

BANK OF FINLAND

1933

YEAR BOOK

COMPILED BY THE

STATISTICAL DEPARTMENT OF THE BANK OF FINLAND

VOLUME XIV

HELSINKI — HELSINGFORS 1934

**HELSINKI — HELSINGFORS 1984.
GOVERNMENT PRINTING OFFICE.**

The present is the fourteenth annual issue of the Year Book of the Bank of Finland. As in previous issues its main feature consists of the statistical tables, which contain detailed information regarding the position and business of the Bank of Finland during 1933 in addition to some reviews of the development of the Bank of Finland partly during 1922—1933 and partly during longer periods. Some new reviews have been added in the present issue, illustrating the credit balances of the Bank of Finland with its foreign correspondents, the ordinary cover and the amount of aluminium-bronze coin in circulation. Besides, the tables include the usual series of figures illustrating the business of the Joint Stock banks. In addition to the tables this volume includes a section that gives a condensed review of the most important events in 1933 for the economic development of Finland as well as a survey of the different branches of business of the Bank of Finland and its results during last year.

The Year Book has been compiled in the Statistical Department of the Bank of Finland, the undersigned head of the Department being principally responsible for its contents. As in former years, the Year Book is published in Finnish, Swedish and English; the tables include headings and other letterpress in French.

A. E. TUDEER, PH. D.
Head of the Statistical Department.

Bank of Finland, Helsinki (Helsingfors),

---	----

I. REVIEW OF THE ECONOMIC POSITION IN FINLAND IN 1933.

The symptoms of improvement that could be observed in economic conditions in Finland during 1932, grew considerably stronger during 1933. This promising tendency was due above all to the improvement in the timber market, the favourable balance of trade, better foreign payment conditions and, in general, to the growing confidence in the economic sphere. The appreciably easier state of the money market showed that Finland entered upon the final stage of the depression during the year under review, while the signs of improvement in various branches of industry and in the economic conditions of the country in general indicated that business conditions moved towards a period of recovery. The continuance of this favourable tendency is, however, in any case dependent on world conditions. With regard to the latter it can be said that there was still a feeling of uncertainty in the world markets, which political, social and trade policy factors as well as monetary and other experiments were likely to accentuate, although at the same time several signs pointing towards stabilisation and recovery, especially in regard to production and prices, could be noticed.

Economic Policy of the Government. The most important tasks of economic policy consisted on the one hand in rebutting proposed reforms that were artificial and detrimental to the sound development of economic conditions, and on the other in inaugurating measures of support, when State assistance proved imperative and within the range of possibility. Mention should be made in particular of the steps taken to consolidate agricultural indebtedness, grants of deferment and support to rural communes that had got into difficulties in paying their debts, and the subvention of the Central Bank for Co-operative Agricultural Credit Societies for covering losses on exchange in connection with its foreign

loans. Agriculture continued to be supported by means of export premiums intended to stabilise the internal prices for its products. For relieving unemployment, public works and relief work were organised by the Government in various parts of the country.

Apart from this policy of coping with the crisis commercial policy occupied the foremost place. Above all the conclusion of a new trade agreement with Great Britain should be mentioned, which, as it is based on reciprocity, assures Finland in broad lines of its former exporting opportunities; this benefit had, however, to be bought by granting certain benefits to imports from Great Britain. Negotiations were proceeding at the end of the year with regard to changes in the trade agreements with Poland and Estonia and also with Germany, which had denounced its commercial treaty with Finland.

Trade and Industry. According to the preliminary information of the Board of Agriculture the *harvest* of spring sowings and hay was smaller than in the previous years owing to drought during the spring and summer, but the crops of wheat, rye and especially of potatoes were ample and of good quality. The quantity of the harvest was estimated at about 2,980 million fodder units compared with 3,190 in 1932 and 3,090 in 1931. The value of the harvest was about 4,835 million marks according to preliminary estimates and was therefore lower than in the previous year, when the corresponding value amounted to 5,312 million marks. The crop results for the most important cultivated plants were as follows (in tons):

	Wheat.	Rye.	Barley.	Oats.	Potatoes.	Hay.
1927	29,000	327,500	143,100	633,000	758,000	2,682,700
1928	27,200	279,400	125,600	569,800	688,900	2,690,800
1929	20,800	265,000	140,500	513,900	720,600	2,509,500
1930	23,600	336,400	164,800	626,700	928,400	2,925,000
1931	30,500	315,200	165,600	669,700	977,900	2,904,300
1932	40,400	329,400	178,900	669,500	983,400	3,016,200
1933	43,500	356,300	164,700	598,400	1,238,800	2,619,300

The results of *cattlefarming* were still bad, owing to poor prices, in spite of Government measures of support. The low price of butter increased local consumption and reduced exports of this article, and the development in this direction was accelerated to some extent by the greater difficulty of selling in foreign markets and a policy of prohibition in some countries. Butter exports fell off from 14,524 tons in 1932 to 11,885 tons in 1933

and were approximately 32 per cent less than in the record year of 1931. On the other hand exports of eggs rose from 6,267 tons to 9,976 tons or 59 per cent, of bacon from 2,027 tons to 2,692 tons or 33 per cent, and of cheese from 3,277 tons to 4,176 tons or 27 per cent. But as butter exports were reduced and the price of the latter products dropped, the value of exports of foodstuffs obtained by cattlefarming was reduced from 517 million marks in 1932 to 478 millions in 1933.

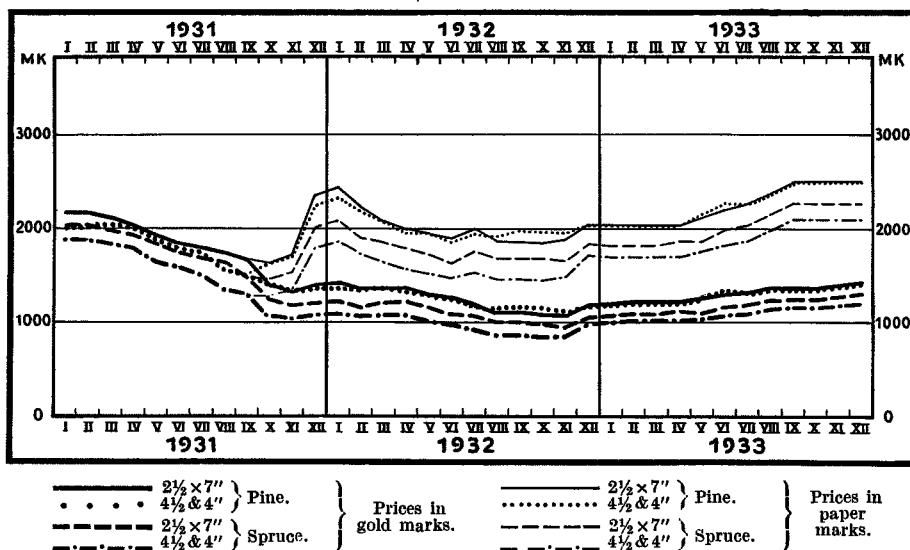

In spite of these unfavourable circumstances the conditions of life among the farming population began to improve. The cause of this lay in the lowering of rates of interest and in increased lumber work and rising prices for forests, to which we will refer later. Although the State assisted in consolidating agricultural credits and in retaining the present owners on farms by means of special measures, it proved impossible to save all the farmers that were heavily involved in debt. The number of forced sales of farms by auction was 3,296, consequently larger than during the two previous years, for which the corresponding figures were 2,526 and 1,640 respectively.

In *industrial* activity the change for the better that had set in during the preceding year, continued. The gross value of industrial production, which had risen from its lowest point, 9,249 million marks, in 1931 to 9,556 millions in 1932, is estimated to have amounted to about 10,600 millions last year. This increase was partly due to an extension of output and in some branches also to higher prices. In comparison with the record in 1928 the gross value of production was still 23 per cent below the peak value, a circumstance that has to be ascribed chiefly to the fall in prices, although the quantities produced in some branches of industry were also smaller than those attained at that time.

The total output of the *exporting industries* during the year under review was 13 per cent higher in regard to quantity and 17 per cent higher in regard to value than in 1932. The quantity produced equalled the record of 1928, but the gross value was considerably lower than for 1926—1930 and only exceeded the values for 1931 and 1932.

The favourable results of the exporting industries were principally due to the improvement of the timber market abroad and were consequently most clearly evident in the business of the *sawmills*. The demand for saw-mill products grew and prices were on the rise as will be seen in the dia-

MOVEMENT OF PRICES FOR SAWN WOODGOODS¹⁾ IN 1931-1933.
MARKS PER STD.

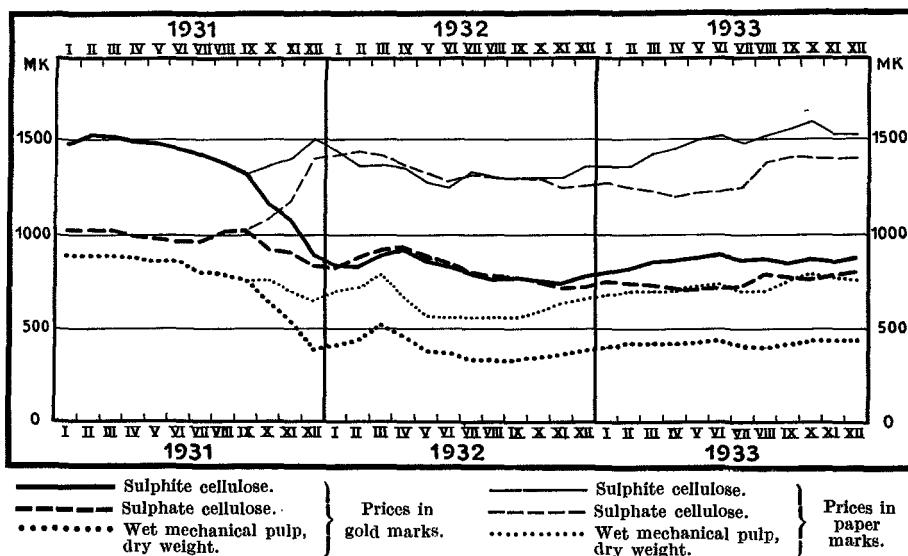

gram above. The consequence was increased sawing and livelier exports of sawn goods. Several sawmills that had stopped work, were restarted. Exports rose from 736,100 stds in 1932 to 982,600 stds in 1933 and were therefore larger than during any year since 1929. It should be noted, however, that this quantity includes re-exports of 53,000 stds of Russian sawn goods. — Sales of sawn timber for shipment during 1934 are also promising. The only danger is that, as the rise in prices has evoked increased sawing in all the timber producing countries, the market may soon be overstocked and a setback may occur.

In exports of *round timber* a slight increase could be noted in comparison with the inconsiderable quantities of the previous years. Exports of pitprops grew from 1,351,500 m³ in 1932 to 1,435,600 m³ last year and exports of pulpwood from 201,200 m³ to 791,800 m³. The value of exports of pitprops rose from 127.6 million marks to 129.0 millions and of pulpwood from 20.9 million marks to 85.3 millions.

The *plywood industry* had to face severe competition during the first half of the year, particularly from exports from Russia, but during the

¹⁾ The curves indicate the prices quoted in the respective months; towards the end of the year the quotations refer to the following year's shipments.

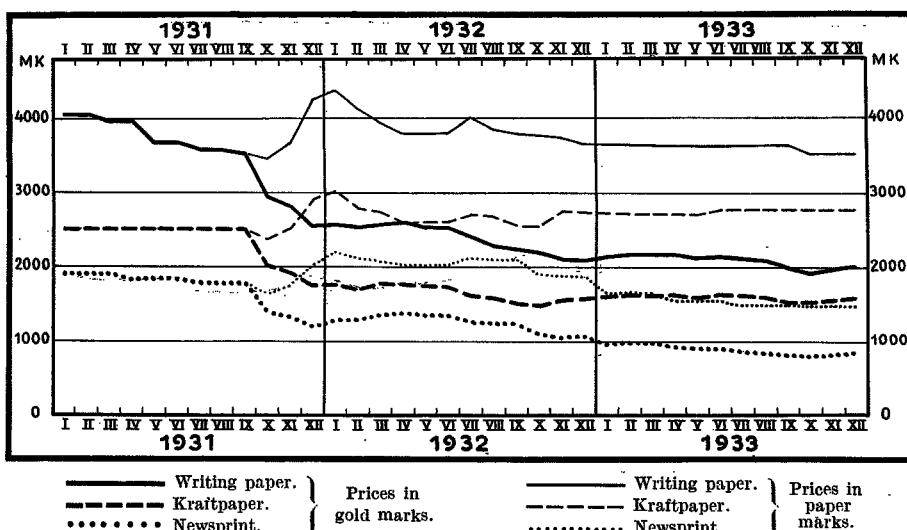

MOVEMENT OF PRICES FOR WOODPULP IN 1931-1933.
MARKS PER 1,000 KG.

latter half of the year the position improved. The total exports increased from 80,648 tons in 1932 to 95,949 tons in 1933, but in the latter year prices were rather weaker on an average. The value of plywood exports grew from 196.0 million marks to 227.1 millions. Although the quantity exported very nearly approached the maximum of 1929, the value of exports was considerably lower than during that year.— Exports of *bobbins* increased from 4,834 tons in 1932 to 5,889 tons in 1933, but prices were low and the value of exports only advanced from 42.1 million marks to 47.6 millions.

