

BANK OF FINLAND

1923

YEAR BOOK

COMPILED BY THE

STATISTICAL DEPARTMENT OF THE BANK OF FINLAND

VOLUME IV

HELSINGFORS 1924

**HELSINGFORS 1924
GOVERNMENT PRINTING OFFICE.**

The fourth annual issue of the Year Book of the Bank of Finland has, in general, been compiled after the same plan as former issues. Its purpose is to give a detailed picture of the business of the Bank of Finland and the development of financial conditions in the country.

The tables are almost unchanged; only one new table has been added, table 25, which illustrates the clearing operations at the branch offices of the Bank of Finland. In the letterpress the chapter on the business of the Bank of Finland has been curtailed considerably. On the other hand the review of economic conditions in Finland, especially that part which deals with the value of Finnish currency, has been extended. These changes are due partly to the fact that the business of the Bank of Finland may now be said to have returned completely to normal forms which do not call for detailed explanation every year, and partly to the question of a return to a gold footing having come to the fore, since practically complete unanimity was reached as to the stabilising of the mark having to be carried out approximately at its present value and having to receive a gold parity as soon as conditions allow.

The tables have been compiled by *Yngvar Heikel*, M. A., Assistant Statistician to the Bank, the letterpress by the undersigned.

KAARLO J. KALLIALA, M. A.
Head of the Statistical Department

Bank of Finland, Helsingfors:

June 3, 1924.

I. SURVEY OF THE ECONOMIC POSITION OF FINLAND IN 1923.

In the course of 1923 economic conditions in Finland did not present as bright a picture as in the year before. The harvest proved worse than for many years, the money market was strained again to a great degree towards the end of the year and prices for the principal articles of export fell on the markets abroad. As against this, however, pleasing progress has also to be recorded. It is deserving of special mention that the stabilising of the value of the mark proceeded successfully and that the public finances were placed on an excellent basis.

Before going into these questions at greater length certain measures adopted by the Government in regard to the economic life of the country should be mentioned.

Economic Policy of the Government. As mentioned in former issues of this year book, the system of control over economic conditions exercised during the war had to a great extent been abandoned as early as 1921. During 1923 restrictions remained in force only in regard to the following points. In most towns maximum rents were fixed, though they were raised as from June 1st. The rent index at the end of the year was 981, while the wholesale price index stood at 1,096. Business in foreign currency was not absolutely unrestricted, but control in this respect was confined to requiring the necessary permission for such dealings and giving returns with regard to them to the bank inspectors. With respect to such returns, too, certain modifications were allowed in the course of the year.

Otherwise there were no departures from normal conditions.

In the matter of customs policy a number of changes were introduced in 1923. The revenue from import duties, the volume of imports and the price index for imported goods (not including duty) for the last four years are included in the following figures: —

	Import duties collected.							Import duties in " of value of imports	Volume of imports compared to 1913	Price index for imports
	Wheat and wheaten flour. Mill. mks.	Coffee. Mill. mks.	Sugar. Mill. mks.	Tobacco. Mill. mks.	Other goods. Mill. mks.	Total Mill. mks.				
1920 . . .	8.8	67.8	20.4	46.3	150.4	293.7	8.1	52.8	1,387	
1921 . . .	61.4	152.2	77.1	37.7	187.5	515.9	14.4	54.5	1,329	
1922 . . .	95.8	166.2	120.7	61.5	324.3	768.5	19.4	74.7	1,072	
1923 . . .	142.5	171.2	124.3	71.1	520.3	1,029.4	22.3	101.6	915	

These figures indicate that the revenue from import duties was more than trebled during 1920—23. Such an increase was principally due to the fact that the volume of imports for the same period was almost doubled, but the raising of the rates of duty also contributed to some extent to the increase. It should further be noted that the proportion of import duties to the value of imports for the period under review having risen from 8.1 % to 22.3 %, does not reflect only an increase in the rates of duty, but likewise, and in a greater measure, the rise in the value of the mark. Seeing that the rates of duty were, with few exceptions, fixed by weight or quantity and not ad valorem, the proportion of revenue to the value of the commodities increased automatically by the price of commodities, stated in marks, going down. It also followed that there was, in general, no reason to raise the rates of duty. In those cases in which increases were made, as, for instance, in 1923, these referred as a rule to commodities on which the duty was formerly very low.

The increase in customs revenue was very considerable, especially in 1923, chiefly owing to the greater volume of imports. The revenue from import duties, 1,029.4 million marks, was 260.9 million marks in excess of the corresponding revenue for the previous year and 309.4 million marks above that included in the State Budget. Import duties had thus increased to as much as, approximately, 55 % of the entire state revenue from taxes for 1923. As at the same time the Government finances allowed of an easing of the burden of taxation, a reduction in the cost of living

was desirable from the point of view of agriculture and industries working for export, and smuggling appeared to be on the increase, a lowering of the rates of duty for 1924 was deemed advisable. In connection with the Budget the Diet reduced these rates on various commodities, including coffee, tea and cocoa, by 10—20 %, besides which the Government, which has the right to raise the duty on such classes of goods as are marked with an asterisk in the Customs tariff up to fourfold the amount, reduced the rates of duty on a number of commodities by about 20—30 % by fixing smaller increases than for the year before.

Export dues which brought in 13.2 million marks in 1923, were totally abolished from the beginning of 1924. For products of the paper industry and for plywood the export duty was done away with altogether, so that since the beginning of 1924 export duty is only levied on wood-goods, mainly unworked.

Trade agreements were concluded during the year with Denmark and Iceland, Poland, Holland and Great Britain. The prolonged negotiations with regard to a trade agreement with Soviet Russia led to no result. Several agreements of minor importance with the latter country, called forth by the circumstance that the two countries adjoin each other, were, nevertheless, drawn up after fluctuating negotiations.

As regards the Government's economic policy in other respects, special mention may be made of the measures adopted for the improvement of traffic. The network of railways and roads was extended, rolling stock on the railways was added to, the harbours were improved, ice-breakers were acquired and so forth, with considerable appropriations sanctioned by the Diet.

The protracted labour of legislation with a view to providing land for the landless class of the population was completed in the course of 1923. The system of acquiring land then introduced is in many respects similar to the system adopted in England in the Land Reform Bill of 1907.

Some of the minor changes in taxation passed in 1923 are dealt with below in connection with the State finances.

Trade and Industry. For agriculture the year proved an unsatisfactory one. A cold and late spring, combined with a considerable rainfall in June, affected the rye crops unfavourably and delayed spring sow-

ings very much. A warm and drier July improved the crop prospects considerably, but in August and September some night frosts occurred, causing an almost entire failure of the grain crops in the northern and eastern parts of the country. As, however, the cultivation of grain is inconsiderable there and the frost did not, in general, affect those districts in which the real grain cultivation is carried on, a rye crop of almost average extent was, nevertheless, gathered in Finland, regarded as a whole, albeit of rather poor quality. The harvest of oats was worse. In a number of places the oats did not have time to ripen owing to late sowing and rainy weather, but was mown down as green cattlefood. The greater part of the oats crop was, however, mown, but as it rained almost uninterruptedly during the late autumn, the oats could generally not be harvested at the usual time and had to be left for a long time in sheaves on the fields, where a portion was destroyed; the rest could only gradually be got under cover early in the winter. Under such conditions the crop of oats was small and in regard to quality poor. The potato crop, too, was below the average. On the other hand, the hay crop was satisfactory in point of quantity, though not everywhere in point of quality.

It is probable that the total value of the harvest was about 700—800 million marks or about 20 % less than in years in which the crops could be described as medium.

Prices for agricultural produce were also not favourable. The flour mills sold rye flour ground from foreign rye early in the year at about Fmk 2: 70 per kilogramme, which fell in September to Fmk 2: 20. These prices did not satisfy the local producers of grain. Towards the end of the year prices rose to some extent in consequence of the drop in the value of the mark, but not as high as the level at the beginning of the year. Finnish butter fetched about 210/- per cwt in England in the early part of the year which may be regarded as a satisfactory price. But later prices fell up to the beginning of July as low as 138/-. The latter half of the year, however, recorded an almost uninterrupted rise, so that at the turn of the year 1923—24 the price was 215/-.

In the wood-refining industry 1923 was not a good year for the reason that prices for its products on the markets of the world dropped and at the same time the rate of exchange for the currency of the most important country of export, i. e. Great Britain, fell in Finland, partly owing to a

rise in the value of the mark, partly owing to a drop in the value of the pound itself.

Prices for sawn timber were, in general, satisfactory. At the beginning of the year larger exporters obtained about £ 18 per standard for 7" pine battens. During the summer, however, the market which was to some extent uncertain throughout the year, for obvious political reasons, was again weaker, among other things thanks to the prolonged dock strike in England. Competition from Eastern Europe also began to make itself felt. The price for the above class of goods was £ 16.10/-—to £ 17 in August. For thicker timber and spruce generally the price dropped rather more. Early in the year about £ 25 was paid for 3 × 9" pine planks, but only £ 20 to £ 21 in August. From the end of September to the close of the navigation the demand was again livelier, but prices did not rise further. As already stated, profits were reduced, too, by the fall in the sterling rate of exchange. During 1922 the rate for pounds in Finland stood, on an average, at 205: 88, but in 1923 at 171: 10. The quantity of sawn woodgoods exported, however, amounted to 901,300 standards or 6.3 % more than in the preceding year and only slightly less than the yearly record so far established, 903,000 standards, in 1913. The above quantity is approximately 1/3 of the sawn woodgoods imported by European countries.

Of round timber 3.2 million cubic metres were exported or 47.3 % more than the year before.

The paper industry, on the other hand, was in a more difficult position. At the end of 1922 the state of this industry, though not strikingly good, was at any rate satisfactory. In the spring of 1923, however, the paper industry was affected by the hard state of the low market. On markets abroad prices fell considerably, for certain kinds of paper as much as 10—20 %. As rates for foreign currency dropped at the same time, the total reduction in price amounted, according to the calculations of the paper millers, to about 30—35 % for an appreciable part of their production. The cause of this crisis was to be sought partly in competition from Germany, partly in increased production of paper in Canada. As one consequence of the worse conditions, three paper mills in Finland gave up paper production entirely and went over to the production of chemical and mechanical pulp as far as possible. By the end of the year

13 of the 72 papermaking machines in the country were at a standstill. Paper exports for 1923, however, amounted to 90.2 % of the exports for 1922 which shows that the falling off, nevertheless, did not attain very great proportions. In addition, the reduced paper production was compensated, as already mentioned, in part by increased production of pulp.

For the chemical and mechanical pulp industry, too, the year was not so favourable. During the first half year up to July prices were rising, partly on account of large stoppages of work in these branches of industry in Sweden and Norway, but later a fall in prices set in. Before the fall in the value of the mark in the autumn the factories' prices in marks were estimated to be about 30 % lower than at the beginning of the year. Although prices were thus unsatisfactory during the latter half of the year, exports for the whole year increased. Exports of chemical pulp amounted to 107.9 % and of mechanical pulp to 121.7 % of the corresponding exports for 1922.

The branches of industry working for the home market were also obliged to lower their prices as a result of foreign competition in many lines. In certain special branches, such as the tobacco, boot and shoe, leather and nail industries, a curtailment of production had even to be resorted to.

Labour conditions in 1923 were very peaceful and good. Excepting a suspension of work in the building trade in the capital in the height of the summer, the labour peace was not in general interrupted by labour disputes. No unemployment occurred. Even the seasonal unemployment which was so common in winter prior to the war has been reduced in recent years to a minimum. Wages were on the whole unchanged.

Foreign Trade. Seeing that in 1922 exports exceeded imports by 497.7 million marks and constituted 113 % as compared with the latter, the balance of trade for 1923 was also expected to produce a surplus of exports. This, however, was not the case, as the result of the exchange of trade with foreign countries proved, on the contrary, to be an excess of imports, amounting to 214.7 million marks, and the value of exports totalled 95 % of the value of imports. In view of the fact that Finland's balance of trade, like that of many other countries, usually shows a sur-

plus of imports, this result was in no way a novelty. The surplus of imports was, indeed, by comparison smaller than as a rule before the war.

