## FINLAND AS A TOURIST COUNTRY

The rapid development of world communications has brought Finland very close to Central Europe and made it an integral part of the Scandinavian tourist area. Finland has moreover become an important half-way house for tourists between the Soviet Union and Western Europe.

The opportunities offered by Finland for tourists are partly based on its large area and small population. By European standards the area of the country is considerable; it is larger than Italy or the British Isles. On the other hand the Finnish population totals less than 5 million and the major part of it is concentrated in Southern Finland. Thus Finland is able to offer the tourists unspoiled nature, wide-open spaces and solitude. As far as climate is concerned Finland is suitable for tourism both in summer and winter. The average temperature in July is the same in Helsinki as in London and the sunny hours average 250 as against 200 in London. Because of the country's northern location the summer is also very light; in the northernmost part the sun never sets in the middle of the summer. In winter there is plenty of snow and especially in the early spring there are excellent possibilities for skiing.

In the last few years marked steps have been taken in the utilization of these natural tourist attractions. The highway network has been rebuilt all over the country; no traffic jams plague the roads. Camping sites and motels are gradually becoming more numerous and available in all parts of the country. The number of holiday villages has increased from a few to approximately 70 and local provincial companies have been founded to improve the standard of services for tourists. Tens of skiing resorts with ski lifts have been built as well. This work has brought the lake area of Eastern

Finland, the largest uniform lake region in Europe and the last big wilderness in Western Europe within reach of tourists.

However, what Finland has to offer to the tourist is not restricted exclusively to her nature for she can boast also of many interesting attractions in the field of culture from old cultural monuments, castles and stone churches to modern Finnish architecture and design. The same parallelism between traditional culture and new culture based on it is noticeable also in the performing arts. Local traditions e.g. in folk dancing and folk music have been revived at the same time as a series of cultural events »Finland Festivals» has been established, which provides diversified, high-quality art performances in various tourist centres throughout the summer. As an example may be mentioned the Savonlinna opera festival; the tourist attractions in the town and its surroundings are closely connected with the festival programme.

But tourism does not consist only of holiday activities. Travelling for study purposes, to participate in international congresses and meetings as well as purchase and business trips form an important part of tourism. Constant attention has been given in Finland to the promotion of the services and amenities required to get the full benefit from this type of travelling.

After the devaluation of 1967 Finland has become a far better prospect as a tourist country also as far as prices are concerned. This can be clearly seen in the development of tourism in the last few years.

In 1968 the deficit on the travel account declined to 8 million marks after having been almost 100 million marks in previous years. Last year this development was very distinctive as revenue from tourism increased by 33 per
cent while expenditure grew by 28 per cent. Receipts from tourism in 1969 amounted to 375 million marks and corresponding expenses to 371 million. Last year the travel account showed a surplus for the first time as income exceeded expenditure by approximately 4 million marks.

It has been estimated that the number of foreign tourists having visited Finland in 1969 was about 1300000 . If forecasts are made for the future it is likely that this figure will be at least doubled by 1975.

## EXPLANATIONS RELATING TO THE STATISTICAL SECTION

## BANK OF FINLAND

Page 4. Since Dec. 31, 1969. Gold and forsign exchange $=$ Gold (valued on basis of the par value of the mark) + Special drawing rights + IMF gold tranche + Foreign exchange. Liabilites on foreign exchange and mark accounts $=$ Foreign exchange accounts + Mark account of holders abroad. Other foreign assets $=$ Foreign bills + Foreign bonds + Currency subscription to Finland's quota in the IMF. Other foreign liabilties = Foreign term liabilities + IMF mark accounts. Claims on Treasury $=$ Treasury bills covering certain IMF and IBRD accounts + Advances for stand-by stocks - Export levies (net). Foreign exchange situation: Gold holdings are valued on basis of the par value of the mark. Gold tranche position measures that part of Finland's quota which may be drawn essentially automatically in convertible exchange against payment in marks.
Fage 5. Other advances = Intand bills discounted in foreign currency + Loans + Other claims (excl. Treasury's IMF and IBRD bills and Advances for stand-by stocks). Lablities $=$ Other cheque accounts + Other sight liabilities + Domestic term liabilities - Cash reserve accounts - Export levies (net).

