

BANK OF FINLAND

1940

YEAR BOOK

COMPILED BY THE
STATISTICAL DEPARTMENT OF THE BANK OF FINLAND

VOLUME XXI

HELSINKI -- HELSINGFORS 1941

HELSINKI — HELSINGFORS 1941
GOVERNMENT PRINTING OFFICE

The present is the twentyfirst issue of the Year Book of the Bank of Finland, compiled chiefly on the same plan as previous issues. Its main feature are the statistical tables, which contain detailed information regarding the position and business of the Bank of Finland during 1940. In addition it contains some reviews of the development of the Bank of Finland in previous years and some series of figures illustrating the business of the Joint Stock banks. Besides the tables this book includes a section that gives a condensed review of the most important events in 1940 for the economic development of Finland as well as a survey of the different branches of business of the Bank of Finland and its results during last year.

The Year Book has been compiled by the Statistical Department of the Bank of Finland, the undersigned head of the Department being principally responsible for its contents. The Year Book is published in Finnish, Swedish, English and German; the tables include headings and other letterpress in French.

A. E. TUDEER, PH. D.
Head of the Statistical Department.

I. REVIEW OF THE ECONOMIC POSITION IN FINLAND IN 1940.

At the start of 1940 Finland was at war: the whole strength of the nation was devoted to repelling the enemy's attack. Economic activity connected directly or indirectly with purposes of defence was increased, while such activity in other respects declined and was even entirely paralysed in some spheres. When peace was at last concluded on hard terms fresh problems arose: aid for the families of those who had been killed and for the invalids, the care of the evacuated population and the provision of new sources of livelihood for it, and the replacement of the productive forces that had been lost, in a word the reconstruction of the country. Although the need for increasing the efficiency of the defences even after the conclusion of peace kept many men and many productive forces employed, and in spite of some important trade routes being closed by the continuance of the war between the Great Powers, partly restricting imports of essential foodstuffs, raw materials and other goods and partly impeding exports, it was possible to revive peaceful productive activity by degrees. Industrial production, however, fell short of the results of the previous years partly owing to the losses occasioned by the cession of territory and partly owing to difficulties in regard to sales and the supply of raw materials. Agriculture suffered by the loss of territory, by the evacuated livestock succumbing to some extent and by the bad harvest that was due to drought. These circumstances tended, besides, gradually to increase the difficulty of the food situation in the country and to necessitate increasing measures of control. The strain on the money market was relieved at the very beginning of the year by stocks being realised and was gradually converted into an abundant supply of money, although the credit requirements of the Government were unusually large on account of the existing conditions.

Economic policy of the Government. The direction adopted by the economic policy of the Government by the force of circumstances in consequence of the outbreak of the war between the Great Powers in the latter half of 1939, was maintained and accelerated by solicitude for the economic life of the country during its own winter war. The guiding and controlling activity of the Government was continued in 1940 and extended to more and more spheres, as it proved to be necessary. Price control, rationing of articles of consumption and the distribution of other important products were extended and made more severe. It is specially worth mentioning the decision of the Government concerning the control of prices for and trade in articles of public consumption, by which it was intended to stabilise prices at the level, at which they stood on October 15th, 1940, though the Ministry of Supply was empowered to raise them above that level in case of necessity. A special section of Government activity in the economic sphere consists of the legislation, by means of which compensation for various losses caused by the war and the peace treaty and the participation in them of the population and business enterprises through the Capital Levy were regulated. The measures for the reconstruction of the country by means of urgent colonisation and the provision of new holdings, the revival of building operations and the promotion of industry were closely connected with this, though the accomplishment of these measures had mostly to be postponed until the following years. The efforts to organise foreign trade relations achieved more rapid results. Among the numerous commercial treaties and payment agreements concluded with various countries special mention should be made of those with Germany, Sweden, Denmark and Soviet Russia, which were calculated to promote foreign trade already during the year under review. The measures necessitated by Government finance are dealt with in another connection.

Trade and Industry. In quantity the *harvest* of 1940 was less than for a decade. This was partly due to the reduction of the arable area by the cession of territory which, according to approximate calculations, amounted to 10.4 per cent of the former area of arable land in Finland, and partly to the drought experienced during the period of growth, as a result of which the crops failed in many places, especially in the

case of hay and spring sowings. The difficulties were increased by the male population being retained on defence work for a long time and by the shortage of liquid fuel. For these reasons the crop of different kinds of plants is estimated to have been 13—40 per cent less than in 1939. Larger crops were obtained only in the case of potatoes and leguminous plants, as regards potatoes actually a record crop. According to preliminary calculations the total harvest amounted to about 2,800 million fodder units as against 3,664 million in 1939 and an average of 3,926 million for 1937—1939. Notwithstanding the decrease in the volume of the harvest, its value amounted, according to preliminary estimates, to about 8,600 million marks on account of higher prices in comparison with 7,700 and 7,000 million respectively for the two previous years. As farmers were, however, only able to sell so much smaller quantities of their produce, they did not obtain a larger total income on an average for the goods they marketed than in previous years.

The trend of the crops of the most important cultivated plants in recent years is illustrated by the following table, in which preliminary data for last year are given in addition to the final quantities for the previous years, in tons.

	Wheat	Rye	Barley	Oats	Potatoes	Hay
1933	67,000	372,700	178,500	635,500	1,281,800	2,753,100
1934	89,300	394,900	208,500	776,300	1,139,400	3,070,900
1935	115,200	349,500	165,900	608,900	1,269,000	3,312,800
1936	143,100	308,200	185,200	692,500	1,432,900	3,452,900
1937	208,600	431,400	176,000	727,500	1,387,500	3,546,800
1938	255,900	368,500	207,400	825,700	1,197,900	4,058,300
1939	231,400	305,600	188,500	768,200	1,329,400	3,231,100
1940	163,000	269,000	154,000	596,000	1,520,000	2,045,000

Cattlefarming suffered a severe setback in 1940 owing to the cattle that were removed from the seat of war and later from the territory ceded by the peace treaty, partly succumbing and partly having to be slaughtered owing to the difficulty of securing fodder, and owing to its being necessary to reduce the stock of cattle in general on account of the bad crop of fodder. It is calculated that the number of horned cattle had decreased by about 21 per cent by the end of the year, the number of sheep by about 22 per cent, of hens by about 25 per cent and of pigs by about 32 per cent in

comparison with conditions at the beginning of the year. As the cattle that remained alive were in poor condition in consequence of the scarcity of fodder, the supply of cattlefarming produce to the market was considerably reduced, while the farmers' income from these sources in cash fell off in spite of prices rising appreciably.

According to investigations published by the Market Research Institute of the Pellervo Society, prices for the products of cultivated plants exceeded the averages for 1937—1939 by 37 per cent in December, 1940, while the corresponding rise for the products of domestic animals was 66 per cent. On an average the prices for agricultural produce had risen 55 per cent, while on the other hand the prices of farm implements had increased by 35 per cent and farm labourers' wages by 42 per cent. Thus the trend of prices seems to have been favourable from the farmers' point of view, but the effect of this was counteracted to a large extent by the fact that farmers were only able to sell considerably smaller quantities of their produce than in normal years.

The earnings of the agricultural population from the forests, which had dropped as low as 900 million marks during the felling season of 1939—1940, increased appreciably during the felling season of 1940—1941. Lumber work got under way already in the spring of 1940, and since then such work has continued on a fairly large scale both in order to remedy the fuel shortage and to supply raw materials for the exporting industries and the building trade in Finland. As timber prices were high and wages had also risen, the total income of the agricultural population from the sale of timber and lumber work is estimated to have amounted to about 2,800 million marks. This income was therefore more than three times as large as in the previous year and almost twice as large as in the felling season of 1938—1939, but considerably lower than in the felling seasons before that.

Industrial activity was at a standstill during the war as regards some branches of industry, but in the industries engaged directly or indirectly in war production it was very lively. After the conclusion of peace too the degree of industrial activity varied very greatly in different spheres, it being dependent on the supply of raw materials and requisites, selling opportunities, varying losses due to the cession of territory etc. The total industrial output cannot be stated exactly, as the necessary statistics

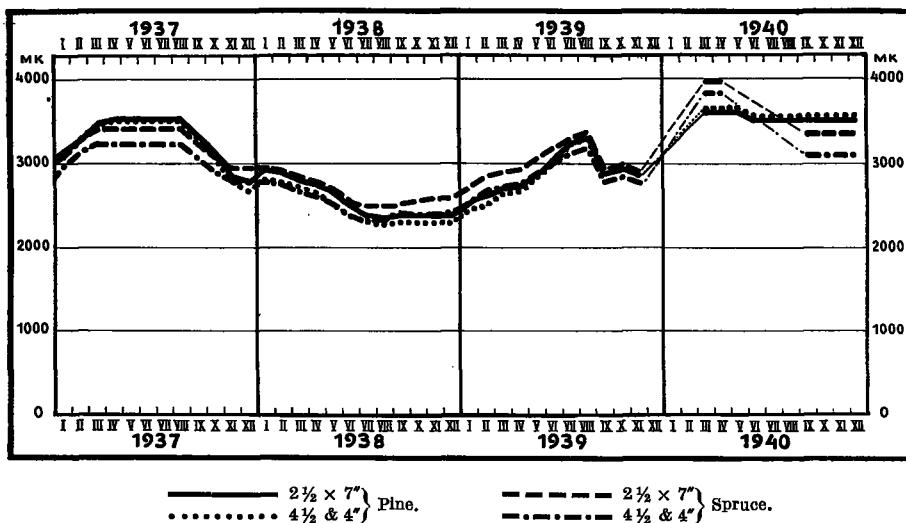

are not available. It is, however, possible to form an opinion of the trend in the different main branches.

Industry supplying the home market, the products of which found an assured market in general, whenever the necessary raw materials and requisites were available, suffered comparatively little, regarded as a whole, though some branches were in a worse position. The Unitas index for the value of home market industry advanced from one quarter to another and exceeded the level of all previous years. The average index for the whole of 1940 (if the level in 1935 is designated by 100) stood at 189 points as against 158 and 147 points respectively for 1939 and 1938, and for the last quarter of the year the index rose to 210 points. This great increase was due principally, or perhaps entirely, to the rise in prices. At all events the figures for production were so high that industry supplying the home market may — with a few exceptions — be considered to have been employed to its full extent.

With regard to the principal branches of home market industry it is worth mentioning that the *metal and machinery industry* was very busy, largely owing to the orders for defence purposes. The index for the value of production in this branch averaged 232 points as compared with 201 and 183 points for the two previous years and rose to 270 points for the last quarter of the year. The *foodstuffs and luxuries industry* worked at full capacity in spite of the food crisis; the index for the value of its production amounted to 180 points as against 151 and 145 points for 1939 and 1938. The output of the *textile and leather industries* was considerable at the beginning of the year, but subsequently manufacture had to be curtailed on account of the dearth of raw materials. The *building materials industry* progressed in the opposite direction, business in it having fallen off to insignificant proportions during the first part of the year as a natural consequence of the depression in the building trade, the shortage of labour and the scarcity of certain raw materials, but increasing later from quarter to quarter to 238 points during the concluding months of the year. Nevertheless, the value of production for the whole year was less in this industry than in the previous years, when building operations were very lively.

The conditions in 1940 had a far more detrimental influence on the *exporting industries*, their old markets being closed and their supply of raw materials having run dry. Although trade relations improved later

MOVEMENT OF PRICES FOR SAWN WOODGOODS IN 1937—1940.
MARKS PER STD.

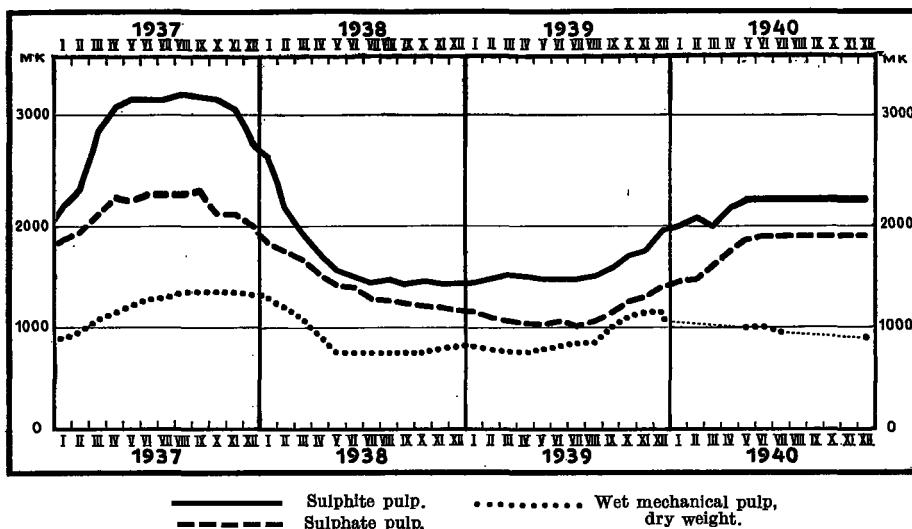

to some extent, the exporting industries still had no opportunity during the year of employing their full productive capacity, a large part of it still remaining unutilised at the end of the year. The index for the volume of the exporting industries stood at no more than 37 points in 1940 as against 93 and 105 points respectively in the two previous years.

In the *sawmill industry* output was small throughout the year. During the latter half of the year, when there might otherwise have been opportunities of exporting, there was no possibility of expanding the work of the sawmills owing to the shortage of logs, a result of the insignificant lumber work of the preceding winter. The index for the volume of production averaged 33 points as compared with 68 and 85 points respectively for 1939 and 1938.

Owing to sawing thus falling below the half of the output for the previous year, exports were reduced still further, for altogether only 195,600 standards of sawn timber were exported as against 702,200 and 864,600 standards in the two previous years. Prices had risen 10—20 per cent, it is true, but despite this exports of sawn timber brought in no more than 624.2 million marks, whereas in 1939 they had provided the country with 1,840.5 million and in earlier years still larger sums.

MOVEMENT OF PRICES FOR WOODPULP IN 1937—1940.
MARKS PER TON.

