

## THE FINNISH MARKET REVIEW

## GENERAL SURVEY

Finnish economy has deteriorated continuously ever since late 1951, and its adaptability has been severely tested by the pressure of increasingly unfavourable foreign trade conditions. Indeed, it has shown remarkable resistance to the contractive forces, but a retardation is evident in most spheres. The situation has grown still worse in the first few weeks of the current year. January was an unfavourable month to foreign trade and clearly the February figures will provide no greater cause for satisfaction. Even normally, however, the initial months of the year are the quietest in foreign trade, owing to ice obstructing shipping and the fact that the exportation of woodworking products does not get into full swing until spring. The development of foreign trade prices continues unfavourable to Finland and the volume exported was less than a year ago. The decrease in the value of exports, however, was more the result of the fall in prices than the reduction in volume. The uncertainty of the export markets, especially in Western Europe, as regards both prices and demand is a disquieting factor. At the same time Eastern trade was momentarily hampered by the fact that trade negotiations with the Soviet Union were not concluded until February 23.

Slackening economic activity has added to the difficulties of the employment situation. Unemployment will probably continue to grow in March and April, when it will fall off again barring unforeseen problems. By the middle of February the number of un-
employed registered totalled 59,000 , of which 46,000 were placed in relief work.

The third sector of economic life to have been clearly affected by the changed conditions is the money market. The accumulation of time deposits is still insufficient, and as cheque accounts have simultaneously been very much reduced the commercial banks in particular show weak deposit results. Their ability to grant loans has been severely tried as the demand for credit has continued strong. Rediscounts with the Central Bank are still very great.

## THE MONEY MARKET

Deposit business in January was characterized by a weakening tendency. The influx of deposits was slower than a year ago in all credit institutions, though most of them reported some increase in their time deposits. Altogether time deposits grew by 3,400 million mark, whereas in January 1952 they increased by 5,400 million. The accounts of the commercial banks too clearly reflected the growing stringency of the money market. The January increase in their time deposits was just over half last year's figure. Cheque account development on the other hand was not nearly as unsatisfactory as in January 1952, when these accounts were reduced by fully 4,000 million marks; this January the reduction was 1,400 million. Nevertheless, mainly in consequence of the increase in time deposits, total deposits by the public fell off by 509 million marks only in January as against a decrease of $\mathbf{2 , 9 1 6}$ million in January
1952. For this reason and because the Bank of Finland did not moderate the terms of rediscounting fixed in the spring of 1952, the commercial banks had to observe a very strict lending policy, and this meant that even urgent credit requirements of their own clients could not always be met. Advances therefore expanded considerably less than a year ago, 1,415 million marks in January 1953 as against 3,268 million in January 1952.

The most important changes in the statements of the Bank of Finland for the first few weeks of the current year compared with a year earlier occurred in its lending and in the foreign payments position. In both cases the recession has had a decisive influence. The increased lending business of the commercial banks has caused a powerful rise in rediscounts. The total of rediscounted bills was fairly small in the beginning of 1952 but subsequently grew very much. At the end of 1952 it exceeded 17,000 million marks, in January this year it fell off to some extent and in the first two weeks of February remained more or less unchanged. In order to be able to carry on with timber loggings, despite the tight monetary situation, to the extent necessary to maintain raw material for forest: industry production in correspondence to demand, the Bank of Finland has decided to grant special loans to enterprises that have applied for so-called employment loan. As far as the foreign pay-
ments position is concerned, the reserve of foreign currency is now much smaller than at the beginning of 1952, for the reasons described above. During the last few weeks, however, the currency reserve has remained at about the level reached by the end of last year, partly thanks to the foreign credits received.

## TRADE AND INDUSTRY

Foreign trade statistics show a surplus of imports for January as high as 3,600 million marks, against some 500 million only last year. The value of imports and, even more, that of exports fell short of the corresponding amounts in 1952. In addition to ice obstructions to navigation, at their worst at this time of year, foreign trade is also suffering from the uncertainty of the Western markets.

In addition to what has already been said about the decline in economic activity and the contraction of output in many spheres the following data can be given on forest work which, as is known, is of great importance to employment and, more particularly, to rural income-formation. On February 15 a total of 140,000 men were employed in lumbering, 70,000 less than twelve months ago. The employment situation has thus changed essentially from last year and the year before that. By the end of January 14 million cu.m. piled measure had been felled; the comparable figure last year was 17.6 million cu.m.

February 25, 1953.

Tables 24-29 according to FInnish Official Statistics I, A, Foreign Trade of Finland, Monthly Reports.
The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Eaports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by thelr owner who must at the same time state the value of the goods as calculated at the frontiers of the country.

* Preliminary figures subject to minor alterations.

## CERTAIN PARTICULARS ABOUT FINLAND

## 1. FORM OF GOVERNMENT

Finland formed a part of the king dom of Sweden from 1154 to 1809; from 1809 it was an autonomous Grand Duchy connected with Russia up to December 6, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a republic in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President chosen for a period of 6 years. The President for the current period, March 1, 1950, to March 1. 1956, is Juho Kusti Paasikivi who has been In office since March 11, 1946.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1951 are at present as follows: Social Democrats 53, Agrarians 51, People's Democrats 48, Conservatives 28, Swedish Party 15, Liberal Party 10.

## 2. LAND

THE AREA is 337,009 square kilometres (Great Britain's area is $245,000 \mathrm{sq}$. $\mathbf{k m}$. and Italy's area $301,000 \mathrm{sq} . \mathrm{km}$.). Of the total area $9.4 \%$ are inland waters. On an average $14.4 \%$ of the land in the South of Finland is coltivated (1040), $2.0 \%$ In the North, $8.2 \%$ of the whole land. Of the land area 21.7 mill. ha ( 58.5 mill. acres) or $70.9 \%$ are covered by forests.

