ million marks as against $1,540.9$ million in 1938 . The reduction in imports was, however, considerably greater, for their volume decreased by about 13 per cent, while their value dropped from $1,944.7$ to $1,753.0$ million. There was a considerable falling off in exports of chemical pulp, but an increase in exports of paper and cardboard, mechanical pulp, plywood and meat. As regards imports, less rye, wheat, maize, coffee and sugar was imported. On the other hand imports of hot rolled and sheet iron and
steel; coal and coke, raw cotton and petrol increased. For January-March the balance of trade yielded a surplus of imports amounting to 242.5 million marks as against 403.8 million in 1938 and was therefore slightly more favourable this year.

The timber market remains firm, although sales have proceeded rather more slowly again during the last few weeks, presumably in consequence of the strained political situation. It is calculated that about April 20th sales of sawn timber from Finland amounted to approximately 420,000 standards as compared with 275,000 standards during the previous year. Prices are firm, but do not yet yield a profit in those cases, in which the sawmills purchased their raw materials at the former high prices. Some exporters are consequently adopting a waiting attitude in the hope that prices may rise. The position of the timber market is in favourable contrast to the state of the market for paper and pulp products. The chemical pulp market is still bad; prices offered are so low that manufacturers are unable to accept them in the majority of cases. Therefore most of the mills can only utilise part of their productive capacity. Owing to the political situation some American and British buyers of newsprint have taken earlier delivery; but consumption has not increased in other respects nor has the state of the market improved.

## THE LABOUR MARKET.

The labour market remained unchanged in March. The number of people on the unemployment register increased slightly and amounted to 25,261 at the end of March, but more than half of them are engaged in relief work organised by the State or the communities. Unemployment is largest in those parts of the country, where lumber work plays the greatest part in supplying employment at this time of the year.

## CONTENTS OF THE TABLES.

I. MONEY MARKET.

Bank of Finland:

1. Weekly Statement.
2. Note issue.
3. Notes in circulation and foreign correspondents.
4. Ordinary cover, note reserve and home loans.
5. Re-discounted bills and balances of current accounts.
6. Rates of exchange.

Joint Stock banks:
7. Home deposits.
8. Home loans.
9. Position towards foreign countries.
10. Foreign Payment Position of all Banks.
11. Clearing.

Tables 22-28 according to Finnish Official Statistics I, A, Foreign Trade of Finland, Monthly Reports.
The term imports covers all. imported goods which are placed on the market either immediately after importation or atter storage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

* Preliminary figures subject to minor alterations.

The above particulars which are of a preliminary nature, are compiled by the Research Office of the Ministry for Social Affairs. The figures in brackets [ ] indicate the position at the end of the previous year.

## CERTAIN PARTICULARS ABOUT FINLAND.

## 1. FORM OF GOVERNMENT.

Finland formed a part of the kingdom of Sweden from $115^{4}$ to 1809; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6th, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919 . The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The present President Kyösti Kallio is elected for the term March 1st, 1937, to March 1st, 1943.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1936 are as follows:

Number
Social-Democratic party ................................... . . . 83
Agrarian party ................................................. 53
Swedish party . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . 21

## 2. IAND.

THE AREA (excluding lake Laatokka) is 382,801 square kilometres $=147,761$ square miles (Great Britain's area is $80,047 \mathrm{sq} . \mathrm{m}$. and Italy's area $117,982 \mathrm{sq} . \mathrm{m}$.$) . Of the total area 9.0 \%$ are inland waters. On an average $11.8 \%$ of the land in the South of Finland is cultivated, $1.1 \%$ in the Nortlı, $6.6 \%$ of the whole land. Of the land area 25.5 mill. ha ( 62.5 mill, acres) or $73.6 \%$ are covered by forests.