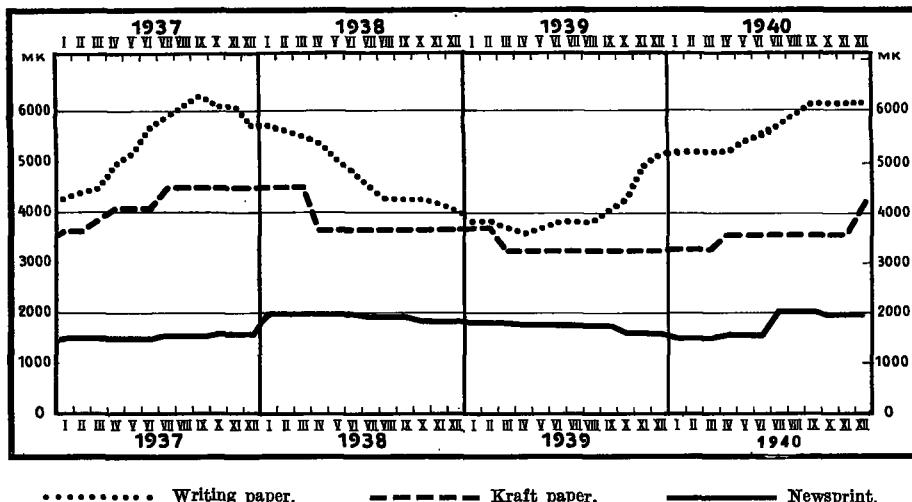

Exports of *round timber* did not decrease as much as exports of other articles in general, this being due to the trade agreement with Germany providing for considerable exports of pulpwood. Under these circumstances 528,600 cub. m. of pulpwood were shipped in comparison with 811,600 and 891,900 cub. m. in the two previous years. As the price was also comparatively high, pulpwood exports yielded 151.0 million marks as against 171.4 and 209.4 million in 1939 and 1938. There was a considerably larger reduction in exports of pitprops which dropped to 474,300 cub. m. after amounting to 1,127,400 cub. m. in 1939 and 1,624,800 cub. m. in 1938. The value of these exports decreased proportionately to 112.4 million marks as against 208.1 and 366.3 million respectively in the two previous years.

The output of *plywood* amounted in 1940 to approximately half of the quantity produced in the year before, but during the year the trend took a favourable turn. Plywood exports for the year amounted to 89,800 cub. m. as compared with 214,200 cub. m. in 1939. The value of these exports decreased rather less or from 389.2 million marks to 220.4 million.

In the *paper and pulp industry* the output of various products fell off to insignificant proportions during the year under review owing to exports

MOVEMENT OF PRICES FOR PAPER IN 1937—1940.
MARKS PER TON.

to the principal old markets ceasing almost entirely. The productive capacity of the industrial undertakings in this sphere therefore remained for the greater part unutilised. In the case of *mechanical pulp* only one quarter of the quantity for the previous year was manufactured, and exports were reduced to 15,000 tons as against 205,400 and 224,600 tons respectively in 1939 and 1938. The value of mechanical pulp exports only amounted to 19.7 million marks in 1940 in comparison with 188.2 and 244.0 million for the two preceding years.

The output of *chemical pulp* also fell off for the same reasons, though not as much as in the case of mechanical pulp. The output, which had exceeded 1,200,000 tons in 1939, dropped to fully 500,000 tons in 1940. Exports decreased still more. Of sulphite pulp 156,600 tons were exported in 1940 as against 694,300 tons in 1939 and of sulphate pulp 106,000 tons as against 398,700 tons in 1939. The value of chemical pulp exports amounted in 1940, in spite of a rise in prices, to merely a fraction of the corresponding value in the previous years, viz., altogether 556.8 million marks in comparison with 1,781.4 and 1,930.4 million respectively in 1939 and 1938.

Exports of *cardboard* were not reduced quite as much as chemical pulp exports. The quantity exported amounted to 43,800 tons as compared with 113,400 tons in 1939, while the export value dropped rather less in consequence of rising prices or from 229.4 to 115.4 million marks.

Both the output and exports of *paper* decreased very much. About 80,000 tons of newsprint were manufactured as against 450,000 in 1939, and about 140,000 tons of other qualities as against 210,000 in the previous year. Paper exports dropped from 535,500 tons to 103,600 tons and their value slightly less in proportion or from 1,165.0 to 310.4 million marks.

Building operations were at a standstill during the first few months of 1940, chiefly on account of the shortage of building materials and owing to workmen having been called to the colours and enrolled for other war purposes. In Helsinki (Helsingfors) work had been suspended on 103 buildings at the beginning of the year. On the conclusion of peace work was resumed gradually and the damage done by air raids was repaired. On the other hand, no fresh enterprise worth mentioning appeared in this sphere until the last months of the year, when building got under way once more.

Sales of cement, which have been regarded as an index of the activity of building operations, were small at the beginning of the year, increased appreciably in May and attained the high level of the previous years in October. Nevertheless, the sales for the whole year did not exceed 317,500 tons as compared with 556,200 and 475,500 tons in the two previous years. It is worth noting the increase in the importance of cement in the building trade and its employment, besides, for other purposes than actual building.

In Helsinki 170 new buildings and extensions were completed in 1940 with total cubic contents of 1,640,000 cub. m. and 6,266 new living rooms. In 1939 the number of completed buildings was 196, their cubic contents were 1,293,000 cub. m. and the number of rooms in them was 7,546, but at that time building had already been paralysed in consequence of the events in the autumn. In comparison with the corresponding figures for the lively building year of 1938 too, 239 buildings, 1,661,000 cub. m. and 8,909 living rooms, building operations during the year under review do not seem to have fallen off to any great extent. It is a different matter,

however, if the number of plans examined is considered. While the examination in 1938 and 1939 had amounted to 284 and 221 building plans referring to the erection of houses of 2,243,000 and 2,038,000 cub. m. and 10,366 and 8,601 living rooms, only 74 plans for new houses were submitted for examination in 1940, their cubic contents only amounting to 308,000 cub. m. and the number of rooms to 2,061, or mere fractions of the corresponding figures for the previous years. It may be mentioned, however, as an encouraging sign that the majority of the building schemes were drawn up during the last few months of the year.

The labour market. In 1940 the labour market was characterised by certain factors not connected with economic life, the most important of which consisted of the direct or indirect participation of large classes of the population in the defence of the country during the war and afterwards in various kinds of work intended to improve the defences. As the degree of economic activity varied very much, as already stated, employment in various spheres and in various places was so uneven that it demanded an equalising intervention on the part of the Government. The number of unemployed registered at the labour exchanges dropped at the beginning of the year to about 1,000, but increased after the conclusion of peace and remained at about 5,000 from the early summer. That the number was not larger, was partly due to people who worked short hours or short working weeks not being included among the unemployed in the statistics.

The evacuated population did not come into the employment statistics either. As this population was very numerous and some time elapsed before it could be absorbed into productive work, the actual unemployment was considerably larger than is shown by the statistics. By degrees, however, an ever increasing proportion of the evacuated population obtained employment, so that at the end of the year not more than about 164,000 individuals, mostly children and old people, or 42.1 per cent of this category of the population were supported by the State.

The higher cost of living caused a general rise in wages during the year. The rises were very unequal in different spheres: they referred principally to the lowest rates of wages, besides which the size of wage-

earners' families was also taken into account in some spheres. On an average the rise of the cost of living index exceeded the increase in wages, so that real wages decreased. Agreements regarding higher wages were effected by means of negotiations between employers and workmen, and no labour disputes occurred during the year.

Foreign trade. During the war foreign trade was paralysed and even after the conclusion of peace it remained insignificant. It was not until some trade agreements had been concluded in the summer and autumn that imports began to get under way, so that during the last months of the year their value approached the pre-war level. Exports, which had fallen off even more than imports, also grew livelier towards the end of the year, though they did not come anywhere near the ordinary pre-war level. Foreign trade was thus smaller than it had been for a long time both as regards value and, still more, in regard to quantity. The trend in recent years is shown in the following table, in which the figures for 1940 refer exclusively to civil imports and exports.

Year	Imports Mill. mk	Exports Mill. mk	Total foreign trade Mill. mk	Surplus of im- ports (-) or exports (+) Mill. mk	Volume % (1935 = 100)	
					Imports	Exports
1935	5,344.4	6,240.5	11,584.9	+ 896.1	99.5	100.1
1936	6,369.0	7,222.6	13,591.6	+ 853.6	120.7	111.1
1937	9,306.4	9,379.7	18,686.1	+ 73.3	144.3	117.2
1938	8,607.3	8,398.0	17,005.3	-209.3	138.3	102.0
1939	7,572.6	7,710.3	15,282.9	+ 137.7	106.7	93.9
1940	5,179.6	2,871.2	8,050.8	-2,308.4	61.0	29.9

The value of foreign trade as a whole was thus 7,232.1 million marks less than in 1939 and fully 10,500 million less than in the record year of 1937. We have to go as far back as the depression in 1931 and 1932 to discover a smaller trade. The value of foreign trade in 1940 thus amounted to only 52.7 per cent of the corresponding value for 1939. Imports maintained their position better than exports. The value of the former was reduced by 2,393.0 million marks and dropped to 68.4 per cent of the corresponding value for 1939, while the latter fell off by 4,839.1 million marks and amounted to only 37.2 per cent of the value of exports for the previous year. These results were also due in part to higher prices. The

quantities imported and exported decreased even more than the corresponding values, as is shown in the last columns of the above table, the volume of imports to 57.2 per cent and the volume of exports to 31.8 per cent of the volume for the previous year.

Owing to the value of exports decreasing much more than the value of imports, the balance of trade proved exceptionally adverse. Whereas the balance of trade during the last decade had recorded a surplus of exports for every year except one, and frequently a very considerable surplus, there was a surplus of imports for 1940 amounting to 2,308.4 million marks. If trade in other than civil goods had been included, the balance of trade would have turned out considerably more unfavourable than is shown by the official statistics. — It is also worth mentioning that gifts of goods from abroad, the total value of which has been estimated at about 500 million marks, are for the greater part not included in the trade statistics. On the other hand, the value of the gold that was sold abroad, altogether 590 million marks, is not included in them either.

In connection with the description of the trend and position of trade some figures concerning exports have been given above. In addition a survey is given below, showing the share of the different branches of trade in exports in recent years. Re-exports are not included in these figures.

Year	Timber industry Mill. mk	%	Paper industry Mill. mk	%	Agriculture Mill. mk	%	Other branches Mill. mk	%
1935	2,710	43.8	2,516	40.6	561	9.1	406	6.5
1936	3,053	42.7	2,900	40.5	668	9.3	539	7.5
1937	4,178	45.1	3,630	39.1	747	8.0	727	7.8
1938	3,385	40.6	3,458	41.5	839	10.1	653	7.8
1939	2,856	37.0	3,378	43.8	781	10.1	695	9.1
1940	1,247	43.4	958	33.4	204	7.1	462	16.1

All the above classes contributed towards the reduction of the total exports, though in a very varying degree. Proportionately the exports of agricultural produce fell off most, viz., by 73.9 per cent, but the reduction in their value was comparatively small, only 577 million marks. The share of this class in the total exports thus decreased considerably. The same may be said of exports of paper and pulp products which fell off almost as much, viz., by 71.6 per cent. The absolute reduction in the value of these exports, 2,420 million marks, by itself represented approx-

imately half of the fall in value of the total exports. Exports of timber products did not decrease as much, for the value of exports dropped by 1,609 million marks or 56.3 per cent of the value in 1939. Exports of »other branches» were reduced least, the decrease being only 233 million marks or 33.5 per cent. The comparative importance of the two latter classes among the total exports was in such circumstances greater in 1940 than generally during the preceding years.

The distribution of imports is illustrated by the following table, in which imports are divided according to their purpose.

Year	Articles of consumption				Articles for productive purposes			
	Foodstuffs and luxuries		Finished products of industry		Raw materials and semi-finished products		Means of transport, machinery etc.	
	Mill. mk	%	Mill. mk	%	Mill. mk	%	Mill. mk	%
1935	823.3	15.4	1,095.1	20.5	2,433.0	45.5	993.0	18.6
1936	986.4	15.5	1,231.1	19.3	2,958.9	46.5	1,192.6	18.7
1937	1,176.4	12.6	1,826.2	19.6	4,299.7	46.2	2,005.3	21.6
1938	1,200.3	14.0	1,913.3	22.2	3,570.9	41.5	1,922.8	22.3
1939	963.5	12.7	1,791.3	23.7	2,959.9	39.1	1,857.9	24.5
1940	1,188.5	23.0	578.8	11.2	2,612.7	50.4	799.6	15.4

The distribution of imports in 1940 was entirely different from normal years. As it was indispensable to restrict imports, efforts were made principally to import essential goods and to restrict imports of such goods as it was easier to dispense with in the existing conditions. Thus the considerable decrease in the total imports was mainly due to a great reduction both of finished products of industry and of means of transport, machinery etc., the decrease in the former class amounting to 1,212.5 million marks or 67.7 per cent and in the latter to 1,058.3 million or 57.0 per cent. On the other hand imports of raw materials and semi-finished products, which were necessary in order to maintain Finnish production, only fell off by 347.2 million marks or 11.7 per cent. Imports of foodstuffs were in an exceptional position, as they had to be increased on account of the acuteness of the food situation. Thus the value of imported foodstuffs exceeded the corresponding value in 1939 by 225.0 million marks or 23.4 per cent.

The trend of imports and exports in each month is illustrated by the following table which also includes the surplus of imports for each month.

	Imports Mill. mk	Exports Mill. mk	Surplus of imports Mill. mk
January	199.7	135.4	64.3
February	123.8	94.5	29.3
March	164.0	69.1	94.9
April	225.2	69.6	155.6
May	470.2	157.8	312.4
June	589.4	226.8	362.6
July	469.8	304.9	164.9
August	464.7	277.4	187.3
September	468.4	307.1	161.3
October	632.7	376.8	255.9
November	692.0	403.9	288.1
December	679.7	447.9	231.8
Total	5,179.6	2,871.2	2,308.4

Home trade was insignificant at the beginning of the year, but grew appreciably livelier later on. Wholesale trade for the whole year was 3—4 per cent larger than in 1939 and 1938. It is evident that the increase was a result of the rise in prices and that trade in 1940 was less than in the previous years as regards quantity.