## 3. POPULATION

NUMBER OF INHABITANTS (1952): 4.1 millions. Sweden (1950) 7.0, Switzerland (1950) 4.7. Denmark (1950) 4.8 and Norway (1950) 3.8 millions.

DENSITY OF POPULATION (1952): In South Finland 28.1, in North Finland 3.6 and in the whole country an average of 18.6 inhabitants to the square kilometre.

DISTRIBUTION (1952): 67.1 \% of the population inhabit the country, $32.9 \%$ the towns and urban districts. The largest towns are (1952): Helsinkd (Helsingfors), the capital, 384,500 inhabltants, Turku (Åbo) 106,000, Tampere (Tammerfors) 105,000.

OCCUPATION (1950): Agriculture and forestry $39 \%$, industry, manual labour and construction $32 \%$, commerce $7 \%$, transport $6 \%$, services $9 \%$, unspecified industry and without profession $7 \%$

LANGUAGE (1950): Finnish speaking $91.2 \%$, Swedish speaking $8.6 \%$, others $0.2 \%$.

RELIGION (1949): Lutheran $95.4 \%$, Greek-Orthodox $1.7 \%$, others $2.9 \%$.

EDUCATION (1952): Practically all persons over 15 years of age are literate. There are three universities (the oldest founded in 1640) and 12 colleges of university standard.

INCREASE OF POPULATION (1951): Births $23.0 \%$, deaths $10.0 \%$, increase $8.7 \%$. Deaths in France (1951) $13.2 \%$ and in Great Britain (1951) $12.6 \%$.

## 4. TRADE AND COMMUNICATIONS

NATIONAL INCOME (1951, in thousand million marks): Gross nationsl income at market price 773. Net national product at factor cost, by origin: agricuiture 73 (12 \%), forestry and fishing 93 ( $15 \%$ ), manufacturing 202 ( $33 \%$ ), construction 51 ( $8 \%$ ), transport and communieations 40 ( $7 \%$ ), commerce, banking and insurance 73 ( $12 \%$ ), public activities 51 ( $8 \%$ ), other services 28 ( $5 \%$ ), total 611. Volume index 121 (1948 = 100).

FOREST RESOUROES (1950): The growing stock comprises 1,870 million of solid cub. m. Incl. bark ( 48,384 million cub. ft), of which pine is $45.5 \%$, sprace $32.2 \%$, the rest $22.3 \%$ being leaf-trees, chiefly birch. Of the growing stock 7,471 million cub. ft, $650 \%$ of them pines, are up to the standard required for logs (minimum for sawmill logs $18^{\circ} \times 6^{\circ}$ and for veneer logs $18^{\prime} \times 7^{\prime \prime}$ ). The annual growth is about 41 million of solid cub. m . green wood excl. bark ( 1,448 mill. cub. ft ). The
total removal in 1949 calculated according to the use of wood was 40 milion cub. m. ( 1,413 million cub. ft ). In the years 1923 to 1938 in the then area of the country, it averaged 41 million oub. $m$. ( 1,448 million cab. $f$ t) per year, the correspondIng Jearly growth belng 46 million cub. m. ( 1,624 million cub. tt).

AGRICULTURE (1950): Cultivated land 2.5 million hectares, divided as follows: area under cultivation under 10 hectares $41.2 \%, 10-50 \mathrm{ha} 53.6 \%, 50-100 \mathrm{ha} 8.6 \%$, over 100 ha $1.6 \%$. Cultivated land (1950) is divided between the different kinds of crops as follows: $40.6 \%$ hay, $9.7 \%$ temporary grassland for grazing, $18.8 \%$ oats, $7.6 \%$ wheat, $5.9 \%$ rye, $4.8 \%$ barley. $3.4 \%$ potatoes, $9.2 \%$ other. Dairy units in operation In 1951 amount to 488.

OWNERSHIP OF LAND (1941): The land area is distributed among different classes of owners approximately as follows: private $49.2 \%$, State $41.0 \%$, joint stock companies etc. $7.1 \%$, communities $2.1 \%$.

INDUSTRY (1950): Number of industrial concerns 5,880, workpeople 259,813, gross value of products of industry 325,714 million marks.

LENGTH OF RAILWAYS (1952): 4,987 km., of whioh $4,800 \mathrm{~km}$. State railways and 187 km . private. The gauge is in general 1.624 m .

MERCHANT FLEET (1.4.1952): Steamers 369 (471,358 gross reg. tons), motor vessels 127 ( 124,205 gross reg. tons), sailing vessels with auxiliary engines 183 ( 12,455 gross reg. tons), other sailing vessels 5 (3,810 gross reg. tons). Total 634 ( 611,328 gross reg. tons).

## 5. FINANCE AND BANKING

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to 1914 the currency maintained its stable gold value, and after the disturbances caused by the war a gold standard was again introduced from January 1, 1926. The unit currency is the mark (Finnish markka> $=100$ penniä). Since October 12, 1931, the redemption of bank notes in gold is, however, suspended. In 1948 Finland joined the International Monetary Fund and on June 27, 1951, the official par value of the mark was established at 230 marks per one U.S. dollar, the selling rate of the Bank of Finland being 231 marks and its buying rate 229 marks.

STATE FINANCES. According to the finance accounts for 1951 the State revenue was 204,633 million marks, of which 182,448 million marks were current revenue, and State oxpenditure 206,987 million marks, of which 143,924 million marks were current expenditure. See tables $21-23$ in this issue.

MUNICIPAL FINANCES. According to the finance accounts for 1950 expenditure amounted to 57,893 million marks. Total revenue was 67,971 million marks, of which income from taxation was 29,170 million marks. The municipal income tax (non-progressive) averaged $10.0 \%$ of the ratepayers* income.