The *cellulose industry* had to contend with many difficulties during last year. The restriction of output, based on international agreements, tended to reduce the yield of the industrial undertakings, the measures of commercial policy instituted in some countries were intended to hamper imports of cellulose, and the fall in the value of the currency in the United States brought about a reduction in prices for those mills, that had sold their goods there. As, however, the consumption in the world markets increased, prices nevertheless began to rise and sales to grow during the latter half of the year. In these circumstances the cellulose industry of

MOVEMENT OF PRICES FOR PAPER IN 1931-1933.
MARKS PER 1,000 KG.

Finland succeeded in disposing of the whole of its annual production, which was about 6 per cent larger than for the previous year. In addition this industry was relieved of its stocks, which had amounted to approximately 41,000 tons at the beginning of the year, so that by the end of the year the state of the market was no longer burdened by any stocks. In regard to quantity exports of cellulose recorded a fresh maximum, 797,900 tons, dry weight, and thus exceeded exports during the previous year by 5 per cent. Although prices rose to some extent during the second half of the year, this was not able to influence the result for the year, the value of exports increasing comparatively less than the quantity or from 1,150.9 million marks in 1932 to 1,181.1 millions in 1933.

For the *mechanical pulp industry* the market recorded larger sales and higher prices during the year under review. This was partly the result of the remarkable water shortage, which began to interfere with production during the summer in the northern countries and some parts of Germany. As the shortage of water became more and more acute, the Finnish mills were obliged to restrict their contract deliveries towards the end of the year. Exports amounted to 207,900 tons or 15 per cent more than in 1932, and exceeded any previous year. The value of exports amounted to 155.7 million marks against 142.2 millions in 1932. — The demand for

cardboard also grew livelier, but prices remained at their former low level. The quantity exported totalled 60,000 tons and was also larger than in any previous year. The value of exports amounted to 109.1 million marks compared with 100.1 millions during the year before.

The business of the *paper industry* was affected during the year under review principally by international measures for restricting trade and by the fall of the dollar, although on the other hand there were signs of improvement setting in. During the greater part of the year prices went on falling; it was only during the concluding months of the year that symptoms appeared, indicating the approach of firmer prices. The quantity manufactured increased and exports were larger than in any previous year, viz., 319,300 tons compared with 288,700 in 1932. Owing to the low prices, however, the value of exports dropped from 646.6 million marks for the previous year to 642.2 millions for 1933. The paper mills' orders in hand at the end of the year were considerably larger than a year before.

In the various branches of *industry supplying the home market* a certain, though very uneven, improvement could be observed. The value of production increased by about 14 per cent in comparison with the year before, but still fell short of the maximum in 1928 by 13 per cent.

The position of the metal industry improved most, the increase in the value of production amounting to 20 per cent in comparison with 1932; in the textile, foodstuffs and luxuries, and leather and footwear industries the rise was about 15 per cent. On the other hand building operations were still inconsiderable. However, even in this trade the first signs of greater enterprise began to appear towards the end of the year.

The Labour Market. During the whole of the year under review the labour market in Finland still remained bad; the Government and communes were obliged to go further along the road they had embarked on by organising public works, relief work and other measures of assistance. However, unemployment did not on any occasion during the year assume such large proportions as during the initial months of 1932, and towards the end of the year under review the situation improved considerably. The number of unemployed registered by the Unemployment Boards amounted at the end of 1933 to about 41,000 or more than half fewer than a year

before. Part of these were engaged in relief work, so that the number of those actually out of employment was about 24,000. The improvement in the labour market was due in a large measure to lumber work and partly to the public works organised by the State. The improvement referred chiefly to the rural districts, the falling off in the number of unemployed in the towns being only slight.

Wages, which had fallen very much during the period of bad trade, began to rise again during the year under review, though they did not attain their former level.

Foreign Trade. The development of Finland's foreign trade during recent years is illustrated in the following survey.

	Imports. Mill. mks.	Exports. Mill. mks.	Surplus of imports (-) or exports (+). Mill. mks.	Volume in % (1913 = 100)	Imports. Exports.
1927	6,385.9	6,324.4	— 61.5	136.4	143.1
1928	8,012.9	6,245.3	—1,767.6	169.4	141.2
1929	7,001.4	6,429.7	— 571.7	154.8	149.8
1930	5,247.7	5,404.1	+ 156.4	141.2	134.5
1931	3,464.7	4,456.7	+ 992.0	110.4	136.5
1932	3,502.8	4,631.5	+1,129.2	98.2	143.9
1933	3,928.1	5,297.7	+1,369.6	115.9	165.8

The total value of foreign trade during the year under review amounted to 9,225.8 million marks and was therefore 13 per cent higher than in 1932, but still 35 per cent lower than in 1928, when the record so far was established. The volume of foreign trade increased even more than its value or by 16 per cent, and only fell short of the record figure of 1928 by 9 per cent. The increase referred to both imports and exports. The volume of imports was 18 per cent larger than in 1932, but as the prices of imported goods fell about 5 per cent, the increase in the value of imports only amounted to about 12 per cent. The volume of exports increased about 15 per cent and was therefore larger than in any previous year. The value of exports, on the other hand, although exceeding the corresponding value for 1932 by 14 per cent, was still 18 per cent below the peak value.

The value of imports increased altogether by 425.8 million marks and the value of exports by 666.2 millions. In this way the balance of trade for 1933 was even more favourable than in the previous years. The surplus

of exports amounted to 1,369.6 million marks and was larger than in any year before. The nearest approach was in 1932 and 1931 with 1,192.2 and 992.0 million marks respectively. The fact that the balance of trade for 1933 proved so favourable was due partly to the competitive ability of the Finnish exporting industries in foreign markets, partly to the low purchasing power of the population and partly to the favourable tendency of prices, prices for goods imported into Finland falling, while prices for exported goods rose. The low foreign value of the Finnish mark also acted as a protection against imports from abroad; however, neither import prohibitions nor contingents were employed in Finland to restrict imports, as was the case in so many other countries.

In order to illustrate exports, the goods exported are grouped in the following table according to trades producing them. Re-exports are omitted from these calculations.

	Exports in 1932.		Exports in 1933.		Increase (+) or decrease (-)	
	Mill. mks.	%	Mill. mks.	%	Mill. mks.	%
Timber industry	1,670	36.7	2,285	43.4	+ 615	+ 36.8
Paper industry	2,057	45.2	2,108	40.1	+ 51	+ 2.5
Agriculture	598	13.1	573	10.9	- 25	- 4.2
Other branches	227	5.0	293	5.6	+ 66	+ 29.1
Total	4,552	100.0	5,259	100.0	+707	+15.5

The considerable increase in the value of exports is principally due to the increased quantity of exported sawn timber and its rising price. The exports of products of the paper and pulp trade also increased, but owing to unfavourable prices the value of these exports only rose slightly. As a result the timber trade resumed its old place in Finnish exports, while the paper and pulp trade, which occupied the first place in 1931 and 1932, dropped into the second place. The fact that agriculture fell off in this respect both absolutely and relatively, was due partly to lower quantities exported and partly to unsatisfactory prices. With regard to other branches of industry it may be stated that the products that increased appreciably as regards the value of exports, included cotton yarn and cotton cloth, pig-iron and other kinds of iron, articles of granite, earthenware and glass, and vessels.

The distribution of imports according to their purpose will be seen in the following table.

Imports divided according to purpose.

Year.	Articles of consumption.				Articles for productive purposes.			
	Foodstuffs and luxuries.		Finished products of industry.		Raw materials and semi-finished products.		Means of transport, machinery etc.	
	Mill. mks.	%	Mill. mks.	%	Mill. mks.	%	Mill. mks.	%
<i>Value and ratio of total imports.</i>								
1927	1,538.2	24.1	1,482.6	23.2	2,163.2	33.9	1,201.9	18.8
1928	2,041.4	25.5	1,933.9	24.1	2,635.8	32.9	1,401.8	17.5
1929	1,878.8	26.8	1,654.7	23.6	2,280.4	32.6	1,187.5	17.0

1933	130.2	70	97.0	110	267.1	177	56.8	130

It will be noted from the upper part of this table that the value of imports of foodstuffs and luxuries was reduced, while on the other hand the corresponding values of finished industrial products as well as of raw materials and semi-finished products and means of transport, machinery and other means of production increased. The largest increase occurred in imports of raw materials, the increase in means of production coming next; thus, the value of imports of goods for productive purposes amounted to 60.0 per cent of the total imports compared with 55.8 per cent during the previous year. The proportion of goods for consumption fell off to a corresponding extent, from 44.2 per cent in 1932 to 40.0 per cent last year.

In examining the lower part of the table it is evident that the quantities imported in each class were slightly larger in 1933 than they had been in 1932. Calculated in this way, too, the increase was largest, viz. 27 per cent, in the class of raw materials and semi-finished products and smallest in the class of foodstuffs and luxuries. The table shows, further, that imports of goods belonging to the latter class have been considerably smaller during

the last few years than during 1928—1929 and even less than during 1911—1913. Imports of finished industrial products were quantitatively at about the same level as before the Great War, but only represented half of the corresponding quantity during 1928—1929. In regard to raw materials and semi-finished products last year's imports rose to the same level that they had reached, when they were at their highest point in 1928, and were much larger than before the war. Finally, as regards imports of means of production, they were slightly larger than before the war, but only amounted to one-third of the quantity imported during 1928. These facts afford a further and interesting illustration of the spheres, in which recovery set in in economic conditions in Finland during the year under review.

The value of imports and exports and the difference between them for each month during 1933 are given below.

	Imports. Mill. mks.	Exports. Mill. mks.	Surplus of exports (+) or imports (-). Mill. mks.

In *home trade* the consequences of the growing purchasing power of the population began to be evident. According to the Unitas index the turnover in wholesale trade was larger in every month than during the corresponding period in 1932, and the value of the turnover increased altogether by about 10 per cent, but still fell considerably short of the turnover in 1928—1930. The total sales in wholesale business are estimated to have amounted in 1933 to about 8,000 million marks in comparison with 7,400 millions during the previous year. As there were no marked fluctuations in prices, the quantity turned over, of course, increased at about the same pace as the value.

The Money Market. At the outset of the year under review the money market was tight, although during the last few weeks of the year before signs of relaxation had appeared. This tendency towards relaxation subsequently characterised the money market throughout the whole of last year with the result that, after the position had grown easier month by month, the market was easier at the end of the year than at any time since the war. The development of the market is illustrated in the following survey.

The money market during 1927—1933 in million marks.