The money market. The money market, which had been severely strained at the beginning of 1940, rapidly grew easier during the first few months of the year, and in spite of a setback during the summer the relaxation characterised the trend until the end of the year. The cause of this plentiful supply of money did not consist in any great accumulation of capital, but in the fact that factory and trade stocks were realised and the funds thus liberated were received by the Joint Stock banks either for the redemption of debt or as deposits on cheque accounts. The trend is illustrated by the following table.

The deposit accounts of the public increased fairly well at the beginning of the year, but during the latter half of the year, when deposit business is always poorer than during the first half, they fell off again, partly in consequence of the nervousness evoked among some depositors by the decision of the Diet that 10 per cent of the deposits should be withheld for payment of the Capital Levy. Nevertheless, at the end of 1940 deposits amounted to 529.4 million marks more than at the beginning of the year,

The money market during 1934—1940 in million marks.

whereas in 1939 their total had been reduced by 608.7 million. The increase in cheque accounts was much greater or 2,221.1 million marks for the above reason and because business houses and private individuals in general tried to prepare for heavier payments than usual, as against only 515.2 million in the previous year. The actual deposits in the Joint Stock banks thus increased during the year by 2,750.5 million marks in all or more than ever before. In consequence of deposits increasing in this way the Joint Stock banks redeemed all their re-discounted bills and other loans obtained from the Bank of Finland during the first few months of the year. This trend is apparent in the rapid reduction of the borrowing of the Joint Stock banks from other Finnish credit institutions up to the end of February, and the decrease would have been still greater and would

¹⁾ Including loans on security to credit institutions.

have continued, if other deposits made by Finnish credit institutions, consisting chiefly of cash funds paid into the Savings banks, had not increased simultaneously.

As the credit requirements of business undertakings decreased during the year, the Joint Stock banks were able to discount Treasury bills on a fairly large scale. Altogether the credits granted by these banks increased in this way by 1,392.7 million marks in 1940. The margin of deposits in the Joint Stock banks, which had dropped to 855.8 million marks at the end of 1939, increased rapidly from the beginning of 1940 and, after a setback during the summer, again towards the end of the year, so that at the end of the year the margin of deposits amounted to 2,185.6 million. Thus the position of the Joint Stock banks had become very liquid, although it should be noted that the large deposits on cheque accounts, which could, of course, be withdrawn at any time, made their position insecure.

In other credit institutions that accepted deposits the trend of deposits was also fairly normal again after the drain in the autumn of 1939, though slightly weaker than in the »good years» of 1936—1938. In these too deposits increased very much at the beginning of the year, but were rather poor during the latter half after the setback during the summer. The trend during 1940 as a whole, in comparison with the corresponding figures for the previous years, is illustrated by the table below.

	Deposits 31 Dec. 1940 Mill. mk	Increase or decrease in 1940 Mill. mk	Increase or decrease in 1939 Mill. mk	Increase in 1938 Mill. mk	Increase in 1937 Mill. mk	Increase in 1936 Mill. mk
Joint Stock banks (deposits						
by the public)	12,149.7	+ 2,750.5	— 93.5	1,006.1	812.9	525.1

Consumers' Co-operative Societies' Savings Accounts						
	631.8	— 24.9	— 44.2	76.8	119.5	54.2
Mortgage institutions	6.0	— 0.7	+ 0.7	1.3	0.4	0.6
Total	23,294.5	+ 3,525.0	— 168.4	2,219.7	2,406.8	1,462.7

In examining the increase in deposits it should be noted that the Treasury and Helsinki Municipality, and possibly some other municipalities, issued interest-bearing taxation certificates which were bought by business undertakings and the public, funds being employed for this purpose that were mostly deposited in credit institutions in other years in anticipation of the payment of taxes. At the end of the year 5 % Treasury taxation certificates were in circulation to the value of 1,248.4 million marks.

The changes in the position of the Bank of Finland are described in the second part of this review. Here it is only worth mentioning that the position in this case was also characterised on the one hand by the abundant supply of money in the business world and especially by the easy position of the Joint Stock banks, and on the other by the large credit requirements of the Treasury.

As regards *rates of interest*, some tendencies for them to rise were visible during the year, though these failed to attain any great extent. The rise referred mainly to the investment market, where there was a great scarcity of funds seeking for investment, whereas the rates of interest on the money market remained unchanged as a rule in consequence of the plentiful supply of money.

The credit rates charged by the Bank of Finland remained unaltered throughout the year at the level, at which they had stood since December, 1934. They were as follows:

For purely commercial bills at not more than three months' date	4 %
For other bills, according to the bill and its maturity	4½—5 »
For loans on security and advances on cash credit, according to the nature of the security and credit	4—5 »

The most usual credit rates charged by the Joint Stock banks were unchanged, but, as the banks had discounted an appreciable amount of Treasury bills at a comparatively low rate, the average credit rate dropped to 5.68 per cent as against 5.88 and 5.85 per cent respectively for 1939 and 1938. On deposit and cheque accounts the majority of the Joint Stock banks paid a rate of $3\frac{1}{2}$ and 1 per cent respectively, as before, but, as

the relative importance of cheque accounts increased, the average rate decreased to 2.52 per cent as against 2.88 and 2.99 per cent for the two previous years. Most of the Savings banks paid 4 per cent interest on money on savings accounts; only 13 Savings banks in towns paid a rate of $3\frac{3}{4}$ per cent. The credit rates charged by the Savings banks remained unchanged at about 5— $5\frac{1}{2}$ per cent for the greater part. Loans on security could be granted during the year to smaller amounts than usual, so that rates of interest on them tended to rise. The rate on first-class loans on security, which had dropped fairly generally in the preceding years to 5 per cent, rose in many cases to such an extent that the rates on existing loans were raised by $\frac{1}{4}$ — $\frac{1}{2}$ per cent, while on new loans a rate of up to $5\frac{3}{4}$ per cent was charged. The rising tendency of rates of interest was also visible in the bond market. Issues of new loans were small, it is true, but in a couple of cases the rate rose as high as 6 per cent, while in the previous years bond loans had been issued at rates of $5\frac{1}{2}$, 5 and even $4\frac{1}{2}$ per cent.

The *Stock Exchange* was closed during the war and did not resume its business until April 1st. The turnover was very lively in April, and quotations for shares were considerably higher than in the autumn of 1939, but during the following months the demand declined and prices fell. In October—November the fear of inflation produced a brisker demand, the business done became livelier and prices of shares rose, but in December, when the mood grew calmer again, the turnover was also reduced. Altogether the turnover on the Stock Exchange amounted to 330.4 million marks during the year as compared with 245.3 and 221.8 million in 1939 and 1938. The index for the price of shares averaged 138 points (1935 = 100) as against 132 and 131 points for the previous years. It is worth noting that the higher quotations referred principally to industrial shares which were considered to represent real values, while prices for bank shares were considerably lower than in the previous years.

The *formation of new companies* was at a standstill during the war and only began to get under way towards the end of the year. As on the other hand some companies gave up business, the increase both in the number and capital of limited companies was less than usual during the year. This is shown in the following table.

	New companies Number	Capital Mill. mk		All companies Number	Increase	All companies Capital Mill. mk	Increase Mill. mk
1935	600	92.5		12,463	464	9,295.0	261.0
1936	679	246.5		13,025	562	9,802.5	507.5
1937	874	264.5		13,766	741	10,542.8	739.8
1938	819	153.0		14,427	661	11,021.5	479.2
1939	791	176.4		15,068	641	11,413.4	391.9
1940	433	193.4		15,371	303	11,480.8	67.4

Issues of bond loans were also small. The Government did not issue any new bond loans, but sold considerable quantities of bonds of the loans issued in 1939. The amount of outstanding bonds of the 4 1/2 per cent loan of 1939, the 5 per cent Defence Loan of the same year and the Premium Bond Loan increased by about 650 million marks in value. In addition, the municipalities of some towns and urban districts issued small bond loans to the total nominal value of about 60 million.

The data for calculating the *balance of payments* are as yet available only in part, yet on their basis some preliminary conclusions may be drawn as to how this balance turned out for 1940. In the first place it is known that the official trade statistics record a surplus of imports of 2,300 million marks in round figures. As gifts of goods came into the country to the value of about 500 million marks and gold was sold abroad to the value of approximately 600 million, it may be said that foreign trade resulted in an expenditure of 2,200 million in round figures in the balance of payments. As the balance of trade in 1939 yielded a surplus of exports of 138 million marks, the extra expenditure that thus occurred under this heading in the balance of payments in comparison with the previous year amounted in round figures to 2,340 million. It is further obvious that the increased foreign indebtedness resulted in an increase of interest payments abroad too, though according to calculations this only amounted to about twenty million marks. On the other hand, some items of income also increased. In spite of the falling off in shipping the merchant fleet earned so much in consequence of very greatly raised freights that it is calculated to have provided the country with an income about 500 million marks larger than in 1939. To this a new item of income was added, viz., the gifts and grants of the friends of Finland abroad and of Finnish citizens resident there, which were received in abundance during the days

of trial and have been estimated to amount to about 2,000 million marks, one quarter in goods and the rest in foreign currency. There is no information available regarding the other items of the balance of payments, but, if it is assumed that they remained unchanged — or if the changes are assumed to have balanced each other — it can be reckoned that the balance of payments for 1940 was about 140 million marks more favourable than the corresponding balance for 1939. As the balance of payments for the latter year recorded a surplus of income amounting to 940 million marks, it can therefore be calculated that the balance of payments for 1940 yielded a surplus of income of close on 1,100 million. This unexpectedly favourable result was principally due to the donations referred to, without which the expenditure in the balance of payments would have exceeded the income considerably. — The above calculations do not, however, include imports of war material which amounted to such large sums that the surplus in the balance of payments was thereby converted into an appreciable deficit.

The movement of capital harmonised with the negative balance of payments and was characterised by a considerable increase in Finland's foreign indebtedness. Particulars are not yet available concerning all aspects of the foreign payment position, but some circumstances referring to the trend are in any case worth noting. During the year the Government negotiated two foreign loans, one of 50.4, the other of 30.0 million Swedish crowns. Besides, \$ 18,759,000 of the »Fatcon» loan, contracted for in December, 1939, and obtained from the United States Government, were employed. The combined value of these long-term loans amounted to 1,862.4 million marks. In addition an agreement was concluded for employing Treasury bills, issued in crowns, for certain payments; at the end of the year such bills were outstanding to the value of 139.6 million marks. If the amortization of former loans, amounting in all to about 160 million marks, is deducted from this fresh indebtedness of 2,002.0 million marks, the net increase in the foreign debt is about 1,840 million. It can further be established that Finland's short-term foreign indebtedness also increased and her short-term foreign balances were reduced to such an extent that in this way too funds to the value of fully 1,000 million marks were secured for financing the large surplus of imports.

The State finances. The events of 1940 taxed the State finances heavily. The expenditure increased many times over on account of the cost of the war. Direct and indirect war expenditure was increased by the constant improvement of the defences and by such new tasks as the care of the evacuated population, the support of the wounded and of war orphans, the maintenance of the controlling apparatus etc. By this means the total State expenditure rose to a level that differed entirely from normal years, but the final amounts are not yet known.

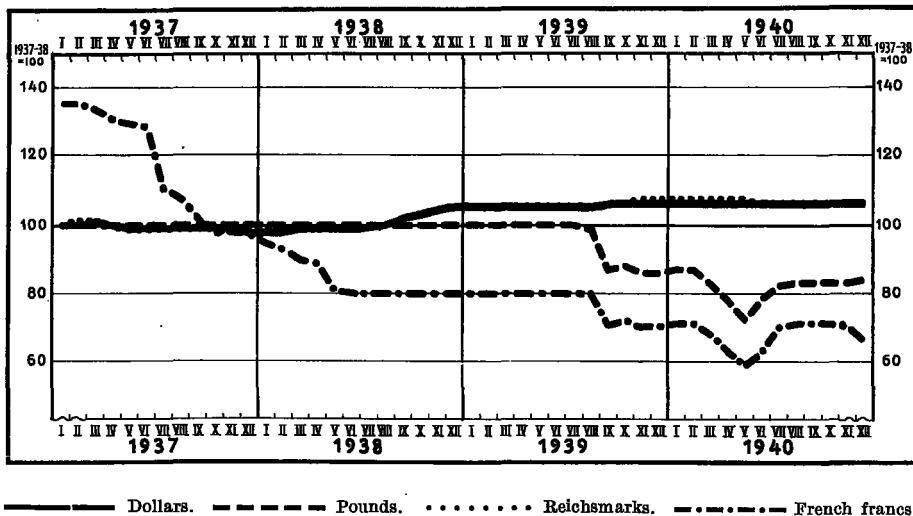

At the same time some sources of State revenue began to dry up. Customs revenue, the yield from the stamp tax and the net surplus from forestry in particular were considerably reduced. The yield of some other sources of revenue would obviously also have fallen off, if the basis of revenue had not been extended. During the autumn of 1939 several taxes were increased and new taxes were introduced, and in 1940 the screw of taxation was tightened. The income tax was raised 20 per cent and the property tax 50 per cent, the bachelor tax was doubled, an excess profits tax was introduced and subsequently raised, excise on tobacco, sweet-stuffs and beverages was increased, excise on matches was reintroduced, excise on sugar and duty on coffee were approved and the taxation of alcoholic and malt beverages was raised. Railway and postal fees were also raised.