THi AVERAGE TEMPERATURE in the coldest month is in S. Finland - $3^{\circ}$ to- $8^{\circ} \mathrm{C}$., in Lapland - $12^{\circ}$ to $-14^{\circ} \mathrm{C}$. and in the warmest month $+16^{\circ}$ to $+17^{\circ}$ and $+12^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki (Helsingfors) is $+4.6^{\circ}$ (in Oslo $\div 5.4^{\circ}$, in Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the South for about 110 days, in Central Finland for about 150 days, in Lapland about 200 days.

## 3. POPULATION.

NUMBER OF INHABITANTS (1937): 3.8 millions (of whom 0.2 million emigrants). Sweden (1937) 6.3, Switzerland (1937) 4.2, Denmark (1937) 3.7 and Norway (1937) 2.9 millions.

DENSITY OF POPULATION (1937): In South-Finland 18.8, in North-Finland 2.7 and in the whole country an average of 11.0 inhat itants to the square kilometre.

DISTRIBUTION (1937): $78.5 \%$ of the population inhabit the country, $21.5 \%$ the towns and urban districts. The largest towns are (1937): Helsinki (Helsingfors), the capital, 293,237 inhabitants, Tampere (Tammerfors) 74,736, Viipuri (Viborg) 73,917, Turku (Åbo) 72,981.

OCCUPATION (1930): agriculture $59.6 \%$, industry and manual labour $16.8 \%$, commerce $4.3 \%$, transport $3.8 \%$, other occupations $15.5 \%$.

LANGUAGE (1930): Finnish speaking $89.4 \%$, Swedish speaking $10.1 \%$, others $0.5 \%$.

RELIGION (1937): Lutheran $96.0 \%$, Greek-Orthodox $1.8 \%$, others $2.2 \%$.

EDUCATION (1930): Amongst persons over 15 years of age only $0.9 \%$ are illiterate. There are three universities founded in 1640,1917 and 1920.

INCREASE OF POPULATION (1937): Births $18.9 \%$, deaths $12.3 \%$ (in France in $193615.3 \%$ and in England in 193612.1 $\because$ :'oo), natural increase $6.6 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOURCES. The growing stock of the forests is 1,620 million $\mathrm{m}^{8}$ ( 57,214 million cubic feet). The merchantable tim-
ber (measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $60.7 \%$, spruce by $28.1 \%$, the conifers thus constituting $88.8 \%$ or 1,383 million trees; leaftrees, mostly birch, $11.2 \%$ or 174 million trees. The annual increment is 44.4 million $\mathrm{m}^{3}(1,568$ million cub.ft.). The annual fellings according to earlier calculations are 40 million $m^{3}$ ( 1,413 million cub. ft .).

AGRICULTURE (1937): Cultivated land 2.2 million hectars, divided as follows: area under cultivation $0.3-10$ hectars $33.4 \%$, $10-50$ ha $52.1 \%, 50-100$ ha $8.4 \%$, over $100 \mathrm{ha} 6.1 \%$. Cultivated land is divided between the different kinds of crops as follows: $51.7 \%$ hay, $17.7 \%$ oats, $9.4 \%$ rye, $4.7 \%$ barley, $3.4 \%$ potatoes, $13.1 \%$ other. The number of dairies in 1937 amounted to 588.

OWNERSHIP OF LAND (1923): The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$.

INDUSTRY (1937): Number of industrial concerns 4,246, workpeople 207,506 , gross value of products of industry 21,076 million marks.

LENGT'H OF RAILWAYS (1937): $5,907 \mathrm{~km}$, of which 5,651 km State railways and 256 km private. The gauge is in general $1,524 \mathrm{~m}$.

MERCHANT FLEET (1938): Steamships 558 (304, 738 reg. tons net), motor vessels 182 (21,577 reg. tons net), sailing ships 110 ( 34,288 reg. tons net). 'Total 850 ( $360,603 \mathrm{reg}$. tons net).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish mmarkka) = 100 penniä). According to the monetary law of December 21st, 1925, a gold coin of 100 marks' value shall contain $3^{15} / 1 \mathrm{~g}$ grams of fine gold. Since October 12th, 1931, the redemption of bank notes in gold is, however, suspended.