## deposits by the public - <br> advances to the fublic - money supply

Commercial bank and mortgage bank figures obtained from the official bank statistics. savings bank figures from the Central Statistical Office, other figures from the respective credit institutions or their central banks.
Page 6. Cheque accounts in all credit institutions relates to commercial banks, savings banks, co-operative banks, and mortgage banks. Term deposits in all credit institutions includes a small amount of deposits in mortgage banks.
Page 7. Money supply $=$ Finnish notes and coins in circulation Finnish notes and coins held by the banks + Cheque accounts of the public + Fostal giro accounts of the public.

## STATE FINANCES

Page 8. Official figures computed by the Economic Department of the Ministry of Finance. First date of publication: Bulletin No. 8, 1968. Revenue and expenditure: Extra-budgetary funds and the aggregated net current deficit of State enterprises are included. Figures are reported on a cash payment basis. Debt: Foreign debt includes promissory notes given to international organızations. Index-tied bond loans are taken at nominal values. Cash debt (net) $=$ net debt to the Bank of Finland plus short-term debt to the Post Office Savings Bank less cash holdings (net) of State departments and funds.

## FOREIGN TRADE

Pages 9-11. Figures supplied by the Board of Customs. Indices (p. 9): The indices are calculated according to the Laspeyres formula. At the end of the year the arithmetic mean of the Laspeyres indices corresponds to the annual level of the Fisher index formula. Terms of trade: the ratio of export indices to import indices. Foreign trade by countries (p. 11): imports by countries of purchase, exports by countries of sale.

## BALANCE OF PAYMENTS

Fages 12-13. Figures are calculated by the Bank of Finland Institute for Economic Research. In addition to the Board of Customs figures, exports include grants in kind but exclude stevedoring expenses and imports include seamen's duty-free imports, non-monetary gold, grants in kind and adjusted allowance for smuggling.

## PRICE INDICES

Fage 14. All indices calculated by the Central Statistical Office.

## WAGES - PRODUCTION

Fages 15-16. Figures supplied by the Central Statistical Office. Page 16. Index of industrial production calculated by the Central Statistical Office. The grouping by branches of industry is in accordance with the international nomenclature (ISIC). The seasonally adjusted series is calculated by the Bank of Finland Institute for Economic Research on the basis of the index of industrial production per working day according to a method resembling the U.S. Bureau of Census Method II. Commodities according to use: 'nvestment goods weight 14.3, other producer goods weight 57.0 and consumer goods weight 28.7. Special manufacturing indices: food industry ISIC no. 20 , weight 11.2 , wood industry no. 25 , weight 6.6 , paper industry no. 27 , weight 13.1. chemical industry no. 31, weight 5.2. non-metallic mineral industry no. 33, weight 3.6 and metal industry nos. 34-38, weight 23.5

## LABOUR - TIMBER FELLINGS - INTERNAL TRADE TRAFFIC - HOUSE CONSTRUCTION

Fage 17. Labour 'ijures supplied by the Labour Research Bureau of the Ministry of Communications and Public Works, both based on the labour force sample survey. Labour input represents the estimated average number of days worked. (See article in No. 10 1960 of this Bulletin). Commercıal timber fellings compiled by the Minıstry of Communications and Public Works. Since July 1965 figures have been adjusted by the Bank of Finland Institute for Economic Research. Retailers' and Wholesalers' volume indices supplied by the Central Statistical Office. Indicator of traffic act/vity calculated by the Bank of Finland Institute for Economic Research. Figures are weighted averages of the sea, air, railway and road traffic. House construction figures calculated by the Central Statistical Office.

## SOME PARTICULARS ABOUT FINLAND

## FORM OF GOVERNMENT

From 1154 to 1809 Finland formed a part of the kingdom of Sweden. It then became an autonomous Grand Duchy connected with Russia until December 6. 1917, the date of Finland's declaration of independence. The republican constitution was adopted in 1919. The legislative power of the country is vested in Parliament and the fresident. The highest executive power is held by the Fresident, elected for a period of 6 years. The President for the current period. March 1, 1968, to March 1. 1974, is Urho Kekkonen.
Parliament, comprising 200 members, is elected by universal suffrage for a period of 4 years. The number of seats of the different parties in Parliament elected in 1970 were as follows: Social Democrats 52, Conservatives 37. Centre Farty 36. People's Democrats 36. Finnish Farmers' Party 18. Swedish Party 12, Liberal Farty 8 and Christian League 1.

## INTERNATIONAL ORGANIZATIONS

Finland became a member of BIS 1930. IMF 1948. IBRD 1948. GATT 1950. UN 1955. IFC 1956. IDA 1960. EFTA 1961. ADB 1966 and OECD 1969.