By resorting in this way to the taxation screw the menace of a sudden reduction of State revenue was avoided, but it was impossible to balance revenue and expenditure solely by these means. In order to effect such a balance it proved necessary in Finland, as in general in all countries involved in war, to resort to credit on a large scale. Some of the indebtedness of the Treasury incurred during the war has so far not been established, so that final figures concerning the increase of the *Public Debt* cannot yet be given. The following figures provide information concerning the latest developments in the Public Debt. As already stated, the Government negotiated three foreign loans to a total amount of 1,862.4 million marks. No new long-term loans were issued in the country, but, as already mentioned in another connection, bonds of such loans as had been put on the market in the previous year were sold to the value of about 650 million marks. As all loans were amortised according to contracts, the outstanding amount of the long-term Government loans in-

creased during the year by 2,317.7 million marks or to 7,180.4 million. The greater part of the war expenditure had, however, to be covered by short-term credit. While the short-term debt of the Treasury amounted at the end of 1939 to only 757.4 million marks, the amount of this debt had grown to 9,976.8 million by the end of the next year. The greater part of this consisted of bill credits at the Bank of Finland and other credit institutions; sales of taxation certificates had brought in over 1,000 million marks, close on 170 million had been entered in the Public Debt register and bills issued in Swedish crowns were in circulation to the value of about 140 million marks, besides which the Government was as usual in debt to the Post Office Savings Bank. The total amount of the Public Debt was 17,157.2 million marks at the end of the year according to these data as against 5,620.1 million a year before, but for the reasons stated these figures are not final.

Foreign and internal value of the mark. In 1939 the basis for the external value of the mark had been altered, the stable relation of the mark to the sterling rate having been abandoned and the dollar having been taken as a basis for the quotations. Although no express decision had been passed regarding the pegging of the mark to the dollar, the rate for this currency remained unchanged throughout the year under review; the dollar rate was therefore stable at mk 49: 35 as during the last months of 1939. The value of other foreign currencies consequently depended on the stability of the relation between them and the dollar. As efforts were generally made everywhere during the war by means of Government measures to maintain the rates of foreign exchange undisturbed, the mark rates for the currencies of different countries did not fluctuate either to any large extent. Swedish, Danish and Norwegian crowns were quoted at unaltered rates throughout 1940, the sterling rate dropped during the latter half of May from mk 197: 25 to mk 157: 75, but rose again to mk 191: —, and the rate for French francs displayed almost the same trend, as it dropped at first from mk 113: 50 to mk 91: — and subsequently rose again to mk 107: —. The value of Reichsmarks also fell slightly, from mk 1,982: — to mk 1,974: 35, while Swiss francs rose from mk 1,123: — to mk 1,156: —. The trend of the principal currencies, expressed in Finnish marks, is shown in the diagram on the opposite page.

AVERAGE MONTHLY RATES OF EXCHANGE IN 1937—1940.

The internal value of the Finnish mark, as shown by the price indices, continued to move in the direction initiated by the outbreak of the war between the Great Powers. The official cost of living index, in which the period from August, 1938, to July, 1939, was introduced as a new basis, rose from 107 points in December, 1939, to 131 points in December, 1940. The advance therefore amounted to 22.4 per cent. The rise in prices according to the consumption price index of the Bank of Finland was slightly less or only 16.8 per cent. In general it may be said that this rise was very uneven in different spheres, this being due to its being produced by many different causes. Among these reference should be made to the rise in the price of imported articles and such Finnish products as required imported raw materials and requisites for their manufacture, a reduction of supply in relation to demand due to the shortage of goods and rising wages. The efforts of price policy tended to prevent a rise in prices, or in some cases to encourage output by increasing prices. It should also be noted that consumption changed appreciably in the existing circumstances owing to some goods being quite unobtainable, while only controlled quantities of others could be had, and owing to efforts to make up for this shortage in different ways, varying according to time and place, by means of goods

that were still available. In view of this the Social Research Office has drawn up another cost of living index, known as the rationing index, in which the restrictions imposed by rationing are taken into account in regard to foodstuffs. This index stood at 106 in December, 1939, and at 121 in December, 1940, so that the increase in the cost of living, calculated in this manner, amounted to 14.2 per cent.

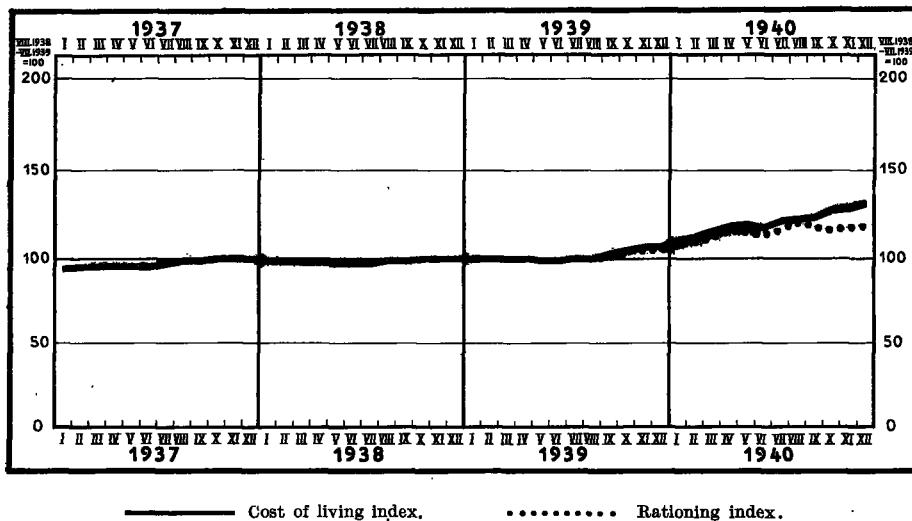

The trend of prices is also illustrated by the diagram on the opposite page; in addition the following series of indices are given, illustrating the monthly fluctuations.

	Cost of living index (Aug. 1938 —July 1939 = 100)		Rationing index (Aug. 1938— July 1939 = 100)		Consumption price index (1931 = 100)		Sensitive consumption price index (1931 = 160) Increase (+) or de- crease (—)	
	Points	Increase (+) or de- crease (—)	Points	Increase (+) or de- crease (—)	Points	Increase (+) or de- crease (—)	Points	Increase (+) or de- crease (—)
1939								
December ..	107	—	106	—	119.3	—	129.3	—
1940								
January	111	+ 4	109	+ 3	122.2	+ 2.9	133.1	+ 3.8
February ...	113	+ 2	111	+ 2	124.8	+ 2.6	137.3	+ 4.2
March	116	+ 3	113	+ 2	127.7	+ 2.9	141.8	+ 4.5
April	119	+ 3	117	+ 4	129.2	+ 1.5	144.1	+ 2.3
May	120	+ 1	116	—1	130.8	+ 1.6	146.0	+ 1.9
June	118	—2	114	—2	131.3	+ 0.5	146.4	+ 0.4
July	122	+ 4	118	+ 4	132.5	+ 1.2	147.7	+ 1.3
August	123	+ 1	123	+ 5	133.3	+ 0.8	149.0	+ 1.3
September ..	124	+ 1	120	—3	134.9	+ 1.6	151.4	+ 1.4
October	128	+ 4	118	—2	135.9	+ 1.0	152.2	+ 0.8
November ..	129	+ 1	119	+ 1	137.3	+ 1.4	154.4	+ 2.2
December ..	131	+ 2	121	+ 2	139.3	+ 2.0	156.7	+ 2.3

These figures show that the rise in prices was most pronounced at the beginning of the year. In the early summer the rise grew slower and even ceased partly, but continued again in the autumn, though at a slower pace than during the first months of the year.

To supplement the above figures the following table is given, showing the average height of the different price index numbers in 1940 in com-

COST OF LIVING INDEX AND RATIONING INDEX.
AUG. 1938—JULY 1939 = 100.

parison with the previous years. The table shows that on the whole all the series of indices give the same picture of the very great rise in prices in recent times.

	Cost of living index	Foodstuffs index	Consumption index	Sensitive con- sumption price index
1935	100	100	100.3	107.0
1936	100	99	100.0	106.4
1937	105	107	105.0	113.5
1938	108	108	107.2	114.6
1939	110	112	110.8	118.5
1940	131	137	131.7	146.8

II. THE BANK OF FINLAND IN 1940.

1. THE NOTE ISSUE.

The note issue of the Bank of Finland is illustrated in tables 1—12 in the statistical part of this volume. Table 1 refers solely to 1940, while the others also contain reviews of several previous years. With the exception of table 2, which is based exclusively on the monthly statements, and tables 6—8, which refer to the end of the year or to full years, these tables are based on both the weekly and monthly statements of the Bank.

The redemption of notes. In the conditions obtaining in 1940 the question of reintroducing the gold basis was not discussed in Finland any more than elsewhere. By a decree of December 5th the right granted to the Bank of Finland in the autumn of 1931 of not redeeming its notes in gold or in cheques made out in foreign gold currency was therefore prolonged for another year, i.e. up to the end of 1941.

The right of issue. During the year the provisions of the law of December 13th, 1939, concerning the right of note issue were in force. According to these the note circulation of the Bank of Finland, including the Bank's other liabilities payable on demand, was not to amount to more than 1,800 million marks in excess of the total of the gold reserve, the Bank's undisputed balances with its foreign correspondents, the bills in foreign currency payable abroad, the foreign bonds listed on foreign Stock Exchanges, the matured interest coupons in foreign currency, the foreign bank notes and inland bills falling due at not more than three months' date.

At the end of 1939 the right of issue of the Bank of Finland amounted to 7,067.0 million marks. At the beginning of 1940, when the bill portfolio increased, the right of issue rose rapidly and reached its highest point for the year on March 23rd at 9,057.7 million marks. During the next few

weeks the right of issue fell off again and subsequently remained as a rule 200 to 300 million below this maximum. On the last day of the year the right of note issue totalled 8,864.2 million marks; thus the increase during the year amounted to 1,797.2 million or 25.4 per cent. On an average the right of note issue amounted to 8,621.3 million marks or considerably more than in the previous years, but the averages for the latter are not comparable to the average for 1940.

The note circulation. As long as the war lasted and the Government was obliged to resort to the help of the Bank of Finland for defraying the heavy war expenditure, the note circulation grew rapidly. The amount of notes in circulation, which was 4,038.7 million marks at the beginning of the year, increased to 4,831.5 million at the end of April. During the next few months the notes in circulation decreased to some extent with normal seasonal fluctuations and dropped to 4,591.1 million marks on July 23rd. In August, when withdrawals from the Joint Stock banks and Savings banks increased, the notes in circulation began to grow once more, and on the last day of December they attained their maximum for the year at 5,551.0 million. Thus the note circulation had increased during the year by 1,512.3 million marks or 37.4 per cent. For the sake of comparison it is worth mentioning that the increase in the previous year amounted to 1,952.8 million or 93.6 per cent, i. e. it was even larger than in 1940. On an average the note circulation amounted to 4,786.0 million marks for the year as against 2,505.3 million for 1939 and only 2,091.6 million for 1938.

The recent trend of the note circulation is shown by the following figures:

	Notes in circulation		
	Highest Mill. mk	Lowest Mill. mk	Average Mill. mk
1936	1,631.0	1,269.8	1,470.9
1937	2,080.4	1,516.3	1,860.4
1938	2,308.1	1,934.0	2,091.6
1939	4,038.7	1,901.0	2,505.3
1940	5,551.0	4,022.8	4,786.0

The composition of the note circulation. The increase in the note circulation affected its composition according to denominations in such a

way that the number of large notes in circulation increased especially. The largest notes, of 5,000 marks, did not really come into circulation until 1940, although a small number of provisional notes of this denomination had been issued during the year before. As these large notes are used very little in making purchases, it seems as though they were employed to a considerable extent as a kind of article for hoarding. The number of 1,000 mark notes in circulation rose by 62 per cent and thereby attained the most important position in the note circulation, for of the notes circulating on the last day of the year close on half, 47.5 per cent, consisted of these notes which were evidently also employed for hoarding purposes. Of the 500 mark notes too a larger number, 25 per cent, were in circulation at the end of the year than at the beginning. On the other hand the employment of 100 mark notes remained unchanged on the whole, and the circulation of the 50 and 20 mark notes decreased to some extent. Of the smaller notes only the 10 mark notes, which had earlier been withdrawn from circulation, but had been reintroduced in 1939, came into general use during the year.

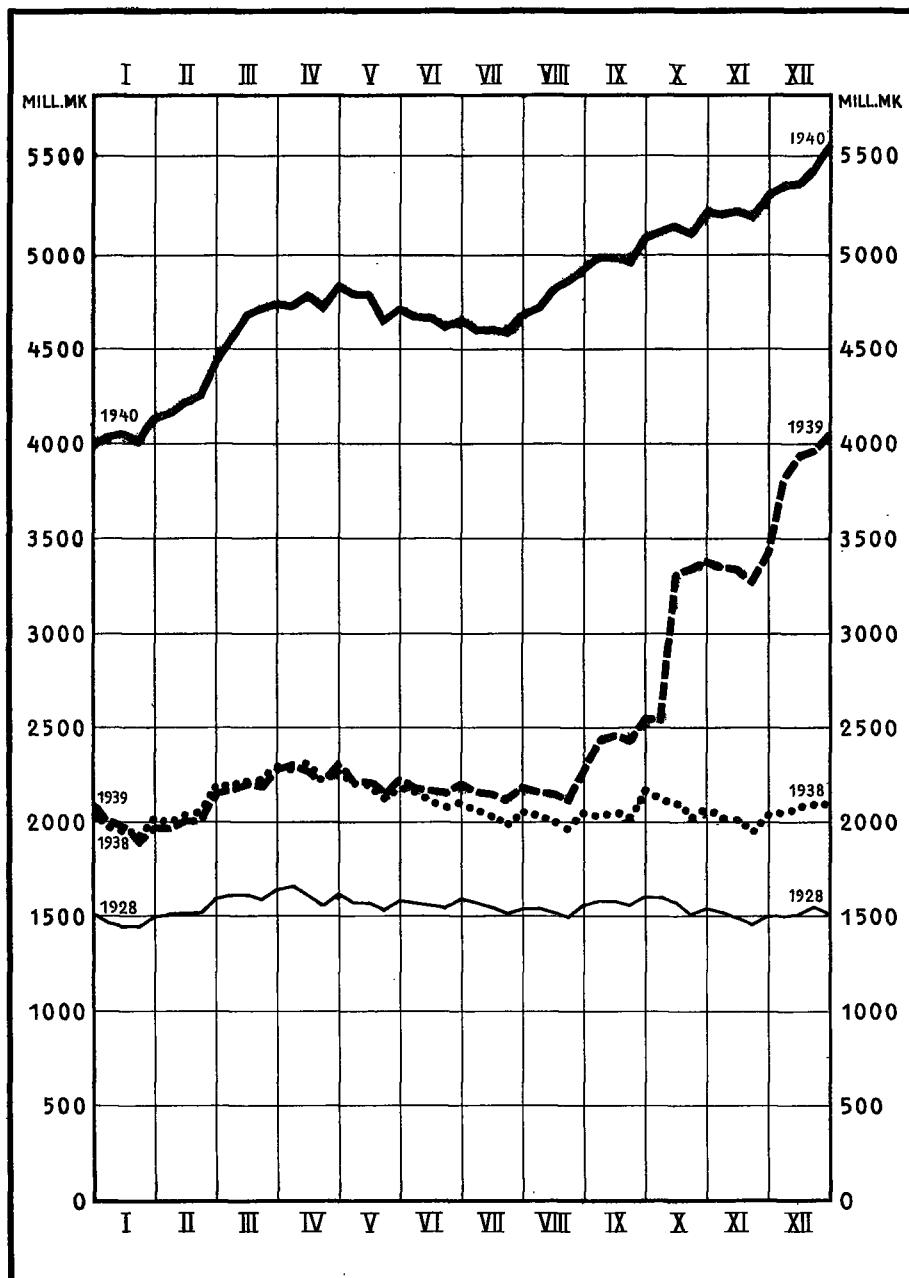

The changes that occurred will be seen in the following table which shows the number of notes of different denominations that were in circulation at the end of 1936—1940 with the exception of older issues than that of 1922.