STATE FINANCES. According to the finance accounts for 1988 the State revenue was $5,584.7$ million marks of which $4,862.0$ million marks were current revenue, and State expenditure $5,432.8$ million marks, of which $3,487.3$ million marks were current expenditurc. The principal sources of revenue were as follows: State property and undertakings (net) 549.7 , direct taxes $1,090.4$, indirect taxes $2,208.8$, stamp duty 264.5 , charges 110.8 , interest and dividends 359.5 and capital revenue 672.7. The value of State property in 1922 was estimated at $11,150.6$ million marks. For Public Debt see table 19 in this issue.

MUNICIPAL FINANCES. According to the Budget for 1938 expenditure amounted to $1,808.4$ million marks. Income from taxation was calculated at 608.1 million marks, taxed income at 7,963.9 million marks. The municipal income tax (non-progressive) averaged $7.7 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland (founded in 1811) is a State Bank. Its head-office is in Helsinki (Helsingfors) with branches in Turku (Åbo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleaborg), Kuopio, Joensuu, Sortavala, Viipuri (Viborg), Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskylä and Kotka.

THE JOINT STOCK BANKS (1939): Number 9, possess 473 offices, where all kinds of banking business is transacted. There is one banking establishment per 7,410 inhabitants.

The largest banks are: Kansallis-Osake-Pankki, Oy. Pohjoismaiden Yhdyspankki-Ab. Nordiska Föreningsbanken and Helsingfors Akticbank, all with head offices in the capital.

OTHER BANKS (1939): Mortgage banks 5, Savings banks 484, Co-operative Credit Societies 1,119 and a Central Bank for the latter.

# NEW INDICES FOR FOREIGN TRADE. 

BY<br>VERNER LINDGREN, M. A.<br>head of the statistical department of the board of customs.

## INTRODUCTION.

In order to afford means of surveying Finnish imports and exports the Board of Custorns, which draws up the official statistics of foreign trade, has since 1919 calculated various series of indices referring to the volume and value of commodities exchanged in foreign trade. Up to now 1913 has been used as a basis. Since that year, however, circumstances have altered appreciably, among other things owing to the country's currency having depreciated to a small fraction of its value in 1913. The index numbers calculated on the basis of the conditions obtaining then consequently do not correspond to reality.

## PRINCIPLES FOR CALCULATING THE NEW INDICES.

From the beginning of 1939 the Board of Customs has given up these series of indices and has calculated new ones with 1935 as a basis, this being done in accordance with a recommendation adopted at a meeting of the heads of the central statistical offices of the Northern countries held in Copenhagen in 1936. So far the new series have been completed only from the beginning of 1938 and partly for 1936 and 1937, but will subsequently be completed for the two latter years.

The new indices refer both to the quantity (volume) of trade and to the unit value of the goods. As to the latter it should be noted that it is not a question of the fluctuations of price quotations, but of actually obtained average prices of the imported and exported goods. The indices comprise 221 items in the import
statistics and 75 items in the export statistics, representing altogether 62 per cent of the total value of imports and 84 per cent of the total value of exports during 1935, the base year. The items of goods included in the indices can be combined into the following main classes :-

| Indices of imports |  |  |  |
| :---: | :---: | :---: | :---: |
|  |  | Index materials in \% of |  |
| Main class | Number of jtems | value of majn class | value of total imports |
| Raw materials and semiproducts | $90$ | 69 | 32 |
| Machinery, means of transport etc. | - 42 | 49 | 9 |
| Foodstuffs, beverages and tobacco | . 41 | 91 | $1 \pm$ |
| Other goods for consumption | - 48 | 35 | 7 |
| Total imports | 8281 | 68 | 62 |
| Indices of exports |  |  |  |
|  |  | Index materials in \% of |  |
| Main class | $\operatorname{Number}_{\text {items }}$ of | value of main class | value of total exports |
| Timber | 29 | 91 | 39 |
| Paper and pulp products | - 10 | 87 | 35 |
| Animal foodstuffs | 11 | 88 | 6 |
| Other goods .......... | 25 | 38 | 4 |
| Total exports | 875 | 84 | 84 |

The index materials are thus quite representative in extent, especially as regards the largest main classes of exports and also as regards most of the imports.