## LAND

THE AREA is 337000 square kilometres (Great Britain's area is $245000 \mathrm{sq} . \mathrm{km}$ and Italy's area $301000 \mathrm{sq} . \mathrm{km}$ ). Of the total. inland waters form $9.4 \%$. On an average $15.8 \%$ of the land in the South of Finland is cultivated (1960), $2.3 \%$ in the North and $9.2 \%$ of the land as a whole. Of the land area 21.8 mill. ha ( 53.9 mill. acres), or $71.3 \%$, are covered by forests.

OWNERSHIP OF LAND (1960): The total land area was distributed among different classes of owners approximately as follows: private $60.9 \%$. State $31.8 \%$, joint stock companies etc. $5.6 \%$, municipalities and parishes $1.7 \%$.

## POPULATION

NUMBER OF INHABITANTS (1968): 4.7 million. Sweden 7.9, Switzerland 6.1, Denmark 4.9 and Norway 3.8 million.

DENSITY OF POPULATION (1968): In South Finland 26.2, in North Finland 4.3 and in the whole country an average of 15.4 inhabitants to the square kilometre.

DISTRIBUTION BY AREA (1968): 51 \% of the popilation inhabit the rural areas, $49 \%$ towns and urban districts. The largest towns are: Helsinki (Helsingfors), the capital 532300 inhabitants, Tampere (Tammerfors) 152 500, Turku (Abo) 152000.

EM: LOYMENT (1968): Agriculture and forestry $25 \%$, industry and construction $34 \%$, commerce $15 \%$. transport and communications $7 \%$. services $19 \%$.

LANGUAGE (1960): Finnish speaking 92.4 \%, Swedish speaking $7.4 \%$, others $0.2 \%$.

EDUCATION (1968): Fractically all persons over 15 years of age are literate There are 6 universities (the oldest founded in 1640), 6 colleges of university standard, and 2 teacher training colleges, besides teacher training departments in two of the universities.

INCREASE OF FO.PULATION (1968): births $16.0 \%$. deaths $9.6 \%$, increase $4.4 \%$, net emigration $1.6 \%$. Deaths in France $11.0 \%$ and Great Britain $11.8 \%$.

## TRADE AND TRANSFORT

NATIONAL INCOME (1968, in million marks). Gross domestic product at factor cost by industrial origin: agriculture 2635 ( $9 \%$ ). forestry and fishing 1947 ( $7 \%$ ), manufacturing 8941 ( $30 \%$ ). construction 2748 ( $9 \%$ ), transport and communication 2225 ( $7 \%$ ), commerce, banking and insurance 3724 (12 \%), public administration 1418 ( $5 \%$ ), other services 6211 ( $21 \%$ ), total 29849 . Index of real domestic product 113 (1964 = 100).

FOREST RESOURCES (1960-1968): The growing stock comprised 1448 million of solid cu. mincl. bark ( 51139 million cu. ft). of which pine $43 \%$ and spruce $38 \%$, the rest $19 \%$ being broad-leaf-trees, chiefly birch. Of the growing stock 16364 million cu. ft, $47 \%$ of them pine, was up to the standard required for logs. The annual growth is 47 million solid cu. m green wood excl. bark ( 1660 mill. cu. ft). The total removal in 1968 calculated according to the use of wood was 48 million cu. $m$ excl. bark ( 1655 million $\mathrm{cu} . \mathrm{ft}$ ).

AGRICULTURE (1960). Cultivated land 2.6 million hectares. Number of holdings 388000 . of which 184000 are of more than 5 ha. Index of agricultural production 100 for $1968(1964=100)$. Measure of self-sufficiency in bread cereals $81 \%$ in the crop year 1967/68.

INDUSTRY (1966): Gross value of industrial production 20900 mill. marks, number of workers 356100 , salaried employees 84 200, motive power (1966) 4.2 mill. kW. Index of industrial production 171 for 1967 (1959 = 100).

STATE RAILWAYS (Jan. 1. 1970): Length 5801 km .
MERCHANT FLEET (May 31, 1970): Steamers 56 ( 66867 gross reg. tons), motor vessels 385 ( 587534 gross reg. tons), tankers 54 ( 690293 gross reg tons) general cargos 10 ( 1379 gross reg. tons). Total 605 ( 1346073 gross reg. tons).

MOTOR VEHICLES (Dec. 31, 1969): Fassenger cars 643100. lorries and vans 96900 , buses 7900 . others 4700 . Total 752600.