	1936	1937	1938	N u m b e r	
				1939	1940
5,000 mk	—	—	—	4,550	67,062

5 »	166,121	159,212	154,736	151,781	146,674
Total	12,748,653	14,630,946	14,439,415	23,677,889	25,183,294

Metal coins. The demand for metal coins was also considerable during the year and their circulation increased.

This, however, does not refer to *gold coin*; such coin was not put into circulation at all, as there is no actual gold standard in force in Finland. The number of coins of this kind consequently remained unaltered. The

BANK OF FINLAND NOTES IN CIRCULATION IN 1928, 1938, 1939 AND 1940.
MILLION MARKS.

small number of gold coins withdrawn from the Bank of Finland in the course of time has mostly been used for technical purposes or has been acquired by collectors of coins. The following amounts of gold coin were «in circulation» in this manner:

	200 mk	100 mk	Total
1935	611,800: —	351,500: —	963,300: —
1936	613,400: —	352,200: —	965,600: —
1937	614,000: —	352,900: —	966,900: —
1938	640,000: —	370,000: —	1,010,000: —
1939	640,000: —	370,000: —	1,010,000: —
1940	640,000: —	370,000: —	1,010,000: —

The employment of *aluminium-bronze coins* increased, though nothing like as much as in 1939. The trend of the circulation of these coins in recent years is shown by the following table.

	20 mk	10 mk	5 mk	Total
1935	7,156,300: —	32,318,870: —	29,640,320: —	69,115,490: —
1936	9,516,120: —	34,986,430: —	33,015,005: —	77,517,555: —
1937	22,264,960: —	39,683,940: —	37,738,205: —	99,687,105: —
1938	25,880,680: —	42,208,610: —	39,051,310: —	107,140,600: —
1939	47,045,500: —	45,515,160: —	45,084,730: —	137,645,390: —
1940	49,107,100: —	45,807,450: —	48,266,755: —	143,181,305: —

The number of *nickel coins* in circulation increased considerably, and the increase would have been even greater, if the dearth of nickel had not restricted the striking of coins. In order to make good the shortage of small change the Bank proposed the temporary striking of 1 mark, 50 penni and 25 penni coins of the same size and weight as before, but of copper. An act concerning this was confirmed on December 30th, and on the same day the first lot of such copper coins was put into circulation. In the following table, which illustrates the trend of the number of nickel coins in circulation, 1 mark copper coins to the value of 84,000 marks and 25 penni copper coins to the value of 18,000 marks are included; the newly struck 50 penni coins were not yet issued during the year.

	1 mk	50 p	25 p	Total
1935	30,839,955: —	8,699,481: 50	8,018,417: —	47,557,853: 50
1936	33,607,461: —	9,412,599: —	8,637,478: 75	51,657,538: 75
1937	38,684,842: —	10,710,375: —	9,653,754: 75	59,048,971: 75
1938	41,505,322: —	11,510,274: 50	10,486,702: 25	63,502,298: 75
1939	43,052,288: —	12,333,695: 50	11,328,070: 50	66,714,054: —
1940	49,687,187: —	14,032,585: —	12,677,171: 50	76,396,943: 50

Of the various small coins in *copper* the following amounts were in circulation according to the statistics:

	10 p	5 p	1 p	Total
1935	3,504,775: 80	3,499,316: 55	738,920: 67	7,743,013: 02
1936	3,682,898: 50	3,616,143: 85	738,563: 46	8,037,605: 81
1937	3,927,399: —	3,799,499: 75	738,274: —	8,465,172: 75
1938	4,168,938: 30	3,953,425: 15	738,168: 04	8,860,531: 49
1939	4,395,076: 40	4,139,178: 40	737,622: 74	9,271,877: 54
1940	4,631,927: 80	4,229,706: —	737,521: 99	9,599,155: 79

The size and appearance of the 10 penni and 5 penni coins were also altered by the act referred to, but the new coins were not put into circulation before the end of the year.

At the end of the year metal coins were in circulation to the total value of 230.2 million marks. As the corresponding amount at the end of 1939 was 214.6 million marks, the increase amounted to 15.6 million or about 7 per cent. If all the outstanding metal coins and notes are added up, the following amounts are obtained, indicating the total amount of money in circulation at the end of recent years:

	Mill. mk
1932	1,175.0
1933	1,286.7
1934	1,394.0
1935	1,506.1
1936	1,768.3
1937	2,220.0
1938	2,266.4
1939	4,253.3
1940	5,781.1

Thus the total amount of circulating money increased in 1940 by 1,527.8 million marks or about 36 per cent, whereas the increase in 1939 had amounted to approximately 88 per cent.

It has been impossible in these calculations to deduct lost notes and coins, the quantity of which is probably considerable, especially in the case of small notes and small coins.

The manufacture and destruction of notes. As the note circulation was large and increased during the year, considerable quantities of new notes were required. Altogether 16,806,000 such notes were manufactured in the note-printing works to the total value of 2,963.3 million marks. The number of new notes was thus less than in 1939, when it amounted to 22,293,000, but considerably larger than was usual in the previous years. In regard to value, however, the printing of notes was larger than in 1939 which had recorded the highest annual amount up to then, 2,851.3 million marks, and also appreciably larger than generally in recent years.

The burning of notes was larger both as regards number and value than in 1939, but less than in 1938. Altogether 7,057,911 old notes were destroyed in this way as against 6,421,584 and 10,385,882 notes in 1939 and 1938. The total value of the burnt notes was 846.1 million marks as compared with 521.1 million in 1939 and 1,022.1 million in 1938. In comparison with the printing of notes, the destruction of notes was exceptionally small during the last two years. The number of notes burnt in 1940 and 1939 represented only 42.0 and 28.8 per cent of the number of notes manufactured during those years, whereas the corresponding proportion was 101.5 for 1938, 63.3 for 1937, 87.7 for 1936 and over 100 per cent for the years before that. It is, of course, natural that the burning of notes should be relatively small in years, in which the note circulation increases very much, and comparatively large during times, when the note circulation is reduced.

The note reserve. The difference between the right of note issue and the total liabilities payable on demand indicates at any given time the unused right of issue of the Bank of Finland, also known as the note issue reserve or, shortly, the note reserve.

At the beginning of the year the note reserve was very large, 2,023.1 million marks. In January it recorded a temporary reduction, but then grew again and reached the highest point for the year on March 23rd at 2,522.2 million marks. During the whole of the spring and summer the note reserve remained large, but in the autumn it began to decline and at the end of December it dropped to the lowest point for the year at 1,234.9 million. It was then 788.2 million marks or 38.9 per cent lower than a year before. This great reduction was due to the increase in the note circulation and in other liabilities payable on demand. On an average the note reserve amounted to 2,099.1 million marks for the year and was therefore considerably larger than in the previous years, the corresponding averages for which were 1,271.1 and 332.2 million. It should be noted, however, that these averages are not commensurable, seeing that the regulations for the Bank were considerably amended both in December, 1938, and in December, 1939.

The relative strength of the note reserve, i.e. its proportion to the right of note issue as a whole, to the notes in circulation and to the total liabilities payable on demand, moved during the year in the same direction as its absolute amount. At the beginning of the year the note reserve represented 28.6 per cent of the right of note issue and 40.1 per cent of the liabilities payable on demand, but at the end of the year only 13.9 per cent of the former and 16.2 per cent of the latter. These proportions are, however, not less than in some previous years.

2. COVER FOR THE NOTE ISSUE.

The Bank of Finland's cover for the note issue is shown in tables 13—20, all of which are based on the weekly and monthly statements.

The funds, against which the Bank is entitled to issue notes, are enumerated on page 26. Of these assets the Bank had, as before, no foreign bonds listed on foreign Stock Exchanges in its possession in 1940. The principal changes in the other assets representing the note cover are described below, each category separately.

The gold reserve. As the demand for foreign currency was very large owing to the conditions obtaining at the beginning of the year, the Bank of Finland found it advisable to sell part of its gold reserve abroad with a view to increasing its reserve of foreign currency. By this means the value of the gold reserve was reduced in the first week in March to about half its amount. After that the gold reserve remained almost unchanged. At the end of the year it was valued in the books at 603.8 million marks and was consequently 575.1 million less than at the beginning of the year. On account of the amount of some other assets, enabling the Bank to issue notes, increasing during the year, the importance of the gold reserve as a part of the cover was reduced even more than its value. At the beginning of the year 22.4 per cent of the total cover consisted of the gold reserve, but on the last day of the year this proportion had dropped to 8.6 per cent.

Credit balances with foreign correspondents. At the beginning of the year the credit balances of the Bank of Finland with its foreign correspondents amounted to 1,726.1 million marks. The reserve of foreign currency was thus fairly abundant, but the demand for foreign exchange was also very urgent under the existing conditions. Week by week the reserve of foreign currency decreased and was reduced to 1,056.3 million on February 23rd. The subsequent sale of a part of the gold reserve increased the reserve of foreign currency, so that on March 8th it increased to 1,605.8 million, but then it fell off again rapidly, already by the end of the first week in April to 1,088.6 million. During the following months the fluctuations were very slight until a fresh reduction started in the late summer with the result that on September 8th the reserve of foreign currency decreased to 853.4 million marks, the lowest point for the year. Thanks to the negotiation of a foreign loan, it improved again and amounted on the last day of the year to 1,177.2 million marks. In the course of the year it had therefore been reduced by 548.9 million or 31.8 per cent. Obviously, the reserve of foreign currency would have experienced still greater pressure and would have decreased even more, if the clearing system had not been adopted in foreign trade with so many countries.

On an average the credit balances of the Bank of Finland with its foreign correspondents amounted to 1,155.8 million marks; for the pre-

vious years the corresponding averages were appreciably higher or 2,069.3 million for 1939 and 2,144.0 million for 1938.

The relative importance of the reserve of foreign currency as a factor in the note cover was considerably reduced during the year, like that of the gold reserve, for at the end of 1939 foreign exchange represented 32.8 per cent, but a year later only 16.7 per cent of the note cover as a whole.

Inland bills. In addition to the gold reserve and the reserve of foreign currency, which have formed the cornerstones of the note cover for years, only internal bills are of any particular importance in the cover for the note issue. These bills are dealt with later at greater length in connection with the credits granted by the Bank of Finland. Here it is only worth mentioning that this class of cover recorded a greatly increasing importance in consequence of the appreciable increase in discounting bills during the year. Already at the beginning of the year the inland bills represented a strikingly high proportion or 44.8 per cent of the total cover for the note issue. By the last day of the year this proportion had grown to 74.7 per cent, so that at that date these bills constituted by far the most important part of the cover.

Foreign bills. Formerly, foreign bills were of some importance from the point of view of the note cover, but since the outbreak of the war between the Great Powers other methods of trade and payment have come into use, while the employment of foreign bills has been restricted to insignificant proportions. At the beginning of the year under review the portfolio of the Bank of Finland contained foreign bills to the value of only 1.9 million marks; their amount remained insignificant throughout the year and even dropped to 0.3 million in March. In December there was a slight increase in the bill portfolio, but despite this the value of these bills did not exceed 6.8 million on the last day of the year. The average for 1940 was only 2.0 million marks as against 71.7 and 70.3 million for the previous years.

Foreign notes and coupons. The foreign notes and coupons, the amount of which had also been low in the previous years, were of equally small importance for the note cover. This item varied in the Bank's statements between 0.5 and 3.2 million marks and averaged 1.9 million.

3. HOME LOANS.

The fluctuations in home loans granted in various forms by the Bank of Finland are shown in table 23. The total amount of home loans at the end of each month during 1933—1940 is given in table 24.

Direct credits. The direct credits granted by the Bank of Finland did not experience the same seasonal fluctuations in 1940 as in normal times, their trend being characterised mainly by the credit requirements of the Government. For this reason credits increased rapidly during the first months of the year, from 2,186.0 million marks at the beginning of the year to 5,518.6 million on March 23rd, when the maximum for the year was reached. Thus, in scarcely three months, the increase amounted to 3,332.6 million marks or 152.5 per cent. As loans to the Treasury grew during this time from 600.0 to 3,900.0 million, this increase was almost entirely a result of the Government's credit requirements during the war. For the next few months the direct credits of the Bank of Finland remained at this level or slightly below it. On the last day of the year these credits amounted to 5,348.9 million marks, so that the increase for the whole year totalled 3,162.9 million or 144.7 per cent. As the amount of Government credits had not altered, it is evident from these figures that the credits granted to others than the Government had decreased during the year by 137.1 million marks. This was due to business concerns redeeming some of their credits, when their stocks were exhausted. The same thing refers to some industrial undertakings, while at the same time some others, on the contrary, increased their borrowing. In addition, some credit institutions' own bills were included in the direct credits at the end of 1939 and were redeemed during the first half of the year.

The trend of the direct credits granted by the Bank of Finland in recent years is illustrated by the following figures.