The change in the result of foreign trade was caused principally by increased imports. The quantities exported, the »volume» of exports, for 1922 amounted to 93.5 % and for 1923 to 94.6 % of the exports for 1913; this latter proportion is the highest attained since 1913. It was due partly to the fall in prices abroad for Finnish articles of export, partly to the rise in the value of the mark, that the monetary value (F. O. B.) of exports, 4,392.5 million marks, fell short in spite of that of the corresponding value for the previous year, 4,467.6 million marks.

With regard to individual export goods, sawn and round timber, chemical and mechanical pulp, plywood, matches and hides in particular showed an increase, firewood, paper, meat, butter, and cheese, however, a reduction to some extent. Of the value of exports about 61 % was made up of timber and about 28 % of products of the paper industry.

Imports grew in point of quantity very much, namely in comparison to the 1913 imports from 74.7 % for 1922 to 101.6 % for 1923, and the value of imports (C. I. F.) from 3,969.9 million marks for 1922 to 4,607.2 million marks for 1923. The increase in imports was due to various circumstances. Above all the harvest should be mentioned, which was comparatively worse than in any previous year since 1902. The increased imports this caused as against the previous year, which amounted to about 64 million kilogrammes of grain and 44 million kg of cattlefood for the last four months of the year, totalled about 180 million marks. Part of the increased imports was caused by a continued strong extension of production. This is seen, for instance, from the fact that, whereas in 1922 metals, metal goods, machinery and apparatus were imported to a total value of 607.6 million marks, the corresponding value in 1923 was 799.8 millions. But direct consumption, too, appears to have grown to a certain extent to judge by the fact that, for instance, in such a class of imports as cloth an increase of imports occurred.

For the various months the value of imports and exports was as follows in millions of marks: —

	Import.	Export.	Excess of imports (-) or exports (+)
January	306.2	199.0	—107.2
February	261.5	150.4	—111.1
March	311.1	154.4	—156.7
April	368.0	195.5	—172.5
May	460.2	247.5	—212.7
June	421.4	529.9	+108.5
July	392.3	657.3	+265.0
August	570.0	563.8	+193.8
September	410.3	477.4	+ 67.1
October	469.9	481.2	+ 11.3
November	451.5	357.4	— 94.1
December	384.8	378.7	— 6.1
Total	4,607.2	4,392.5	—214.7

In weighing the above figures it should be borne in mind that the seasonal fluctuations in Finland's balance of payment are not as large as in the country's balance of trade. The reason for this is, partly, that timber is paid for to a considerable extent in advance, usually during November to March.

The Money Market. As was explained in the last year book, the depressed state of the money market was relieved towards the end of 1922 partly by the favourable balance of trade, partly because the advances on exports were larger than usual. A sign of this was, for instance, that the Bank of Finland lowered the bank rate on October 17th from 9 % to 8 %. The Joint Stock banks, however, reduced their rates of interest on credits only later and to a smaller degree.

This comparative easing of the money market continued for the first half of 1923 on account of deposits in the banks, more especially long-term deposits, increasing very much during the first five months of the year. The re-discounts of the Joint Stock banks were reduced in February to such an inconsiderable amount as 64.4 million marks. Foreigners' mark deposits also grew through foreign speculators in currency purchasing Finnish marks.

But the improvement in the influx of money and the lowering of the rates of interest led to the demand for credit, mainly for the sawmills and building trade, increasing considerably. For this reason and as the increase in deposits almost ceased during the summer, and besides timber sales, as stated previously, were stagnant, the money market again began to show signs of tension towards the end of the summer. Partly on this account, but chiefly for reasons of currency policy (see p. 17) the Bank of Finland raised the bank rate to 9 % on September 13th. When the position of the foreign exchanges and the inland money market recovered in October, the Bank of Finland again lowered the rate to 8 %. Before the year closed, however, a new and more appreciable raising of the bank rate was undertaken, in this case, too, for reasons of currency policy, but also owing to the state of the money market. The harvest, as was pointed out above, had already proved not so good in many places in September and to this came the added fact in the autumn that the harvesting of oats had to be put off till the winter and part of the crop was destroyed. Furthermore, the financial position in the country districts was made worse by the fact that timber merchants bought less timber than usual. The regularly occurring decrease in deposits in the autumn was, principally as a consequence of these circumstances, much more considerable this year than is customary. Foreigners' deposits in marks, too, fell off in November more than ever before in the course of a single month. The position might possibly have become very serious, if just at this time a State loan had not been negotiated, the proceeds of which in marks were deposited by the Government in the Joint Stock banks after selling the foreign currency to the Bank of Finland. In any case the reduction in actual deposits caused the two largest Joint Stock banks to raise their interest rates on deposits in November. The Bank of Finland which had been obliged to raise its selling rates of exchange considerably at the end of November, also raised its rate for this reason and on account of the falling off in deposits, this time from 8 to 10 %. With reference to this all the Joint Stock banks increased their rates of interest on credits and from the beginning of the following year also their rates on deposits. From the beginning of 1924 the rates of the various banking institutions were approximately as follows in percentage:

	Large banks. %	Other Joint Stock banks. %	Savings banks. %	Insurance companies and similar institutions. %	Post Of- fice Sav- ings bank. %
On credits	10—11 1/2	10—13	8 1/2—11	8—8 1/2	7 1/2
On deposits:					
long-term deposits	6 1/2—7	7—8 1/2	7—8 1/2	—	7
current accounts	5 1/2	5 1/2—6 1/2	—	—	—

By the end of the year indications of an improvement in the money market were visible. In fact, on March 6th of the following year the Bank of Finland lowered the bank rate to 9 %.

In addition to the foregoing a few particulars may be given here to illustrate the state of the money market.

Capital investment in shares during 1923 and the immediately preceding years will be seen from the following review drawn up by the Central Statistical Office.

	New companies.		All companies.		
	Number.	Capital. Mill. mks.	Number.	Increase.	Capital. Mill. mks.
1919	813	466.0	5,428	+ 720	2,570.9
1920	677	490.0	6,033	+ 605	3,712.6
1921	506	150.1	6,409	+ 376	4,189.7
1922	518	126.2	6,743	+ 334	4,360.3
1923	578	200.5	7,159	+ 416	4,581.2

According to these figures the issue of shares in 1923 increased both as regards number and amount of capital. On the other hand a smaller number of companies than last year went into liquidation. No new debenture stock was issued in Finland.

The turnover on the Helsingfors Stock Exchange amounted to 138.2 million marks or a little more than the year before, when the amount was 135.9 millions. Quotations, with the exception of the two last months of the year, were on an average higher than on the corresponding dates in the previous year. The number of protested bills was less in the first half year, but considerably larger in the latter half than in the previous year. In all, the number of protested bills in 1923 amounted to 5,598 as against 4,404 in 1922, and their amount to 41.2 million marks as against 36.8 million marks in 1922.

These figures would seem to indicate that enterprise and business were livelier than the year before, at any rate during the first half of the year.

The business of the Joint Stock banks is dealt with in another place in the present Year Book.

Foreign capital was introduced into the country by means of two State loans taken up in the autumn to a total sum of about 525 million marks. The bonds of one loan were placed chiefly in the United States of America, those of the other partly in England, partly in Sweden. Foreign money was paid out, on the other hand, by buying back foreigners' holdings in Finnish marks, according to bank statistics, to an amount of 161.6 million marks, but if the mark amounts purchased by the Bank of Finland for forward delivery are included, to an amount of 251.6 million marks.

Advances received by exporters and short-term loans taken up which are of considerable importance to the Finnish money market, appear to have been more general during the first half of the year, but less so than customary during the latter half.

The long-term loans from abroad guaranteed by the banks continued to decrease.

Goverment Finance. The Government finances continued to improve throughout 1923. The closing of the Government accounts for 1922, which was completed in the spring of 1923, showed a surplus of 374.9 million marks. Deducting a loan of 138.0 million marks which figures on the debit side, there still remains an actual surplus of 236.9 million marks. As a result of this favourable annual result the cash balance of the Treasury, consisting partly of actual cash in hand, partly of surplus stocks of materials belonging to Government Departments, reached 683.3 million marks at the end of 1922. The annual results for 1923 are not yet available at the time of writing, but it can, nevertheless, be said already that these will also provide a surplus produced chiefly by the fact that several of the Government's different kinds of revenue, particularly the revenue from import duties and from the State Railways, have increased appreciably this year, too. On the strength of the favourable state of the public finances the Diet, on the motion of the Government, abolished several antiquated, unproductive taxes in the autumn of 1923. A reduction in the income and

property tax proposed by the Government could, however, not be finally dealt with by the Diet for want of time. The abolition and reduction of taxes proposed by the Government were estimated to reduce taxation by about 150 million marks or about 9 % of all the State revenue from taxation.

The amount of the National Debt at the end of 1922 and 1923 and the changes in its various categories during these years is given in the following summary:

	^{31/12,} Mill. mks.	^{31/12,} Mill. mks.	Increase (+) or decrease (-) Mill. mks.
Foreign debt			
Funded	659.8	1,477.8	+ 818.0
Floating	167.1	—	— 167.1
Total	826.9	1,477.8	+ 650.9
Internal debt			
Funded	956.0	937.4	— 18.6
Floating	95.0	—	— 95.0
Total	1,051.0	937.4	— 113.6
Total National Debt	1,877.9	2,415.2	+ 537.3

It will be noted that the Government's foreign debt increased by 650.9 million marks and its internal debt decreased by 113.6 millions, so that the net increase was 537.3 million marks. The increase was caused mainly owing to two State loans (in all for 12,280,000 dollars and 1 million pounds) having been negotiated in October and a loan (for 3.3 million dollars) negotiated some years ago by the Government Grain Office now being booked as a debt of the Government.

From the foregoing data as to the state of the Government finances it is clear that State loans would not have been necessary for the Government's own requirements, unless it is, possibly, considered more right to employ means borrowed abroad for large productive undertakings (such as railways, water power installations etc.) rather than capital accumulated within the country by means of taxation. The principal object of the loans was, in reality, to provide the country with foreign currency for strengthening the Bank of Finland's supply of foreign currency and foreign capital for extending productive work or for payment of short-term loans.

A circumstance worth noting, however, is that the National Debt was funded completely during 1923. The foreign floating debt, exclusively due

to the Government of the United States of America, was converted on favourable terms into a long-term loan and the internal floating debt was liquidated entirely. The short-term credit balance due from the Government which figures in the balance sheets of the Bank of Finland, viz., 60 million marks at the end of the year, is not a loan in the actual sense of the word, but compensation promised by the Government to the Bank for certain Russian securities, now valueless, which is to be paid in the course of six years.

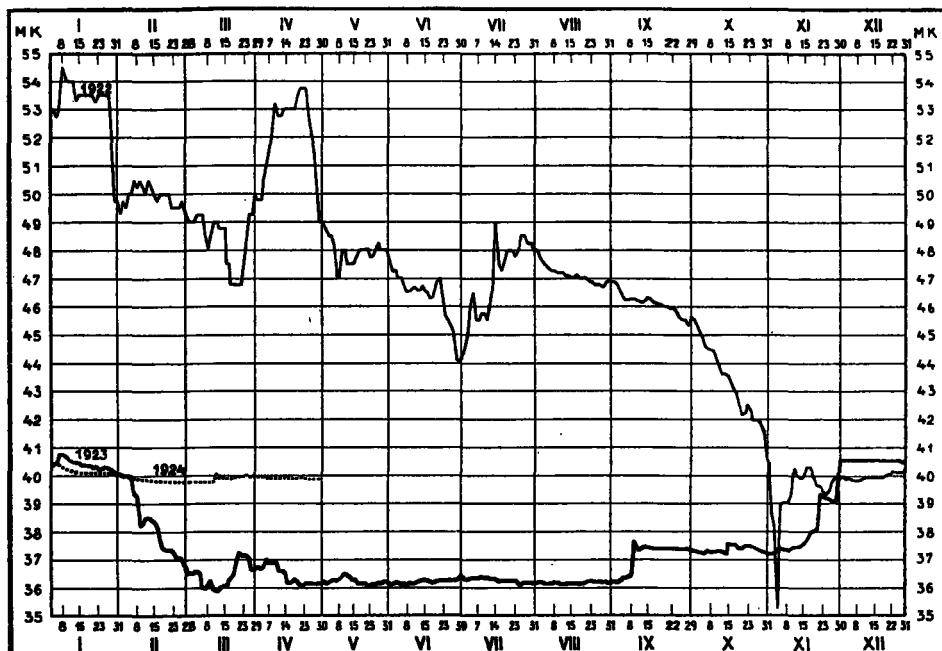

Through the Government taking up considerable foreign loans without itself for the present requiring the mark amounts which came in through their sale, the liquid means of the Treasury were appreciably augmented. At the end of 1923 the Government had deposits in the Bank of Finland and other financial institutions of over 700 million marks or a considerably higher amount than the corresponding sums of the State loans in Finnish marks which amounted to about 525 million marks.