The various kinds of goods taken into account in the indices are listed on page 29, the proportionate share of each commodity in the imports or exports of 1935 being stated; some of the less important commodities have been combined in the list.

For all these items indices are calculated separately for the quantity and separately for the unit value. The numbers are calculated partly per month and partly for the totals cumulating month by month from the beginning of the year, the latter series being published in the statistical section of this Bulletin. In addition to the separate items, index numbers are calculated for several groups of items.

As already stated, the base year is 1935 , but as the seasonal fluctuations are very considerable in Finland's foreign trade, the monthly indices are not based on the average of the monthly numbers for 1935, but on a different figure for each month. These base numbers are, however, not identical with the actual monthly numbers for 1935 , but are converted in the following manner in order to eliminate accidental fluctuations. The annual totals for ten years (1926-1935) for each of the, approximately, 300 items of the indices have been divided proportionately among the different months, and monthly average percentages have been calculated of the ten proportionate numbers for each month. In accordance with these average percentages the annual totals for 1935 have then been calculated proportionately as converted monthly numbers, and these have been used as a basis for the indices.

The actual calculation of the indices has been made according to the following formulae, in which the quantity and unit value for the-base period are designated by $K$ and $P$ respectively and for other periods by $K_{n}$ and $P_{n}$ :-

Index of volume $=\frac{\mathbf{K}_{\mathbf{n}} \times \mathbf{P}_{\mathbf{n}}}{\mathbf{K} \times \mathbf{P}_{\mathbf{n}}} \cdot 100$
Index of unit value $=\frac{\mathbf{K}}{\mathbf{K}} \frac{\times \mathrm{P}_{\mathbf{n}}}{\times P} \cdot 100$
To take an example, the index of volume for the period March 1939 is obtained by calculating the unit value for the quantity in March 1939, according to the price in March 1939, in
percentage of the unit value of the (converted) quantity in March 1935 according to the price in March 1939. The index for the unit value in March 1939, on the other hand, is obtained by calculating the unit value of the (converted) quantity in March 1935, according to the price in March 1939, in percentage of the unit value of the (converted) quantity in March 1935 according to the price in March 1935.

## INDEX NUMBERS FOR 1937-1939.

The index numbers calculated so far are found in the tables on pages 30 and 31 , for the total imports and exports and for their main classes.

The volume of imports has fluctuated considerably, especially at the turn of the year in connection with alterations in rates of duty. On the whole, however, it had a downward tendency in 1937 and also in 1938 with the exception of the beginning of the year, when there was a very great increase, and of the late summer, when a slight increase occurred. In the late autumn the volume curve touched bottom and subsequently it rose again. - The curves for the unit value of imported goods have been steadier. In general the highest point was reached in 1937, after which a fall set in.

As regards the volume of exports, the course of development has on the whole been the same as in the case of the volume of imports: a continued decrease in 1937 and 1938, only interrupted by a rise in the spring of 1938. The trough was reached in the summer of 1938, since when there has, on the whole, been an uninterrupted rise.

A comparison between the series of indices of imports and exports shows that the volume of exports has throughout grown on a slighter scale than the volume of imports, though this has been counteracted by the fact that the unit value of exports has, as a rule, developed much more favourably.

GOODS IN THE IMPORT AND EXPORT INDICES

# NEW FINNISH WHOLESALE PRICE INDEX. 

BY<br>VALTER LINDBERG, PH. D:<br>head of department at the central statistical office.