FINNISH AIRCRAFT (April, 1970): Finnish airlines. Finnair and Kar-Air have in use 2 DC-8-62s, 3 DC-6s, 8 Super Caravelles and 9 Convair Metropolitans. Companies have scheduled traffic outside of Finland to 23 airports and to 16 domestic airports.

## FINANCE AND BANKING

CURRENCY. Since 1860. Finland has had its own monetary system. From 1877 until 1914 the country was on the gold standard, and returned to it in 1926. In 1931, the Central Bank's duty to redeem bank notes in gold was suspended and at the end of 1962 was entirely cancelled. The monetary unit is the mark (Finnish markka). Since Oct. 12 1967, the par value of the mark is 0.21159 grams of fine gold per mark (equivalent to 4.20 marks per U.S. dollar).

THE CENTRAL BANK. The Bank of Finland (estab. 1811) functions under the guarantee and supervision of Parliament. Its Board of Management is appointed by the Fresident of the Republic: the Bank Supervisors. nine in number, are elected by Farliament. The Bank has a head office in Helsinki and 12 branches in other towns.
OTHER CREDIT INSTITUTIONS (Dec. 31, 1969). There are two big and four small commercial banks with in all 824 offices. 330 savings banks, 464 co-operative banks and their central bank, six mortgage banks, and Fost Office Bank. The co-operative stores accept deposits from their members. The National Fension Institute and sixtytwo private insurance comparies also grant credits.
RATES OF INTEREST (Jan 1, 1970). Bank of Finland discount rates $6-9 \%$, the rate for discounts or rediscounts for banks $7 \%$. Other credit institutions: term deposits $4 \%$. 6 month deposits $4 \frac{1}{2} \% .12$ month deposits $5 \% .24$ month deposits $6 \%$ highest lending rate $10 \%$.

# BUSINESS BAROMETER FOR THE FINNISH INDUSTRY 

by Kari Jalas, M. Pol. Sc.
Department Secretary, Department for Economic Policy, the Federation of Finnish Industries

Since the beginning of 1966 the Federation of Finnish Industries has conducted a quarterly survey among the highest industrial management on their business expectations. Parts of the results of the survey have been published under the title »Business barometer for the Finnish industry>. The purpose of the survey is to provide cyclical forecasts on the various sectors of the industry for the members of the Federation and to aid in the formation of the Federation's general industrial policy.

The structure of the survey closely resembles that of the »Konjunkturtest» developed by the IFO-Institut für Wirtschaftsforschung. Answers are chosen from the given alternatives »larger», »equally large» or »smaller», which describe the expected development of the variable or its past development. The concept »equally large» is defined to include changes within the limits of $\pm 2$ per cent from the previous figure, which involves a difference in comparison with the IFO-Institut survey. This $\pm 2$ per cent interval is termed mindifference-interval». Thus the material obtained through the survey is qualitative, which gives rise to specific difficulties in its treatment and interpretation. As many as 100 firms are included in the survey, the major part of the membership of the Federation being covered by it. The survey covers all sectors of industry with the exception of the wood-processing industry, the shoe and clothing industry, the graphic industry and a part of the building material industry which do not belong to the Federation. The response has continuously been very good, between 88 and 97 per cent.

The questions asked deal with:

1. The volume of production during the current quarter
a. in comparison with the previous quarter
b. in comparison with the corresponding quarter of the previous year.
2. The volume of production in the next quarter in comparison with the present quarter
3. Unused production capacity
4. Volume of orders
a. as against three months earlier
b. as against three months after the time of survey
5. Present volume of orders
6. Times of delivery
a. as against three months earlier
b. as against one year earlier
7. Stocks
a. as against three months earlier
b. as against one year earlier (answers asked separately for raw materials and finished products)
8. Total number of workers
a. as against three months earlier
b. as against one year earlier
c. as against three months after the survey
d. as against 6 months after the survey
9. Bottlenecks in production
10. General business prospects.

## THE BUSINESS BAROMETER AS AN INDICATOR OF THE 1966-1969 CYCLICAL FLUCTUATIONS

During 1966-1969 the Finnish economy actually experienced only one marked cyclical change, the turning point of the 1966-1968 recession into a relatively strong upswing. Since the main importance of the business barometer is that it gives vital information on future cyclical development, special attention has to be paid to this change in the direction of the cycle as well as to the development suggested by the business barometer figures at present.