THE BANK OF ISSUE. The Bank of Finland (founded In 1811) is a State Bank. Its head office is in Helsinkd (Helsingfors) with branches in Turku (Abo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleảborg), Kuopio, Joensuu, Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyväskylä, Kotika and Lahti.

THE COMMRRCLAL BANKS (1952): Number 6, possess 487 offices, where all kinds of banking business is transacted. There is one banking establishment per 8,419 inhabitants.

The largest banks are Kansallis-Osake-Pankki, Oy Pohjoismaiden Yhdyspankki - Ab Nordiska Föreningsbanken and Helsingin Osakepankki - Helsingfors Aktiebank, all with head offices in the capital.

OTHER BANKS (1952): Mortgage Banks 5, Savings banks 439, Co-operative Credit Societies 658 and a Central Bank for the latter

# THE BANK OF FINLAND IN 1952 

BY<br>PROFESSOR A. E. TUDEER

HEAD OF THE INSTITUTE FOR RCONOMIC RESEAROH OF THE BANK OF FINLAND

THE MONEY MARKET
At the beginning of 1952 the Finnish money market was comparatively easy. This was mainly due to the favourable market conditions in 1951 and to the resultant large surplus of exports. In addition, considerable advances on account of exports in 1952 had been received towards the end of 1951. But the easiness of the money market was shortlived, and early in the year under review the situation began to grow tighter in consequence of the changes in the general trend that had set in during the previous autumn. Owing to an appreciable time lag in export conditions the early part of 1952 proceeded more or less easily in spite of imports being disturbingly heavy, but, as. the falling prices for exports and the reduced demand for the staple goods made themselves felt, the demand for credit increased again and the money market tightened. These changes are very clearly reflected in the position of the Bank of Finland which thereby experienced considerable alterations.

As it was not considered possible, for political reasons, to alter the rates of interest, as the classical monetary policy would have called for, the Bank of Finland endeavoured to guide the credit market in the desired direction in the course of the year, partly by changing the regulations for rediscounting bills and partly by carefully watching the loans granted by the credit institutions for various purposes.

## BALANCE SH:EET

The diagram on page 27 illustrates the movement of some of the Bank's most important items from week to week. The following table gives a summary of the position of the Bank at the end of the years 1951 and 1952.

| ASSETS Cover for the note issue | $\begin{gathered} 1951 \\ \text { Dec. } 31 \\ \text { Mill. mk } \end{gathered}$ | $\begin{gathered} 1952 \\ \text { Dec. } 31 \\ \text { Mill. mk } \end{gathered}$ |
| :---: | :---: | :---: |
| Gold reserve | 5,865 | 5,863 |
| Foreign currency | 24,123 | 9,646 |
| Foreign baills | 2,659 | 4,503 |
| Foreign banik notes and coupons | 171 | $17 \overline{3}$ |
| Inlamd bills |  |  |
| Treasury bills | 7,023 | 13,076 |
| IMF and IBRD cover | 1,662 | 1,662 |
| Private bills | 11,567 | 14,678 |
| Rediscounted bills | 16 | 17,217 |
| Other Assets |  |  |
| Loans on security | 47 | 57 |
| Advances on current accounts | 378 | 225 |
| Foreign clearing accounts | 3,297 | 4,430 |
| Bonds in Finnish currency.... | 757 | 854 |
| Bonds in foreign currency .... | 192 | $307 \cdot$ |
| Advances on documentary credit | 973 | 206 |
| Sundry assets ............... | 503 | 812 |
| T.otal | 59,234 | 73,711 |
| liabilities |  |  |
| Payable on demand |  |  |
| Notes in circulation | 44,774 | 46,153 |
| Bank-post-bills | 171 | 310 |
| Current accounts | - | 3,408 |
| Mark accounts of holders abroad | 1,257 | 4,323 |
| International Monetary Fund \& International Bank for Reconstruction and Development. . | 1,662 | 2,697 |
| Foreign debt | 1,848 | 2,573 |
| Sundry accounts ............ | 101 | 555 |
| Other Liabilities |  |  |
| Capital | 5,000 | 5,000 |
| Reserve Fund | 1,527 | 2,242 |
| Sundry liabilities | 1,479 | 5,238 |
| Profit and Lross Account | 1,415 | 1,212 |
| Total | 59,234 | 73,711 |

Among the assets there was an appreciable falling off in foreign currency of no less than 14,477 million marks or about threefifths of its amount at the beginning of the year. It should, however, be noted in this connection that, although the supply of foreign currency was, indeed, greatly reduced owing to the adverse balance of trade, it was larger than at the end of 1950 . On the other
hand, it cannot be denied that this item consists largely of ,soft" or bound currencies, which cannot be utilized to the extent that the figures indicate. The other foreign assets, i. e., foreign bills and foreign clearing accounts, recorded a slight rise. At the same time it is worth noting that the foreign liabilities of the Bank, i. e., the mark accounts of holders abroad and the foreign debt, also increased. Altogether the net foreign assets of the Bank, including the gold reserve and some other items, amounted to 17,721 million marks at the end of 1952 as against $31,349^{\circ}$ million a year earlier. Thus these net assets decreased by one-half in the course of the year under review. The position of the central bank therefore grew appreciably weaker, but it is still far stronger than, e.g., at the end of 1950, when the corresponding net amount was only 89 million marks.