## THE OLD INDEX.

The former index was based on "the volume of goods in Finnish internal wholesale trade in 1926". Such a volume of goods must, of course, be based on extremely approximate estimates, seeing that it is impossible even at the present time to collect reliable statistics of internal trade in this country. It may be mentioned, e.g., that in making up the new index, which is to be dealt with below, an attempt was made at first to establish the value of the turnover in internal wholesale trade in 1935 as a basis for the weighting, taking into consideration the different stages of wholesale trade. This proved almost impossible of achievement, however, in a satisfactory manner. Even in important cases it was necessary to resort to rather daring estimates. Although experts in various branches were consulted in all doubtful cases, the data concerning some classes of goods proved to be misleading and even contradictory. In some cases it is almost impossible to draw the line between wholesale and retail trade and between wholesale trade and agency business. Such objections are, of course, justified also in regard to the bases of the old index. Another drawback to the old index was the indirect weighting which can no longer be held to fulfil its purpose. Besides, the collection of price data for some important classes of goods in the old index encountered great difficulties and in some cases the data were actually misleading. But the greatest disadvantage, perhaps, lay in the fact that
such a distant year as 1926 formed the basis of the calculations, as naturally the importance of different goods has greatly changed since then. These and other causes, such as the necessity of revising the classification, have for some time past forced the Central Statistical Office to plan a thorough reform of the wholesale price index.

## COLLABORATION IN THE NORTHERN COUNTRIES.

The question entered upon a new and decisive phase, when it was discussed at the 16 th meeting of the heads of the central statistical offices of the Northern countries in connection with the question of unifying the economic statistics of these countries. The meeting was held in Copenhagen already in 1936, but the question was of such large dimensions that no actual decision could be arrived at then. Another conference was therefore held in Copenhagen in 1937 which again took up the guestion of the indices. At this conference Finland submitted a memorandum that, on the whole, formed the basis of negotiations. It was resolved, as proposed in the memorandum, to select 1935 as the base year for all indices. As far as possible 1935 was to be used also as a basis for establishing the weights for index numbers with a fixed base year. The subject of goods olassification and methods of calculation was postponed to a later conference. This was held in Stockholm in April, 1938, on which occasion the Central Statistical Office
of Finland submitted a report on the work carried out in this country concerning the new wholesale price index. As a result of the deliberations in Stockholm a detailed proposal was submitted for adopting common principles for the wholesale price indices in the Northern countries. This proposal was subsequently adopted by the Central Statistical Office of Finland.

## GENERAL PRINCIPLES.

The results of these deliberations are described below, in broad lines, with some brief remarks. The selection of goods and the weight calculation were based on the value of the goods consumed within the country during 1935 , excluding the consumption that was not placed on the market. Consequently such goods as were consumed by the producers themselves or passed on straight to some further process of production, were not taken into account, nor were exports included. Though 1935, as being a "normal" year, was employed as a basis for the wholesale price index, it must be admitted that it was not equally suitable for all commodities. For some classes of goods it was therefore necessary to strike an average for several years, as, e.g., in Finland the average for 1934-36 for sawn timber and woodpulp. For some articles that only attained a normal turnover in 1936 (e. g., copper in Finland) the latter year was selected as the base year.

In order to obtain representative materials regarding prices, all goods, the "consumption" of which amounts to not less than 20 million marks, should be included. But in order to get really representative materials many kinds of goods have to be taken into account although their consumption falls below the limit mentioned. This is the case especially if a class of goods is greatly split up among different commodities, as e.g., in Finland in regard to the class of "metals and metal goods".

The wholesale prices refer to actual market prices for sales during the period concerned
and for delivery within the customary time. The usual discounts are therefore also taken into consideration. The prices refer in the case of agricultural produce and of forest produce to the prices on the most important market or markets in the country, in the case of products of domestic industry to the prices at the works, in the case of imported goods in Finnish wholesale trade to importers' selling prices, and in the case of imported goods that do not figure in Finnish wholesale trade to import prices including duty and town dues. Occasionally, as in the case of the class "metals and metal goods", missing prices are calculated by means of extrapolation on the basis of similar articles.