Value of Finnish Currency. The cost of living index for Finland which is calculated in proportion to the expenditure of a workman's family before the war, and the wholesale price index worked out at the end of 1923, gave the following figures for the period from December, 1922, to the same month in 1923: —

	Wholesale price index (corre- sponding months in 1913=100).	Variation.	Cost of living index (Jan.— June 1914 =100).	Variation.
1922				
December	1,149	+ 9	1,157	- 11
1923				
January	1,134	- 15	1,150	- 7
February	1,127	- 7	1,149	- 1
March	1,108	- 19	1,147	- 2
April	1,096	- 12	1,116	- 31
May	1,093	- 3	1,096	- 20
June	1,095	+ 2	1,109	+ 13
July	1,080	- 15	1,111	+ 2
August	1,080	-	1,163	+ 52
September	1,089	+ 9	1,172	+ 9
October	1,077	- 12	1,193	+ 21
November	1,070	- 7	1,190	- 3
December	1,096	+ 26	1,170	- 20

According to these figures the cost of living index fell quite considerably from the beginning of the year up to May. This was in a great measure due to prices for dairy produce both on the markets of the world and in Finland falling, which, thanks to the method of calculating the index, influenced the total index greatly. From June to the end of the year the cost of living was again on the rise, partly on account of a rise in maxi-

DAILY RATES OF EXCHANGE FOR THE DOLLAR QUOTED BY THE
BANK OF FINLAND IN 1922—1924.

mum rents in June, partly because the same dairy produce again began to rise in price from the middle of the year. In December the index was 1.1 % higher than a twelvemonth earlier. In a measure the variations in the cost of living index represented customary seasonal fluctuations. The wholesale price index, at the same time, fell from the beginning of the year up to November as a consequence of the fall in prices principally of the products of the industries working for export, but partly also of imported goods. In December the wholesale price index rose slightly, but was, notwithstanding, 5 % lower than a year before.

Seeing that the wholesale price index is probably the better indicator of the purchasing power of money, it may, perhaps, be said that the *purchasing power of the mark within the country* in 1923 was, on the whole,

stable, but that where some variation occurred in this respect, the latter probably involved a rise.

The value of the mark abroad is best illustrated by the *rate of exchange for the dollar in Finland*. Transactions in foreign currency were absolutely free and the Bank of Finland bought and sold foreign currency at the rates it quoted without any restrictions as to amount and object.

At the end of December, 1922, the dollar exchange stood at Fmk. 40: 25 (par = 5: 18). The rate then fell to some extent and fluctuated from March to August or for the period of half a year within such narrow limits as 35: 85 and 36: 45, but rose again during September—November and stood at the end of December, 1923, at 40: 45. The foreign value of the mark thus returned almost exactly to the same level from which it started at the beginning of the year. This movement, interesting in several respects, may be dealt with at greater length.

This strong rise in the value of the mark abroad had set in during August, 1922. It was contributed to both by genuine causes as well as by speculation. Among the former the favourable trade balance and the good harvest may be mentioned. Speculation showed itself in the shape of a demand for Finnish currency which was expected to rise in value abroad, as well as in the fact that importers bought goods from abroad on credit as much as possible and exporters sold against payments in advance and took up foreign short-term loans. As foreign currency soon flowed into the country by these means in unusually large quantities, i. e. the demand for marks became very lively, the Bank of Finland was in a position, by paying higher prices for foreign currency than others and thus figuring as the cheapest seller of Finnish marks, to fix the price of the mark. In other words the rate of exchange for marks was entirely in the hands of the Bank of Finland; whereas the value of the mark abroad had formerly been influenced decisively by the quotations in Stockholm, the fixing of this value now passed to Finland itself. This state of things was made use of by the Bank of Finland in such a manner that the Bank on the one hand prevented sudden rises in the value of the mark, but on the other, as the mark had been greatly undervalued abroad, considered it feasible to allow its foreign value to rise steadily, i. e. to allow the rate of exchange for foreign currency in Finland to fall. The rate of exchange for dollars did, indeed, fall from Fmk. 48: — at the beginning of August to Fmk. 40: 25 at the end of the

year. In the interim the rate of exchange had even stood slightly lower for a short time.

During the first months of 1923 the value of the mark abroad continued its rising tendency, a circumstance to which, to a certain degree, the continued demand for marks abroad for speculative purposes helped to contribute. In consequence of the foreign mark holdings being placed (on conti lori) in banks in Finland, it was possible easily to follow the foreign purchases of marks. At first the Bank of Finland tried to prevent the foreign value of the mark from rising higher and sold marks with this object in Stockholm and to a certain extent also in London. But as the rising tendency of the mark proved very strong and there was therefore reason to suppose that an equilibrium between the foreign and home value of the mark could only be established by allowing its foreign value to rise further, the Bank of Finland desisted from its intentional measures against the rise of the mark's value. whereupon the rate of exchange for dollars at once dropped to about 36: 25, the Bank remaining inactive. At the beginning of March this rate of exchange for dollars corresponded to a sterling rate of 170—171.

That the new level of the rates of exchange was very nearly in conformity with an even balance between the home and foreign value of the mark, seemed likely from various circumstances. Apart from some products of the paper industry, exports in general were profitable. The level of prices within the country certainly fell in a slight measure and imports increased, as regards volume, to the 1913 level, but otherwise no signs characteristic of deflation were generally to be observed; on the contrary, the demand for labour, for instance, exceeded the supply, borrowing from the banks increased considerably in spite of the high rates of interest, goods traffic on the railways grew continuously, and so did clearing operations and so forth.

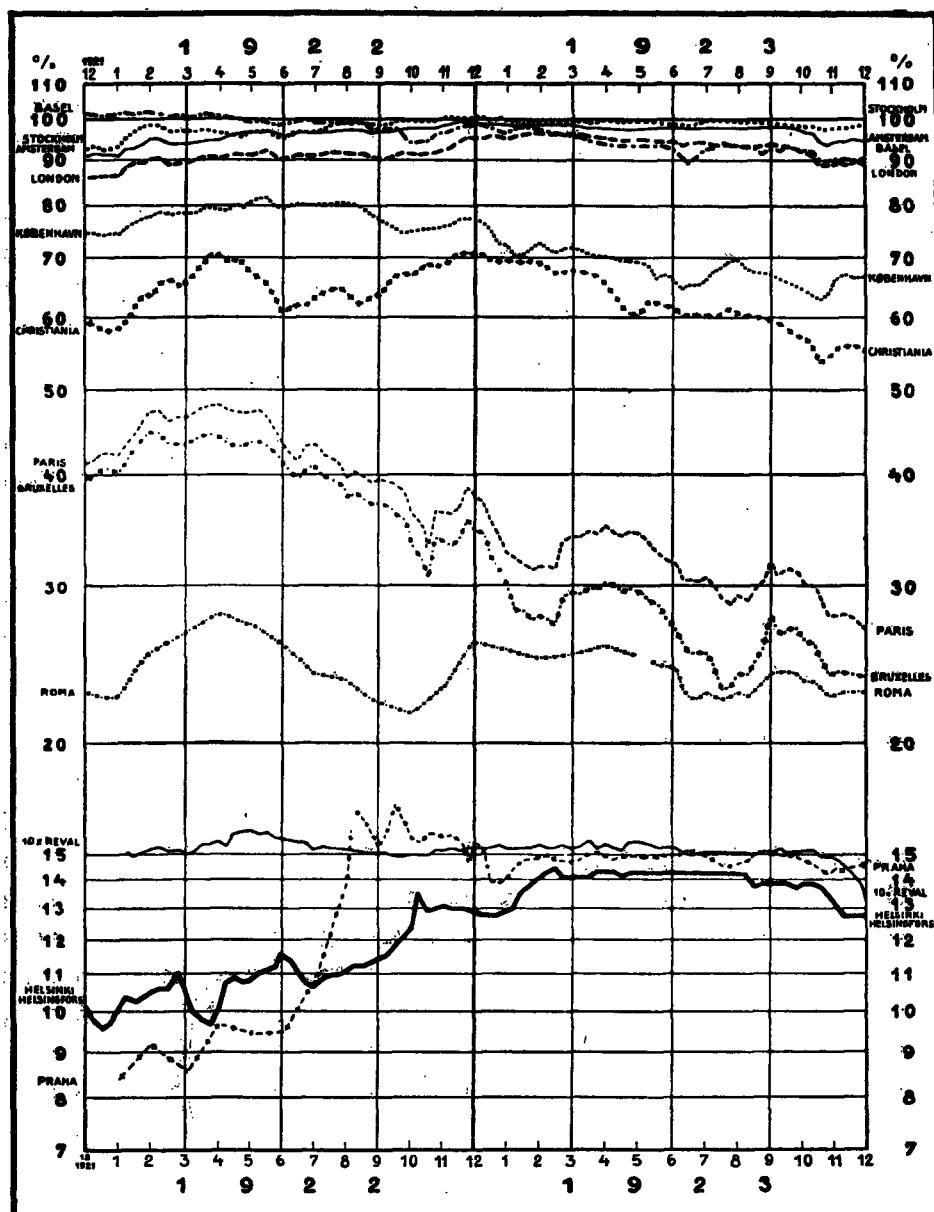

In spring it was the general impression that the foreign rates of exchange would continue to fall during the autumn and public discussions of the foreign currency question confined themselves to the problem as to what should be done, if that was the case. But the rising tendency failed to become a reality.

Shortly after the dollar rate of exchange had steadied itself at the above level, a number of foreign holders of Finnish currency started to

sell their mark holdings in Finland for foreign currency, apparently in the belief that the possibility of a gain on the exchange was no longer to be expected. Inside Finland, on the other hand, no speculation showed itself as yet, based on a fall in the value of the mark. By the sale of marks and as a considerable part of the payments for exports had already been received in advance during the previous autumn or in the course of the spring, the Bank of Finland's supply of foreign currency was reduced more and more. The former circumstance, however, i. e. the sale of marks, only made itself felt slightly at first and was in a way even desirable — at any rate as long as no too great amounts of foreign currency were employed for the purpose — as the reduction of foreigners' holdings of marks was liable to assist the stabilising of the mark's value in the future; the latter circumstance, on the other hand, was known beforehand. Besides, the supply of foreign currency at the Bank of Finland was still larger at the end of May than at the beginning of the year. Under such conditions the Bank of Finland, as the cheapest seller of foreign currency, was in a position to fix the rate of exchange for foreign currency, i. e. the lowest limit for the value of the mark, and for some months the Finnish mark was actually one of the most stable currencies in Europe. This policy also appeared capable of continuation, seeing that in the autumn an increase in the supply of foreign currency could again be looked for.

However, the expectations of a rise in the supply of foreign currency in September were not realised. During the summer foreigners' sales of marks increased considerably; in August frosts occurred in the northeastern parts of Finland; the dock strike in England caused an appreciable delay in the sales of timber; it grew clearer, too, that the balance of trade would be an unfavourable one. All this happened at a moment, when the Bank of Finland's supply of foreign currency, owing to the time of year, was at its lowest. The Bank at first attempted to prop up the rate of exchange for the mark in the hope that the difficulties were of a temporary nature. But when it became evident that the demand for foreign currency was growing more and more, since Finnish speculators, too, began to entertain doubts of the stability of the mark, and offers ceased completely, the Bank of Finland found itself obliged to abandon the level of exchanges which had been kept stable for six months. In the beginning of September the Bank raised its rates of exchange, e. g. for dollars to about 37: 35, but

RELATION OF VARIOUS FOREIGN CURRENCIES TO THE DOLLAR IN 1922—1923.