The loans granted by the Bank of Finland, which had dropped to one-half in 1951 and were exceptionally low at the end of that year, expanded again during the year under review. The main cause is, of course, to be sought in the change in foreign trade, partly in the decrease in exports and partly in the considerable growth of imports. The total bill portfolio increased from 20,269 million marks to 46,633 million. The greater part of the increase referred to bills rediscounted which gradually grew from practically nothing at the end of 1951 to 17,217 million marks at the end of last year, a clear indication of the high degree to which the stringency of the money market had increased. Loans to the Treasury were also considerable or 6,053 million marks more than at the beginning of the year, but were on a considerably lower level than in 1950. The Bank's direct discounting of bills of the business world also rose, by 3,111 million.

Among the "Other assets" the foreign clearing accounts show an increase of 1,133 million marks. This item is a net amount, the account with some countries recording a net credit balance, while in the case of others they record an indebtedness. It is further worth noting that the advances on documentarv credits fell off considerably.

The liabilities of the Bank also changed considerably. The rise in the foreign liabilities have already been referred to. The mark accounts of holders abroad increased
by 3,066 million marks, the foreign debt by 725 million and the account „International Monetary Fund \& International Bank for Reconstruction and Development" by 1,035 million marks. The last-named increase consisted of the equivalent of a short-term credit of 4.5 million dollars granted by the International Monetary Fund to the Bank of Finland at the end of 1952.

The amount of notes in circulation deserves special attention, for the note circulation has been growing very much from year to year; in 1951 the increase was more than 10,000 million marks, representing no less than 30 per cent. Last year the increase was fairly small, only 1,379 million marks or about 3 per cent. This was partly due to the stringency of the money market, chiefly owing to the reduction of the reserve of foreign currency, but was also partly proof of the inflationary tendency having been checked. It should be pointed out further that the great increase in ,"Sundry liabilities" is closely connected with the sale of foreign currency; as this is booked at values below the current rates of exchange, a decrease in the reserve of foreign currency produces a profit which is entered on this account.

The funds of the Bank of Finland increased by 715 million marks by the transfer of this sum, i.e., one-half of the annual profit for 1951, to the Reserve Fund at the year under review. The net profit for 1952 amounted to 1,212 million marks.

## THE RIGHT OF NOTE ISSUE

The following table shows the right of note issue for 1951 and 1952, the amount of issue used and the note reserve.

| RIGHT TO ISŞUE NOTES | $\begin{gathered} 1951 \\ \text { Dec. } 31 \\ \text { Mill. mk } \end{gathered}$ | $\begin{gathered} 1952 \\ \text { Dec. } 31 \\ \text { Mill. mk } \end{gathered}$ |
| :---: | :---: | :---: |
| Gold reserve and foreign |  |  |
| balances | 32.818 | 20,187 |
| Additional right of issue | 50,000 | 50,000 |
| Total right to issue notes | 82,818 | 70,187 |

AMOUNT OF ISSUE USED

| Notes in circulation ....... | 44;774 | 46,153 |
| :---: | :---: | :---: |
| Other liabilities payable on demand | 5,039 | 11,293 |
| Undrawn amount of widvances ion current accounts . . . . . . | 646 | 802 |
| Totail mmount used | 50,459 | 58,248 |
| Note reserve | 32,359 | 11,939 |
| Total | 82,818 | 70,187 |

As a direct consequence of the great reduction of the reserve of foreign currency, the right of the central bank to issue notes decreased appreciably, by 12,631 million marks or over 15 per cent. In spite of this reduction, however, the right of note issue was considerably greater than at the end of 1950. At the same time, the used right of issue increased very appreciably or by 7,789 million marks, which respesents quite 15 per cent. As a result of these double changes the unused right of note issue or the socalled note reserve was very greatly reduced, by 20,420 million marks or 63 per cent of its amount at the beginning of the year. This decrease in the note reserve referred exclusively to the part of the reserve that is dependent on supplementary cover, for it was reduced from 29,731 million marks to only 3,367 million, whereas the note reserve immediately available increased from 2,628 to 8,572 million marks. The explanation of these changes lies mainly in the reduction of the foreign currency and in the growth of the amount of bills.

## PROFIT AND LOSS ACCOUNT

The following table shows the Profit and Loss Account of the Bank for 1952 with comparative figures for 1951 and 1950.

| CREDIT | $\begin{gathered} 1950 \\ \text { Mill. } \mathrm{mk} \end{gathered}$ | $\begin{gathered} 1951 \\ \text { Mill. mk } \end{gathered}$ | $\begin{gathered} 1052 \\ \text { Mill. mk } \end{gathered}$ |
| :---: | :---: | :---: | :---: |
| Interest on internal loans | 995 | 1,328 | 1,108 |
| Interest on curnent accounts abroad | 1 | 18 | 129 |
| Interest on bonds | 143 | 134 | 108 |
| Sundry income | 18 | 31 | 71 |
| Agio | 479 | 642 | 496 |
| Commission | 144 | 207 | 220 |
| Total | 1,780 | 2,360 | 2,132 |

DEBIT

| Salaries | 203 | 268 | 289 |
| :---: | :---: | :---: | :---: |
| Pensions | 12 | 18 | 23 |
| Cost af manufacturing lbank notes ........... | 102 | 108 | 157 |
| Sundry expenses ...... | 44 | 63 | 73 |
| Written off buiding costs | 407 | 475 | 355 |
| Depreciation of furniture | 8 | 13 | 23 |
| Total | 776 | 945 | 920 |
| Net profit | 1,004 | 1,415 | 1,212 |
| Total | 1,780 | 2,360 | 2,132 |

The total income of the Bank of Finland was slightly less in 1952 than in the previous year, but considerably larger than in earlier years. The decrease was principally due to the fact that rates of interest throughout the year were 2 per cent lower than in 1951. After part of the income in the form of interest had, as usual, been transferred to reserve before closing the books, the income from interest on internal loans amounted to 1,108 million marks or 220 million less than for the year before. The income from interest on bonds and from agio was also less than in 1951. On the other hand, the income from interest on current accounts abroad, commission and sundry income recorded a rise.