The Stockholm meeting expressed the wish that separate price indices for imports and exports, based on c.i.f. and f.o.b. prices respectively, should be calculated. This will be done in Finland, in future as before. Although the general index of the wholesale price index includes imported goods as a separate section, a. c.i.f. price index is justified, for it indicates the actual trend of prices (without duty, discharging, town dues etc.) of foreign goods in the Finnish market. By this means such factors as changes in Finnish tariff policy are eliminated from the movement of prices.

It was considered that the arithmetical mean was to be preferred in the wholesale price index to the geometrical mean for certain practical reasons and in order to maintain continuity with the former series.

It was further decided to adopt so-called class weighting. Goods should therefore not be given the weight indicated by the value of their consumption, imports or exports, but a weight corresponding to the class of goods, to which they belong and which they represent. All classes of goods are by no means always equally strongly represented, and the less well a class is represented in proportion to its importance, the greater are the weights falling upon the individual commodities included in the class. This class weighting is undoubtedly an ad-

vantage, but unquestionably presents great difficulties in practice.

Finally, it was decided that no adjustment of seasonal fluctuations should be made in the case of goods with a seasonal movement of prices. This decision was prompted by the endeavour to avoid any deadening of sensitiveness in the index.

## THE SERIES OF SPECIAL INDICES.

In order to illustrate the movement of prices as variedly as possible, it was agreed to draw up some special index numbers in addition to the general index and the class indices. With regard to the origin of goods it is merely mentioned in the decision that the general index should refer both to goods produced within the country and to imported goods. In the Finnish index the former are divided into three categories: agricultural produce, forestry products and industrial products. Of these, the category of "forestry products" is a new one in our wholesale price index and only consists of round timber. Owing to the importance of such products in our national economy, the existence of this category as a special class is justified. Besides, its peculiar and pronounced trend of prices, differing from that of other classes, renders this division into three categories very interesting and explains some obscure points in the trend of the general index.

At the Stockholm meeting Sweden was entrusted with the task of drafting proposals for classifying the goods according to their nature, use and varying stage of manufacture.

According to the nature of the goods 14 classes were decided on for the wholesale price index. In the Finnish index they are represented by the following number of items and weighted as shown below:- -

| Class of goods |  | $\begin{gathered} \text { Finnish } \\ \text { products of } \end{gathered}$ |  |  |  | $\begin{aligned} & \text { Ty } \\ & \text { Hi } \\ & \hline \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | $\begin{aligned} & \text { 穻 } \\ & \text { 蘦 } \end{aligned}$ |  |  |
|  |  | Weight |  |  |  |  |
| Animal foodstuffs | 14 | 315 |  | 34 |  | 349 |
| Cereals and cereal products | 26 | 83 | - | 219 | 41 | 343 |
| Other vegetable foodstuffs | 21 | 48 | - | 270 | 242 | 560 |
| Cattlefood. . . . . . . . . . . . | 1 | 18 | - | 7 | 49 | 74 |
| Fertilisers | 6 | - |  | 8 | 27 | 35 |
| Fuel and lubricating oils | 10 | - | 55 |  | 123 | 178 |
| Metals and metal goods.. | 42 |  |  | 240 | 392 | 632 |
| Stone-, clay- and glassware | 7 | - | - | 104 |  | 104 |
| Chemico-technical goods.. | 17 | - | - | 64 | 83 | 147 |
| Hides and leather goods | 8 | 13 | - | 101 | 40 | 154 |
| Rubber and rubber goods | 4 |  | - | 29 | 21 | 50 |
| Spinning materials and textiles | 35 | 12 | - | 313 | 190 | 515 |
| Pulp, cardboard and paper | 7 |  |  | 73 |  | 73 |
| Timber . . . . . . . . . . . . . . | 14 | - | 440 | 67 | - | 507 |

Total $|218| 489|495| 1529|1208| 3721 \mid$

The general index for articles of import (c.i.f.) consists of the following classes of goods:-

The general index for articles of export (f. o. b.) is composed as follows:-

The Swedish proposals for classification in regard to the employment of goods and their stage of manufacture have been accepted in broad lines by Finland with the departures necessitated by the special conditions in this country. The Swedish proposals are, as far as possible, in line with the classification of goods in the "Minimum List" drawn up by the
committee of statistical experts of the League of Nations.