The above diagram has been calculated in accordance with the Bank of Finland's rates of exchange averaged weekly. For the time during which the Bank did not quote lire and Czechoslovakian crowns, other sources and monthly averages have been used for these currencies.

also raised the bank rate at the same time from 8 to 9 %. In October the Government negotiated foreign loans by means of which foreign currency was introduced into the country to an amount of about half a milliard. Timber sales, too, became livelier and the customary advances on exports again began to be received to some extent. By this means and for other reasons, too, the currency position became favourable and the Bank of Finland could therefore again reduce the bank rate to 8 %. Marks were again purchased for abroad in October to about 132 millions, an exceptionally large amount. The dollar rate for October averaged 37: 35.

In November, however, the position again grew worse. Owing to the general election in England and the greater fall than before of the pound, sales of timber and other articles of export were arrested. This last circumstance was particularly bad for exports, as about 40 % of Finnish exports go to England. Further, the result of the harvest which, apart from the frosts in some parts of the country, had been expected on an average for the whole country to be medium, proved considerably worse, thanks to its being impossible, owing to the incessant rain, to garner the oats in time, so that part of the crop was lost. Finally, foreign deposits began to fall off rapidly. In November about 160 million marks were sold in Finland for foreign currency or, possibly, more than ever before in the course of a month. Inside the country, too, the fears of a fall in the value of the mark were calculated to reduce offerings of and increase the demand for foreign currency. These circumstances forced the Bank of Finland on two occasions to raise the level of exchanges and partly for that reason, partly on account of the tightness of the money market, to raise the bank rate from 8 to 10 %.

Through the latter rise, which occurred on November 30th, the rate of exchange for dollars rose to 40: 50 at which point it remained fixed over Christmas. At the end of December the rate was 40: 45 or very nearly the same as a year before, when the rate was 40: 25.

The value of the mark had thus gone down again and been stabilised, at least for the present, at that level from which it began to rise at the beginning of the year. By the end of the year the Bank of Finland's supply of foreign currency, irrespective of the foreign loans taken up in the autumn, amounted to about 607.2 million marks as against 708.0 millions a year earlier. Of this difference, however, a part was only apparent, as it was

due to depreciation in consequence of writings off in the booked values. The actual difference was caused by the poor harvest and to a large extent by advances on exports and short-term foreign loans having been taken up on a more restricted scale than before, for the reasons adduced above. But for reason foreign currency may be expected in a greater degree in the next this year. In addition, the balance of foreigners' holdings in marks which, as already stated (see p. 10), had been reduced during the year by 251.6 million marks, should prove of a less fluctuating character than that part of these holdings which was either invested in Finland in 1923 or withdrawn again from the country.

During the time, about a year and a half, in which the Bank of Finland pursued a currency policy conscious of its object, it has become clear that, when the Government finances are in a healthy condition and the economic life is sound, it is possible by means of a suitable stabilising policy, employing discount policy, business in foreign currency and foreign credit as means, to achieve appreciable results not only under favourable conditions, but even when difficulties arise. The final object, however, of a foreign value of a currency varying only by a small percentage seems attainable only on the presumption that the central bank of issue, having regard to the future gold parity of such currency, selects a fixed rate of exchange in relation to some gold currency. In the absence of any such fixed rate which is known to be supported by the State bank by all available means, foreign and local speculators would be in a position, according to how the value of the country's currency appeared likely to fluctuate at any given time, to bring about such great changes in the currency market that the rate of exchange would actually move in the anticipated direction, even in such cases, when there was in reality no reason for it. To all appearances, too, speculation based on variations in the value of the mark has assumed larger proportions than previously, although the fluctuations in the value of the mark were then greater. A fall in the sterling rate of exchange, such as has been referred to, which was not succeeded by any corresponding rise in the price of woodgoods, has proved to be a highly disturbing factor, at any rate in the absence of any recognised gold value adopted as a parity by the central bank, for the efforts at stabilising the currency in such countries as Finland, for the economic life of which the sterling rate of exchange is of great importance.

II. THE BANK OF FINLAND IN 1923.

1. THE NOTE ISSUE.

The note issue of the Bank of Finland is illustrated in tables 1—10 in the statistical part of the present publication. Of these, table 1 refers only to 1923, whereas in the others a review is given partially for previous years. The tables are based on both the weekly and monthly balance sheets of the Bank, excepting table 2 which is based exclusively on the monthly returns. With regard to the latter table it should be borne in mind that the note issue is generally largest at the end of a month, although this periodically recurring increase is not so considerable in Finland as in many other countries.

The Right of Issue. According to the provisions for the note issue of the Bank of Finland, in the wording of the Bank Act of December 30th, 1921, the whole of the note circulation, other liabilities payable on demand and the undrawn amount of advances on current accounts must be fully covered by assets included in either the ordinary or the so-called supplementary cover (see table 11).¹⁾

The Bank of Finland's right of issue is equivalent to the amount of its gold reserve and foreign credit balances plus 1,500 million marks, but with the proviso that such part of the note circulation and liabilities payable on demand as is not covered by gold or foreign balances, is covered by assets included in the supplementary note cover. The right of the Bank to issue notes without cover in gold or foreign balances is thus limited in regard to its extent, insomuch as a maximum of 1,500 million marks

¹⁾ A more detailed account of the provisions for the note issue of the Bank of Finland will be found in the Year Book for 1922.

is fixed for such a note issue, and in regard to its character by the fact that such an issue of notes must also be covered by assets included in the supplementary note cover. Against gold and foreign currency, however, the Bank of Finland may issue notes to the same amounts as it possesses at the time in assets which are regarded as belonging to the ordinary cover.

In exceptional cases the right of note issue may be further increased by 100 million marks with the sanction of the President of the Republic. This method has so far not been resorted to.

According to the above provisions that part of the right of issue which was not *already* covered by assets included in the supplementary cover, has been deducted from the right of issue in the calculations (see table 19) which are published in connection with the balance sheets of the Bank of Finland, or in other words the difference between 1,500 million marks and the supplementary cover. As, however, the latter is increased proportionately, for instance, on bills being discounted, this deduction should, nevertheless, in reality be considered as part of the right of issue. In accordance with this the *total* right of note issue has been included in table 1 of this Year Book.

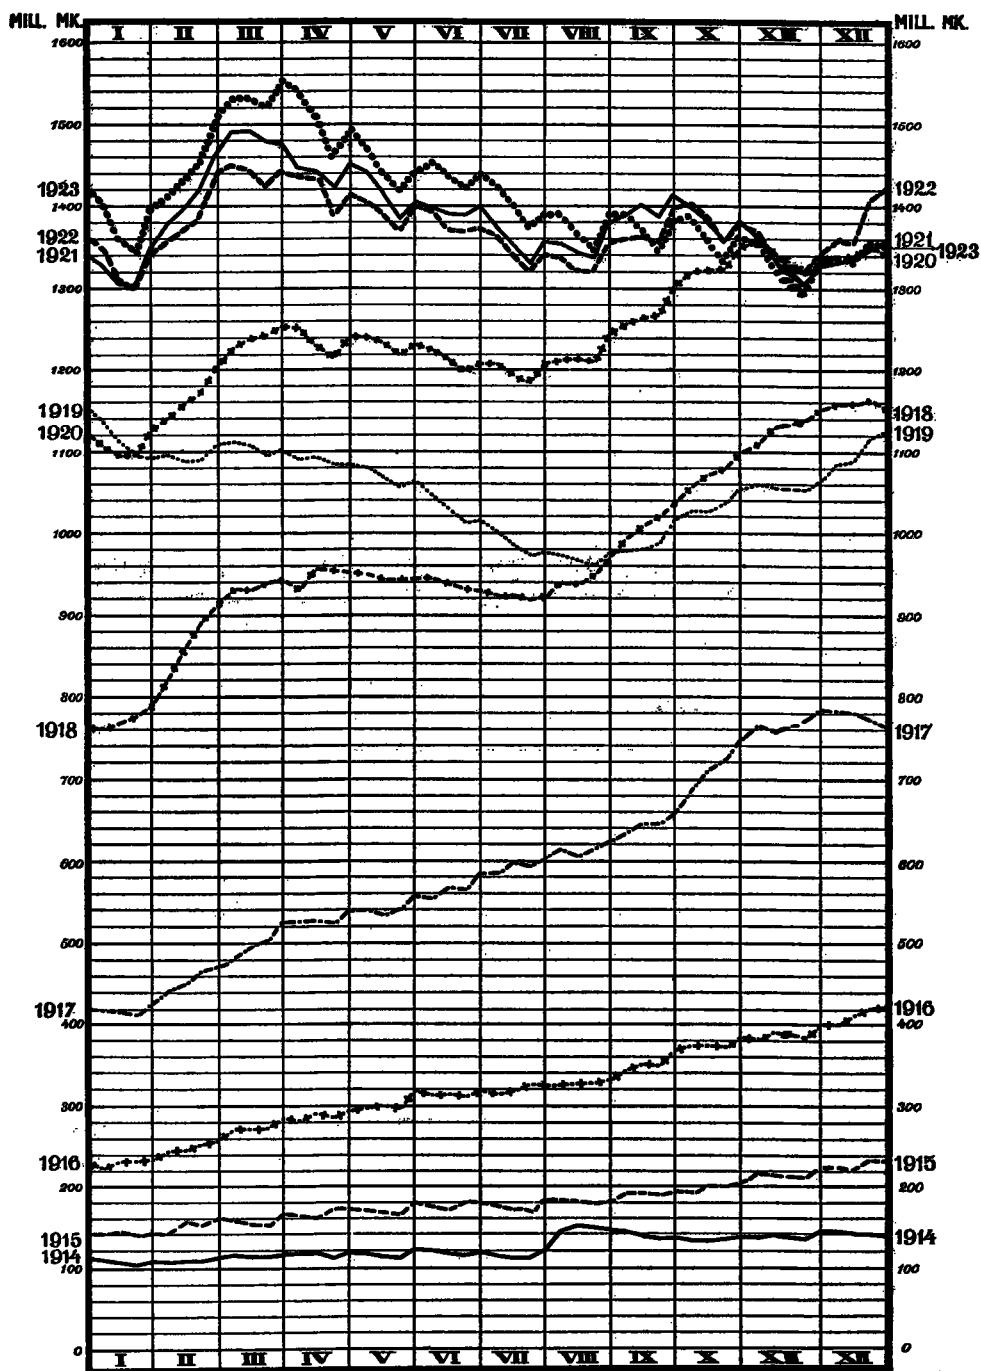

Calculated in this manner the right of note issue was, on an average, 2,160.0 million marks in 1923 or a considerably higher amount than the year before, when it was 1,867.5 million marks. This was a consequence of the supply of foreign currency having increased to an appreciable degree.

The Note Circulation. During 1923 notes were in circulation, on an average, to an amount 35.8 million marks higher than the year before, as the following figures (in millions of marks) indicate: —

	Notes in circulation.		
	Maximum.	Minimum.	Average.
1921	1,493.3	1,303.2	1,385.8
1922	1,449.9	1,300.2	1,374.0
1923	1,555.1	1,298.1	1,409.8

The surplus amount was, however, not spread evenly over the whole year. As will be seen in the accompanying diagram, the quantity of notes was larger during the first half year, but less during the last quarter than in the preceding years. This latter circumstance was not due to any steps

BANK OF FINLAND NOTES IN CIRCULATION IN 1914—1923.

on the part of the Bank of Finland, but probably to the fact that the turnover of money was reduced in the country places as a result of the poor harvest.

The diagram referred to also makes it evident that the need for a medium of exchange varies considerably in Finland at various seasons of the year. The increase in the note circulation early in the year is most to be noted. From the third week in January the note supply rises rapidly up to the middle or end of March. This is very likely due to large quantities of notes being sent to distant parts of the country for forest work, whence the notes only come back into circulation gradually, as the population in such places deposits its money in the banks only to a very small extent. Another smaller increase occurs in September—October, probably owing to the increasing circulation of money in agriculture during harvest time. A third insignificant increase towards the end of the year is to be explained by payments consequent on annual agreements etc. Between these heights lie valleys in January, August and November, in each case in the third week of the month.