On the debit side most of the items increased, though not to the same extent as in previous years, when inflation raised prices and wages. The actual expenditure of the Bank amounted to 542 million marks as
compared with 457 million in the previous year. The increase represented 85 million marks or approximately 19 per cent as against 27 per cent in 1951.

In accordance with the principles adopted in former years the new buildings, repairs etc., as well as newly acquired furniture and fittings, were written off in their entirety. The sums written off totalled 378 million marks as against 488 million in 1951.

After writing off these sums there remained a net profit of 1,212 million marks, as already mentioned. Thus the net profit was 203 million less than in the previous year. In accordance with the regulations for the Bank of Finland, half of the net profit or 606 million marks has been transferred to the Reserve Fund which has thereby increased to 2,848 million marks. The other half of the net profit will be employed for the general budgetary purposes of the State.

# THE ECONOMIC POSITION IN FINLAND IN 1952 

BY
K. O. ALHO, Ph. D.

HEAD OF DEPARTMENT, THE BANK OF FINLAND INSTITUTE FOR ECONOMIC RESEARCH.

## INTRODUCTION

It was ascertained in the survey of Finland's economic development published in this Bulletin a year ago that certain general signs of a falling trend in world markets had appeared at the end of 1951. The effect of the deteriorating foreign markets was felt in Finland's economy fairly early. However, the deflationary development would hardly have been as vigorous as it has now proved had not some Western European countries, above all Great Britain, resorted to measures aimed at lowering import prices and limiting the volume of imports. These measures affected Finnish export products very forcibly, greatly reducing - and for some time even paralyzing - exports to those countries. Some domestic forces also contractive in effect accompanied the unfavourable foreign trading conditions and together these factors resulted in an exceedingly drastic change in the development of Finnish economy. The 1951 boom period, made possible by exports of record nature as re-
gards prices and volume, gave way within a few months to a recession. The effect of this falling tendency began to spread and penetrated deeper into Finland's economic life. However, 1952 saw no actual depression.

Thanks to the fact that the aftermath of the boom was still quite strong at the beginning of 1952 - reflected among other things in the high export prices due to delivery contracts concluded at an earlier date - the overall result for 1952 did not turn out to be so very bad. Thus the 1952 national income (estimated) was only some $5 \%$ less than the remarkably high 1951 income. However, final data may show a somewhat greater difference between these two years.

## AGRICULTURE

The year 1952 was an exceptionally difficult one for Finland's agriculture because of the great damage to crop production by unfavourable weather conditions. A general feature of the weather conditions of the growing season was a drier than normal

May followed by a period of exceptionally heavy, uninterrupted rains from June to the end of the growing season. These conditions together with the cold weather, in some places even frost, retarded the ripening of cultivated plants and, as a consequence, harvesting and other operations, by over a month.
The unfavourable weather conditions affected the quality of the crop to such an extent that, although the quantity figures were higher for 1952 than for 1951, the value of the crop was considerably lower. According to preliminary data the total crop output in 1952 was 3,616 million grain units (a grain unit equalling a fodder unit), thus some $10 \%$ above the 1951 level when the crop volume totalled 3,380 million grain units. The increase on the previous year was due in the first place to the appreciable increase in hay and potato crops; of grains on the other hand, rye, barley and oats gave a worse result than in 1951. As far as spring and autumn wheat is concerned the 1952 crop exceeded the 1951 figure. It may be mentioned that the total volume of the crop today is much smaller than before the war; in 1938 the total crop production in grain units was 4,134 million. However, that was an above-average year it must be admitted. Chiefly thanks to the good spring wheat crop 1952's bread grain yield was somewhat better than 1951's, as can be seen from the crop figures: 637,900 tons in 1952 and 612,200 tons in 1951. The 1952 figure is still based on a preliminary estimate and will obviously change. However Finland's self-sufficiency in bread grains is now considerably less than pre-war. Altogether 512,600 tons of foreign grain, chiefly from the Soviet Union, was imported in 1952, against 314,700 tons in 1951 and 238,800 tons in 1950. The situation has thus deteriorated in this respect from one year to another. The potato crop, as already mentioned, was fairly good in 1952, $1,615,500$ tons against $1,384,000$ tons in 1951. The hay crop was correspondingly $3,274,900$ and 2,942,400 tons.

For cattle-farming the 1952 results were generally good. Because of favourable grazing conditions and a good fodder crop milk production increased roughly 100 million kg from the preceding year to 2,650 million kg for 1952. In consequence dairy butter production also advanced, at a rough estimate,
some $5 \%$ on 1951's 41.5 million kg. Towards the end of the year butter output registered a decrease but there was no particular difficulty in meeting butter distribution requirements. Cheese output also rose last year and a considerable quantity was exported. Meat production declined in 1952 slightly in comparison with 1951 but the fall from 125 to 122 million kg was so minimal that it did not essentially affect the marketing situation. Some qualities of meat were also exported to a small extent during 1952. There was an occasional egg shortage, partly on account of price problems and partly because of a contraction in production in comparison with previous years.