According to the use of goods, a division has been made into materials for production and articles of consumption. It was not considered necessary to make a discrimination between capital goods for production and for consumption, nor to distinguish certain classes of goods that serve consumption as well as production. At the same time it is well-known that a commodity may be referred according to its nature both to the one class and to the other. In pronounced cases and in regard to important commodities, it has been considered necessary to divide them between the two classes. Different weights are employed according to their importance. This method is undoubtedly most correct, although the classification has caused some difficulty in many cases.

With reference to the stages of production goods have been divided into: 1) crude materials and simply transformed articles and 2) more elaborately transformed articles. A division into 1) crude materials, 2) simply transformed and 3) more elaborately transformed articles, as the committee of experts proposed, 'would not have heen suitable in the case of certain commodities, or easy of accomplishment and, in the conditions existing in Finland, would nevertheless have displayed very great divergences from the proposals of the committee of experts. Even
with the present division the divergences are considerable owing to the special conditions obtaining in the North.

On the basis of the materials available at present it may be said in regard to these special indices that goods for consumption and more elaborately transformed articles both display an even and similar trend of prices. Materials for production and crude or simply transformed articles display trends of prices similar to each other with a marked rise and fall of price.

## A COMPARISON BETWEEN THE OLD AND NEW INDICES.

In making a comparison between the old and the new indices for 1936-1938, for which years both series are calculated monthly, the graphical method is the simplest one. Comparable curves for the general price indices for home market goods, articles of import (c.i.f.) and articles of export (f.o.b.) have been given above. In regard to home market goods in the first place a more pronounced general rise can be observed in the case of the new index than of the old one. The difference in this rise is most strongly expressed during the boom in 1937, especially during the latter part of that year. This is principally due to the fact that the new index includes forest products which displayed a strong rising tendecy in price during that period. If we examine the curves of the general index for articles of import, we find considerable coincidence between the new and the old index. The rise at the beginning of 1937 is, however, slightly more pronounced in the case of the new index than of the old one. In the case of the general index for articles of export, on the other hand, a comparison between the old and the new index displays great discrepancies. The new index records a much greater rise during 1937 than the old one, but drops again at the beginning of 1938 far more markedly than the old index. The former phenomenon is due to the collection of price data for some important kinds of paper having
been altered entirely. The latter tendency is explained by the weighting. It should be pointed out as a general fact of great importance in comparisons between these new and old price curves, that changes in the selection of commodities and the transition to direct weighting have affected the comparability to a great extent.

If, by means of the available, comparable materials for the year 1935, we attempt to calculate coefficients for a comparison between the new and old indices, we obtain the following results. The ratio between the new general index for home market goods and the corresponding old index is 1.106 (for agricultural produce 1.310, for industrial products 1.071 and for imported goods 1.074). New index numbers are therefore obtained for previous years by multiplying the old indices by the corresponding coefficient. The coefficient for the general index for articles of import (c.i.f.) is 1.158 and for the general index for articles of export (f. o.b.) 1.254.

If we extrapolate new series of indices with these coefficients for 1926-1934, we obtain the following results, taking 1935 as the base year:

|  | General indices <br> Home market <br> goods |  |  |  |
| :--- | :--- | :---: | :---: | :---: |
| Year |  | Articles of <br> import (c.j.f.) | Articles of <br> export(f.o.b.) |  |
| 1926 | $\ldots \ldots$ | 111 | 112 | 116 |

## GENERAL CONCLUSIONS.

Without doubt the wholesale price index in its new form gives us a more varied and clearer idea of the course of prices and is a more

[^5]sensitive intrument than the old one. In one respect the old index, perhaps, was liable to arouse more interest among the public: in the classification. The different commodities came, as it were, more into the open and the class indices (of closely allied commodities) were, no doubt, used to some extent in practice as a basis for certain kinds of economic agreements, tariffs etc. In such cases, of course, the rearrangement of the wholesale price index is a drawback. It should be borne in mind, however, that the basis for such classes of goods had in many cases already grown rather weak, so that
the reliability of some class indices suffered in a corresponding degree.