Apart from these more important changes it will be seen that the note supply is greater at the end of the month for easily intelligible reasons. Quarterly fluctuations which are clearly apparent in many countries are not to be observed in Finland, no doubt owing to the fact that payments falling due quarterly do not occur to any great extent.

The periodical changes indicated above have been very clear and regular since November, 1920, when the inflatory increase of notes may be said to have ceased. It may be mentioned as a curious coincidence that the wholesale price index rose just up to November, 1920, and then began to fall.

The Constitution of the Note Circulation. The constitution of the note circulation, as illustrated in table 8, has been almost unchanged for the last three years which goes to show that conditions in this respect, too, have become stabilised. As far as any tendency can be observed in it during 1923 it was in the direction of the share of the largest notes in circulation being slightly reduced. Notes of 20 marks value not being put into circulation any more, some lesser changes were caused in the constitution of the note supply.

As regards the number of notes, the following quantities of the different denominations were in circulation at the end of 1920—23, disregarding older issues among which, since 1923, all types of notes issued prior to 1909 are classed: —

		N u m b e r		
		1920.	1921.	1922.
Actual notes.				
1,000 marks	374,614	416,042	428,520
500 »	468,081	459,982	482,620
100 »	4,485,320	4,642,405	5,230,546
50 »	2,306,369	2,031,546	2,138,603
20 »	3,371,574	3,011,691	2,271,547
10 »	5,043,848	4,224,442	4,176,731
5 »	5,364,023	4,921,498	5,043,078
Total		21,413,829	19,707,606	19,771,645
				20,098,911
Provisional small notes.				
1 mark	16,003,416	10,764,710	4,506,340
50 penni	6,923,737	4,969,932	2,288,982
25 »	11,239,370	9,457,220	5,933,060
Total		34,166,523	25,191,862	12,728,382
				10,395,760

As these figures indicate, the slight rise in the number of actual notes was principally due to the number of 10 mark notes being increased in consequence of the 20 mark notes having been called in.

The disappearance from circulation of the provisional small notes continued owing to corresponding nickel coinage having been issued since July 27, 1921. As the number of small notes in circulation was still so great, according to the books, as recorded above, it is probable that a considerable part of them has been worn out and destroyed or has been lost in some other way.

Nickel coins were in circulation at the end of 1923 in the following quantities: —

	Number.	Marks
1 mark	17,687,094	17,687,094: —
50 penni	9,603,323	4,801,661: 50
25 »	14,983,132	3,745,783: —
Total	42,273,549	26,234,538: 50

Production and Destruction of Notes. In the spring of 1923 the Bank of Finland began to issue notes of a new type (1922 model) which had partly already been produced in the previous year at the Bank's note printing works. In the course of the year notes of 1,000, 100, 50, 10 and 5 marks' value were put into circulation, while the issue of 500 mark notes was only undertaken in March, 1924. There were thus no 20 mark notes among the new notes. The number of notes produced during the year in the note printing works was 11,396,000, their value constituting 1,267,780,000 marks. The notes withdrawn from circulation and destroyed amounted in number to 19,470,184 to a monetary value of 744,118,160 marks. Their destruction was carried out by means of burning in the central furnaces of the Bank.

Counterfeit Notes. Towards the end of 1923 it was discovered that forged specimens of 1,000 mark Bank of Finland notes of the 1918 issue had been produced by machinery and bartered out. The forgery, which was carried out very cleverly, was discovered on December 23 in Petersburg. For this reason notes of this old issue began to be withdrawn from circulation, although no definite date for their recall was fixed. Among the 1,000 mark notes returned to the Bank up to the middle of May, 1924, (95 % of the number in circulation) there were 338 false specimens. This small number, as well as the circumstance that the forged notes occurred exclusively in South Finland, proves that the forgery was discovered almost immediately. The Bank of Finland accepts all genuine notes issued by it since its foundation in 1811, but in order to avoid losses which might be caused by forged notes the Bank has advised foreign bankers only to accept notes of the new (1922) type.

The Note Reserve. The difference between the right of note issue and the total liabilities payable on demand (which are referred to in table 1 under the heading »Used Right of Issue») indicates the amount of the note reserve of the Bank of Finland. In that table the note reserve, both conditional and unconditional (see above), is included.

Calculated according to the method last mentioned, the note reserve in 1923 averaged 305.0 million marks or considerably more than the year before, when the corresponding figure was 253.6 million marks. The mini-

num amount of 127.2 million marks (on October 8th) was also higher than the minimum amount of the previous year of 111.4 million marks. The proportion between the note reserve and the total right of issue varied between 6.9 % and 19.8 %, being 13.9 % on an average. These proportional figures are below the usual pre-war figures, but the average was higher for 1923 than for any year since 1915.

2. COVER FOR THE NOTE ISSUE.

The Bank of Finland's cover for the note issue is shown in tables 11—15. These tables are based on weekly, as well as monthly balance sheets, with the exception of table 15 in which only the cover for the note issue at the end of 1922 and 1923 is dealt with, as it was taken at the closing of the books in accordance with the new regulations for the note issue.

A. The Ordinary Cover.

The ordinary cover, i. e. the sum of the gold reserve and balances with foreign correspondents, varied in 1923 between 325.3 million marks at the end of September and 879.3 million marks on March 15th and averaged 660.0 million marks. The corresponding average for the previous year was much lower, only 367.5 million marks.

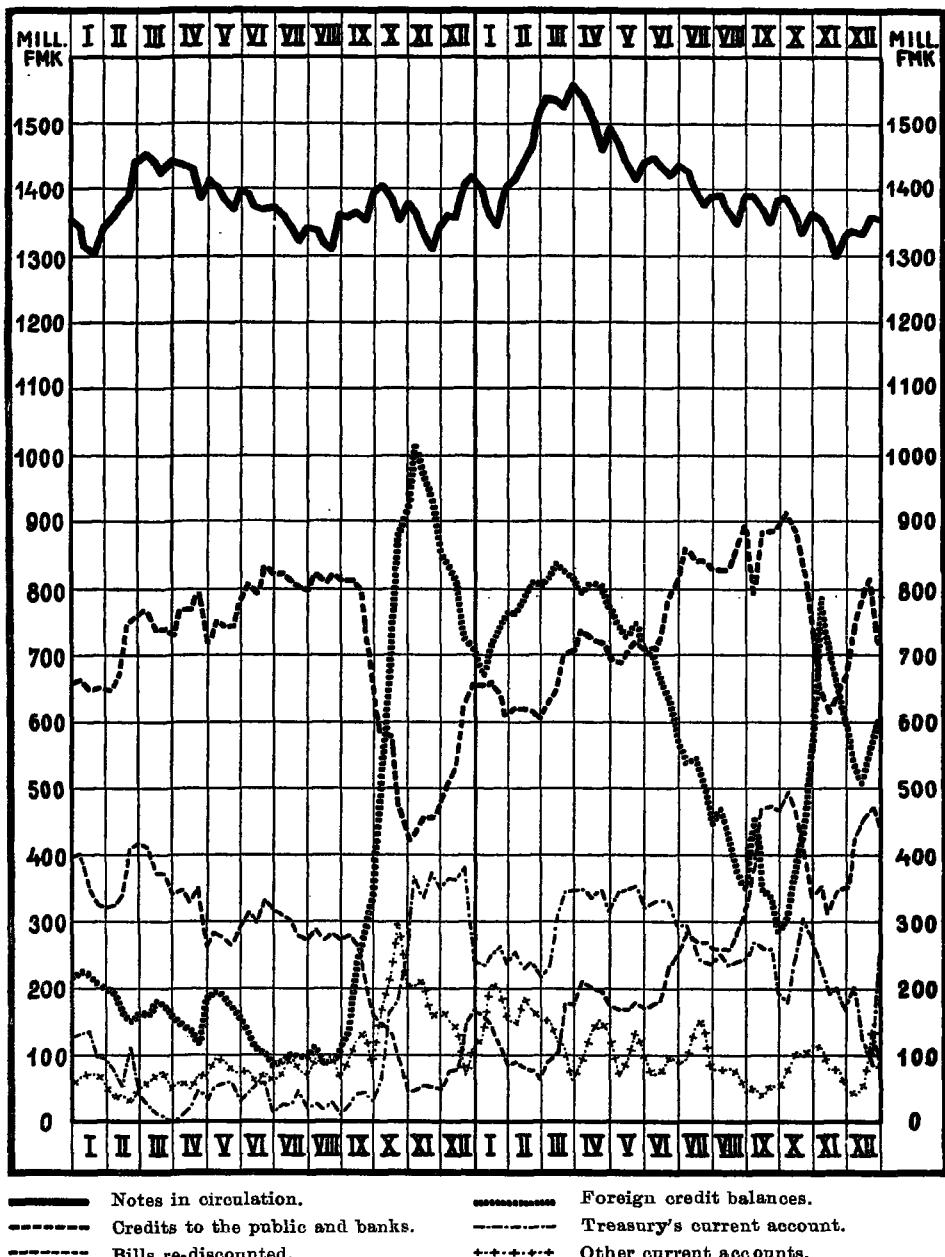

It will be easily understood that the changes in the amount of the ordinary cover were due to alterations in the foreign balances.

The Gold Reserve. The changes in the extent of the gold reserve during 1923 were again insignificant. At the end of the year the extent and constitution of the gold reserve were as under: —

	Marks.
Finnish gold coin	28,629,230: —
Foreign gold coin	13,632,889: 42
Gold bullion	442,390: 89
<hr/>	
Total	42,704,710: 31

The gold reserve is in an exceptional position, seeing that it is not booked in paper currency, but is still entered at the nominal value of coin, i. e. 1 kilogramme of fine gold at 3,444: 44 marks.

THE PRINCIPAL ACCOUNTS OF THE BANK OF FINLAND IN 1922—1923.

The proportion of the gold reserve to the amount of notes and of the gold reserve to all liabilities payable on demand will be found in tables 13 and 14. The former proportion averaged 3.04 % during 1923, the latter 2.32 %. These comparative figures are, however, in reality misleading, for the value of the gold reserve is calculated in gold marks and the liabilities at sight which are compared with it, in paper marks. According to the dollar exchange at the end of December the value of the gold reserve, expressed in paper marks, amounted to 333.3 million marks. In comparison with the value of notes in circulation this amount constituted 24.6 %. If the foreign balances are added to the gold reserve calculated in this manner, the proportion of the total, i. e. of the ordinary cover, to the notes in circulation is 69.5 %.

Balances with Foreign Correspondents. At the end of 1923 the supply of foreign currency at the Bank of Finland amounted to 708.0 million marks. This currency had come in principally in the autumn of 1922 in a very short time, partly owing to a surplus of exports in the balance of trade for 1922, but mainly through the circumstance that in view of falling rates of exchange exporters sold their goods for cash in advance and took up foreign loans, the foreign exchange acquired by these means being bought by the Bank of Finland. As payment for a large part of the exports for 1923 had thus been received in advance, it was to be anticipated that the Bank's supply of foreign currency would be greatly reduced in the course of the year. However, as the diagram on page 28 shows, no reduction was to be noticed during the first quarter of the year. On the contrary, the Bank's supply of foreign currency grew during that time to some extent (the maximum of 836.6 million marks was attained on March 15th), partly due to advances still coming in, and partly to foreign currency entering the country through foreigners' purchases of marks. But in April a reduction clearly set in, caused chiefly by importers' requirements of foreign currency, and later also by foreigners selling marks in Finland for foreign currency. The supply of foreign currency attained a minimum at the end of September, when it amounted to only 282.6 million marks. In October and November the Bank of Finland bought the greater part of the foreign currency which came in by means of State loans, in addition to which foreign money came in more plentifully again

through the advances received in the ordinary way and through loans. At the end of the year the supply of foreign currency amounted to 607.2 million marks, an amount which was less than at the corresponding date the year before, in spite of two State loans having been taken up in the autumn. The causes of such a decline were the following: as a result of the bad harvest imports of grain had increased considerably, advances and loans had been taken up by exporters on a smaller scale than usual and the Bank of Finland had paid for its mark amounts bought for forward delivery (120 million marks) and reduced the booked rates of exchange for its supply of foreign currency; to a certain degree, too, the circumstance that the Joint Stock banks had increased their supply of foreign currency had some effect.