	Highest Mill. mk	Lowest Mill. mk	Average Mill. mk
1936	1,027.8	802.6	945.9
1937	1,156.0	948.3	1,046.9
1938	1,586.6	1,082.4	1,416.9
1939	2,186.0	1,074.1	1,295.2
1940	5,518.6	2,229.1	5,032.9

The direct credits of the Bank of Finland are granted in three ways: by discounting bills, granting loans on security and making advances on cash credit. Of these, the discounting of bills is incomparably more important than the others, and its importance was on the increase during the year. Last year on an average 98.1 per cent of the direct credits referred to bills, 1.0 per cent to advances on cash credit and 0.9 per cent to loans on security.

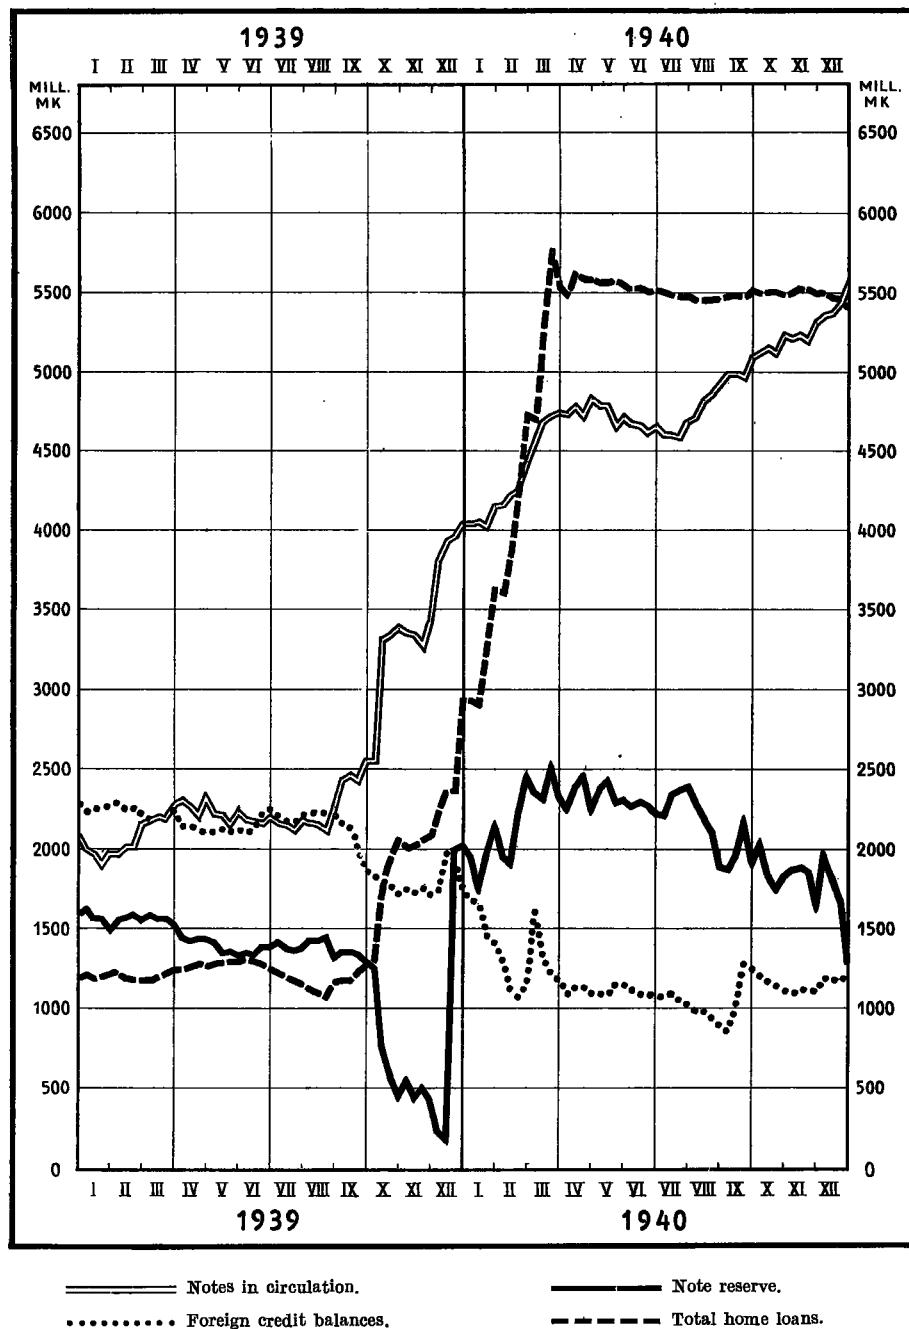

The amount of *bills directly discounted* in the possession of the Bank of Finland at the beginning of the year amounted to 2,042.6 million marks. In the following months the value of the discounted bills rose rapidly with the same kind of fluctuations as referred to above in connection with the total amount of the Bank's direct credits. The highest point for the year, 5,422.8 million marks, was reached on March 23rd, after which the amount of these bills fell off again to 5,274.9 million at the end of December. As already stated, a considerable part of the bills directly discounted by the Bank of Finland was composed of Treasury bills.

The credits granted by the Bank of Finland in the form of *advances on cash credit* amounted to 162.2 million marks at the beginning of the year and to 176.5 million at its end. However, an appreciable part of the advances on cash credit was not utilised. The sums drawn on cash credit at the beginning of the year under review amounted to 93.0 million marks, but subsequently this amount decreased week by week. The lowest point for the year, 25.4 million marks, occurred on November 8th, after which the total increased again, so that at the end of December it represented 32.9 million or 60.1 million less than a year before. On an average the amount drawn on cash credit in 1940 was 47.9 million marks as against 68.8 and 65.7 million respectively for the two previous years.

The amount of *loans on security* granted to others than credit institutions was 50.4 million marks at the end of 1939. During 1940 only slight changes occurred in the amount of such loans. On the last day of the year these loans totalled 41.2 million marks, so that they were then 9.2 million lower than a year before. On an average loans on security represented a total value of 47.9 million marks as against 38.2 million for 1939 and 57.7 million for 1938.

Loans to credit institutions. As the money market became strained in consequence of the events in the autumn of 1939 and the credit institutions

THE PRINCIPAL ACCOUNTS OF THE BANK OF FINLAND IN 1939-1940.

were forced to resort to the help of the Bank of Finland, the amount of *re-discounted bills* had risen to 314.9 million marks by the end of that year. The stringency began to relax, however, at the beginning of 1940, as was evident from the fact, e.g., that the bills re-discounted by the Joint Stock banks decreased rapidly already in January. By April 23rd the re-discounted bills had been redeemed entirely and did not figure subsequently in the statements of the Bank of Finland.

Loans on security to credit institutions, which had amounted to 424.2 million marks at the beginning of the year, were also appreciably reduced during the first half of the year, so that on June 8th they had fallen off to 42.5 million. Subsequently these loans increased again to some extent and at the end of the year they amounted to 47.0 million. It should be noted that at that date the Joint Stock banks had redeemed such loans entirely and that only some loans to Savings banks in towns remained, which they were unable to repay owing to the heavy withdrawals and the poor accumulation of savings.

The *total credits* granted by the Bank of Finland were higher in 1940 than in any previous year, as the above description shows. At the end of 1939 they amounted to 2,925.1 million marks, then rose up to March 23rd, when the maximum for the year was reached at 5,748.1 million, and subsequently remained on a slightly lower level until the last day of the year, when their amount was 5,395.9 million and was consequently 2,470.8 million or 84.5 per cent higher than a year before. On an average the total credits of the Bank amounted to 5,175.3 million marks as compared with only 1,431.7 and 1,416.9 million in 1939 and 1938.

4. BONDS.

In addition to the actual credits referred to above, the Bank of Finland also invests capital in bonds. The changes in the bonds held are shown in columns 12 and 13 of table 23, which give particulars separately for bonds issued in Finnish currency and bonds issued in foreign currency.

During 1940, when the bond market was inert, much smaller changes occurred in the bonds held by the Bank of Finland than generally in the

previous years. New bonds were bought to the value of only 103.3 million marks, whereas the value of purchases in 1939 had amounted to 393.8 million. The value of sold and drawn bonds totalled 74.3 million marks. The valuation of the holdings of bonds, which was 646.7 million marks at the beginning of 1940, amounted at the end of October to 686.7 and at the end of December to 676.2 million. Thus the increase in their value during the year represented only 29.5 million. — The bonds were valued in the books at low rates as a rule.

Bonds in Finnish currency. At the beginning of 1940 the Bank of Finland held bonds in Finnish currency belonging to loans issued by the Finnish State, Finnish municipalities, credit institutions and industrial undertakings to the value of 324.6 million marks. During the first half of the year the bond portfolio was reduced somewhat, but in October it increased again rapidly, the value of these bonds amounting to 381.6 million marks. At the end of the year the Bank held bonds in Finnish currency to the value of 369.7 million marks, so that the increase for the year amounted to 45.1 million. At the end of 1939 50.2 per cent of the booked value of bonds referred to bonds in Finnish currency; by the end of 1940 this proportion had risen to 54.7 per cent.

Bonds in foreign currency. Last year, as before, the Bank of Finland held a considerable quantity of bonds in foreign currency issued by the Finnish State, Finnish municipalities and business undertakings. At the beginning of the year they were valued in the books at 322.1 million marks. While fluctuating in various directions, the value of these bonds fell off gradually and amounted to 306.5 million at the end of the year. Thus the value of the bonds issued in foreign currency had decreased by 15.6 million, principally by means of bonds being drawn.

5. LIABILITIES PAYABLE ON DEMAND.

The liabilities of the Bank of Finland payable on demand during 1940 are dealt with in table 22 which is based on both the weekly and monthly statements.

The liabilities payable on demand may be divided into three main classes according to their nature, viz., notes in circulation, other actual sight liabilities and undrawn balances of cash credits.

Notes in circulation. The most important part of the liabilities payable on demand consists of the notes in circulation; in view of their special importance they have been dealt with separately in chapter 1. In this connection it need only be mentioned that the relative importance of the notes in circulation increased in 1940. On an average they represented 73.4 per cent of the total liabilities payable on demand, whereas the corresponding average for 1939 was 65.4 and for 1938 57.7 per cent.

Current accounts. The next main class in the order of importance among the liabilities payable on demand, the amounts deposited on current account, varied according to the existing circumstances. These current accounts, on which the Bank of Finland does not pay any interest, are divided into two rather unequal groups: current accounts due to the Treasury and current accounts due to others.

The fluctuations of the *Treasury's balances on current account* give a clear idea of the financial difficulties of the Government at various dates. At the end of 1939 there were 26.0 million marks on this account, but subsequently the Treasury's account — with two exceptions — was exhausted throughout the year. The Treasury even overdrew its account at times by considerable sums. On an average there were only 1.7 million marks on this account, whereas the corresponding average for 1939 was 155.3 million and for the two previous years 268.0 and 295.3 million marks.

On the *current accounts with others* than the Treasury, the main part of which consists of the cash of the Joint Stock banks, larger amounts were deposited in 1940, when the money market grew easier, than in 1939. At the beginning of the year under review the balances on these accounts amounted to 685.7 million marks. This total began to increase already during the first months of the year and rose by degrees to 1,439.7 million on May 23rd. Subsequently the balances on these accounts fell off again, the reason being to be sought partly in the taxation certificates issued by the Treasury and Helsinki Municipality and partly in withdrawals from the accounts of the Joint Stock banks for other causes. On December

8th the lowest point for the year was reached at 554.0 million marks, but later larger sums were again deposited on these accounts, so that the balances on them at the end of the year amounted to 834.1 million or 148.4 million more than at the beginning of the year. The average for the year was 1,042.0 million marks as against 817.1 million for 1939 and 1,061.6 million for 1938.

Bank-post-bills. The actual liabilities payable on demand also include the bank-post-bills issued by the Bank of Finland. The striking increase in business in bank-post-bills is shown in the following table:

	Issued Mill. mk	Redeemed Mill. mk	Outstanding at end of year Mill. mk
1933	890.1	910.9	6.6
1934	1,114.0	1,110.8	9.8
1935	1,343.6	1,341.2	12.2
1936	1,814.6	1,803.4	23.4
1937	2,347.8	2,349.1	22.1
1938	2,627.7	2,624.9	24.9
1939	2,854.0	2,811.8	67.0
1940	3,510.1	3,520.5	56.6

Business in bank-post-bills increased very much in 1940, so that the trend continued in the same direction as in the previous years. The value of the bank-post-bills issued was 23.0 per cent higher than in 1939 and approximately four times as high as in 1933, when business in these bills was insignificant on account of the general depression. The value of the outstanding bank-post-bills was at its highest on January 15th, when it amounted to 127.6 million marks, and lowest, at 15.6 million, on May 23rd. On an average such bills issued by the Bank were in circulation to the value of 38.7 million marks, i.e. appreciably more than in the two previous years, for which the averages were 21.0 and 17.1 million respectively.

Bills collected. Under this heading sums are included in the statements of the Bank of Finland that have come in through the collection of bills and have not yet been accounted for. The bills entrusted to the Bank for collection were almost exclusively foreign bills. Altogether they represented a value of 159.3 million marks during 1940. Thus the amount of

such bills was considerably higher than in 1939, when it totalled 74.1 million. The liabilities involved by the collection of bills and appearing in the statements of the Bank were quite insignificant, averaging only 0.7 million marks for 1940.

Foreign correspondents. The liabilities of the Bank of Finland to foreign correspondents consist of the balances of these correspondents in Finnish currency (conti loro), the amount of which is in general comparatively small. At the beginning of 1940 these liabilities, which form part of the liabilities payable on demand, amounted to 68.2 million marks and remained at approximately this level during the first months of the year. After dropping during the summer to 20.7 million on June 23rd this amount began to rise, increasing especially in the autumn, and totalled no less than 295.0 million marks at the end of December. It had thus increased during the year by 226.8 million marks or more than fourfold, besides which it was much larger than ever before. On an average the liabilities to foreign correspondents amounted to 105.8 million marks, whereas the corresponding averages for the two previous years were only 25.2 and 36.1 million. The great increase on this account is connected with the fact that the foreign indebtedness of the country grew appreciably during the year, as already shown.