CYCLICAL DEVELOPMENT EXPERIENCED BY THE MEMBERS OF THE FEDERATION OF FINNISH INDUSTRIES

The chart above depicts the development of the various components of the barometer during the period under review. The height of the columns shows the difference between $\mathrm{S}_{\mathrm{T}}^{+}$and $\mathrm{S}_{\mathrm{T}}^{-} ; \mathrm{S}_{\mathrm{T}}^{+}$shows the share of those having replied »larger» and $S_{T}^{-}$the share of those having replied »smaller». The charts deal with the following components 1) general business prospects, 2) present volume of orders, 3) total number of workers as against three months earlier, 4) times of delivery as against three months earlier.

The question on general economic prospects is intended to measure how optimistic the entrepreneurs are regarding the future; changes in the expectations may be assumed to precede changes in real economic variables. The development of this component proves this hypothesis to be correct. The entrepreneurs'
optimism increased considerably during the second quarter of 1968 thus forecasting an upswing, which, however, did not affect the labour position, for instance, until almost one year later. The increase in the volume of orders and the lengthening of delivery times also appeared not until the first half of 1969. The entrepreneurs' optimism reached its peak during the first quarter of 1969; as many as 55 per cent of them expected a further improvement in the outlook and the rest expected the situation to remain unchanged. Thus the optimism reached its peak again approximately one year before the downward cyclical trend set in at the end of 1969, e.g. in the form of a decreasing volume of orders and assumed changes in the delivery dates.

The experience gathered from the sixteen surveys made so far has been very encourag-
ing. The various components of the business barometer have usually given a coherent picture of the prevailing cyclical situation. On the other hand, the information obtained on the development of the volume of production and the stock situation has not always been sufficiently free from seasonal fluctuations to serve the analysis of cyclical development. The general weakness of the method is, however, that the results obtained cannot for the time being be combined with the quantitative material derived from other sources.

## THE DEVELOPMENT OF THE BUSINESS BAROMETER

Because the theory on which the barometer is based is not yet very highly developed the reliability and accuracy of the method can be measured only empirically. The continuous observation of the results and the development of the method on the basis of this control therefore have to be regarded as prerequisites for the use of the barometer as a source of the information used for economic forecasting.

Before the publication of the results of the barometer began their consistency and reliability were examined for one and a half years. ${ }^{1}$ By the end of 1968 material and experience had been obtained from twelve surveys and it was decided to carry out a more thorough study on the reliability and forecasting ability of the barometer results. The study ${ }^{2}$ which was finished in April 1969 dealt mainly with the ability of the barometer to depict and forecast the volume of production, the number of workers and the development of the volume of orders.

An essential problem in the use of the business barometer in depicting past developments is the quantification problem, i.e. the transforming of qualitative answers to represent the real quantitative changes. The quantification ex-

1 Ristimäki, J.: Experiences from the business barometer, Teollisuusliitto tiedottaa 4/67, (in Finnish).
2 Jalas, K. J. J.: The interpretation and forecasting ability of the surveys on business expectations, mimeographed study, Suomen Teollisuuslitto, Helsinki 1969, (in Finnish).
periments with the volume of production carried out in connection with the study, however, did not give satisfactory results. One of the reasons for this was that the compilation of quantitative comparison series created great difficulties. This was on the one hand due to problems faced in the collection of information. On the other hand, the theoretical basis of the quantification has not yet been sufficiently developed.

The results from the quantification experiments showed that the information given by the barometer cannot yet be linked with the conventional statistical figures derived elsewhere. Thus the forecasting ability of the barometer could be tested only as an internal question concerning the material.

An endeavour was made to measure the forecasting ability of the entrepreneurs' expectations on two levels. Firstly, the reliability of the cyclical forecasts on the various sectors and the whole manufacturing industry was tested. Secondly, the average forecasting ability of the individual firms' expectations was tested over the whole time period 1966-1968.

The forecasting ability of the barometer proved to vary greatly depending on the variable being forecast. As far as production and labour expectations were concerned the accuracy was rather good whereas expectations concerning the volume of orders did not predict future changes too well. There were, however, clear differences in the forecasting accuracy between the different sectors; in the foodstuffs industry and >other manufacturing» it was very good also as far as volume of orders was concerned. As the firms of the building material industry, which is very sensitive to cyclical changes, have a great weight in »other manufacturing», the whole forecasting method can apparently be improved by increasing the share of the enterprises of this sector in the sample.