It is worth mentioning in this connection that the foreign currency held by the Joint Stock banks seldom exceeds 100 million marks, so that the Bank of Finland's supply of foreign currency is practically the actual reserve of the country for payments abroad.

In the course of 1923 the Bank of Finland sold foreign currency in Finland: to Government Departments for about 263.3 million marks, to the public for about 534.8 millions, and to banks and banking establishments for about 1,780.7 millions, or in all for about 2,578.8 million marks.

B. The Supplementary Cover.

The assets belonging to the supplementary cover may be referred to here in the order in which they appear in table 11.

Finnish Silver Coin. Minted Finnish silver coin which, like the gold reserve, is still entered in the books at its nominal value, has had to record very slight changes in the balance sheets of the Bank of Finland ever since the minting of new silver coins ceased in 1918 and the silver coinage disappeared from circulation owing to the circumstance that its metallic value rose above its nominal worth. At the close of 1923 the book value of silver coin represented 546,970 marks or the same as a year earlier.

Foreign Bonds and Notes and Coupons in Foreign Currency formed an item of little importance in the supplementary cover. At the end of

the year the value of the former amounted to 5.3 and of the latter to 0.7 million marks. Almost the entire group of bonds consisted of bonds of the 1919 Finnish 6 % State Loan (Gutzeit) which were issued exclusively in foreign currency. Their nominal value at the end of 1923 was 929,000 Norwegian crowns and the booked value 5,295,300 marks.

Foreign Bills. In 1923 the Bank of Finland discounted foreign bills altogether for 844.7 million marks. The Bank has, however, generally very few foreign bills in its portfolio as most of the discounted bills are drawn absight and are, therefore, collected immediately. From the beginning of the year up to November 15th the Bank of Finland had a number of bills drawn in foreign currency which were not included in the note cover. The amount included in the cover varied in 1923 between 0.1 and 13.8 million marks and averaged 6.8 millions.

Finnish Government Bonds in Finnish Currency. The second largest item in the supplementary cover, 38.9 % at the end of 1923, was composed of Finnish Government bonds in Finnish currency, which have been made to include also such bonds as are likewise made out in other currencies. At the beginning of the year the amount of these bonds was 511.4 and at the end of the year 488.1 million marks and the reduction for the year was thus 23.3 million marks. This was partly due to regular redemption of bonds, but chiefly it was caused by a lower valuation of the bonds. At the end of 1923 the Bank of Finland held bonds of various Government loans (with the exception of the aforesaid loan issued only in foreign currency) to the following amounts:

Loan.	Issues in both Finnish and foreign currency.	
	Nominal value. Marks.	Booked value. Marks.
1889 3½ %	37,020	18,510
1895 3½ %	457,000	228,500
1901 3½ %	38,000	19,000
1903 3½ %	6,500	3,250
1898 3 %	7,000	3,150
1909 4½ %	201,200	130,780
Total	746,720	403,190

Loan.	<i>Issues in Finnish currency only.</i>	
	Nominal value. Marks.	Booked value. Marks.
1918 5½ %	117,400,000	91,572,000
1918 5½ %	7,963,100	6,211,218
1918 5½ %	10,160,000	7,924,800
1919 6 %	346,769,000	346,769,000
1919 5½ %	6,490,000	5,062,200
1920 5½ %	5,212,800	4,065,984
1922 7 %	1,600,000	1,440,000
1919 Premium loan	27,128,800	24,684,544
	Total 522,723,700	487,729,746
	Grand total 523,470,420	488,132,936

Government Short-Term Liabilities. The Bank of Finland's credit balances at the Treasury included in the balance sheets under this name are made up of a compensation which the Government has undertaken to repay to the Bank in the course of a few years for certain Russian securities, now rendered worthless. At the beginning of the year the amount in question was 71.7 million marks and by the end of the year 60.0 million marks remained unredeemed. No interest is paid by the Treasury on the amounts to be compensated.

Inland Bills. The largest item forming the supplementary cover, 55.8 % at the end of 1923, is composed of inland bills. These will be referred to in greater detail in chap. 4 in connection with other home loans. Here it need only be mentioned that in consequence of the regulations for the note cover, according to which only such inland bills may be included in the supplementary cover as fall due in less than three months and for the payment of which at least two fully reliable persons or firms have made themselves responsible, a small part of the bills could not be employed as supplementary cover. At the end of 1923 there were no longer any bills of this kind in the portfolio of the Bank.

3. LIABILITIES PAYABLE ON DEMAND.

The liabilities of the Bank of Finland payable on demand during 1923 are dealt with in table 16 which is based on both the weekly and monthly balance sheets. In this connection the remark should be repeated

that the total of these liabilities does not correspond exactly to the total used right of issue given in table 1, as the balance sheets do not include in the former amount the undrawn amount of advances on current accounts which figures only in the calculations respecting the right of note issue.

The liabilities payable on demand are treated below in the order in which they appear in the balance sheets of the Bank.

Notes in Circulation. Owing to their special importance the notes in circulation have been dealt with separately in chap. I to which the reader is referred.

Bank-Post-Bills in Circulation. Bank-post-bills issued by the Bank of Finland are put into circulation either by the Bank's own or by the public's remittances of money in this form. Such bills are sold by the Bank without commission. During the last four years the Bank of Finland has issued and redeemed bank-post-bills to the following amounts in millions of marks: —

	Issued.	Redeemed.	In circulation at end of year.
1920	492.3	492.2	6.7
1921	506.6	510.4	2.8
1922	442.0	439.4	5.4
1923	525.8	524.2	7.0

According to these figures the business of the Bank of Finland in bank-post-bills increased considerably during 1923. The amount of bank-post-bills in circulation varied in the course of the year between 1.9 and 7.0 million marks and averaged 3.8 million marks.

Current Accounts. Next to the notes in circulation the amounts deposited on current account form the largest item of the Bank of Finland's liabilities payable on demand and according to its regulations the Bank is not entitled to pay interest on such sums.

The Treasury's balance on current account fluctuated between 83.1 and 354.3 million marks and amounted on an average to 261.9 million marks or a higher amount than was usual before the war.

The amounts deposited on current account by others than the Government which consist principally of the cash of the Joint Stock banks, varied between 36.0 and 201.0 million marks and averaged 102.7 millions.

Bills Collected. Under this heading sums are included in the balance sheet of the Bank of Finland which have come in through the encashment of bills and which have not yet been accounted for. The bills entrusted to the Bank for collection were almost exclusively received from abroad. In 1920 the corresponding value in Finnish currency of bills collected was altogether 43.7, in 1921 109.1, in 1922 142.2 and in 1923 169.4 million marks which shows that this form of the Bank's business is constantly growing. The liability which has arisen by the means described averaged 2.0 million marks in 1923 and did not exceed 7.9 millions in any balance sheet.

Balances for Payment of Drawn Bonds and Coupons on Loans. This group of the Bank of Finland's liabilities originated owing to the Bank, acting as agent by agreement, redeeming coupons and drawn bonds chiefly of Government, but also of certain Municipal loans. For the due date the respective issuers of the bonds remit the amounts required for redemption, but as all the holders of coupons and bonds do not draw the amounts due to them on that date, the Bank has almost always some means in hand on this account. During 1923 this item was absent from among the Bank's liabilities in only one balance sheet. The maximum amount was 8.6 and the average 2.0 million marks.

Foreign Correspondents. One of the largest items among the liabilities payable on demand is made up of debts due to correspondents abroad. This debt consists of the credit balances of the Bank's correspondents in Finnish marks (conti lori) on which the Bank pays interest according to agreement. The amount of these varied in 1923 between 10.5 and 38.4 million marks and averaged 26.7 millions. The corresponding average for the previous year was considerably lower, 14.8 million marks.

Sundry Accounts. In these accounts, also belonging to the liabilities payable on demand, advances are chiefly entered, i. e. means set aside for payments which have been received before the due date. Such liabilities

fluctuated from January to October between 0.7 and 26.9 million marks and from November to December between 19.1 and 236.4 millions. The rise towards the end of the year was due to transfers in connection with the purchase of foreign currency acquired by means of State loans.

4. HOME LOANS.

The home loans of the Bank of Finland to the public and the Joint Stock banks for each week during 1923 are shown in table 17 and the loans at the end of each month during 1916—1923 in table 18. Thus these tables do not include the indebtedness of the Treasury to the Bank which is included in table 11 only.

Credits Granted to the Public. Credits granted to the public or in other words the direct credits granted for the requirements of the business world in the form of discounting bills, loans on mortage and advances on current account were considerably reduced in 1923. During the first half of the year these direct credits varied between 492.4 and 572.2 million marks, but then decreased to 272.6 millions at the end of the year. The change is even clearer in the proportional figures. During the first half-year direct credits constituted about $\frac{3}{4}$ of all credits granted and increased by the end of February even as high as 89.3 % of the total, but at the end of the year this percentage had dropped to 38.0. This change was brought about partly — and chiefly — by the fact that the largest timber refining concern in Finland in which the State owns a majority of shares, reduced its borrowing from the Bank of Finland to a great extent, partly by the re-discounting of the Joint Stock banks in the latter half of the year increasing as a result of the tightness of the money market.

Credits to the Banks. Credits to the banks which took the form solely of rediscounting bills gained more and more importance among the credits of the Bank of Finland during 1923, as follows from what has been said. The lowest re-discounted amount, 64.4 million marks, occurred at the end of February, when the re-discounts, too, attained a minimum in proportion to all credits granted, namely, 10.7 %, the maximum, 491.7

million marks, being reached on October 8th. In the final balance sheet for the year the amount had decreased to some extent, to 444.1 million marks, the proportion to all credits granted, however, being a maximum of 62.0 %.

At the end of the year the Bank of Finland thus approached the type of Central Banks which are principally bankers' banks. This was, however, not due to any measures adopted by the Bank, but was a result of existing conditions. It would also be premature to assert that the change described in the internal constitution of credits granted was a sign of a definite and lasting move in this direction.

5. POSITION AND RESOURCES OF THE BANK.

Position of the Bank at the End of the Year. The position of the Bank of Finland at the end of 1921—23 is given in table 19. A retrospective review of the position of the Bank at the end of 1914—20 is included in table 20. These tables are drawn up in accordance with the results published in the Bank's annual reports, but with the alteration that among »Other assets» some minor groups have been combined.

All the more important items in the Bank's balance sheet have already been dealt with above excepting the Bank's own resources which are treated in detail below.

Resources of the Bank. The Bank of Finland's funds during 1868—1923 are included in table 21.

The capital of the Bank at the end of 1923 was 100 million marks and its reserve capital 50 million marks. During the last three years no change has occurred in these funds.

The items which correspond to the value of the premises and furniture of the Bank amounted of the end of 1923 to 12 million marks or double the amount of a year before. The increase was due principally to extensions of the buildings of the note printing works and the head office. In this connection it should be mentioned that the Bank of Finland owns, in addition to these premises, a house in Helsingfors for flats for the staff and premises for local branches in 10 other

towns. The booked value of the premises, 12 million marks, is thus only a fraction of their actual value.

Profits at disposal were available at the end of 1923 to an amount of 46,960,400: 92 marks. Of these the Diet appropriated 33,505,065: 72 marks »for strengthening the position of the Bank of Finland», which in reality constitutes a form of reserve fund. As more precise decisions with regard to the employment of these means have not been made, they may be disposed of by the Supervisors of the Bank as required. These reserved profits have been made use of only once, namely for writing off the last of the Bank's Russian balances in connection with the closing of the books for 1922.

The balance of the profits at disposal, 13,455,335: 20 marks, represents the profits for 1923 and the Diet has not yet passed a decision as to the employment of these means.

6. EARNINGS AND EXPENSES AND DISPOSAL OF PROFITS.

Earnings and Expenses. The earnings and expenses of the Bank of Finland during 1917—23 are seen in table 22 which constitutes a summary of its published Profit and Loss accounts for those years. The alterations which were made in previous years in the way earnings and expenses were included in the Profit and Loss account, have been referred to in previous issues of this Year Book.