End of year and month.	Deposits in the Joint Stock banks.			Credits of the Joint Stock banks.	Difference between credits and deposits.	Bank of Finland's		
	Deposit and savings accounts.	Current home corri- pondents.	Total.			direct credits.	re-discounts.	note reserve.
1927	5,286.7	1,694.9	6,981.6	8,117.8	1,136.2	755.0	55.2	696.9

December	5,732.1	1,765.8	7,497.9	7,639.6	141.7	715.6	—	819.3

As this table shows, a change occurred in regard to the deposits of the public in the Joint Stock banks: during 1931 and 1932 these total amounts had been reduced considerably, but during 1933 deposits increased again by 184.6 million marks. This increase did not, indeed, equal the amount of accrued interest and was appreciably less than the corresponding increases during the time of good trade conditions, yet it indicates that there was a

turn in a favourable direction. The short-term deposits in the Joint Stock banks, i. e., current accounts and home correspondents, too, recorded rising figures, so that the increase in the total deposits of the banks amounted to 343.2 million marks, whereas during the preceding years there was, on the contrary, a considerable reduction. However, the main cause of the easier state of the money market was not this latter circumstance, but the fact that demand for credit fell off very much, which was to a great extent due to the liquidity of business enterprises improving and to the absence of fresh enterprise. The total credits of the Joint Stock banks were thus reduced last year by 579.0 million marks, so that they dropped to 7,639.6 millions after amounting to 9,566.1 millions at the end of 1929. The relaxation of the money market is clearly seen in the tension between the credits and deposits of the Joint Stock banks. In 1928 and 1929 this tension had exceeded 2,000 million marks and at the end of 1932 it amounted to 1,063.9 millions. During 1933 the tension relaxed month by month and by the last day of the year it had decreased to 141.7 million marks, a hitherto unheard of level in the statistics of Finnish banking. The relaxation of the money market is also seen in the fact that re-discounted bills, the total of which amounted to 301.1 million marks at the end of 1932, have disappeared altogether from the statements of the banks since October, 1933. The same circumstance is shown by the increase in the cash of the Joint Stock banks to higher amounts than ever before and the striking improvement in their position towards foreign countries.

The same tendency in the direction of an easier money market can be traced in the position of the Bank of Finland, as described in the second part of this volume. In this connection it need only be mentioned that the Bank of Finland's reserve of foreign currency increased during the year under review from 314.1 million marks to 954.0 millions, while the note reserve grew from 492.1 million marks to 819.0 millions and the ordinary cover, too, from 55.2 per cent to 80.6 per cent of all the liabilities payable on demand. It is also worthy of note that the reduction in the note circulation, which had proceeded since 1928, was arrested and was converted into an increase, so that the notes in circulation at the end of the year were approximately 100 million marks higher than at the end of 1932. This is, of course, an indication of newly awakened liveliness in economic activity and beginning improvement in purchasing power.

The favourable change in deposit business was also visible in other financial institutions besides the Joint Stock banks, as is shown in the following table, in which the increase or reduction in depositors' balances in the Joint Stock banks on deposit, savings and current accounts, the Savings banks and other financial institutions are given. The figures for 1933 are partly based on preliminary data.

	1930 Mill. mks.	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Joint Stock banks	+ 93.1	-401.6	-237.1	+ 315.1
Savings banks	+ 247.4	+ 42.4	+ 3.3	+ 193.3

Consumers' Co-operative Societies' Sav- ings Accounts	- 1.3	- 35.4	- 21.2	+ 4.2
Mortgage institutions	-	+ 0.3	- 2.1	-
Total	+ 410.5	-355.5	-221.0	+ 574.1

In addition to the circumstances already referred to the favourable balance of trade should be mentioned as a factor that contributed to the relaxation of the money market, as well as the fact that the plentiful supply of foreign currency in payment for exports that was obtained in this way, had no longer to be employed last year, as was the case in the two previous years, for redeeming Finland's short-term foreign indebtedness. In consequence of growing confidence and livelier foreign trade Finland's short-term indebtedness, on the contrary, increased again last year, according to calculations, by about 265 million marks. At the same time the country's short-term credit balances, consisting chiefly of the foreign accounts of the banks, increased by more than 1,000 million marks as a result of the favourable balance of trade. Whereas the short-term foreign indebtedness exceeded the corresponding balances by about 690 million marks at the end of 1932, the total of the latter was about 50 million marks larger at the same date a year later than the total foreign indebtedness. In this respect, therefore, the foreign payment position of the country improved by about 740 million marks. As this calculation is made in gold marks, the change implies that the conditions of payment actually improved by a still larger amount, possibly by about 900 million paper marks.

As regards the long-term foreign indebtedness of the country, no new loans of this category were issued during the year under review. By means of old loans being redeemed in the regular order and as some Finnish bonds, issued in foreign currency, were also bought up partly for the purpose of special redemption and partly for investment, the long-term foreign indebtedness of the country was reduced during last year by at least 300 million marks. — Besides, the fall of the dollar eased the burden of Finland's foreign indebtedness appreciably.

In such circumstances it can be said that Finland's foreign conditions of payment improved in a decided manner during last year and that in this respect the position is fully consolidated.

Along with the relaxation of the money market that proceeded during the year, rates of interest were lowered considerably. The Bank of Finland reduced the bank rate on four occasions. The rates charged by the Bank were as follows:

	On Jan. 1st. %	From Feb. 1st. %	From June 3rd. %	From Sept. 5th. %	From Dec. 20th. %
For purely commercial bills at not more than three months' date	6 1/2	6	5 1/2	5	4 1/2
For other bills, according to the kind of bill and its maturity	7—7 1/2	6 1/2—7	6—6 1/2	5 1/2—6	5—5 1/2
For loans on security and advances on cash credit, according to the nature of the security	6 1/2—7 1/2	6—7	5 1/2—6 1/2	5—6	4 1/2—5 1/2

The financial institutions, which were parties to the interest agreement, reduced their deposit rates from July 1st by $\frac{1}{2}$ per cent, so that during the latter half of the year they paid 4 $\frac{1}{2}$, 4 $\frac{3}{4}$ and 5 per cent interest on 6 months' deposits, according to the class, to which they belonged, and 2 $\frac{1}{2}$, 2 $\frac{3}{4}$ and 3 per cent on current account. In November it was agreed to lower rates of interest by a further $\frac{1}{2}$ per cent, which came into force on January 1st, 1934. The rates on credits granted by the financial institutions were lowered simultaneously. According to special agreements no higher rate than 9 per cent after July 1st and 8 $\frac{1}{2}$ per cent after the following January 1st was to be charged in any case on credits. The most usual credit rates charged by the Joint Stock banks were therefore 6—9 per

cent during the second half of the year, while the Savings banks mostly charged $6\frac{1}{2}$ —7 per cent, and sometimes even lower rates. The Post Office Savings Bank lowered its rate in July from 5 to $4\frac{1}{2}$ per cent. Other money lenders, too, followed the same lines in their lending policy. The falling tendency was particularly evident in the latter half of the year, when signs of a surfeit of money began to appear. Insurance companies and funds, which had been able to invest their funds shortly before at 8—9 per cent interest, had to be content with 7—8 per cent and towards the end of last year with even lower rates. It is worth noting that such institutions found it advisable to lower the rates of interest even for irredeemable loans. Naturally, a tendency was apparent to transfer loans to such institutions, in which the lowest rates were charged; debtors endeavoured especially to release themselves from private loans, partly because the reduction of interest on such loans proceeded more slowly than in the financial institutions and partly because they were in general regarded as less desirable.

One consequence of the drop in rates of interest was that more attention was given to the bond market. New bond loans were issued to a total nominal amount of about 300 million marks on terms that could not have been considered possible at the beginning of the year under review. Preparatory steps were also taken for the conversion of some bond loans at high rates of interest. The Stock Exchange quotations for bonds were regularly on the upgrade, according to the Unitas index from 97 in December, 1932, to 115 a year later. In addition, the depression in the share market began to lift. The Unitas index rose from 97 in December, 1932, to 123 in December, 1933. The total turnover on the Stock Exchange amounted to 195.6 million marks compared with 162.4 millions during the year before.

Although the share market showed signs of recovery, the form of investment of capital that is expressed in the establishment of limited liability companies, was at a complete standstill last year. New companies were formed in fairly large numbers, but they were insignificant, and as many companies went out of business or reduced their capital stock, it happened for the first time that the total capital invested in limited companies was reduced. This confirms the circumstance already referred to, that although the business concerns already in existence were able to extend their activity, scarcely any fresh enterprise was visible at all. These facts are illustrated in the following table.

	New companies.		All companies.		Increase (+) or decrease (-) Mill. mks.
	Number.	Capital. Mill. mks.	Number.	Increase.	
1927	709	291.8	9,080	+570	6,486.1 +1,023.7
1928	777	447.6	9,731	+651	7,939.0 +1,452.9
1929	558	280.8	10,082	+351	8,539.5 + 600.5
1930	547	185.0	10,410	+328	8,797.7 + 258.2
1931	682	383.7	10,742	+332	8,830.6 + 32.6
1932	787	548.2	11,096	+354	9,125.9 + 295.3
1933	688	105.7	11,528	+432	9,095.6 — 30.3

As a proof of the improvement in the state of the money market it can further be mentioned that only 8,735 bills were protested last year against 19,121 and 26,343 during the previous years; the total amount of these bills was 43.8 million marks in comparison with 103.8 millions in 1932 and 162.7 millions in 1931. In both respects the figures decreased to approximately the same level as in 1928, although it should be noted that business in bills was much livelier then than at present. The number of bankruptcy proceedings instituted was also much smaller than formerly, viz., 1,251 against 1,915 in 1932 and 2,417 in 1931.

State Finances. The recovery in the economic sphere also began to exercise an influence on the State finances during the year under review. Such sources of revenue as the Customs, the State forests and railways, and the Post and Telegraph Offices provided much larger amounts of revenue than in 1932 and than it had been possible to reckon on, when drawing up the Budget for 1933. The revenue from the property and income tax of the State as well as from the excise on liquors also exceeded the corresponding revenue in 1932 appreciably. The items of income further included those loans that the Government had taken up for financing the public works organised for the relief of unemployment. The expenditure was also considerably larger than in 1932, largely owing to the costs involved by the Government policy with regard to unemployment. The main figures in the finance accounts of the Treasury were as follows, compared with the corresponding figures for 1931 and 1932.

	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
<i>Revenue.</i>			
Current revenue	2,742.1	2,438.2	2,872.6
Capital revenue	65.3	272.8	227.9
Total	2,807.4	2,710.5	3,100.5
Loans	—	214.6	200.0
Utilised out of balance from previous years	270.5	42.1	—
Deficit	—	34.5	—
Grand total	3,077.9	3,001.7	3,300.5
<i>Expenditure.</i>			
Current expenditure	2,420.8	2,484.6	2,543.6
Capital expenditure	657.1	517.1	703.6
Total	3,077.9	3,001.7	3,247.2
Surplus	—	—	53.3
Grand total	3,077.9	3,001.7	3,300.5

The booked amount of the *Public Debt* remained unchanged on the whole during the year under review. The total Public Debt at the end of 1932 amounted to 3,471.9 million marks and at the end of 1933 to 3,507.7 millions. But although the total amount did not vary to any extent worth mentioning, the composition of the Public Debt underwent some changes that are worth recording. The foreign funded debt was reduced by regular amortisation by 47.7 million marks to 2,384.0 millions, while the short-term foreign debt increased by 8.0 million marks to 358.9 millions. The internal funded debt increased, owing to some of the public works being financed by borrowed funds, by 210.7 million marks and thus rose to 716.0 millions. On the other hand the short-term internal debt was reduced by 135.2 million marks to 48.8 millions. Altogether the indebtedness incurred abroad, part of which, however, was in reality invested in this country from the beginning or was transferred there later, amounted to 2,742.9 million marks or 39.7 millions less than a year before, while the internal debt increased by 75.5 million marks and thus amounted to 764.8 millions.

As explained in previous issues of this Year Book, these figures are only exact as regards the internal part of the Public Debt. Foreign loans are entered in the books in Finland, as customarily elsewhere, in the country's own currency at the rates of exchange current at the time the loans were issued, loans negotiated before the war, for instance, almost at the

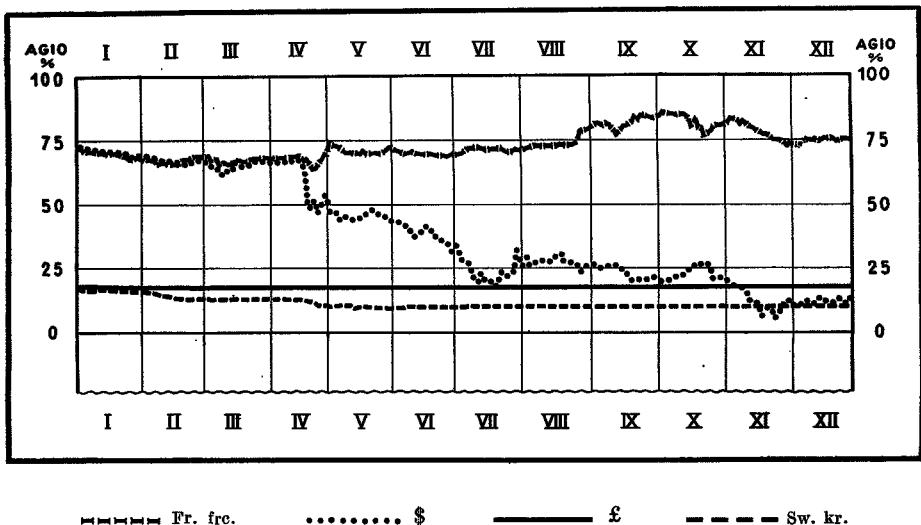

pre-war rate of exchange. In order to determine the amount of the Public Debt more exactly, the Treasury calculates every month, what sum in Finnish marks would be necessary at each date in order to pay off the whole Public Debt at current rates of exchange. According to this calculation the Public Debt of Finland at the end of 1932 amounted to 5,958 million marks, but at the corresponding date in 1933 to 4,421 millions, i. e., 1,537 million marks less. This considerable reduction was caused principally by the fall in the value of the dollar and represented an appreciable reduction of the expenditure on the Public Debt.