Foreign clearing accounts. The balances on the foreign clearing accounts, of which the Bank of Finland has charge, are also included among the liabilities payable on demand. At the beginning of 1940 this account showed an indebtedness of 25.5 million marks. After decreasing in January, this debt began to grow and reached its highest point at 338.4 million marks on the last day of the year. This appreciable increase was a natural consequence of imports from those countries, with which Finland has clearing agreements, being larger than Finnish exports to them. On an average these liabilities amounted to 187.0 million marks as against 52.8 and 44.6 million for the two previous years.

Sundry accounts. These accounts represent various liabilities, among which reference should be made to advances, i.e. sums received for disbursement before the due date. The amount of liabilities entered on this

account was 63.6 million marks at the beginning of the year, but began to rise at once and remained at a considerably higher level throughout the year. At the end of the year these liabilities amounted to 410.1 million marks; their total had therefore increased by 346.5 million or more than sixfold. On an average the liabilities on »Sundry accounts» amounted to 248.1 million marks during the year under review, whereas the corresponding average for 1939 was 165.9 and for 1938 only 22.9 million.

Undrawn balances on cash credit. The balances of advances on cash credit granted by the Bank of Finland which have not been utilised, but can be withdrawn at any moment, form a separate class among the liabilities payable on demand. This amount was at its lowest at 69.2 million marks at the beginning of the year but increased gradually, when the money market became easier, and amounted to 143.6 million on the last day of the year, i. e. to more than double. On an average the undrawn balances on cash credit amounted to 112.4 million marks for the year as against 89.7 and 85.6 million for the two previous years.

6. BALANCE SHEET AND FUNDS OF THE BANK.

The balance sheet of the Bank at the end of the year. The balance sheets of the Bank of Finland at the end of 1933—1940 are given in table 30, which is drawn up in accordance with the results published in the annual reports of the Bank.

The balance sheet total of the Bank, which has increased rapidly as a rule in recent years, again grew very much owing to the changes that occurred in the various accounts of the Bank in consequence of the events of 1940. While the balance sheet total amounted to 4,783.2 million marks at the end of 1937, it had risen to 5,325.4 million at the end of 1938, to 6,809.0 million at the same date in 1939 and finally to 9,492.3 million at the end of 1940. The increase during the year under review was thus 39.4 per cent as against 27.9 per cent in 1939. Since 1937 the total of the annual balance sheet of the Bank of Finland had almost doubled its amount, which clearly indicates the exceptional conditions, under which the business of the Bank was carried on during the last few years.

Most of the items in the balance sheet of the Bank and the changes in them have already been dealt with. The growth of the Bank's own funds has, however, still to be discussed.

Funds of the Bank. The Bank of Finland's own funds during 1876—1940 appear in table 33.

The Capital of the Bank of Finland, which was raised to 1,250.0 million marks in December, 1938, has remained unaltered since then. The Reserve Fund, however, which is increased annually by a fixed part of the profits according to the regulations for the Bank, was raised again in 1940. At the end of 1939 this fund amounted to 469.8 million marks, but at the beginning of the year under review half the profit for 1939 or 51.2 million marks was transferred to it automatically. By a decision of the Diet of November 22nd, 1940, the Reserve Fund was further increased by that part of the other half of the profit that exceeded the sum included in the Budget, so that altogether the Reserve Fund was increased by 52.5 million marks. Thus, at the end of 1940, it amounted to 522.3 million marks. In accordance with the same principle the Reserve Fund was increased in the first statement for the current year to 623.6 million marks by half the profit for 1940 or 101.3 million being automatically transferred to it.

In addition to the actual Reserve Fund the balance sheet of the Bank of Finland includes a special fund corresponding to the value of the premises and furniture, which has been maintained unaltered at 12.0 million marks. If this is taken into account, the total amount of the Bank's own funds is 1,885.6 million marks at present.

7. EARNINGS AND EXPENSES AND DISPOSAL OF PROFITS.

Earnings and expenses. The earnings and expenses of the Bank of Finland during 1933—1940 are seen in table 31, which constitutes a summary of its Profit and Loss accounts published in the annual reports.

The total earnings of the Bank of Finland in 1940 amounted to 230.5 million marks or 100.3 million more than in 1939. They were consequently larger than in any previous year. The great increase in earnings was principally due to larger grants of credit. The Bank received 159.6 million marks in interest on home loans or 96.9 million more than in 1939 and considerably over 100 million more than in 1934—1937. In making a comparison with 1939 it is further visible that the interest earnings on bonds amounted to 48.9 million marks or 1.7 million more than in the latter

year and that 17.2 million marks were earned in commission or 7.8 million more than in 1939. The Bank also made a profit of 4.4 million marks on foreign exchange business in 1940, while in 1939, on the contrary, there was a considerable loss under this head. In contrast to other earnings, however, interest from foreign correspondents fell off, actually as much as from 10.8 million for 1939 and still higher sums for the previous years to 0.3 million for 1940. The reduction was due to the majority of the correspondents ceasing to pay interest on foreign deposits.

The changes in the items of expenditure were less than in the items of income. The expenditure on salaries and wages rose from 10.2 to 10.5 million marks on account of the increase of staff, pensions from 0.9 to 1.0 million, and miscellaneous expenses from 2.7 to 2.9 million. Owing to the growth of the note circulation the printing of bank notes caused a considerable increase in expenditure, viz., from 3.9 to 5.3 million. The greatest changes were caused by the conversion of the loss on foreign exchange into a profit, which represented a decrease in expenditure of 9.0 million marks, and by the writing off of 7.5 million marks on the Profit and Loss account. This was a result of the reduction of the Bank's credit balances in consequence of the cession of territory in so far as it was established in the course of 1940. The writing off of this amount did not, however, dispose of all the losses that the Bank may possibly suffer for the same cause on the very considerable credits granted by the Bank to various business undertakings working in the ceded territory. As data are not yet available as to the extent of the losses of these undertakings nor as to the compensation they are to receive or of the value of their assets that may be left over on the Finnish side of the frontier, it was not considered advisable to take into account in the balance sheet those losses that the Bank may possibly sustain in connection with these credits.

The total actual expenditure amounted to 27.9 million marks and was therefore almost equal to the expenditure in 1939, but considerably higher than in the previous years as a rule.

The Profit and Loss account yielded a net profit of 202.6 million marks. This was almost twice as large as for 1935—1939 and considerably larger than for any previous year. The figures for the last ten years are as follows:

	Net profits Mill. mk
1931	110.7
1932	115.2
1933	112.4
1934	111.4
1935	100.2
1936	101.3
1937	101.6
1938	104.6
1939	102.5
1940	202.6

Disposal of profits. The disposal of the profits of the Bank of Finland during 1900—1940 is shown in detail in table 32.

It has already been mentioned that half of the profit for 1940 or 101.3 million marks was transferred to the Reserve Fund in accordance with the regulations for the Bank. The State Budget contains an amount of 100.0 million marks as revenue out of the profits of the Bank. An amount of 1.3 million marks remains on the account of undisposed profits pending the decision of the Diet as to its disposal.

8. CLEARING OPERATIONS.

The clearing operations of the Bank of Finland in 1940 and their progress in previous years will be found in tables 34 and 35. The former of these refers to clearing operations at the head office, the latter to similar operations at the branch offices.

The progress of the clearing operations in recent years is shown in the following review:

Year	Bank-post-bills				Cheques				Total	
	Number	%	Mill. mk	%	Number	%	Mill. mk	%	Number	Mill. mk
1933	747,954	53.1	5,508.9	30.6	661,784	46.9	12,498.2	69.4	1,409,738	18,007.1
1934	685,159	45.5	5,812.5	27.4	819,659	54.5	15,430.9	72.6	1,504,818	21,243.4
1935	665,685	41.8	6,509.3	27.5	928,020	58.2	17,184.8	72.5	1,593,705	23,644.1
1936	650,805	38.1	7,250.5	26.6	1,055,790	61.9	19,977.9	73.4	1,706,595	27,228.4
1937	673,142	35.1	9,197.7	24.6	1,242,813	64.9	28,240.6	75.4	1,915,955	37,438.3
1938	682,839	33.9	9,450.4	24.7	1,334,278	66.1	28,737.9	75.3	2,017,117	38,188.3
1939	611,047	31.6	8,005.8	21.3	1,323,240	68.4	29,638.5	78.7	1,934,287	37,644.3
1940	447,299	29.0	7,905.1	18.6	1,096,678	71.0	34,686.8	81.4	1,543,977	42,591.9

During the first few months of 1940 clearing business was less than in the previous years, but in April it grew livelier and recorded a larger monthly turnover than before. In regard to value the clearing operations increased from 1939 by 4,947.6 million marks or 13.1 per cent and were therefore larger than in any previous year. But, although this business had increased as regards value, it proved less than in previous years as regards the number of bank-post-bills and cheques cleared. The number of bank-post-bills, which had fallen off year by year for a long time, was greatly reduced during the year under review, while at the same time their total value decreased. The number of cheques also fell off appreciably, even below the corresponding number for 1937—1939, but the total value of cheques recorded a fresh peak. Thus the shifting of the centre of gravity in clearing business towards an ever increasing employment of cheques continued in 1940.

As before, bank-post-bills were smaller in value on an average than cheques. It was characteristic of the trend in 1940 that the average size of both cheques and bank-post-bills increased considerably, of the former from 22,398 marks in 1939 to 31,629 marks in 1940 and of the latter from 13,102 marks to 17,673 marks during the same time.

Clearing operations were carried on during 1940 at the head office and at the branch offices at Turku (Åbo), Vaasa (Vasa), Oulu (Uleåborg), Tampere (Tammerfors) and Jyväskylä. At the branch office in Viipuri (Wiborg) clearing business had already been suspended before the end of 1939 and was not resumed in 1940. The clearing business done at the head office in the latter year amounted to 34,585.2 million marks, at the branch offices to 8,006.8 million. The share of the former therefore represented 81.2 and of the latter 18.8 per cent of the total clearing operations. The proportion between the clearing business of the head office on the one hand and of the branches on the other was thus exactly the same as in 1939, although the number of branch offices, in which clearing operations were carried on, had been reduced.

III. THE FINNISH JOINT STOCK BANKS IN 1940.

The conditions prevailing in 1940 that have been described in the first part of this volume, also characterised the position of the Joint Stock banks. The effects of the war and the economic difficulties were felt in many ways in their business. The cession of territory and the consequent losses suffered by customers and the loss of securities caused several of the Joint Stock banks heavy losses which had not yet been finally established last year. On the other hand the appreciable easing of the money market during the year under review is also clearly visible in the balance sheets and results of the Joint Stock banks.

Number of banks and banking offices. The number of Joint Stock banks transacting business, which had remained unchanged for many years, was reduced last year from nine to eight. This was due to Savo-Karjalan Osake-Pankki, most of the business of which was transacted in the territory ceded by the peace treaty, experiencing such insuperable difficulties that the shareholders decided to place their bank under administration.

The number of banking offices decreased considerably for the same reason. There were 44 branches of Joint Stock banks in the ceded territory, all of which were closed and amalgamated with other branches that continued to carry on business. Besides, 20 branches of Savo-Karjalan Osake-Pankki that were situated within the present borders of Finland and 3 branches of other banks were closed. On the other hand 9 new branches were opened, some of which were intended to replace the offices in the ceded territory. Thus there were altogether 451 offices of Joint Stock banks at the end of the year under review, of which 168 were established in towns and 283 in rural districts.

The course of banking business is dealt with below on the basis of the figures contained in the official banking statistics. The latter include

the bank referred to, which had gone out of business, so that they concern 9 banks as in the previous year. Besides, the tables 41—44 in this Year Book illustrate the home deposits and home loans of the Joint Stock banks and their foreign payment position in 1933—1940.

The Joint Stock banks' financial position and own funds. If we combine the balance sheets for December 31st, 1940, of the banks that carry on business, and compare them with the corresponding figures for the three previous years, we obtain the following table:

<i>Assets</i>	1937 Mill. mk	1938 Mill. mk	1939 Mill. mk	1940 Mill. mk
Cash	1,316.9	1,234.4	809.2	1,854.4
Finnish credit institutions	313.8	268.4	273.1	282.0
Foreign correspondents	247.7	337.2	282.7	202.2
Foreign bills	116.5	117.4	33.9	0.3

Loans	4,076.6	4,583.8	4,860.3	5,060.0
Cheque accounts	2,526.7	2,589.9	2,872.2	2,134.3
Bonds	1,368.5	1,418.0	1,255.1	1,655.3
Shares	189.8	173.8	157.3	140.1
Bank premises and shares in bank premises	251.2	254.0	269.1	327.7
Other real estate	14.4	13.6	11.7	11.3
Furniture	7.0	4.2	1.4	1.2
Sundry assets	397.0	481.3	447.7	578.5
Total	12,517.6	13,246.0	13,178.0	16,073.5
<i>Liabilities</i>				
Share capital	824.3	824.3	824.3	824.3
Reserve funds	588.9	594.0	597.3	598.9
Other funds	97.5	103.5	109.5	126.0
Deposits	6,872.9	7,549.0	6,940.3	7,469.7
Cheque accounts	1,613.7	1,943.7	2,458.8	4,680.0
Finnish credit institutions				
Deposits	913.2	893.6	1,201.5	706.6
Cheque accounts	630.4	368.5	165.0	631.9
Foreign correspondents	271.9	309.5	145.1	143.5
Bank-post-bills	207.4	207.6	174.9	396.8
Sundry liabilities	397.3	342.6	468.9	419.0
Profits	100.1	109.7	92.4	76.8
Total	12,517.6	13,246.0	13,178.0	16,073.5

The grand total of the balance sheets of all the Joint Stock banks amounted to 16,073.5 million marks and was larger than in any previous year. The increase in 1940 represented 2,895.5 million marks or 22.0 per cent. The total turnover on cash accounts also increased, though relatively less, viz., by 35,524.4 million marks or 10.1 per cent. The turnover in cash amounted to 387,303.6 million marks or more than in the previous years.