In 1923 the earnings of the Bank of Finland amounted to 102.9 million marks and its expenses to 89.4 millions, so that the profit constituted 13.5 million marks.

For the years 1919—21 the annual profits of the Bank of Finland varied between 75.1 and 118.1 million marks. As against this the annual profits for the succeeding two years were only 10.5 and 13.5 million marks respectively. The small profits for 1923 are to be explained by the great amount of writing off undertaken by the Bank. The Bank's supply of bonds has, in view of the present high rates of interest, been reduced in valuation by 21.3 million marks. The supply of foreign currency, too, has been valued in the books at lower rates of exchange than last year. This was caused partly by the fact that the management of the Bank,

in spite of the market exchange of the dollar at the end of last year having stood almost exactly as high as a year before, has still considered itself bound, with a view to the future, to reduce the book value of the dollar, partly by sterling and other European foreign currency having dropped in value in the course of the year in comparison to the dollar and thus also in comparison to those rates of exchange which were adopted in closing the books for 1922. The writing off undertaken for the former reason, as a form of reserve, amounted to about 15 million marks, the writing off due to the latter motive which must for the present be regarded as a loss, amounted to about 21 million marks. By means of selling foreign currency during the spring and summer at lower rates of exchange than those at which it had been bought early in the year, the Bank suffered a loss of 14.1 million marks. In all the writing off in closing the books of the Bank amounted to 70.6 million marks. Losses of this kind could, of course, have been avoided by the Bank of Finland appearing as a buyer on the foreign currency market only after the rates of exchange had fallen to their lowest level. But in order to attain a firm position on the foreign currency market as soon as possible and to be able to confine the exchange fluctuations to a minimum, the Bank chose another method, irrespective of the losses of a private economic form, which were to be expected under the method adopted.

Appropriation of Profits. According to the Bank Law the Diet is entitled to dispose freely over the profits of the Bank, once the original capital and reserve capital have reached their full limit.

After the Diet had decided on December 18th, 1922, that 29,042,985: 41 marks of the profits were to be reserved for strengthening the position of the Bank of Finland, there remained at the end of that year 10,462,080: 31 marks in profits at disposal. Of this amount 6.0 million marks were transferred in January, 1923, to the assets which represent the value of the premises and furniture of the Bank. With regard to the balance of 4,462,080: 31 marks the Diet resolved on December 7th, 1923, that it should be transferred to the aforesaid means for strengthening the position of the Bank. At the end of 1923 there were thus no other profits at disposal than the profits for the year 1923, 13,455,335: 20 marks, as to the disposal of which the Diet has, as stated, not yet decided.

7. VARIOUS BRANCHES OF BUSINESS.

Clearing. The clearing operations of the head office of the Bank of Finland which began on September 1, 1906, will be found illustrated in table 24, embracing the years 1907—23, and the clearing operations at five branch offices which were started in May, 1922, in table 25. As the clearing operations at the branch offices could not affect the operations at the head office to any great extent, the figures for the latter are still fairly accurately comparable to the figures for previous years.

The clearing operations at the head office of the Bank continue to increase year by year in a way illustrated by the following figures: —

Year.	Bank-Post-Bills.				Cheques.				Total.	
	Number.		Amount.		Number.		Amount.		Number.	Amount. Mill. mks.
	Quant.	%	Mil. mks.	%	Quant.	%	Mil. mks.	%		
1920.....	312 290	83.3	3 411.8	47.6	62 635	16.7	3 752.1	52.4	374 925	7 163.9
1921.....	339 525	82.3	3 772.8	45.8	73 204	17.7	4 461.5	54.2	412 729	8 234.3
1922.....	422 969	82.5	4 155.6	40.3	89 537	17.5	6 161.1	59.7	512 506	10 316.7
1923.....	546 406	80.5	4 583.8	34.9	132 142	19.5	8 555.1	65.1	678 548	13 138.9

The amount of bank-post-bills and cheques during the last few years has been on an average as follows: —

	Bank-post-bills. Marks.	Cheques. Marks.
1920	10,925	5 9,905
1921	11,112	6 0,946
1922	9,825	6 8,810
1923	8,389	6 4,742

In conjunction with the table given above these latter figures indicate that in the clearing operations cheques have gained greater importance.

The clearing operations at the branch offices amounted to about $\frac{1}{4}$ of the corresponding operations at the head office.

Deposits. Since a long time the Bank of Finland has accepted, on prescribed conditions, valuables as safe deposits in sealed packets as well as securities or so-called open deposits. With regard to the latter particulars will be found in table 26. As this table shows, this branch

of the Bank's business is falling off. At the end of 1923 the number of open deposits left in the custody of the Bank was only 32 to a total value of 183.9 million marks; the deposits left in the care of the Bank (for following the drawing of bonds etc) amounted to 45 in number to a total value of 12.6 million marks.

III. THE JOINT STOCK BANKS DURING 1923.

As the business of the Bank of Finland and the changes occurring in its position are greatly influenced by the general state of the money market, a number of tables illustrating the position of the Joint Stock banks (tables 32—35) and at the same time the state of the money market, are included in this year-book. The following particulars with regard to the Joint Stock banks are based partly on these tables and partly on other information contained in the official statistics concerning the Joint Stock banks.

Number of Banks. At the end of 1922 the number of Joint Stock banks was 20. In January, 1923, a new bank, Svenska Finlands Landmannabank A. B., was founded, principally for the purpose of providing the credit requirements of farmers in the Swedish speaking districts of Finland. In the course of the year the Kommersbanken A. B. in Åbo ceased to work independently and by its amalgamation with a local issuing house a new bank, A. B. Åbolands Bank was formed. The Aktiebanken för Utrikes-handel (Joint Stock Bank for Foreign Trade) decided during the year to liquidate, but the liquidation which was undertaken by the Helsingfors Aktiebank had not yet been completed by the end of the year. The number of Joint Stock banks was thus increased during 1923 by 1, and amounted to 21, when the year ended.

Through the closing of the one bank referred to no loss was inflicted on its shareholders.

At the end of 1923 the Joint Stock banks had 412 branches carrying on every form of business throughout the country, partly in the towns, partly in the country districts, and also a number of agencies with more or less extensive scope, principally for the receipt of deposits. If the head offices of the Joint Stock banks and the Bank of Finland with its 13 branches are included, there were in Finland at the end of 1923 in all 449 banking establishments, or one to about 7,700 inhabitants.

Financial Position of the Joint Stock Banks. The combined balance sheets of the Joint Stock banks at the end of 1920—1923 show the following results: —

A s s e t s .				
	1920. Mill. mks.	1921. Mill. mks.	1922. Mill. mks.	1923. Mill. mks.
Cash	171.1	156.6	251.2	261.7
Foreign correspondents	41.5	80.5	67.2	84.2
Foreign bills	13.1	6.3	5.1	8.0
Inland bills	1,509.7	1,584.3	1,905.3	2,146.8
Loans	1,927.4	1,943.5	1,828.9	1,916.0
Advances on current account (cash credits).....	793.3	747.2	757.2	857.5
Home correspondents	1,323.2	1,697.9	1,654.5	1,948.2
Bonds	229.4	156.9	145.5	134.0
Stocks and shares	96.6	96.2	104.8	113.6
Certificates of deposits in other banks	6.8	7.8	6.3	9.1
Interest accrued	50.5	54.7	49.3	56.9
Bank premises	65.4	87.5	98.5	101.9
Furniture	2.7	5.0	6.0	6.1
Sundry assets	60.6	156.9	63.6	61.0
Total	6,291.3	6,781.3	6,943.4	7,705.0
L i a b i l i t i e s .				
Share capital	873.0	859.0	863.0	867.8
Reserve funds	317.2	333.5	240.4	264.4
Other funds	154.3	146.9	156.5	168.8
Deposits	2,453.4	2,548.2	2,779.9	3,056.3
Deposits on Savings Bank's terms	272.2	295.8	333.8	394.2
Current accounts	605.2	562.0	615.3	605.7
Bank-post-bills	150.3	144.2	198.1	176.2
Foreign correspondents	795.9	994.6	971.8	810.2
Home correspondents	282.5	382.3	406.9	688.7
Rediscounted bills	208.6	345.2	155.6	442.8
Sundry liabilities	178.7	169.6	222.1	229.9
Total	6,291.3	6,781.3	6,943.4	7,705.0

The more important items in these balance sheets are examined below.

The Banks' Own Funds. The most important of the banks' own funds, the share capital and reserve funds, are seen in the following summary. As the alterations in the funds of the banks, dependent on the annual results, do not appear yet in the annual balance sheets, but only in the first balance sheet after the annual meeting, such funds have been included below at the amounts shown at the end of March each year, after the annual meetings of all the banks had been held. The figures thus indicate the changes which occurred in the funds of the banks during the preceding twelve months of business.

						Increase or decrease.
	31 March 1922. Mill. mks.	31 March 1923. Mill. mks.	31 March 1924. Mill. mks.	1921. Mill. mks.	1922. Mill. mks.	1923. Mill. mks.
Share capital	810.0	863.0	868.0	— 63.0	+ 53.0	+ 5.0
Reserve funds	288.9	254.4	283.5	— 47.2	— 34.5	+ 29.1
Total	1,098.9	1,117.4	1,151.5	— 110.2	+ 18.5	+ 34.1

The above summary shows that the banks' own funds which had increased during the previous year by 18.5 million marks, increased by 34.1 million marks during 1923, of which 5.0 millions constituted an increase in share capital and 29.1 millions an increase in reserve funds. Only one of the smaller banks increased its share capital in the course of the year, the increase amounting to 3 million marks. The rest of the total increase was due to a new bank with 2 million marks share capital having started operations during the year. The reserve funds which had decreased considerably during the two previous years, increased in 15 banks in 1923, while in the others they either remained unaltered or did not exist. Reductions in reserves, therefore, did not occur in any bank.

Home Deposits and Credits. The home deposits of the Joint Stock banks (including a comparatively insignificant amount of long-term deposits in Finnish marks belonging to foreigners) amounted at the end of 1921—23 to the following figures: —

							Increase or decrease.		
	1921. Mill. mks.	1922. Mill. mks.	1923. Mill. mks.	1921. Mill. mks.	1922. Mill. mks.	1923. Mill. mks.			
Current accounts	562.1	615.3	605.7	—	43.1	+	53.2	—	9.6
Home correspondents	382.3	406.9	688.7	+	99.9	+	24.6	+	281.8
Deposits	2,548.2	2,779.9	3,056.3	+	94.8	+	231.7	+	276.4
Savings accounts	295.8	333.8	394.2	+	23.6	+	38.0	+	60.4
Total	3,788.4	4,135.9	4,744.9	+	175.2	+	347.5	+	609.0

As the above figures indicate, the growth of bank deposits in 1923 was very considerable and almost 80 % larger than in 1922, despite the fact that it was then about twice as large as in 1921. It should be noted, however, that of the increase in 1923 319.3 millions, or more than half, consisted of Treasury deposits. Under such circumstances the increase in deposits by the public during the year was rather less than the preceding year, but considerably more than in 1921. During the half-year the increase in deposits, even long-term deposits, was greater than usual, but during the latter half-year deposits were generally reduced, probably owing to the bad crops more than anything.

In this connection it should be pointed out that, in addition to home deposits, the Joint Stock banks dispose of considerable sums in Finnish marks deposited by foreigners, mostly in the form of deposits payable on demand, which appear in the balance sheets of the banks in the Foreign Correspondents' accounts. These deposits, which can, of course, be employed for credits in the same way as home deposits, were formed formerly by foreign currency being obtained for Finland by the sale of marks, but since the autumn of 1922, when foreigners' deposits increased, the initiative has come from abroad with a view to speculation on the rise of the mark. The indebtedness of the banks towards foreign countries arose in this way in Finnish marks and the changes in it which greatly influence the state of the money market in Finland, will be dealt with below. The figures given above thus indicate almost exclusively actual home deposits on which the capacity of the Joint Stock banks for granting credit certainly depends most.