Currency and Level of Prices. It had been characteristic of the conditions in 1932 that want of confidence in the stability of the Finnish mark and the redemption of short-term foreign indebtedness with the consequences attending these factors had put economic conditions in Finland to a severe test and had acted as a pressure on the value of the currency. But as the economic conditions and the Finnish mark withstood this trial and the demands for a voluntary depreciation of the value of the mark were refused towards the end of that year, confidence began to return. The favourable balance of trade and the first symptoms of recovery in the economic sphere as well as the falling rates of interest increased general confidence during the year under review. The more the year advanced, the stronger grew this feeling.

Under such circumstances both the foreign and internal value of the mark remained very steady. Sterling was quoted firmly, with the exception of slight fluctuations early in the year, at Fmk. 227: — throughout the year. Thus the Finnish mark followed the fluctuations of sterling in relation to gold currency. In relation to the French franc and other gold currency the mark rose to some extent at the beginning of the year, but fell at the end of April and again in August, but towards the end of the year the rates of exchange once more became more favourable. The French franc, for instance, was quoted in December, 1933, at an average rate of Fmk. 271: 77, while in December, 1932, the average quotation was Fmk. 271: 84. The fluctuations during the year are shown clearly in the diagram on the next page.

If the disagio or reduction in the value of the Finnish mark is calculated in comparison with the foreign currency that is of most importance

DAILY QUOTATIONS OF FOREIGN CURRENCIES IN 1933.
PERCENTAGE ABOVE PAR.

—■— Fr. franc \$ —▲— £ -+-- Sw. kr.

for Finland, the result is as follows. At the end of December, 1932, the disagio of the Finnish mark in relation to the French franc was 42.1 per cent and on the same date in 1933 almost the same or 42.9 per cent; in relation to sterling it was also almost unchanged, viz. 15.1 and 14.9 per cent respectively, but on the other hand in relation to the dollar 42.2 and 11.4 per cent respectively and to the Swedish crown 18.8 and 9.1 per cent respectively. The relative rise in value in relation to the dollar and the Swedish crown was, of course, a consequence of changes in the value of these currencies and not in the value of the Finnish mark.

In examining these circumstances it should be noted that the rates of exchange were allowed to adapt themselves quite freely according to supply and demand, there having been no control of transactions in foreign currency during the whole of the year under review.

The internal value of the mark, which can be gauged in the light of the wholesale price index and the cost of living index, remained very firm during the past year. The movement of these indices from month to month are shown in the following table, in which the cost of living index is calculated in such a manner that the level of prices in 1926 forms the basis of boths series of figures.

	Wholesale price index.	Increase (+) or decrease (-).	Cost of living index.	Increase (+) or decrease (-).
1932				
December.....	90	.	86	.
1933				
January	90	—	85	+1
February	89	-1	85	—
March	89	—	84	-1
April	88	-1	84	—
May	88	—	84	—
June	89	+1	83	-1
July	90	+1	85	+2
August	90	—	85	—
September	90	—	85	—
October	90	—	85	—
November	90	—	85	—
December.....	89	-1	84	-1

According to both indices the fluctuations in price were very slight and were mainly caused by the usual seasonal phenomena. It seems, besides, as though the indices indicated a generally falling tendency, though this was exceedingly weak. This is confirmed by a comparison between the average indices for the last few years.

	Wholesale price index.	Cost of living index.
1926	100	100
1927	101	102
1928	102	104
1929	98	104
1930	90	95
1931	84	88
1932	90	87
1933	89	85

The changes in the mutual relation of prices for various classes of goods are more important than the insignificant changes in the general level of prices. It was advantageous for the development of the balance of trade that, while the general index for imported goods dropped from 88 on an average for 1932 to 85 during 1933, the price index for exported goods rose from 72 to 77. This change is more clearly visible in comparing December, 1932, with December, 1933. For the former month the price index for imported goods stood at 89, but for exported goods at only 72; for last December, however, the corresponding figures were 84 and 82. A levelling

process is therefore proceeding in the state of prices unfavourable for the foreign payment conditions of Finland, which arose towards the end of 1931, when prices of imported goods suddenly rose sharply after Finland had abandoned the gold standard, while prices of exported goods only rose to a far less pronounced degree.

II. THE BANK OF FINLAND IN 1933.

I. NOTE ISSUE.

The note issue of the Bank of Finland is illustrated in tables 1—10 in the statistical part of this book. Table 1 refers solely to 1933, while the others also contain reviews of several previous years. With the exception of table 2, which is based exclusively on the monthly statements, and tables 8—10, which refer to the end of the year or to full years, these tables are based on both the weekly and monthly statements of the Bank.

The Redemption of Notes. Since the autumn of 1931 the Bank of Finland has been released by special ordinances from its liability to redeem its notes in gold or in cheques made out in foreign currency. The last of these ordinances, which were issued for a specified time, was to be in force up to the end of 1933. As the principal financial countries did not institute any preliminary steps whatever during that year for re-establishing the gold standard, such a possibility was not contemplated in Finland either. In view of this a new ordinance was issued on December 8th, 1933, by which this right of the Bank of Finland in regard to redeeming its notes was prolonged for another year, i. e., up to the end of 1934.

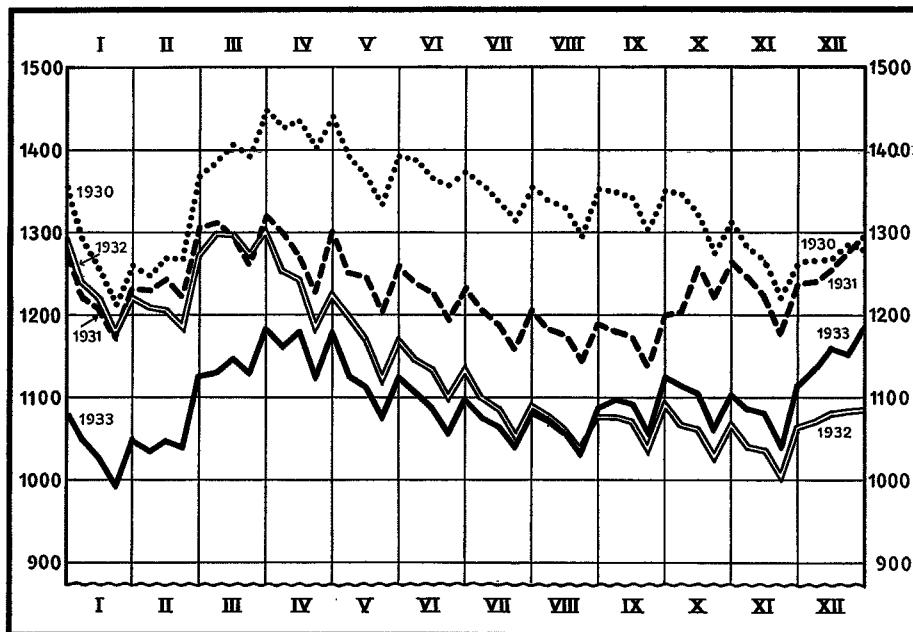

The Right of Issue. According to the law of December 21st, 1925, the Bank of Finland's right of issue is equivalent to the amount of its gold reserve and its undisputed foreign credit balances plus 1,200 million marks, though with the proviso that such part of the note circulation and liabilities payable on demand as is not covered by gold or foreign balances, is covered by assets included in the so-called supplementary cover. This includes foreign bills, foreign bonds quoted on foreign Stock Exchanges, interest coupons in foreign currency which have fallen due for payment and foreign bank notes and inland bills subject to certain conditions. In accordance with these regulations a distinction is made in the Bank's weekly statements

between two kinds of right of note issue, the one immediately available and the other dependent on increased supplementary cover. In view of the fact that the supplementary cover, for instance in discounting bills, is immediately increased, the latter kind of right of note issue is, however, in reality also available.

The right of note issue of the Bank of Finland that had sunk lower than during the entire period in which the monetary law of 1925 had been in force, owing to the foreign exchange crisis in the autumn of 1931, and after reaching its lowest point at 1,806.9 million marks, had increased again to some extent during 1932, grew considerably during the year under review. At the end of 1932 the right of note issue amounted to 2,009.5 million marks and subsequently increased almost without interruption, so that at the end of the year under review it reached its highest point, 2,476.6 million marks. The average right of note issue for 1933 was thus 2,320.1 million marks compared with 2,010.8 and 2,099.1 millions respectively during the two previous years. It should be pointed out, however, that during 1925—1928 and in 1930 the right of note issue was at times considerably higher than during last year.

The Note Circulation. Ever since 1928 the note circulation has been reduced from year to year. This tendency only ceased during last year, the recovery in economic conditions creating an increased demand for notes. At the beginning of the year the note circulation was about 210 million marks less than a year before, but grew week by week in comparison with the notes in circulation at the corresponding dates in the previous year, as is clearly seen in the diagram on the next page. During the last week in August, 1933, the note circulation was already larger than at the corresponding date in 1932, the curves crossed and the notes in circulation continued to grow, so that by the end of the year they were approximately 100 million marks higher than at the end of 1932. This change was, however, not able to influence the average amount of the note circulation, which fell off, on the contrary, still further to 1,095.6 million marks on account of its low starting point at the beginning of the year under review. The average amount was therefore, in spite of the rising tendency, 39.5 million marks lower than for 1932. The development during the last few years is seen in the following table.

BANK OF FINLAND NOTES IN CIRCULATION IN 1930-1933, MILL. MK.

	Notes in circulation.		
	Highest. Mill. mks.	Lowest. Mill. mks.	Average. Mill. mks.
1927	1,522.1	1,269.6	1,413.6
1928	1,660.9	1,446.7	1,548.0
1929	1,596.0	1,300.9	1,439.3
1930	1,447.2	1,212.5	1,330.7
1931	1,319.5	1,137.6	1,229.0
1932	1,299.4	1,004.0	1,135.1
1933	1,183.6	992.8	1,095.6

The reduction of the note circulation since 1928 has been due principally to the depressed economic conditions and the decreasing purchasing power of the population. To some extent, as we shall show later on, the exchange of small notes for metal coins also contributed towards it.