## INDUSTRY

In 1951 industrial production had developed very favourably. No drastic change occurred in the situation in the first months of 1952 although the export market showed clear sings of weakening - a diminution of demand and falling prices as from the autumn of 1951. However, the upward movement of production slowed down fairly soon after the beginning of the year and during the second quarter the rise seen hitherto was converted to a veritable decline. The contraction of productive activity appeard first and most clearly in the woodworking industry, but gradually other branches began to feel the influence of contractive forces. These increased considerably in intensity towards the end of the year but it was possible even then to diseern fairly lively activity in some productive spheres. The power of resistance of Finland's economy proved firmer than was expected.
Thanks to a relatively good early part of the year the indices illustrating industrial production revealed no particularly strong decline. All the most important indices generally fell below the 1951 level, but the difference between the figures for these two years was not very great. Thus for instance the index reflecting the total volume of industrial output ( $1948=100$ ) which stood at 133 in 1951 fell by 9 points, $7 \%$, down to 124. As was to be expected it was the export industry that registered the largest decline, from 128 to 109 points, or $15 \%$; corresponding indices for home market industry were 135 and 130 respectively. With regard to the metal industry attention is drawn to the
fact that despite the conclusion of war reparations deliveries and the resultant marketing difficulties no great contraction occurred in production, as can be seen from the slight fall in the relevant indices from 128 points in 1951 to 122 points in 1952. The maintenance of activity in the metal industry at such a level even was attributable to the fact that it was possible to place the surplus production in the USSR and other countries of the East bloc.

Compared with 1951 production figures fell in almost all branches of the woodworking industry, in some fields even below the 1950 levels. Newsprint production and the manufacture of prefabricated wooden houses, however, were an exception; they both showed an increase on 1951, albeit a very slight one. The production of sawn goods contracted in 1952 to 750,000 stds. i. e. one-fourth, against 1951 when output reached the post-war peak of 1 million stds. The production figure for 1950 was 875,000 stds. Cellulose production also fell fairly sharply, i.e. from $1,385,000$ tons in 1951 to $1,155,000$ tons in 1952 , which was a shade below the 1950 figure. A decline of approximately the same proportions occurred in 1952 in both of the main products of the cellulose industry; sulphate cellulose fell from 564,000 to 443,000 tons and sulphite cellulose from 821,000 to 713,000 tons. The total output of paper contracted little from 686,000 to 685,000 tons - owing to the fact that although other paper qualities fell off sharply the output of newsprint increased from 412,000 to 435,000 tons. For some other products of the wood-processing industry too 1952 gave a poorer result than 1951. The year 1951, indeed, was exceedingly favourable for the entire woodworking industry. As far as 1952 is concerned it would have turned out much worse than it actually was had not the deals made earlier increased exports during the early part of the year.

The setback experienced by the woodworking industry directly affected the entire forest economy. Also in forest economy the consequences of the cyclical change were felt fairly slowly and by degrees. The forest work continued in the 1951/52 felling season on a larger scale than during the previous winter, which had been an exceedingly active one for forest operations. When at their
height in February 1952 forest operations employed 10,000 workers more than in the preceeding winter, or 210,000 men. It may be mentioned that the corresponding figure for 1950 was only 150,000 and for the year before that as low as 100,000 workers. Forest operations were of a high order also with regard to the felling result in 1951/52. The total cut was 37.8 million cu.m. and considerably exceeded that of the preceding winter ( 33.0 million cu.m.). The quantity felled in 1951/52 marked a post-war peak. During a later phase of the felling season the contractive effects of the business cycle change were more distinctly discernible. Floating and haulage operations were reduced in scale in the spring of 1952 since a part of the timber was left in the forest when demand diminished. The number of forest deals made in the autumn of 1952 was distinctly smaller than in the preceding years. As felling operations also diminished in company-owned forests the forest employment situation at the end of 1952 was somewhat slacker than a year before, a circumstance which contributed to tightening the employment situation first and foremost in the most important forest work areas.

## BUILDING ACTIVITY

Although the large post-war building projects such as the reconstruction of North Finland, the re-settlement of the displaced population and making good the productive plants ceded to the USSR were completed in most cases, building activity was very lively in 1952. The total of buildings completed in towns and urban districts in 1952 was 5.8 million cu.m. (preliminary figure) against 4.0 million cu.m. in 1951. This shows a gratifying increase in building activity in population centres. Of the total mentioned 3.1 million cu.m. in 1952 was residential housing and 2.4 million cu.m. in 1951. Building activity apparently fell off slightly in some fields in comparison with the preceding year. Although final accurate figures are not available an expert estimate puts the total building volume at about the same level as in 1951. The retardation towards the end of the year was felt in this sphere also; it was reflected among other things in a reduced number of building permit applications and in a slackening demand for cement. The
concluding months of the year accounted for the fall in total cement consumption from 805,000 tons in 1951 to 756,000 tons in 1952. Sufficient building materials were available on the whole but the shortage of financing capital proved a major problem. Building costs fell slightly during the year as is clear from development of the index of building costs. Further, the total of State funds used in 1952 for so-called Arava loans was 7,000 million marks i. e. 2,000 million more than in 1951.

## THE LABOUR MARKITT

At the beginning of the year employment was still good. It was indeed several months before the deflationary factors made themselves felt on the labour market. The situation in the early months of the year can be regarded almost as one of overemployment of approximately the same strength as during the preceding year. However, tightening was observable in some fields by the spring, and towards the autumn there was a distinct change for the worse. The situation continued to deteriorate and by the close of the year the number of persons listed in unempoyment registers was over 35,000 - it had only been 3,600 at the end of 1951. An appreciable number of the unemployed was, however, placed in relief work organized by the State and local authorities. These work projects were principally financed under the programme drafted in good time by the Cabinet for the combating of unemployment.

The development of the labour market was exceptionally favourable in 1952 insofar as peace was maintained throughout the year except for some minor labour disputes. This was due in addition to political calm to the price level remaining fairly stable, thus removing the principal incitement for the launching of new wage demands.