The banks' own funds at the end of 1940 and the changes in them during the last few years are shown in the following table:

	31 Dec. 1940 Mill. mk	1940 Mill. mk	M o v e m e n t	
			1939 Mill. mk	1938 Mill. mk
Share capital	824.3	—	—	—
Reserve funds	598.9	+ 1.6	+ 3.3	+ 5.1
Pensions funds	60.8	+ 2.1	+ 0.8	+ 0.2
Undisposed profits	65.7	+14.4	+ 5.7	+ 5.8
Profit and Loss Account	76.8	—15.6	—17.3	+ 9.6
Total	1,626.0	+ 2.5	— 8.0	+ 20.7

There was no change worth mentioning in the banks' own funds during 1940. Their capital remained unaltered, and their reserve funds were increased by only 1.6 million marks and their pensions funds by 2.1 million. The growth of the undisposed profits was slightly larger, which was a natural consequence of the fact that already at the annual meetings of share-holders in 1939 it was decided that, in view of the existing conditions, the banks should provide for possible losses. In contrast to the other items, the net profits for the year fell off, a circumstance that is dealt with later.

Home deposits and home loans. The deposit accounts of the Joint Stock banks and the changes in them will be seen from the following table:

	31 Dec. 1940 Mill. mk	1940 Mill. mk	M o v e m e n t	
			1939 Mill. mk	1938 Mill. mk
Deposits	7,469.7	+ 529.4	—608.7	+ 676.1
Cheque accounts	4,680.0	+ 2,221.2	+ 515.1	+ 330.0
Finnish credit institutions				
Deposits	706.6	— 494.9	+ 307.9	— 19.6
Cheque accounts	631.9	+ 466.9	—203.5	—261.9
Total	13,488.2	+ 2,722.6	+ 10.8	+ 724.6

Deposits in the Joint Stock banks increased to a larger extent during the year under review than ever before. The total increase amounted to 2,722.6 million marks or 25.3 per cent, whereas in 1939 it had been quite negligible and in 1938 very modest. More significance attaches, however, to the changes that occurred in the composition of the deposits. It will be seen from the above table that the actual deposits by the public increased less than in 1938, but more than in 1939, when deposits decreased appreciably. The cheque accounts of the public increased very differently, for they were almost doubled. While, at the end of 1939, the cheque accounts represented only 26.2 per cent of the deposits which the banks had received directly from the public, the corresponding proportion at the end of 1940 had risen to 38.5 per cent. The credit balances of other Finnish credit institutions moved in the same direction: deposit accounts fell off and cheque accounts increased. It should be noted that in the first few months of the year under review the Joint Stock banks redeemed the credits they had obtained from the Bank of Finland, while at the same time other credits received from Finnish credit institutions grew, principally owing to the increase in the cash of the Savings banks. It can therefore be established from various points that there was a distinct tendency towards greater liquidity. This is intelligible in view of the fact that the greater part of the increase in the deposits with the Joint Stock banks originated from a definite source: from the conversion of the stocks of business firms and factories into cash. The majority of the business concerns were anxious to keep these released funds in such a form that they could be easily withdrawn, when an opportunity presented itself again for replenishing stocks, for which reason they were either deposited on cheque accounts or employed for reducing indebtedness.

The home credits granted by the Joint Stock banks are shown in the following figures:

	31 Dec. 1940 Mill. mk	1940 Mill. mk	M o v e m e n t 1939 Mill. mk	1938 Mill. mk
Finnish credit institutions	282.0	+ 8.9	+ 4.7	— 44.9
Inland bills	3,826.3	+ 1,922.0	+ 134.3	+ 78.0
Loans	5,060.0	+ 199.7	+ 276.5	+ 507.2
Cheque accounts	2,134.3	— 737.9	+ 282.3	+ 63.2
Total	11,302.6	+ 1,392.7	+ 697.8	+ 603.5

The credits granted by the Joint Stock banks also increased very much during the year under review, while at the same time considerable changes occurred in their composition, partly of such a nature as is not visible from the figures of the above table. The total credits increased by 1,392.7 million marks or 14.1 per cent. The increase referred chiefly to inland bills. Their total was fully doubled, so that the bill portfolio, which represented 19.2 per cent of the credits of the Joint Stock banks at the end of 1939, amounted to 33.9 per cent a year later. The indebtedness of other Finnish credit institutions and loans increased slightly, while cheque accounts were reduced by about one-quarter. These changes were due to the fact that the demand of the business world for credit was small throughout the year and customers reduced their indebtedness to the banks to a considerable extent. By this means the Joint Stock banks were able to grant the Treasury considerable short-term credits, chiefly by means of discounting bills.

The investments of the Joint Stock banks in bonds are not included in the credits. In the course of the year the banks' holdings of bonds increased, according to the valuation in the books, by 400.2 million marks or 31.9 per cent and amounted to 1,655.3 million marks at the end of the year. The increase was principally due to the Joint Stock banks having purchased considerable quantities of taxation certificates from the Treasury, whereas the quantity of other bonds in the portfolio was reduced. The total value of Government bonds at the end of the year represented 43.3 per cent of the total nominal value of the bonds held.

Cash and cash reserves. During the latter half of 1939 the money market had grown very strained, but at the end of the year the strain began to relax and the position rapidly became easier. This was shown partly by the redemption of credit obtained from the Bank of Finland and partly by the growth of the cash of the banks. The total cash of the Joint Stock banks, which amounted to 809.2 million marks on the last day of 1939, increased to 1,320.9 million by the end of May and, after falling off in the summer, grew again in the autumn, reaching 1,854.4 million marks at the end of December. The cash had thus increased by 1,045.2 million marks or 129.2 per cent in the course of the year.

The change in the liquidity of the Joint Stock banks is clearly evident, if their cash and cash reserves are compared with their total liabilities payable on demand. The former consist of the cash of the banks, funds deposited on current account in the Bank of Finland, extraneous bank-post-bills and cheques and the banks' net credit balances in other banks, commercial bills in foreign currency payable abroad, bonds in Finnish currency issued or guaranteed by the State and bonds listed on foreign Stock Exchanges. The liabilities payable on demand include all the indebtedness of the banks payable at sight and the undrawn amounts of credits granted on cheque accounts. If we combine these figures for December 31st in the last few years, we obtain the following table:

	1937 Mill. mk	1938 Mill. mk	1939 Mill. mk	1940 Mill. mk
Cash	1,316.9	1,234.4	819.9	1,854.4
Cash reserves	1,333.9	1,241.1	624.9	1,243.9
<hr/>	<hr/>	<hr/>	<hr/>	<hr/>
Total	2,650.8	2,475.5	1,444.8	3,098.3
 Undrawn on cheque accounts	1,229.3	1,445.5	1,523.2	2,349.2
Other sight liabilities	2,715.3	2,839.2	3,099.6	6,030.0
<hr/>	<hr/>	<hr/>	<hr/>	<hr/>
Ratio of cash and cash reserves to sight liabilities	%	%	%	%
	67.2	57.8	31.3	37.0

The sight liabilities of the Joint Stock banks increased during the year under review by 81.3 per cent, but their cash and cash reserves comparatively still more or by 114.4 per cent. As a result the proportion of the latter to the former improved from 31.3 to 37.0 per cent. Although the liquidity of the banks had not yet attained the high level, at which it had stood in 1936—1938, it is worth noting that it is much better than the law demands, for according to law it is sufficient for the cash and cash reserves together to represent 20 per cent of the liabilities payable on demand, while at the end of 1940 the proportion was actually almost twice as high.

Foreign payment position. The foreign payment position of the Joint Stock banks is illustrated by the following table:

<i>Claims</i>	31 Dec. 1940 Mill. mk	Movement			1938 Mill. mk
		1940 Mill. mk	1939 Mill. mk	1938 Mill. mk	
Foreign correspondents					
Nostro	201.7	— 72.5	— 48.8	+ 80.5	
Loro	0.5	— 8.0	— 5.8	+ 9.1	
Foreign bills	0.3	— 33.6	— 83.5	+ 0.9	
Total	202.5	— 114.1	— 138.1	+ 90.5	
<i>Indebtedness</i>					
Foreign correspondents					
Nostro	36.9	+ 8.2	— 18.7	+ 9.2	
Loro	106.6	— 9.8	— 145.7	+ 28.4	
Total	143.5	— 1.6	— 164.4	+ 37.6	

The settlement of foreign accounts that had begun in 1939 in consequence of the war between the Great Powers, continued in 1940. As foreign trade had fallen off and the financing of imports and exports was organised in a growing number of cases on the basis of a clearing system, the former methods of payment lost their significance. The foreign balances of the Joint Stock banks decreased in such circumstances by 114.1 million marks, while in the case of their indebtedness the reduction was only 1.6 million. By this means the net foreign balances of the Joint Stock banks were reduced from 171.5 million marks at the beginning of the year under review to 59.0 million at its end.

Deposit and credit rates. No great changes occurred during the year in the rates of interest maintained by the banks. As in the year before, the Joint Stock banks paid a rate of $3\frac{1}{2}$ per cent on six months' deposits and 1 per cent on cheque accounts with the exception of some small banks which paid a rate of $1\frac{1}{2}$ —2 per cent. As the importance of cheque accounts, on which the rate of interest is low, increased appreciably, the average deposit rate dropped from 2.88 per cent at the end of 1939 to 2.52 per cent at the end of last year. On credits too the former rates were charged in most cases, but, as the Joint Stock banks discounted a considerable quantity of Treasury bills at a comparatively low rate, the average credit rate also fell. At the end of 1939 it was 5.88 per cent, but a year later 5.68 per cent.

The division of the deposits made by the public in the Joint Stock banks at the end of 1937, 1938, 1939 and 1940 according to the rates of interest will be seen in the following table:

		1937 Mill. mk	1938 Mill. mk	1939 Mill. mk	1940 Mill. mk
Below 1 $\frac{1}{4}$	per cent	1,610.5	1,892.3	2,276.2	4,651.7
1 $\frac{1}{4}$ —3 $\frac{1}{4}$	» »	54.0	77.4	48.0	108.4
3 $\frac{1}{2}$	» »	6,769.4	7,459.8	6,861.3	7,310.5
3 $\frac{3}{4}$ —4	» »	38.9	52.4	58.8	73.1
Above 4	» »	13.8	10.8	9.6	6.0

The corresponding division of credits is as follows:

		1937 Mill. mk	1938 Mill. mk	1939 Mill. mk	1940 Mill. mk
Below 4 $\frac{1}{4}$	per cent	681.1	721.7	463.5	678.1
4 $\frac{1}{4}$ —5	» »	849.3	1,106.9	1,048.7	1,798.6
5 $\frac{1}{4}$ —6	» »	1,969.7	3,423.9	4,153.9	4,773.1
6 $\frac{1}{4}$ —7	» »	4,482.6	3,535.0	3,812.8	3,649.3
Above 7	» »	312.6	156.3	157.0	121.5

The year's results. The income and expenditure of the Joint Stock banks are given in the following table:

<i>Income</i>		1937 Mill. mk	1938 Mill. mk	1939 Mill. mk	1940 Mill. mk
Interest		151.2	155.8	183.6	212.8
Income on bonds and shares		77.2	103.3	99.3	104.7
Agio		33.9	32.6	26.2	4.7
Recovered on claims previously written off ..		5.3	5.7	3.0	2.3
Income from bank premises		12.0	17.2	16.4	14.6
Sundry earnings		23.3	23.0	28.8	29.7
Appreciation of bank premises		—	—	—	129.5
Net loss		—	—	—	2.4
	Total	302.9	337.6	357.3	500.7
<i>Expenditure</i>					
Expenses		169.6	184.5	197.0	198.4
Amounts written off		32.0	42.2	66.6	219.8
Transferred to pensions funds		1.2	1.2	1.3	1.4
Losses of mortgage departments		—	—	—	1.9
Net profits		100.1	109.7	92.4	79.2
	Total	302.9	337.6	357.3	500.7

Owing to the cession of territory in accordance with the Moscow peace treaty, many of the customers of the Joint Stock banks sustained considerable losses, the final extent of which had not yet been established by

the end of last year. Part of the losses will be compensated, but part will have to be borne by the Joint Stock banks. In anticipation of this the banks wrote off 181.3 million marks from the credits granted in drawing up their latest balance sheets and reduced the booked value of their holdings of bonds and shares by 38.4 million, for the greater part in consequence of the cession of territory. To cover this depreciation the Joint Stock banks employed 129.5 million marks, in addition to their regular income, by raising the value of some of the bank premises.

Apart from the above, the changes in the other items of income and expenditure were small. It is worth noting, however, that the more important earnings, such as the net interest on credits and the yield from bonds and shares, were larger than formerly. At the same time the expenditure also increased, principally as a result of heavier taxation.

Eight Joint Stock banks recorded net profits amounting in all to 79.2 million marks, while one, Savo-Karjalan Osake-Pankki, showed a loss in its balance sheet.

In addition to the profits for the year under review, the shareholders' meetings of the Joint Stock banks had a sum of 65.7 million marks at their disposal, brought forward on Profit and Loss Account from former years. Besides, 61.7 million marks of the reserve funds were employed, partly by means of increasing the value of premises, so that altogether 206.7 million marks were at their disposal. The employment of these funds, in comparison with the corresponding figures for previous years, is shown in the following table.

	1937 Mill. mk	1938 Mill. mk	1939 Mill. mk	1940 Mill. mk
Distributed to shareholders	88.8	100.2	72.3	75.5
Transferred to funds	5.2	3.5	3.8	1.6
Additional amounts written off	—	—	0.4	102.4
Various public purposes	0.3	0.3	1.5	0.5
Left on Profit and Loss Account	45.6	51.3	65.7	26.7

For writing off additional amounts, principally owing to the cession of territory, 102.4 million marks were employed. In other respects the distribution of the profits differed very slightly from former years. Slightly more was distributed to shareholders than in 1939, but appreciably less than in 1937 and 1938. On the other hand the transfers to funds and

donations for public purposes were less than in 1939. Owing to the size of the sums written off, the amount carried over on Profit and Loss Account, which had grown regularly in previous years, was reduced from 65.7 million marks to 26.7 million.

Most of the Joint Stock banks paid the same dividends to their shareholders as for 1939, these being lower than in former years, and only three of the smaller banks, one of which had paid no dividend for 1939, raised the rate of dividend. The recent trend of the dividends paid by the Joint Stock banks will be seen in the following table.