The Composition of the Note Circulation. The change from small notes to metal coinage is clearly evident, if the division of the note circulation into notes of various denominations is examined. As new 10 and 5 mark notes were no longer printed for this reason, but on the contrary old notes of these denominations were also withdrawn from circulation, there was

only an insignificant number of these denominations of notes in circulation at the end of last year. At the same time the number of all the other, i. e., of all the larger notes in circulation increased by about 10 per cent. — The following quantities of the different denominations were in circulation at the end of 1929—1933, disregarding older issues than that of 1922:

	N u m b e r .				
	1929	1930	1931	1932	1933
1,000 mks	382,293	345,107	412,505	317,718	351,508
500 »	494,318	467,991	442,523	372,941	404,740
100 »	4,800,538	4,582,115	4,291,657	3,903,530	4,344,596
50 »	1,930,808	1,849,919	1,776,433	1,759,856	1,955,205
20 »	2,546,038	2,563,276	2,552,490	2,706,386	2,980,285
10 »	3,892,608	3,610,344	3,308,940	749,489	214,336
5 »	5,148,823	4,953,780	4,163,065	1,144,404	260,188
Total	19,195,426	18,372,532	16,947,613	10,954,324	10,510,858

Metal Coins. In accordance with the monetary law of 1925 gold coins were struck of a value of 200 and 100 marks. These are, however, not generally current, the insignificant number withdrawn from the Bank of Finland in the course of time having mostly been acquired by collectors of coins. The following amounts of gold coin were »in circulation» in this way (in marks):

	200 mks.	100 mks.	Total.
1927	327,200: —	125,100: —	452,300: —
1928	437,800: —	199,200: —	637,000: —
1929	506,200: —	273,400: —	779,600: —
1930	568,800: —	321,700: —	890,500: —
1931	614,200: —	353,000: —	967,200: —
1932	613,800: —	353,000: —	966,800: —
1933	615,800: —	351,200: —	967,000: —

On the other hand the aluminium-bronze coins of 10 and 5 marks' value that have been struck since 1928, possess appreciable importance as a means of payment in comparison with small notes. The number of such coins in circulation has grown comparatively quickly during the last two years, when the small notes were withdrawn from circulation. At the end of the last few years the number of coins of this kind in circulation amounted to the following sums (in marks):

	10 mks.	5 mks.	Total.
1929	3,313,500: —	1,431,085: —	4,744,585: —
1930	3,814,850: —	1,965,405: —	5,780,255: —
1931	5,342,940: —	4,676,120: —	10,019,060: —
1932	22,990,410: —	19,016,585: —	42,006,995: —
1933	28,952,820: —	24,647,350: —	53,600,170: —

Nickel and copper coins are used as small change. Of the former the following amounts (in marks) were in circulation at the end of the following years:

	1 mark.	50 penni.	25 penni.	Total.
1927	23,093,954: —	6,879,413: —	5,828,330: —	35,801,697: —
1928	25,524,984: —	7,568,621: —	6,471,383: 50	39,564,988: 50
1929	25,995,811: —	7,738,946: 50	6,749,768: 50	40,484,526: —
1930	26,571,093: —	7,846,990: 50	6,926,817: 75	41,344,901: 25
1931	25,572,849: —	7,611,592: 50	6,835,448: 50	40,019,890: —
1932	25,393,757: —	7,432,155: 50	6,789,920: 75	39,615,833: 25
1933	26,479,914: —	7,706,324: 50	7,059,443: 25	41,245,681: 75

Of the various small coins the following amounts (in marks) were in circulation at the same dates:

	10 penni.	5 penni.	1 penny.	Total.
1927	2,868,816: 40	3,067,832: 05	750,297: 91	6,686,946: 36
1928	3,016,145: 80	3,159,829: 10	749,446: 98	6,925,421: 88
1929	3,118,042: 40	3,218,715: 60	748,124: 34	7,084,882: 34
1930	3,180,669: 10	3,253,173: 25	746,906: 93	7,180,749: 28
1931	3,196,434: 40	3,261,487: 75	746,049: 21	7,203,971: 36
1932	3,152,027: —	3,272,951: 15	740,716: —	7,165,694: 15
1933	3,206,699: 70	3,310,742: 25	739,837: 21	7,257,279: 16

It should be noted that in calculating the above amounts it was impossible to take into account the quantities of notes and coins lost, which are considerable, especially in the case of small notes and coins.

Manufacture and Destruction of Notes. During last year 6,318,000 new notes were manufactured, which is slightly less than the corresponding number for 1932 of 6,688,000 notes. In comparison with previous years both these figures are very moderate, a natural consequence of the large issues of small notes having formerly increased the total number of notes printed very much. The total value of the notes manufactured, 469.1 million marks, was likewise very slight in comparison with the corresponding amount for 1932, 694.5 millions, and for 1931, 812.8 millions.

In the same way the number of notes withdrawn from circulation and destroyed was also unusually small, viz., 8,498,403 against 12,678,505 and 16,127,538 respectively during the two previous years. The total value of the notes destroyed was the same as in 1932 or 611.8 million marks compared with 730.5 millions in 1931.

The Note Reserve. The difference between the right of note issue and the total liabilities payable on demand, or the so-called used right of issue, indicates the amount of the unused right of issue of the Bank of Finland, also known as the note issue reserve or, shortly, the note reserve. The note reserve, both conditional and unconditional, is shown in table 1 in the statistical section.

The note reserve, in the wider sense of the term, increased fairly regularly during the year under review from 492.1 million marks on the first day of the year to 819.3 millions on the last day and thereby attained the level that was considered normal before the crisis set in. On an average the note reserve amounted to 671.1 million marks last year. For the two preceding years the corresponding averages were rather less or 526.5 and 640.8 million marks respectively.

In proportion to the right of note issue as a whole the note reserve was larger than in 1932, viz., 28.9 per cent against 26.2 per cent, but in comparison with 1931 and 1930 this proportion was still fairly low. In this respect, too, the position improved during the year. This ratio was smallest at the beginning of the year, as it fell to 22.5 per cent at the end of February; but subsequently it rose by degrees, so that on the last day of the year it amounted to 33.1 per cent.

2. COVER FOR THE NOTE ISSUE.

The Bank of Finland's cover for the note issue is shown in tables 11—18. All these tables are based on the weekly and monthly statements.

A. The Ordinary Cover.

The ordinary cover is composed of the Bank of Finland's gold reserve and undisputed balances with foreign correspondents. At the end of 1932 the amount of the cover was 618.5 million marks, excluding the foreign credit, although the latter is included among the credit balances with foreign correspondents in the statements. Later the amount rose week by week with comparatively slight fluctuations and reached its highest point for the year under review, 1,276.6 million marks, at the end of December; the increase during the year thus amounted to 658.1 million marks or

106.4 per cent. The average amount of the ordinary cover was 1,120.1 million marks or appreciably more than for 1932 and 1931, when the corresponding averages were 810.8 and 899.1 million marks respectively, and approximately as high as for 1930 and 1928, though still lower than for 1927 and 1926.

In the same way the ordinary cover grew in proportion to the total amount of the liabilities payable on demand. This proportion was 55.2 per cent at the beginning of the year, but rose gradually during the year to such an extent that on the last day of the year it amounted to 80.6 per cent. The average for the year was 70.4 per cent, i. e., considerably higher than the corresponding averages for the two previous years, 56.7 and 63.9 per cent respectively, but had not yet equalled the average for 1930, 74.3 per cent.

The Gold Reserve. For the first time for many years there was a considerable change in the size of the gold reserve. In 1933 gold was purchased to the value of about 18.3 million marks. As the value of the gold sold did not amount to as much as 0.1 million marks, the gold reserve was increased during the year under review from 304.4 to 322.7 million marks. Nevertheless, the importance of the gold reserve as cover was small, for on an average the gold reserve represented 19.7 per cent of all liabilities payable on demand against 21.3 per cent in 1932 and 21.5 per cent in 1931.

Credit Balances with Foreign Correspondents. The principle cause of the increase in the ordinary cover lay in the fact that the Bank of Finland's credit balances with its foreign correspondents grew very much during the year. This, again, was a consequence of the surplus of exports providing the country with considerable sums of foreign currency, which flowed into the Bank of Finland, when confidence in the Finnish mark and the stability of its value had been restored, and thereby increasing the Bank's supply of foreign currency. At the beginning of the year the balances with the Bank's foreign correspondents amounted to 505.2 million marks. During January and February this sum grew rapidly to about 770—780 millions and remained at this level until August, when there was a new increase. On the last day of the year the highest point for the year was reached at

954.0 million marks. It should be noted, however, that at the beginning of the year the equivalent of the foreign credit of one million pounds, 191.0 million marks, was included in the reserve of foreign currency, and that this credit was not renewed, when the foreign exchange position developed favourably. Excluding this credit, which is included in the statements of the Bank of Finland both as an asset and a liability, the reserve of foreign currency only amounted at the beginning of the year under review to 314.2 million marks. The Bank's balances with its foreign correspondents increased during the year by 639.8 million marks, i. e., their value was more than trebled. On an average the reserve of foreign currency in 1933, excluding the foreign credit referred to, was 633.0 million marks or considerably more than in 1932, when the corresponding average amounted to 377.3 millions. In comparison with the average for 1931, 595.0 million marks, the reserve of foreign currency last year could also be described as plentiful, but in 1930 these balances were even larger or, on an average, 875.4 million marks.

It should be mentioned that the Bank of Finland's credit balances with its foreign correspondents, like its gold reserve, are still booked at the par of exchange according to the monetary law of 1925 or at even lower rates.

B. The Supplementary Cover.

It has been mentioned before on page 23, what kind of assets may be included in the supplementary cover in accordance with the regulations for the Bank of Finland. Of these the Bank had no foreign bonds listed on foreign Stock Exchanges at all in its possession. The changes in the other assets belonging to the supplementary cover are shown in table 11.

Inland Bills. The largest of the items forming the supplementary cover is composed of inland bills. These are referred to later in connection with other home credits. It need only be mentioned here that they averaged 70.4 per cent of the supplementary cover in 1933. Their importance as cover was therefore, comparatively speaking, less than during the preceding years, when about 78—85 per cent of the supplementary cover were composed of inland bills.

Foreign Bills. Apart from the previous group the foreign bills are alone of actual importance as a factor in the supplementary cover, and their increase during last year really contributed towards reducing the comparative importance of the inland bills in this respect. Foreign bills were discounted during the year under review to a total amount of 2,274.7 million marks, whereas the corresponding amount for 1932 was 1,943.0 millions and for 1931 1,363.6 millions. The total amount of foreign bills in the portfolio of the Bank at the beginning of the year was 236.0 million marks. Already in the early part of the year this amount began to rise rapidly, so that by the middle of May it represented 363.9 millions, after which it fell off again to 248.6 millions at the end of September. During the concluding months of the year a larger amount of foreign bills again accumulated in the portfolio of the Bank and the highest point was attained on December 23rd at 374.9 million marks. As this amount was 371.0 millions at the end of the year, the increase in the course of the year amounted to 135.0 million marks or 57.2 per cent. On an average the Bank held foreign bills to a value of 315.5 million marks in 1933 against 233.7 millions in 1932 and 208.4 millions in 1931. For the sake of comparison it may further be stated that the corresponding average for 1929 was no larger than 15.0 millions. The foreign bills represented on an average 29.4 per cent of the total supplementary cover during the year under review; the corresponding proportions for 1932 and 1931 were 20.5 and 21.2 per cent respectively.

Foreign Notes and Coupons. Regarded as supplementary cover, the foreign notes and coupons in the possession of the Bank were of no practical importance. At the end of the year the Bank had a supply at its disposal to a value of only 1.7 million marks.

3. HOME LOANS.

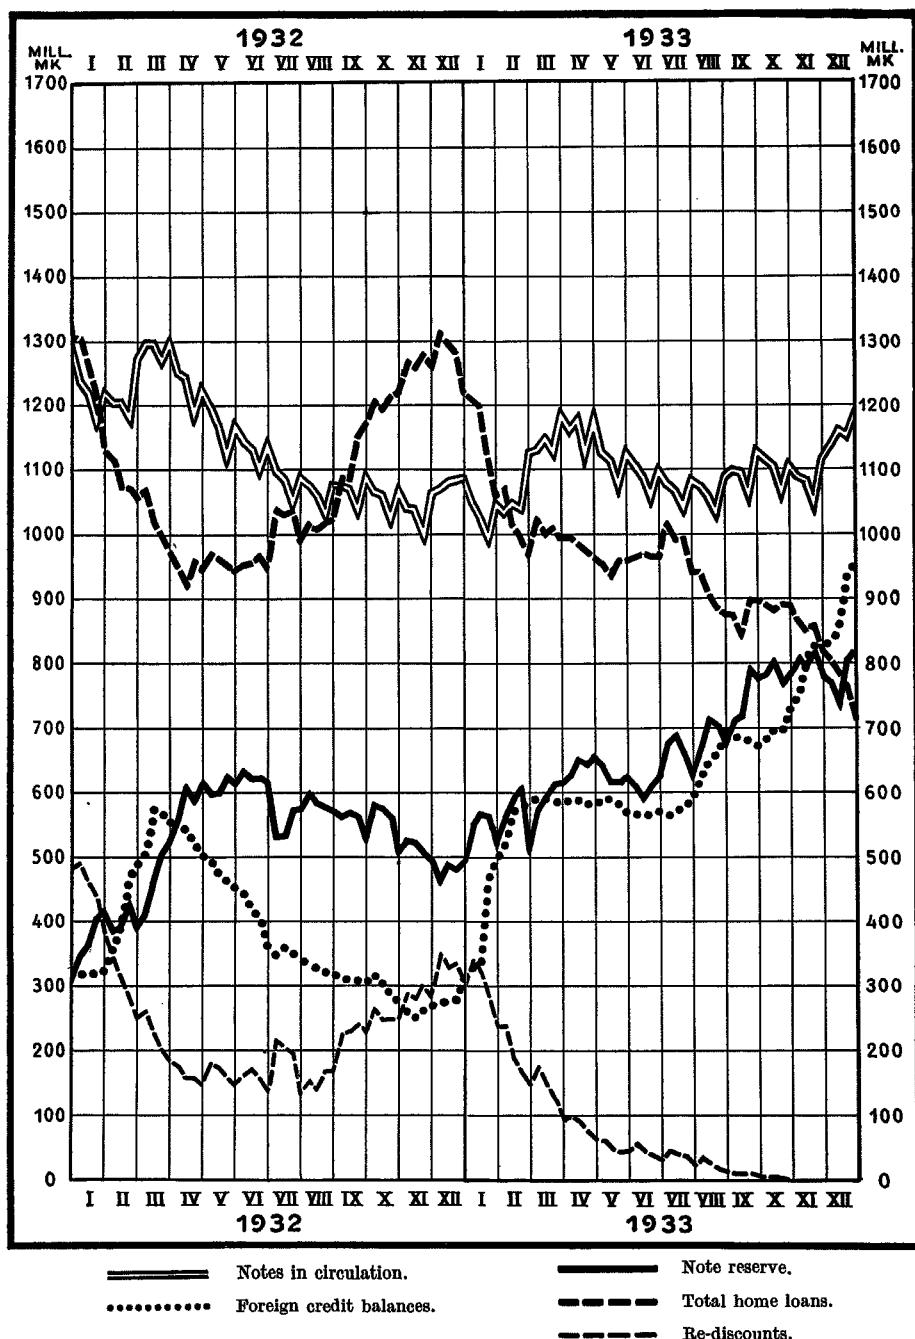

The home loans granted by the Bank of Finland to the public and the Joint Stock banks for each week during 1933 are shown in table 21 and the loans at the end of each month during 1926—1933 in table 22.