## FOREIGN TRADE

The business cycle change was reflected earlier and with greater intensity in foreign trade than in any other walk of economic life. The initial months of 1952, moreover, were characterized by the aftermath of boom conditions in the export trade. But the situation changed completely during the spring. Exports began to contract sharply both in quantity and value, partly as a result of an abrupt price fall and partly owing
to a check in demand. At the same time imports continued at their exceptionally high level, even exceeding in several months both in value and volume the already recordbreaking level of 1951. On account of this development in the foreign trade, which gained in force continually, the trade balance took a very unfavourable turn. Whereas 1951 produced a very considerable export surplus it began to be apparent fairly early that 1952 would reverse the position, i.e. the ultimate outcome would be a pronounced excess of imports and a balance of payments deficit. This was what actually happened. The development of foreign payments business and balance of payments turned out to be particularly disquieting since the currency reserves, strengthened considerably by the favourable export market in 1951, began to contract seriously because of the unfavourable development of foreign trade. In the spring the authorities gradually began to take steps to restrict imports but as importers held rather a large number of licences still unutilized the stricter licensing and currency policy could only affect importation activity itself gradually and fairly slowly. During the closing months of the year, however, imports showed a distinct decrease. The result for 1952 as a whole, however, was a substantial deficit in both the trade balance and the balance of payments. This was contributed to by the fact that the terms of trade moved in a manner very unadvantageous for Finland, especially in he last months of 1952 when the sharp fall in export prices was felt in its full force. There was some decline also, it is true, in import prices, but not nearly on the same scale as on the export side.

With the value of imports as high as the new peak of 182,080 million marks, considerably higher than the 1951 figure of 155,464 million, and with exports on the other hand moving down from 186,883 million marks to 156,746 million the excess of imports turned out to be as much as 25,334 million marks. Hence the balance of trade for 1952 was 56,753 million marks ,,worse" than in 1951 when there was an export surplus of 31,419 million. It is natural that such development should tighten the economic situation, especially in a country like Finland which is largely dependent on her foreign trade.

Over and above commercial exports the exportation of war reparations goods, not included in the above export figures, continued until September 1952. In that month Finland's war reparations to Soviet Union were finally and fully paid off. Reparations deliveries in 1952 amounted to 8,215 million marks in value. In the year before 12,396 million worth of war reparations goods were exported.

As far as the breakdown of foreign trade between different countries is concerned some notable changes emerged during the year under review. First, Great Britain's share in Finland's foreign trade diminished on both the import and export side. Her proportion of the total imports fell from 21.1 \% in 1951 to $18.8 \%$. The drop in exports was much more considerable: $30.8 \%$ of Finnish exports went to Britain in 1951 and 23.8 \% in 1952. The share of the United States also showed a decline, insofar as exports contracted, calculated in the same manner as above, from 6.8 to $5.5 \%$. Imports on the other hand increased from 6.3 to $7.7 \%$. In 1952 conditions were particularly favourable to trade with the USSR and other countries of the East bloc. The Soviet Union's share of Finnish exports increased from 8.3 to $17.5 \%$ - a very pronounced rise. The comparable figures for imports were 7.6 and $12.1 \%$ respectively. The Soviet Union thus reinforced materially her position in Finland's foreign during 1952.

## THE MONEY MARKET

The effect of the unfavourable business cycle changes was ascertainable in the money market too. At the end of 1951 there had been an easing-off in the money market primarily thanks to the favourable economic development, but with the coming of 1952.
there was a fairly rapid transformation. Deposit activity, however, long continued at a surprisingly high level but the weakening effect of the business cycle swing was gradually discerned in deposits too. The situation was more adverse with cheque accounts as economic life fast withdrew large sums from the relatively generous funds that had accumulated earlier in these accounts. Cheque accounts diminished in consequence very sharply, which made the money market situation still more difficult by reducing the credit extension facilities of financial institutions and above all of commercial banks. Demand for credit being exceptionally lively already at the beginning of the year owing to the great need for funds, the money market tightened by the spring and became even more strained in the autumn when deposit activity weakened.

The situation with which other financial institutions than commercial banks were faced was less difficult insofar as their deposit activity, in which time deposits play a much greater role than cheque accounts, remained appreciably strong right up to August. Nor did it contract very sharply even towards the end of the year. The pressure exerted by economic life did not affect other financial institutions as strongly as it did commercial banks which are the principal sources of finance for trade and industry. The overall development of deposit activity in the last few years is set out in detail in the table below.

The tightening of the situation in the money market in the spring of 1952 fairly soon resulted in the commercial banks first and foremost but partly also other financial institutions having to resort to the assistance of the central bank. These financial institutions had had no rediscount debt to the Bank

DEPOSITS BY THE PUBLIC.

of Finland at the close of 1951, but the situation changed rapidly in the course of the spring and rediscounts soared at a good pace to very high figures. Because of this development the Bank of Finland, which was of the opinion that the expansion of credit accommodation threatened the stabilization policy, took special measures with regard to rediscounts in order to retain control of the situation. For this and other reasons rediscounts contracted in the summer. But in the autumn, when the situation came to a head again owing to the increase in the need for credit and the falling off in the influx of deposits into banks, the position was still more aggravated than in the spring. Rediscounts reached their 1952 peak, 19,002 million marks, in December of that year.

The rates of interest were not raised in 1952 despite the deterioration in the money market situation. In December 1951 the Bank of Finland lowered its discount rate to $53 / 4 \%$ and maintained it at this throughout the year under review. In this connection the competition in deposit rates may be referred to. The issue here was the levelling of the somewhat differing rates paid by different financial institutions. As the competition threatened to lead to regulation of the rates of interest the financial institutions concluded a new interest rate agreement which slightly narrowed the discrepancy in the rates. This measure had no essential effect, however, on the level of the rate of interest.