The index might, perhaps, be given a more concrete content, if, as has been done in Sweden, goods for productive purposes, for instance, were divided into agricultural requisites, industrial requisites, building materials and fuel and lubricating oils. Nor is it impossible to make such an additional division in Finland for certain prolonged periods on the basis of the detailed and well prepared materials that now form the foundation of the wholesale price index.

## ITEMS.

Issues of bond loans. The ordinary budget for the current year assumed that the State would raise loans of 550 million marks. The Government has now decided to issue an internal bond loan of this amount, the rate of interest being $4 \frac{1}{2}$ per cent. The loan will run for 25 years. The redemption will be made twice annually, $1 / 50$ of the total amount being paid off each time. The bonds will be issued according to the State's need for cash. Colonisation honds, which were notified for redemption on May 1st, may be exchanged for the new bonds. Colonisation bonds are now outstanding to an amount of about 100 million marks. They were issued from 1928 onwards at rates varying between 5 and 7 per cent.
In 1929 the Finnish Mortgage Association raised a bond loan of 10 million Swedish crowns, guaranteed by the State. The loan carries interest at a rate of $61 / 2$ per cent and the period of redemption was fixed at 30 years. At the beginning of 1939 the outstanding bonds amounted to nearly 7.0 million crowns or 74.5 million marks. Since the release of the Finnish mark from gold in 1931, this loan has caused a considerable annual loss. As the whole of the loan may be repaid in December this
year, the Bank of Finland has granted the necessary means at a rate of $31 / 2$ per cent. The new loan is to be redeemed within 10 years in annual instalments of equal size.

Forest resources in Finland. Oertain preliminary data are now available regarding the results of the second national forest survey carried out in 1936-38 according to a plan described in No. 9, 1936, of this Bulletin. It was feared that the forest resources of Finland had decreased very much since the first similar survey in 1922-23, owing to the rapid growth of industry and exports, which caused excessive felling. Fortunately this does not appear to have been the case, at least not to the extent assumed. Calculated in averages per hectare, the forest resources of the whole country have even increased. The first summary report of the survey points to an increase in the forests of Western Finland of 2 to 5 per cent and also to increasing annual growth. In the East, on the other hand, the forest resources have decreased appreciably, in certain places up to 17 and 18 per cent. Further north they have either slightly decreased or remained
unchanged. Where the forests have decreased, this is often caused by such cuttings in overaged forests which were necessary in order to get increased growth. The same result has been obtained by improved drainage. The valuable whitewood forests have increased in the eastern as well as in the western parts of the country.

Regulations for the Bank of Finland; Finnish coinage. A new English edition of the Finnish Monetary Law and the Regulations and Instructions for the Bank of Finland has recently appeared, taking into account the amended regulations of December 22nd, 1938. Besides, a survey of the coinage of Finland has appeared in French, continuing a series of previous similar publications. It includes
data about the legal requirements regarding the coins and about minting in 1864-1938. The pamphlets are supplied free of charge on application to the Statistical Department of the Bank of Finland.

Rearrangement of statistical table. In connection with the adoption of a new Customs Tariff from the beginning of 1939, the system of trade statistics, too, was changed. The classification of goods was made to correspond as far as possible to the "Minimum List" recommended by the Economic Committee of the League of Nations. This has necessitated a rearrangement of table 23 in the statistical section of this Bulletin, which gives the value of imports and exports in different classes of goods.

## THE BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department.

Helsinki (Helsingfors), Finland.