The extent of home *credits* in the Joint Stock banks at the end of 1921—1923 is given in the following figures:

	Increase or decrease.					
	1921. Mill. mks.	1922. Mill. mks.	1923. Mill. mks.	1921. Mill. mks.	1922. Mill. mks.	1923. Mill. mks.
Inland bills ...	1,584.3	1,905.3	2,146.8	+ 74.6	+ 321.0	+ 241.5
Loans	1,943.5	1,828.9	1,916.0	+ 16.1	- 114.6	+ 87.1
Advances on cur-						
rent accounts	747.2	575.2	857.5	- 46.1	+ 10.0	+ 100.3
Home correspon-						
dents	1,697.8	1,654.5	1,948.2	+ 374.6	- 43.3	+ 293.7
Total	5,972.8	6,145.9	6,868.5	+ 419.2	+ 173.1	+ 722.6

A comparison of the size of home deposits with home credits shows that the banks were able, at the end of 1923, to grant credits to an amount exceeding the total amount of home deposits by 2,123.6 million marks. This difference is explained chiefly by the bank's own funds, foreigners' deposits in Finnish marks and re-discounts at the Bank of Finland.

According to the above figures a great increase occurred in the credits granted by the Joint Stock banks during 1923. This increase was more than four times as great as the increase for 1922 and also considerably above the increase for 1921. At various seasons of the year the increase was, however, very uneven, as the following figures show in greater detail:—

End of month.	Deposits. Mill. mks.	Increase or decrease. Mill. mks.	Credits. Mill. mks.	Increase or decrease. Mill. mks.
January	4,330.1	+ 194.2	6,121.5	— 24.4
February	4,408.8	+ 78.7	6,263.0	+ 141.5
March	4,457.8	+ 49.0	6,473.0	+ 210.0
April	4,510.8	+ 53.0	6,558.5	+ 85.5
May	4,600.3	+ 89.5	6,675.8	+ 117.3
June	4,654.1	+ 53.8	6,701.4	+ 25.6
July	4,654.2	+ 0.1	6,745.0	+ 43.6
August	4,587.5	— 66.7	6,772.8	+ 27.8
September	4,620.6	+ 33.1	6,885.6	+ 112.8
October	4,576.7	— 43.9	6,883.8	— 1.8
November	4,699.5	+ 122.8	6,892.4	+ 8.6
December	4,744.9	+ 45.4	6,868.5	— 23.9

It will be seen that the increase was greatest at the beginning of the year, especially in February and March. This was partly due to deposits, independently of Treasury deposits, rising rapidly during the first half of the year; partly, too, to livelier trade in the timber refining industry demanding more capital. The increase in September was brought about by stagnation in sales of timber referred to in the review at the beginning of this Year Book. In the last quarter of the year, when home and foreign deposits fell off, the banks observed great caution in granting credits.

The rate of interest charged by the Joint Stock banks during the first half of the year on credits was 9 ½—12 %. After the Bank of Finland had raised the bank rate on September 13th from 8 % to 9 % a rise in the rates of the Joint Stock banks began to be observed which was arrested

by the reduction of the official bank rate to 8 % on October 28th. When the Bank of Finland again raised the bank rate on November 30th, this time by 2 %, the rates of interest of the Joint Stock banks continued to rise, so that at the end of the year they were about 10—13 %. Rates of interest on long-term deposits varied from 6 $\frac{1}{2}$ % to 8 $\frac{1}{2}$ %, while the rate on deposits on current account was 5 $\frac{1}{2}$ % to 6 $\frac{1}{2}$ %.

Position towards Other Countries. Prior to the World-War the position of the Finnish Joint Stock banks towards other countries was, except for a few short periods, one in which their credit balances exceeded their indebtedness. As Finland's balance of trade for 1918—1920 was exceedingly unfavourable and the shortage of foreign currency, especially since the middle of 1919, was almost chronic, foreign currency was acquired by means of selling Finnish marks abroad. On the other hand, purchases of marks for abroad have often occurred on foreign initiative for speculative purposes.

The rise in the indebtedness of the banks since the middle of 1922 has been due to this latter circumstance. Owing to such sales of marks considerable sums of deposits in Finnish currency accumulated in the Finnish banks and amounted at the end of 1923 to about 96 % of the indebtedness of the banks to foreign countries; the balance is made up of various debts arising from current banking business.

During the various months in 1923 the foreign indebtedness and assets of the banks, the latter of which include credit balances with foreign correspondents and foreign bills, fluctuated as follows:—

End of month.	Credit balances. Mill. mks.	Indebtedness. Mill. mks.	Net indebtedness. Mill. mks.	Increase or decrease. Mill. mks.
January	101.3	1,008.8	907.5	+ 7.9
February	100.4	1,054.0	953.6	+ 46.1
March	98.0	1,078.9	980.9	+ 27.3
April	90.2	1,117.4	1,027.2	+ 46.3
May	75.2	1,102.2	1,027.0	— 0.2
June	75.3	1,011.4	936.1	— 90.9
July	86.8	983.0	896.2	— 39.9
August	79.0	951.8	872.8	— 23.4
September	96.5	884.3	787.8	— 85.0
October	93.4	1016.6	923.2	+ 135.4
November	131.7	856.7	725.0	— 198.2
December	92.2	810.2	718.0	— 7.0

These figures show that the net indebtedness of the Joint Stock banks grew during the months of January—April and during October, but fell off in the other months. The increase in the first months of the year is probably connected with the rise which set in in the foreign value of marks during those months and which called forth the purchase of Finnish currency for abroad. The exceptionally large increase in the net indebtedness in October is to be explained apparently by the large foreign loans taken up at that time by the Government which again awakened foreign speculators' interest in marks. Bull speculation, however, soon gave place to strong bear speculation.

According to special data which the Bank of Finland collected, the indebtedness of the Joint Stock banks to foreign countries at the end of the last five years was spread over different countries approximately in the following manner (in percentage of the total indebtedness): —

	1919.	1920.	1921.	1922.	1923.
England	13	6	13	14	17
Germany	1	3	6	8	10
France	1	1	2	2	2
Sweden	33	29	26	22	38
Norway	24	25	14	15	11
Denmark	20	20	25	26	15
Holland	1	1	2	3	2
United States	2	9	5	5	1
Other countries	5	6	7	5	3
	Total	100	100	100	100

The foreign creditors of the Joint Stock banks are to be sought, it appears, above all in the Scandinavian countries.

At the end of the last seven years the position of the Joint Stock banks towards foreign countries was as follows: —

Year. m./z	Credit balances. Mill. mks.	Indebted- ness. Mill. mks.	Net indebt- edness. Mill. mks.	Increase or decrease. Mill. mks.
1917	57.9	75.6	17.7	+ 18.3
1918	60.6	158.7	98.1	+ 80.4
1919	108.9	561.3	452.4	+ 354.3
1920	54.6	795.9	741.3	+ 288.9
1921	86.8	994.6	907.8	+ 166.5
1922	72.2	971.8	899.6	— 8.2
1923	92.2	810.2	718.0	— 181.6

As these figures indicate, the net indebtedness decreased considerably in 1923, so that at the end of the year it was over 180 million marks less than at the end of the two previous years and 23.3 millions less than at the end of 1920. If, further, it is taken into consideration that the Bank of Finland had paid in the autumn for Finnish marks which it had bought for forward delivery and of which at the end of the year 90 million marks had not yet been delivered to the Bank, the net indebtedness of the Joint Stock banks to foreign countries had actually decreased by 271.6 million marks.

Including the foreign credit balances and indebtedness of the Bank of Finland, the net indebtedness of all the banks to foreign countries was only 38.1 million marks as against 220.7 millions at the end of the year before. It had thus decreased during the year by 182.6 million marks.

Results for the Year. As the particulars of the profit and loss accounts of the Joint Stock banks, which are submitted for the official bank statistics, are not yet available for 1923 at the time of writing, only a few details can be given in this respect with regard to the economic results of the banks' operations for the year.

According to the annual reports of the banks the results for the year constituted a profit for 19 banks and a loss (10.4 millions) for one bank, viz., the Aktiebanken för Utrikeshandel (Bank for Foreign Trade) which was in course of liquidation. The profit and loss account of one of the minor banks, which last year received support from one of the large banks, formally shows neither profit nor loss. The results were thus appreciably better than for the preceding year, when the profit and loss accounts of four banks showed a combined loss of 13.4 million marks, not to mention the year 1921, when two banks closed their books with a total loss of 114.0 millions, an amount which exceeded the profits of all the other banks for the latter year by about 2 millions.

The total profits of the above 19 banks for 1923 amounted in all to 129.8 million marks or 3.1 millions more than the profits for 1922 of the 15 banks which then had a surplus.

The dividends distributed by the banks during the last four years will be seen below: —

Dividend rate	1920.	Number of banks.		
	1921.	1922.	1923.	
No dividend	1	6	5	5
3—5 %	3	—	4	2
6—7 $\frac{1}{2}$ %	7	5	3	5
8—9 %	5	2	2	2
10—11 %	4	4	2	3
12—13 %	1	2	1	1
14—15 %	—	—	1	1
16—17 %	1	1	1	1
18—19 %	—	—	1	1
20—22 %	1	1	—	—
Total	23	21	20	21

The dividends which some of the banks distributed out of profits for 1923 were thus slightly higher than the dividends paid for the year before.

¹⁾ A detailed account of the laws concerning the Bank of Finland's right of note issue is to be found in the Year Book 1922.

²⁾ This amount is the difference between right of note issue uncovered by gold reserve or claims on foreign correspondents (1,500 mill. marks) and the supplementary cover. This amount thus also constitutes in fact a note reserve that, however, may be utilised for the note issue only if set against such means as can be referred to the supplementary cover. With regard to the unconditional note reserve no such conditions are laid down.

³⁾ See previous note.

¹⁾ Un relevé détaillé des lois concernant le droit d'émission de la Banque de Finlande se trouve dans le Rapport de 1922.

²⁾ Cette somme représente la différence entre le droit d'émission non garanti en or ou avoirs à l'étranger (1.500 millions de marcs) et la couverture supplémentaire (voir tableau II). Cette somme constitue donc en réalité une réserve qui, en tout cas, ne peut être utilisée pour émission que contre un actif pouvant compter comme couverture supplémentaire. Le droit d'émission non utilisé "absolu" (col. 11) peut être employé sans cette limitation.

³⁾ Voir la note précédente.

**1. — Note Issue of the
Emission de billets de la**

		Right to issue Notes (according to the Law of $\frac{20}{12}$ 1921). Droit d'émission d'après la loi du $\frac{20}{12}$ 1921.					
Date. Date.	Gold Reserve and Foreign Corres- pondents. Encaisse or et comptes cou- rants à l'étran- ger.	Uncovered Limit of Issue. Droit d'émis- sion au-dessus de la couver- ture.	Right of Issue. Droit d'émission.	Of which Con- ditional Right of Issue. Dont droit d'émission conditionnel.	Unconditional Right of Issue (col. 4 - 5). Droit d'émission absolu. (col. 4 - 5).	Notes in Circulation. ¹⁾ The difference between these bills and the amount of the bills stated in table 17 is due to the fact that not all bills in the portfolio of the Bank are included in the supplementary cover. La différence entre ce nombre d'effets et celui du tableau 17 provient de ce que tous les effets que la Banque a en portefeuille ne sont pas comptés dans la couverture supplémentaire des billets.

¹⁾ At the closing of the books for 1921 the book value of the Russian Treasury bills, 91.6 million marks, was transferred to the Government's short-term obligations. At the final settlement of the matter the Bank of Finland itself wrote off 19.9 million marks of this amount out of its profits. The balance, viz., 71.7 million marks, is to be paid by the Government in cash to the Bank of Finland in the course of six years.

²⁾ According to the resolution of the Diet these means are to be used for strengthening the Bank's position.

¹⁾ Dans le bilan à fin 1921 les bons du Trésor de l'Etat russe ont été transférés, avec une estimation de 91,6 millions de marcs, aux engagements à court terme de l'Etat. Lors du règlement définitif de l'affaire, la Banque de Finlande a amorti sur ce montant 19,9 millions de marcs par prélevement sur les bénéfices. Le reste, 71,7 millions de marcs, sera remboursé par l'Etat à la Banque de Finlande dans un délai de six ans.

²⁾ Selon la résolution de la Diète cette somme sera employée à fortifier la situation de la Banque.