## PRICES

The most noteworthy feature in 1952's price development in comparison with previous years was the transformation from a protracted inflationary price climb to a distinct fall. While not particularly strong this tendency was clearly discernible. It seemed in the autumn that the price fall was coming to an end, but this was probably a temporary phenomenon only since strengthening deflationary forces in Finland's economy tend to promote the decline. The falling tendency of domestic prices was attributed chiefly to declining prices on international markets. The lowering of world market prices promoted the efforts of the authorities to stabilize prices and wages at home. The stabilization policy, which the Bank of Fin-
land supported, must be regarded beside foreign trade price development as the principal reason for falling prices and a stabilized wage level. Some demands for wage adjustments were introduced, but no major wage disputes were experienced and the year was peaceful in that respect.

As regards price indices, the cost of living index remained practically constant during the year. The wholesale price index on the other hand, mueh more affected by the drastic fall of the prices of forest products than the cost of living index, dropped from 1,928 points in December 1951 to 1,765 points in December 1952. It was even a shade below this level in September, 1,734 points. The price level at the close of the year was 8.5 per cent below the figure for the end of 1951, according to the wholesale price index; in 1951 on the contrary, it registered a rise of $34 \%$. It may be mentioned that the price fall of forest products at home in 1952 was as much as $22.2 \%$.

## CONCLUSION

The year 1952 was in many respects exceptional and in a category of its own in post-war economic development and economic policy. It showed some positive traits, above all the conclusion of the war reparations deliveries and thus the fulfilling of the agreement concluded by Finland on September 19, 1944 with the Soviet Union and her allies. On the credit side may also be entered the achievements of the stabilization policy, aimed at making the country's monetary economy healthy and building a lasting defence against the inflation which upset the foundation of Finland's economy in the preceding years. However, the overall picture of 1952 is unfavourable. The transformation from a boom period to a phase of contraction was a severe test for the adaptability of the economy and although its power of resistance proved stronger than was expected antideflationary forces were incapable of preventing the spread of the paralyzing effect of the cycle change. Hence, Finland entered 1953 in tightening economic circumstances and the foreign trade outlook, on which her economic development depends essentially, gave little call for optimism.

## ITEMS

Trade agreements. Finland has recently concluded trade agreements with the following countries:

Eastern Germany. On December 16 an agreement was signed in Berlin covering trade from January 1 to December 31, 1953. Eastern Germany will deliver machinery, various chemicals, brown coal briquettes, textiles, etc. Finland's exports will include asbestos, feldspar, round timber, cellulose, kraft paper, textiles, shoes, cheese, etc.

Hungary. An agreement concerning the exchange of goods during the year 1953 was concluded in Budapest on December 19. Exports from Hungary will include machinery and apparatus, chemicals, radio valves and electrical appliances. Finland will export pulpwood, pitprops, cellulose and machines.

Poland. An agreement for 1953 was signed in Helsinki on December 22, 1952. Total trade will amount to about 42 million dollars, 14.5 million dollars of which will represent imports from Poland under a tripartite agreement between Finland, the Soviet Union and Poland. Polish exports will include coal, coke, textiles, and products of the chemical industry. Finland's exports will include copper products sleepers, fibre board, prefabricated houses, machinery and equipment, various paper products, rayon cellulose, bobbins and spools, etc.

Czechoslovakia. An agreement for 1953 was signed in Helsinki on February 2. Czechoslovakia will deliver tractors, motor cars, motor cycles, various machines, chemicals, etc. to a total value of 3,250 million marks. Finland will export to Czechoslovakia first and foremost woodworking industry machines to a value of 900 million marks. The difference will be settled as usual under a tripartite agreement to which the Soviet Union will form the third party.

Italy. The validity of the trade agreement between Finland and Italy has been extended by an exchange of notes for an additional two months, up to February 28. The original quotas have been increased correspondingly.

Jugoslavia. The validity of the agreement on the exchange of goods between Finland and Jugoslavia was extended by an exchange of notes on December 27, 1952 to the end of 1953.

Japan. A trade and payments agreement was concluded in Stockholm on December 24 through an exchange of notes. The governments of each country contract to accord export and import permits as liberal treatment as possible. Payments will be arranged through a dollar account to be held at the Bank of Japan. The agreement will be valid for one year and will be automatically extended provided neither party gives notice of termination.

Exporters' retention quotas. According to a Bank of Finland decision Finnish exporters are no longer entitled, as from January 1, to retain for their own use a part of the foreign currencies earned by their exports. Exporters to hard currency areas were permitted from February 1950 to retain 10 per cent of their foreign exchange earnings, to be used in importing goods essential to their particular industry. The retention quotas of import agents were also abolished at the same time. Agents were earlier entitled for their own use to 40 per cent of their earnings in commission fees. Later this percentage was reduced to 20.

Ab Kemi Oy. One of Finland's largest woodworking establishments, Ab Kemi $O y$ in Northern Finland, was faced with major financing difficulties in the autumn of 1952. The suppliers of credit considered the situation so critical that additional credit was promised only on the condition that shareholders in the company should also participate in financing by raising the share capital threefold. The increased share capital was only partly subscribed by the company's old
shareholders; the majority of the new shares went to new buyers. The ownership of the company consequently rests on a new foundation. The State and state-owned companies now own $37 \%$ of the total share stock. Further, Metsäliitto (Co-operative Society of Private Forest Owners) also has a considerable number of shares. The company's operations continue unchanged.

Motor vehicles in use. The number of motor vehicles imported to Finland in 1952 is well above all previous import figures. The total imported in 1952 was 26,163 motor vehicles and chassis, the 1951 total having been 18,632 . The peak figure for pre-war was 8,232 in 1938 . The 100,000 mark was exceeded for the first time in 1952. Passenger cars account for 53,330 , lorries for 45,794 and buses for 4,390 of the total 103,514 .