Re-discounted Bills. At the beginning of the year under review the amount of bills re-discounted at the Bank of Finland was 301.1 million marks. On January 7th the highest point for the year was recorded at 339.7 millions, but subsequently the amount of re-discounted bills was reduced rapidly along with the relaxation of the money market. In the last statement for October there were no longer any re-discounted bills, nor do they appear later in the Bank's statements. Such a state of things has not occurred since 1918, when the supply of money was very large as a consequence of inflation. On an average re-discounted bills amounted to only 71.4 million marks during last year against 240.7 millions in 1932 and 173.2 millions in 1931; in 1929 the corresponding average was 595.1 million marks.

Of the actual lending business of the Bank of Finland during 1933 on an average 7.6 per cent referred to re-discounted bills and 92.4 per cent to direct credits. For 1932 the corresponding proportions were 21.6 and 78.4.

Direct Credits. The direct credits of the Bank of Finland amounted to 917.2 million marks at the beginning of the year under review, but were reduced in January to 819.0 millions. Later such credits increased and reached their highest point, 969.3 million marks, on July 8th, but then a reaction set in and credits fell off gradually to 715.6 millions at the end of December. The direct credits of the Bank were thus reduced during the year by altogether 201.6 million marks or 22.0 per cent of their amount at the beginning of the year. This reduction was not caused by any policy adopted by the management of the Bank of Finland; on the contrary, by lowering the bank rate on four occasions, as already mentioned in another connection, the Bank consciously endeavoured to guide the course of events in the opposite direction. The most important cause of the falling off in credits were the reduced credit requirements of the Bank's clients, to which various circumstances contributed. As a result of the generally improved liquidity industrial and commercial undertakings had been able to collect outstanding amounts, some of them sold off surplus stocks of manufactured goods or got rid of supplies of raw materials purchased earlier at high prices, large amounts of capital being tied up in such stocks, and many also derived considerable profits. All this reduced the demand for credit.

THE PRINCIPAL ACCOUNTS OF THE BANK OF FINLAND IN 1932-1933.

The bond loans issued by some industrial concerns and the repayment by some banks of credits granted to preserve their liquidity, acted in the same direction.

The direct credits of the Bank of Finland during the year under review averaged 872.5 million marks or slightly more than in the previous years, but rather less than during 1928—1929. The development of the direct credits during recent years is seen in the following table.

	Highest. Mill. mks.	Lowest. Mill. mks.	Average. Mill. mks.
1925	453.0	289.1	349.7
1926	622.2	447.1	538.2
1927	755.0	547.6	676.4
1928	1,093.4	750.6	938.3
1929	945.9	824.2	886.1
1930	887.2	682.1	792.8
1931	890.9	655.9	750.5
1932	980.5	742.2	851.1
1933	969.3	715.6	872.5

This shows that the lowest point of the direct credits during last year was appreciably higher than the average for the corresponding credits before the period of good trade conditions.

Direct credits are granted in three forms: by discounting bills and by granting loans on security and advances on cash credit. The discounting of bills is the most important of these, averaging 78.4 per cent of the direct credits of the Bank of Finland during the year under review, whereas the amounts drawn on advances on cash credit averaged 12.2 per cent and the loans on security 9.4 per cent of such credits.

The amounts of bills directly discounted varied on the whole in the same manner during the year as the total amount of direct credits in general. At the beginning of the year under review the Bank of Finland held such bills to a value of 701.7 million marks. After dropping in January to 617.0 millions the total amount of these bills increased to 752.2 millions during the third week in July, after which it fell off again gradually and reached its lowest point, 574.8 million marks, on the last day of the year. The total amount of bills directly discounted was at that date 126.9 million marks less than at the beginning of the year under review.

There were comparatively slight changes in the advances on cash credit during the year. The amount drawn against them was 115.8 million

marks at the beginning of the year, rose in March to 123.4 millions and fell off during the autumn to 90.3 millions at the end of the year. The average for the year, 106.8 million marks, was very nearly the same as for the two previous years, when it amounted to 105.2 and 102.3 millions respectively.

The course of the loans on security was in the same direction, but the changes were greater. At the beginning of the year these loans amounted to 99.7 million marks altogether. After dropping to 69.6 million marks in February, the total amount of loans on security attained its highest point at the beginning of July at 107.7 millions, but then fell off rapidly owing to the relaxation of the money market. At the end of the year these loans stood at 50.5 million marks, so that the reduction during the year amounted to about 50 per cent. On an average the total amount of loans on security was approximately the same as in 1932, viz., 82.1 million marks in 1933 against 83.0 millions in the previous year.

4. BONDS.

In addition to the direct credits referred to above the Bank of Finland also grants credit to various kinds of clients by purchasing bonds. The changes in the bonds owned by the Bank are shown in the latter part of table 21, in which particulars are given separately regarding bonds issued in Finnish marks and bonds issued in foreign currency.

Bonds in Finnish Currency. The Bank of Finland holds larger or smaller quantities of bonds belonging to loans issued either by the Finnish State or by some Finnish financial and industrial undertakings and by municipalities. During the last few months of the year under review the Bank of Finland participated in the issue of bond loans by several industrial concerns and subscribed for a part of these loans for its own account, but as the bond certificates were not yet available by the end of the year, these bonds were not entered in the bond account. There were, however, some changes in this account, the Bank of Finland having bought and sold bonds belonging to various loans. At the beginning of the year the booked value of bonds issued in Finnish marks amounted to 64.6 million marks; later their value increased to 99.0 millions at the beginning of June, but decreased again to 69.8 millions by the end of the year.

Bonds in Foreign Currency. The bonds issued in foreign currency form a more important part in the portfolio of the Bank of Finland. This class is composed principally of Finnish State bonds as well as bonds issued by some Finnish municipalities and mortgage institutions. At the beginning of the year under review the booked value of these bonds amounted to 236.4 million marks. Owing to the sale of some packets of bonds and the drawing of others in the course of the year the booked value on this account was reduced, although fresh bonds were purchased simultaneously by the Bank. On the last day of the year, when the remaining supply of bonds was again booked at the same values as at the beginning of the year or partly even lower, the booked value on this account was 245.8 million marks, i. e., slightly higher than a year before. — As these bonds, as well as those issued in Finnish marks, are valued in the books of the Bank of Finland at rates appreciably below their current rates on the Stock Exchanges which have increased of late, it was considered that there was no reason to depreciate them to any great extent, as was the case in previous years.

5. LIABILITIES PAYABLE ON DEMAND.

The liabilities of the Bank of Finland payable on demand during 1933 are dealt with in table 20, which is based on both the weekly and monthly statements of the Bank. In this connection the remark should be repeated that the total of these liabilities does not correspond exactly to the total used right of issue given in table 1, as the former amount does not include the undrawn amounts of advances on cash credit, which only figure in the calculations respecting the right of note issue.

Notes in Circulation. The most important part of the liabilities payable on demand consists of the notes in circulation; in view of their special importance these have been dealt with separately in chapter 1. In this connection it need only be mentioned that the notes in circulation represented an average of 68.8 per cent of all the liabilities payable on demand during the year under review. For 1932 the corresponding proportion was considerably higher or 79.3 per cent.

Bank-Post-Bills. Another class of these liabilities is formed by bank-post-bills issued by the Bank of Finland. The extent of this class of business during the last few years is shown by the following figures:

	Issued. Mill. mks.	Redeemed. Mill. mks.	Outstanding at end of year. Mill. mks.
1927	1,515.4	1,512.4	18.5
1928	1,692.9	1,696.9	14.4
1929	1,437.6	1,438.5	13.5
1930	1,344.1	1,345.6	12.1
1931	1,097.8	1,094.5	15.4
1932	916.1	904.1	27.4
1933	890.1	910.9	6.6

The falling off in business in bank-post-bills occasioned by the general depression still continued in 1933. Possibly this may have been contributed to partly by the circumstance that a charge of Fmk. 1: — per bank-post-bill was introduced in the summer. On an average there were bank-post-bills issued by the Bank of Finland to a value of 7.0 million marks outstanding during the year, whereas the corresponding averages for the previous years were 9.7, 10.9 and 12.2 million marks.

Current Accounts. Next to the notes in circulation the amounts deposited on current account usually form the largest item of the Bank of Finland's liabilities payable on demand. On such deposits the Bank does not pay any interest. Current accounts are divided into two main groups: current accounts due to the Treasury and due to others.

The Treasury's balances on current account varied very greatly as usual, according to the cash position of the Treasury at various times. The Treasury had the largest balances on this account in January—March and August—September. On the other hand the account was exhausted in the middle of July and in the beginning of December. On an average the Treasury's balances on current account amounted to 66.1 million marks during the year and were consequently considerably higher than in 1932, when the corresponding average only amounted to 25.0 millions. On the other hand the average for 1930 and 1929, for instance, was much higher or 108.2 and 136.3 million marks respectively.

The amounts deposited on current accounts due to others than the Treasury consist principally of the cash of the Joint Stock banks. Side by side with the relaxation of the money market these balances rose from 62.8 million marks at the end of December, 1932, to 406.5 millions on December 15th, 1933; on the last day of the year the balances on these accounts

were 327.1 millions. The increase was therefore 264.3 million marks and the amounts deposited on this account had thus increased more than five-fold. The average for the year was 240.1 millions or double the average for 1932, which was 119.2 million marks.

Bills Collected. Under this heading sums are included in the statements of the Bank of Finland that have come in through the collection of bills and have not yet been accounted for. The bills entrusted to the Bank for collection were almost exclusively foreign bills. The equivalent in Finnish currency of the bills collected during 1933 was 88.6 million marks compared with 93.8 millions during the previous year. The liabilities of this kind appearing in the weekly statements of the Bank were quite insignificant; in 1933 they averaged not quite 0.4 million marks.

Foreign Correspondents. Another item among the liabilities payable on demand is made up of debts due to correspondents abroad. This indebtedness consists of the credit balances of the Bank's correspondents in Finnish marks (conti lori), on which the Bank pays interest according to agreement. The amount of these liabilities during the year under review only averaged 2.7 million marks, whereas the corresponding average for the two previous years was considerably higher, viz., 7.1 and 17.4 million marks respectively.

Foreign Credit. In order that the Bank of Finland's right of note issue should not be increased, the foreign credit already referred to, which was taken up by the Bank in order to strengthen its reserve of foreign currency and amounted to 191.0 million marks since August, 1932, was also included among the liabilities payable on demand. As foreign currency was received in sufficient quantities by the Bank in exchange for exports, this reserve fund, which was not employed on a single occasion, became superfluous. In the statement for November 15th it was included at half its amount, 95.5 million marks, and on December 23rd it was eliminated altogether from the Bank's statement.

