Developments in 1957

The most noticeable changes in the balance sheet of the Bank of Finland were caused by the devaluation effected on September 16. First and foremost, its impact is visible in the holdings of foreign exchange whose increase by 9 018 million marks is almost entirely due to the rise in the rates of exchange. In terms of Finnish marks the Bank's indebtedness on the foreign exchange accounts remained despite of devaluation approximately the same as a year ago, which indicates a decrease in this indebtedness in terms of foreign currency. The value of gold and foreign bonds has been kept unaltered in the books. Of the value of the primary note cover, the portion of gold and dollars comprised 62 per cent whereas at the end of 1956 the corresponding percentage was 59.

Mainly as a result of the rise in the advance payments for exports, the »Other Assets» in the balance sheet grew by 7 250 million marks which figure also includes the increase caused by devaluation in the book values.

The abovementioned factors and the fall by 5 405 million marks in the funds on the Treasury's cheque account brought about in the money market a relaxation which in accordance with the objectives of the Bank of Finland was used by the commercial banks for reducing their indebtedness. The rediscounts declined by 8 753 million marks and, since the commercial banks, besides, increased by 1 238 million marks their holdings on cheque accounts, their net indebtedness to the Bank of Finland shrank by nearly 10 000 million marks.

In the last months of 1957 the Export Levy, which had been enacted in order to limit the inflationary effects of devaluation, brought to the Bank of Finland holdings amounting to 3 251 million marks, which amount thus softened the impact of the increase in the exchange reserves on the supply of money. Of these holdings an amount of 2 500 million marks was utilised for the redemption of the Treasury Bond Loan. An amount of 1 250 million marks of budget returns was used for the same purpose.

The total of the inland bills discounted by the Bank in Finnish currency fell by 2 013 million marks, while the advances granted on cheque accounts decreased

by 243 million marks, and the value of bonds in the Bank's portfolio declined by 536 million marks. This contraction of credit reflects the fact that after the devaluation the clients, chiefly export companies, to a considerable extent refrained from making use of the credit facilities available to them. On the other hand, the rise by 3 874 million marks in the inland bills discounted in foreign currency is due to an increase in the book value of the credits granted from the loans contracted with the International Bank for Reconstruction and Development over previous years. The change in this item is offset by the increase in long-term foreign liabilities. The abolishment of the system of deposits against import licences caused a reduction in the long-term Finnish liabilities.

In the past year the total amount of the notes in circulation showed a clearly falling tendency. Towards the end of the year, however, there was an exceptionally strong seasonal rise which brought this total to 60 640 million marks or only 95 million marks less than one year earlier.

The rise in book values caused by devaluation has not affected the profit and loss account. The earnings have slightly declined owing to the decrease in interest receipts. On the other hand, the cash reserve system was not applied in the past year any more and so did not cause interest expenses as it had done in 1956. The profit for the year amounted to 2 171 million marks while the corresponding figure one year earlier had been 2 052 million.

In accordance with the Regulations of the Bank, half the profit or 1 086 million marks will be allocated to the reserve fund. The Diet will decide on the use of the other half of the profit.