The forecasting method based on the distribution of the answers used for the barometer is a very rough one. Therefore reasons for rather good results had to be found elsewhere. There was reason to believe that the explanation
could be found in the good forecasting ability of individual firms. It became clear that the forecasting ability of individual firms was preserved very well during the treatment of the answers. Although the differences in the average forecasting ability of the enterprises of the various branches of industry are not directly reflected in the branch forecasts, a clearly noticeable connection can be seen between these two. Some variables have a better forecasting ability than others; the volume of orders is the variable most difficult to predict while the expectations concerning the labour force were realized more often on average than those regarding the other variables.

Almost exclusively large and medium-size enterprises have been included in the survey. Although this deteriorates the quantification results, it has an advantage as far as the forecasting accuracy of the material is concerned. It could be noted that the forecasting ability of the expectations is considerably better in large firms than in small ones. The difference was particularly clear regarding the production and order expectations.

It became apparent that the fixed indifference interval ( $= \pm 2$ per cent) is not applicable for all variables to be forecast. Especially when applied for labour forecasts the information obtained was very scarce, which involved a weakness for the method as a whole. However, the information obtained from the forecasts is greatly improved if suitable intervals are determined for each variable and sector and revised on the basis of general economic development.

Although the quantification experiments and the measurements of the forecasting ability did not throughout give as good results as was hoped for, there is not doubt that both the quantifiability and the forecasting ability can be improved by developing the method. Efforts are being made for this purpose. The branches of industry important from the point of view of cyclical development, e.g. the building material industry are thereby in a key position.

It is obvious that the method of following and forecasting the cyclical changes based on the survey could be markedly developed also in other respects. The interdependencies between the various variables of the survey are partly clear on an intuitive basis. However, this does not mean that these connections are the same in all firms and branches and that the answers express them in a rational way. The cyclical behaviour of firms should be examined also for the part enabled by the material of the survey. At the same time it would become possible to establish various internal methods of controlling the consistency and quality of the material obtained.

Some subjective judgment is always involved in the interpretation of the numerical results of the business barometer. More and more reliable forecasts can be developed in the future by observing the firms' behaviour when answering questions and by studying the interdependencies between the various components of the survey.

## ITEMS

New Cabinet. As the negotiations to form a majority Cabinet proved inconclusive, the President appointed a new caretaker Cabinet composed of politicians and senior public officials. The Prime Minister of the new Cabinet is Mr Teuvo Aura, Major of the city of Helsinki, the Deputy Prime Minister and Minister of Finance is Mr Päiviö Hetemäki. Mr Väinö Leskinen is Minister for Foreign Affairs and

Mr Olavi Mattila Minister of Trade and Industry.

The Bank Supervisors of the Diet. The Electors of the new Diet chose Bank Supervisors, nine in number, on May 14. The Bank Supervisors elected Mr Juha Rihtniemi as Chairman and Mr Jussi Linnamo as Vicechairman.

Trade agreement. On May 15, 1970 an agreement was signed between Finland and Hungary regulating the exchange of goods between the two countries for the period from July 1, 1970 to June 30, 1971. The Finnish export list includes different kinds of paper and board and their products, cellulose, woodworking machinery and other machinery and equipment, special steel, semi-manufactured products of copper, chemical industry products and plastic products. Finland's import list comprises the licence-free imports together with rolled products, fresh and tinned vegetables and fruits, juices, various textiles and electrical instruments.

Domestic bond issues. The Government has announced the following two bond issues for public subscription.

The 1970 II issue of 8 per cent bonds of 20 million marks. The bonds are dated May 4 and will run for a period of ten years.

The 1970 III issue of $71 / 2$ per cent bonds amounting to 80 million marks. The currency period is four years starting from May 4.

The both loans are issued at par.
The Government has authorized the Real Estate Bank in Finland Ltd to make a private bond issue of 10 million marks. The bonds are dated May 15 and will mature in ten years. The rate of interest is 8 per cent and the loan is issued at par.

Publications of the Bank of Finland. The following publication has appeared in series of Studies in Finland's Economic Growth II: Erkki Pihkala, Suomen Ulkomaankauppa 1860 -1917 (Finland's Foreign Trade 1860-1917). Published in Finnish with an English summary and statistics. Helsinki 1970, 156 pp.

In Series D , the following has recently been published: 25. Pertti Kukkonen and Esko Tikkanen, Jäänmurtajat ja talviliikenne (Icebreakers and Winter Traffic). Published in Finnish. Helsinki $1970,136 \mathrm{pp}$.