Sundry Accounts. In these accounts, also belonging to the liabilities payable on demand, advances are chiefly entered, i. e., sums set aside for payments that have been received before the due date. Such liabilities

fluctuated during the year between 1.3 and 23.9 million marks and averaged 6.9 millions, whereas the corresponding average for 1932 was 6.0 and for 1931 7.5 million marks.

6. BALANCE SHEET AND FUNDS OF THE BANK.

The Balance Sheet of the Bank at the End of the Year. The balance sheets of the Bank of Finland at the end of 1931—1933 are given in table 24, which is drawn up in accordance with the results published in the annual reports of the Bank.

All the more important items in the balance sheet of the Bank have already been dealt with above with the exception of the Bank's own funds, which are treated in detail below.

Funds of the Bank. The Bank of Finland's own funds during 1876—1933 appear in table 27.

The Capital of the Bank of Finland remained unchanged at 1,000 million marks. The Reserve Fund amounted to 197.5 millions at the end of 1932. According to the law of December 21st, 1932, an amount of 110.0 million marks was set aside out of the profits for general State purposes. Only the remainder of the profits or 5.2 million marks could be appropriated for increasing the Reserve Fund of the Bank of Finland. In addition 0.7 million marks were transferred to the Reserve Fund of the Bank from the account of Undisposed Profits. In this way the Reserve Fund was raised to 203.4 million marks.

At the beginning of the current year a small transfer was again made to the Reserve Fund. According to the law of December 30th, 110.0 million marks out of the profits for 1933 were also appropriated for general State purposes, so that the Reserve Fund of the Bank could only be increased on this occasion by 2.4 millions. In the first statement for 1934 the Reserve Fund thus represented 205.8 million marks.

Those assets that represent the value of the premises and furniture of the Bank, were valued in 1933 unchanged at 12 million marks. In addition to the premises on which its head office is situated, the Bank owns a house in the capital for its staff and premises for branch offices in ten other towns. The booked value of the premises, 12 million marks, is only a fraction of their actual value.

7. EARNINGS AND EXPENSES AND DISPOSAL OF PROFIT.

Earnings and Expenses. The earnings and expenses of the Bank of Finland during 1926—1933 are seen in table 25, which constitutes a summary of its Profit and Loss accounts published in the annual reports.

The gross earnings of the Bank of Finland in 1933 amounted to 125.9 million marks. The earnings were therefore considerably less than for 1926—1932, when they varied between 141.3 and 185.7 million marks. In comparison with 1932 the gross earnings fell off by 44.3 million marks or 26.0 per cent.

The appreciable reduction in earnings referred principally to home credits and to the foreign investments of the Bank. The earnings from home credits amounted to 63.9 million marks or 24.4 millions less than in 1932. This reduction was a natural consequence of the reduced credit business, the latter only amounting in 1933 to 943.9 million marks on an average against 1,091.8 millions in 1932, and of the lower rates of interest; the lowest rate of the Bank of Finland for discounting bills averaged 5.58 per cent last year, while the corresponding figure for the previous year was 6.77 or more than one per cent higher.

The interest earnings on assets on the accounts of foreign correspondents also decreased very much, from 28.0 million marks in 1932 to 17.2 millions in 1933. This was entirely due to the interest on such accounts falling to an insignificant figure in the foreign money markets on account of the unusually large amounts of capital that were in search of short-term investment. These interest earnings amounted to 5.52 per cent in 1932, but to no more than 2.13 per cent in 1933 of the average amount on the accounts of foreign correspondents. Agio income and commission were also lower last year than in the previous years. On the other hand the interest earnings on bonds represented almost exactly the same amount as in 1931 and 1932.

There was no change worth mentioning in the total amount of actual expenditure. This amount was 13.5 million marks last year against 13.3 millions in 1932.

In one respect, however, the expenditure differed very much from the corresponding items of expenditure for the previous years. Then very considerable depreciation was undertaken as a rule of the booked value

of the securities held by the Bank; in 1932 this reached its highest figure at 41.7 million marks. Owing to the value of the bonds having thus been depreciated to a great extent in the course of time, their booked value had dropped considerably below their current rates, and there was therefore no reason for further depreciation during the year under review, especially as the Stock Exchange quotations for bonds were rising appreciably.

The net profit of the Bank of Finland for 1933 amounted to 112.4 million marks. The changes in the amount of the net profit during the last few years are shown in the following figures.

	Net profit. Mill. mks.
1927	116.7
1928	144.0
1929	150.7
1930	130.6
1931	110.7
1932	115.2
1933	112.4

The net profit was consequently slightly less than for 1932, but was approximately on the same level as for 1927 and 1931—1932. On the other hand it fell considerably short of the net profit for 1928—1930.

Disposal of Profits. The disposal of the profits of the Bank of Finland during 1896—1933 is shown in detail in table 26.

As already stated above, an amount of 110.0 million marks out of the profits for 1932 was assigned for general State purposes on the basis of a special law, while the remainder, 5.2 million marks, was transferred to the Reserve Fund of the Bank.

The net profit for 1933 was disposed of in the same manner, as has also been mentioned; 110.0 million marks were appropriated for general State purposes on the basis of a special law only in force for the year referred to, and the balance, 2.4 million marks, was transferred to the Reserve Fund of the Bank. On account of the financial difficulties of the Treasury it has therefore been impossible during the last two years to increase the Bank's own funds in the manner, which the regulations for the Bank provide for and which the Bank's own development should demand.

8. CLEARING OPERATIONS.

The clearing operations of the Bank of Finland in 1933 and their progress during previous years will be found in tables 28 and 29. Of these the former refers to clearing operations at the head office, which began on September 1st, 1906, and the latter to similar operations at five branch offices, which were started partly in May, 1922, and partly later.

The progress of clearing operations during the last few years is shown in the following review.

Year.	Bank-Post-Bills.				Cheques.				Total.	
	Number.		Amount.		Number.		Amount.		Number.	Amount. Mill. mks.
	Quantity.	%	Mill. mks.	%	Quantity.	%	Mill. mks.	%		
1927	1,066,180	72.0	9,202.7	41.5	414,523	28.0	12,954.1	58.5	1,480,703	22,156.8
1928	1,146,357	67.7	10,237.9	40.8	546,478	32.3	14,844.6	59.2	1,692,835	25,082.5
1929	1,083,616	64.5	9,680.1	41.9	596,461	35.5	13,410.9	58.1	1,680,077	23,091.0
1930	1,034,319	61.9	8,294.6	36.6	636,955	38.1	14,341.4	63.4	1,671,274	22,636.0
1931	923,451	59.9	6,744.9	36.3	617,215	40.1	11,833.1	63.7	1,540,666	18,578.0
1932	795,393	57.6	5,902.8	34.4	586,048	42.4	11,243.6	65.6	1,381,441	17,146.4
1933	747,954	53.1	5,508.9	30.6	661,784	46.9	12,498.2	69.4	1,409,738	18,007.1

A change in clearing operations occurred last year, which is worth attention, as it indicates that the decline in trade had ceased. While the value of the bank-post-bills and cheques had fallen off from 1928 to 1932 by 7,936.1 million marks or 31.6 per cent, their value rose again last year, though only by 860.7 million marks or 5.0 per cent.

This increase referred exclusively to business in cheques, the turnover in bank-post-bills continuing to decrease. Thus in 1933, too, the same tendency continued that has been referred to before: the importance of cheques in clearing operations is increasing regularly at the expense of bank-post-bills. Whereas in 1928, 40.8 per cent of the total value of the turnover referred to bank-post-bills and 59.2 per cent to cheques, the corresponding proportions last year amounted to 30.6 and 69.4 per cent respectively.

The size of the cheques and bank-post-bills included in the clearing operations is indicated by the following averages, from which it is clear that the average size of the former considerably exceeds the size of the latter. A continued reduction also seems to be occurring in the average

size of cheques and bank-post-bills, a tendency that has been characteristic of clearing operations of late.

	Bank-Post-Bills. Marks.	Cheques. Marks.
1927	8,631	31,251
1928	8,931	27,164
1929	8,933	22,484
1930	8,019	22,516
1931	7,304	19,172
1932	7,421	19,185
1933	7,365	18,886

The clearing operations in 1933 were divided between the head office and the branch offices in such a way that the turnover at the former represented 14,272.0 million marks and at the latter altogether 3,735.1 million marks. Consequently 79.3 per cent of the total turnover in 1933 referred to the head office, while the corresponding proportion for 1932 was 79.2 per cent. The increase in the clearing operations also referred to the head office, while the total clearing operations at the branch offices was slightly reduced. As in previous years only the branches in Turku (Åbo), Vaasa (Vasa), Oulu (Uleåborg), Viipuri (Wiborg) and Tampere (Tammerfors) carried on clearing operations.

III. THE JOINT STOCK BANKS IN 1933.

As the business of the Bank of Finland and the changes occurring in its position are greatly influenced by the general state of the money market, a number of tables illustrating the position of the Joint Stock banks (tables 31—34) and at the same time the state of the money market, are included in this Year Book. The following particulars with regard to the Joint Stock banks are based partly on these tables and partly on other information contained in the official bank statistics which are published in the middle of May by the Bank Inspectorate of Finland.

Number of Banks and Size of their Turnover. The improvement in the economic situation that characterised developments in 1933, made the position of the Joint Stock banks distinctly easier. Nevertheless, last year proved a very hard one for a large number of the Finnish banks, their annual results being affected seriously by the losses that were incurred during the prolonged depression of the previous years and that could not be written off entirely at an earlier date.

At the beginning of 1933 there were twelve Joint Stock banks doing business in Finland. Of these one small bank was absorbed by the largest Joint Stock bank, which already held the majority of its shares, whereas two other small banks had to go into liquidation, their liabilities being, however, guaranteed by two big banks. At the end of the year there were consequently only nine Joint Stock banks in addition to the two that were in course of liquidation.

The restriction of the business of the banks is evident, among other things, in the reduced number of banking offices. During 1933, 25 offices were closed, while only 3 new offices were established. At the end of March, 1934, the Joint Stock banks had 474 offices altogether. Including the 14 offices of the Bank of Finland, there were about 7,200 people to each banking office.

The falling off in banking business is illustrated by the following figures referring to their total turnover.

	Total turnover. Mill. mks.	Balance sheet total. Mill. mks.
1927	540,874.8	9,541.8
1928	605,444.7	10,900.5
1929	592,545.3	10,893.6
1930	550,204.0	10,540.8
1931	455,081.8	10,319.4
1932	427,352.2	9,509.6
1933	419,464.2	9,604.3

The total turnover of the banks, which had been decreasing since 1928, was reduced last year by 1.8 per cent and was thus 30.7 per cent less than during the record year of 1928. On the other hand the contraction of the banks' balance sheets ceased, and they expanded again slightly after dropping regularly for five years.

It will also be found that, if the intensity of banking business is illustrated by the relation of the total turnover of the banks in the course of the year to the size of their combined balance sheets at the end of the year, the changes last year were only slight. The course of this proportion was as follows:

	Per cent.
1927	56.7
1928	55.5
1929	54.4
1930	52.2
1931	44.1
1932	44.9
1933	43.7

Financial Position of the Joint Stock Banks. The combined balance sheets of the Joint Stock banks, at the end of the years 1930—1933, show the following position.

Assets.

	1930 Mill. mks.	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Cash	275.2	275.1	245.7	580.5
Foreign correspondents	163.4	175.9	105.0	247.2
Foreign bills	60.6	122.0	24.8	80.2
Inland bills	2,696.3	2,273.1	1,828.5	1,355.3
Loans	2,882.3	3,028.0	3,226.4	3,221.0
Cash credits	1,307.9	1,149.0	1,032.7	887.7
Home correspondents	2,313.5	2,248.1	2,130.9	2,175.6
Bonds	216.9	224.6	238.8	292.5
Shares	101.7	115.2	176.9	193.3
Deposit certificates of other banks	14.3	14.5	9.2	13.7
Interest accrued	94.9	95.9	77.1	66.2
Bank premises	282.0	282.9	283.9	260.2
Furniture	4.2	3.6	3.7	2.7
Sundry assets	127.6	142.5	103.7	138.7
Total	10,540.8	10,150.4	9,487.3	9,514.8

Liabilities.

Share capital	1,115.0	1,115.5	928.5	914.0
Reserve funds	596.3	584.0	546.2	531.2
Other funds	253.3	74.9	172.3	92.6
Deposit accounts	5,313.5	4,950.5	4,761.1	4,894.4
Savings accounts	828.8	793.0	786.4	837.8
Current accounts	669.8	667.1	626.0	756.4
Bank-post-bills	160.8	151.3	116.2	131.5
Foreign correspondents	358.2	196.2	132.3	184.1
Home correspondents	885.7	967.9	981.2	1,009.3
Re-discounted bills	147.2	461.3	296.2	—
Sundry liabilities	212.2	188.7	140.9	163.5
Total	10,540.8	10,150.4	9,487.3	9,514.8

The annual profits of the banks are included in this table among »Other funds» and their losses, in those cases in which they occurred, have been deducted from this item. For this reason the total balance sheets are slightly less than the corresponding amounts in the table on the previous page.

The summarised balance sheets of the banks for the different years are very similar in some respects, but differ considerably in others. The most important items are dealt with below.

Own Funds. The development of the funds of the Joint Stock banks will be seen in the following table giving the respective figures at the end of each year.

	Amount.		Movement.	
	1932 Mill. mks.	1933 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Share capital	928,5	914,0	-187,0	- 14,5
Reserve funds	546,2	531,2	- 37,8	- 15,0
Pension funds	53,5	54,2	- 3,6	+ 0,7
Profits carried forward ¹⁾	118,8	38,4	+101,0	- 80,4
Total	1,647,0	1,537,8	-127,4	-109,2

The funds of the Joint Stock banks were reduced during the year under review, though not to the same extent as in 1932. The decrease was chiefly connected with the merger of one small bank into a big one and with steps taken by one of the liquidating banks. One bank, however, increased its capital by 1.5 million marks in 1933. Of the profits for 1932 only 1.0 million marks were transferred to the reserve funds of the banks.

There is, however, no reason for attaching too much importance to the changes that occurred in the banks' own funds during the calendar year of 1933. The losses that were written off then and the consequent reduction of the banks' own funds are, as already stated, not a result of banking business during that calendar year, but of the large credits that were granted during the period of good trade and that caused losses, when the depression and the disastrous fall in prices set in. These losses were partly written off earlier, partly covered and partly written off during the year under review, but partly, too, at the beginning of the current year, when the easy state of the money market made the time ripe for a thorough clearance. The total capital of the Joint Stock banks at the end of March 1934, amounted to 782.8 million marks and their actual reserve funds to 492.8 millions. During the first three months of the current year, therefore, these amounts were reduced by 170.1 million marks and it is to be anticipated that the amounts included for the funds of the two banks in course of liquidation will, for the greater part, also have to be written off.

Home Deposits. The development of the deposit business of the Joint Stock banks will be found in the following table, giving the respective figures at the end of each year.

¹⁾ Including the annual profits for the different years less the corresponding losses.

	A m o u n t .			M o v e m e n t .		
	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Current accounts	667.1	626.0	756.4	— 2.7	— 41.1	+130.4
Home correspondents	967.9	981.2	1,009.3	+ 82.2	+ 13.3	+ 28.1
Deposit accounts	4,950.5	4,761.1	4,894.4	-363.0	-189.4	+133.3
Savings accounts	793.0	786.4	837.8	-- 35.8	— 6.6	+ 51.4
Total	7,378.5	7,154.7	7,497.9	-319.3	-223.8	+343.2

The home deposits of the banks increased by 343.2 million marks, a good result in comparison with the reduction of 223.8 and 319.3 millions during the two previous years. It is worth noting that the increase referred to all the deposit accounts of the banks, i. e., both to short-term and long-term deposits.

In order to illustrate the development during a number of years we give the following figures that show the amount of actual deposits and savings accounts, i. e., the actual long-term deposits of the public at the end of the years 1927—1933 and the changes in them.

	Amount. Mill. mks.	Increase (+) or decrease (-).	
		Mill. mks.	Per cent.
1927	5,286.7	+638.2	+13.7
1928	5,843.2	+556.5	+10.5
1929	5,995.2	+152.0	+ 2.6
1930	6,142.3	+147.1	+ 2.5
1931	5,743.5	-398.8	— 6.5
1932	5,547.5	-196.0	— 3.4
1933	5,732.2	+184.7	+ 3.3

The figures indicate clearly, how the movement of deposits made by the public in the Joint Stock banks was affected by the changes in the business cycle. In this respect 1933 records a recovery, but no rising trend as yet, as the increase in deposits did not even equal the interest on the sums deposited, or in other words withdrawals still exceeded deposits in the Joint Stock banks last year.

Home Loans. The home loans of the Joint Stock banks are illustrated in the following table, giving the respective figures at the end of each year.

	A m o u n t .			M o v e m e n t .		
	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Inland bills	2,273.1	1,828.5	1,355.3	-423.2	-444.6	-473.2
Loans	3,028.0	3,226.4	3,221.0	+145.7	+198.4	— 5.4
Cash credits	1,149.1	1,032.8	887.7	-158.8	-116.3	-145.1
Home correspondents	2,248.1	2,130.9	2,175.6	— 65.4	-117.2	+ 44.7
Total	8,698.3	8,218.6	7,639.6	-501.7	-479.7	-579.0

The credits of the Joint Stock banks, which had fallen off from year to year ever since 1929, were reduced last year by 578.9 million marks, which is equivalent to 7 per cent. Since June, 1929, when the credits reached their highest point at 10,046.9 million marks, the contraction amounted to 2,407.3 millions or approximately 24 per cent. Last year's great reduction in credits was mainly a consequence of the position of the banks' clients growing more liquid. The issue of some bond loans for the purpose of converting the short-term indebtedness of several industrial concerns, as well as the considerable sums written off the weak credits of the banks during the last few years, have tended in the same direction.

A glance at the table shows that simultaneously with the reduction of the banks' credits their composition also underwent a change. The reduction referred chiefly to bills and cash credits, while loans fell off only slightly and credits on home correspondents' accounts increased. If we compare the distribution of credits according to the form of credit with the corresponding distribution at the end of the period of good trade conditions, we obtain a clear idea of the considerable change that has taken place. Bills have been reduced from 34.5 to only 17.7 per cent of the credits and cash credits from 14.8 to 11.6 per cent, while credits on home correspondents' accounts have increased from 23.2 to 28.5 per cent and loans from 27.5 to 42.2 per cent. Loans have even increased absolutely, while other forms of credit have decreased.

Owing to the deposits in the banks growing and the credits falling off, the tension between them was reduced in a great measure. This tension that had already decreased to 1,063.9 million marks by the end of 1932 in comparison with over 2,000 millions during the worst time of the financial crisis, relaxed last year by degrees and only amounted to 141.7 million marks at the end of last year. The tension has probably never been so slight before.

The easier position of the Joint Stock banks is also evident in the fact that their cash rose from 245.7 million marks at the beginning of the year under review to 580.5 millions at the end of the year. The cash thus reached a higher level than has ever occurred before in the banking statistics of Finland. The bills re-discounted by the banks at the Bank of Finland,

which amounted to 296.2 million marks at the beginning of the year under review, fell off rapidly and since the end of October no more bills have been re-discounted.

Position towards Foreign Countries. The development of the position of the Joint Stock banks towards foreign countries was marked by altogether different conditions than during the preceding year. This change is seen in the following figures.

End of year.	Credit balances. Mill. mks.	Indebted- ness. Mill. mks.	Net balances (+) or indebted- ness (-). Mill. mks.
1927	366.5	359.4	+ 7.1
1928	255.6	529.1	-273.5
1929	233.9	482.4	-248.5
1930	224.0	358.2	-134.2
1931	297.9	196.2	+101.7
1932	129.8	132.3	- 2.5
1933	327.4	184.1	+143.3

After a sharp reduction in 1932 both the foreign credit balances and foreign indebtedness of the banks increased last year, partly indicating larger trade with foreign countries and partly greater confidence in the Finnish currency and economic conditions in Finland. Although the foreign indebtedness of the Joint Stock banks increased by 51.8 million marks, it was considerably less than in 1927—1931. At the same time their foreign balances, which are related in some measure to the favourable balance of trade, grew by 197.6 million marks to 327.4 millions and were therefore larger than during 1928—1932. At the end of last year the banks had net foreign credit balances amounting to 143.3 million marks, which is in sharp contrast to their considerable net indebtedness in 1928—1930 and is also larger than their net credit balances in 1927 and 1931.

The Year's Results. The annual results of the Joint Stock banks are clearly visible in the following table, which shows their income and expenditure during the last three years.

	<i>Income.</i>		
	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Interest and commission on credits	952.9	820.4	704.8
Interest on bonds	19.6	23.3	23.9
Agio	46.0	38.8	36.7
Recovered on claims previously written off	4.2	2.3	4.0
Sundry earnings	32.5	20.7	21.8
Profits of mortgage departments	0.4	0.3	0.0
<hr/>	<hr/>	<hr/>	<hr/>
Total income	1,055.6	905.8	791.2
Losses	211.8	22.3	86.6
 <i>Expenditure.</i>			
	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Interest	624.5	550.6	473.3
Expenses	211.5	185.4	170.2
Amounts written off	289.4	91.6	144.7
Losses of mortgage departments	4.1	2.2	2.7
<hr/>	<hr/>	<hr/>	<hr/>
Total expenditure	1,129.5	829.8	790.9
Profits	137.9	98.3	86.9

As the credits granted by the banks were reduced and rates of interest were lowered, it was natural that their earnings on credits should have fallen off. As the other items of the banks' income experienced little change, their gross income was reduced by 114.6 million marks to 791.2 millions against 1,282.4 millions in 1929. Owing to the deposit rate falling, the expenditure of the banks in interest was reduced simultaneously, though not as much as the corresponding earnings. The expenses of the banks also decreased slightly, mainly owing to taxation, which decreased on account of the poorer results for 1932. On the other hand the amounts written off on grants of credit were 44.3 million marks larger than in 1932. Larger amounts than in the previous year were also written off bonds and shares as well as premises and furniture.

Seven of the Joint Stock banks returned a larger or smaller net profit totalling 86.9 million marks, while four banks had a loss amounting to 86.6 millions altogether. The annual result for all the banks was thus a net profit of only 0.3 million marks. For the sake of comparison we give the following figures, which show, how adverse this result was in comparison with the net profit for every year except 1931, when the Joint Stock banks as a whole had a considerable net loss.

	Net profits (+) or net losses (-) Mill. mks.
1927	+177.7
1928	+206.9
1929	+187.9
1930	-153.2
1931	- 73.9
1932	+ 76.0
1933	+ 0.3

An amount of 40.9 million marks of undisposed profits was brought forward from the previous year to the year under review. If we add the net profit of those banks, whose business yielded a surplus, we obtain an amount of 127.8 million marks of profits, which was at the disposal of the Joint Stock banks. This amount was employed as shown in the following table.

	1930 Mill. mks.	1931 Mill. mks.	1932 Mill. mks.	1933 Mill. mks.
Distributed to shareholders	140.3	119.7	94.8	91.5
Distributed to depositors	0.9	—	—	—
Transferred to reserve funds	4.0	9.4	1.0	2.2
Transferred to pension and benefit funds	1.1	2.1	0.0	0.0
Additional amounts written off	1.3	11.7	3.7	4.1
Various public purposes	0.8	0.6	0.4	0.0
Gratuities	0.6	0.6	0.3	—
Left on Profit and Loss account	49.4	42.7	40.9	30.0

The dividends paid during the last few years are shown in the following table, only those banks that still carry on business being taken into account.

Dividend.	1927	1928	1929	1930	1931	Number of banks.	
						1932	1933
No dividend	1	1	4	5	1	4	2
3—5 $\frac{1}{2}$ %	1	—	—	—	1	—	2
6—7 $\frac{1}{2}$ »	1	2	1	1	—	6	3
8—9 $\frac{1}{2}$ »	4	3	1	1	6	—	—
10—11 »	5	5	5	5	2	—	—
12—13 »	2	3	3	2	—	—	—
14—15 »	—	—	1	1	—	1	1
16—17 »	2	2	—	—	1	1	1
18—19 »	2	2	2	2	1	—	—
Total	18	18	17	17	12	12	9

Three banks reduced their dividends, but none raised them. Altogether 3.3 million marks less than for the previous year were paid in dividends. The dividends represented 10.0 per cent of the combined capital of the Joint Stock banks and 5.9 per cent of their total funds.

Summary. As we have shown above, the position of the banks was unusually liquid at the end of the year under review. The difficulties that some of the banks had to face last year were due to other causes, viz., to the losses that had arisen earlier, although they were only written off last year. This clearance of the banks, necessitated by the depression, was not yet completed during the year under review, but the position of the banks that succeeded in outliving the years of crisis, was thereby substantially consolidated.
