

## RECENT DEVELOPMENTS

## ECONOMIC ACTIVITY

The present economic expansion, which set in about mid-1958, has now been in progress for three years. By the end of the first quarter of the current year, the seasonally adjusted volume of the domestic product. had risen 23 per cent above the low level of 1958. The seasonally adjusted index of $\cdot$ industrial production was 29 per cent above the trough level, and 16 per cent above the previous peak, attained during the first quarter of 1957.

At the beginning of 1961, the prevailing stage of development was characterised by the increasing rate of growth in all important spheres of activity. Such uniformity has by no means existed at all times during the present period of expansion, and there is no inherent promise that the rate of growth will continue equally high until the end of the year. If the whole period is reviewed, it will be found that it was at its height in early 1960. Only in exports was the growth rate steady throughout that year.

Owing to the high level of production, employment was satisfactory during last winter, and in view of the economic structure of the country, unemployment was low. During the first quarter of this year, total
employment was more than 2 per cent in excess of the corresponding figure for 1960 , while in industry the advance amounted to 5 per cent. Taken as an average for the fourmonth :period November 1960 to February 1961, unemployment represented 1.5 per cent of the total labour force, against 2.3 per cent one year before. This was due not only to the high level of industrial production, but also to more intensive lumbering and livelier building activity, which in turn was made possible by winter being mild.

From the beginning of the current felling season to the end of March, 30.4 million piled cu. m had been cut, or 6 per cent more than during the corresponding ten-month period of the previous felling season. For pulpwood and pitprops, the increase was 11 per cent. Since the felling season 1959/60 there has been a change in structure, the proportion of these qualities increasing, while the share of coniferous saw logs has fallen off. At, the end of April, there was still 6 per cent more labour engaged in forest work than one year previously.

[^0]Early in the year, the cyclical conditions were much the same as during 1960. As the limit of capacity has more or less been attained, economic development is now evening out. During the first quarter, total production was 6 per cent higher than one year previously; for industry the advance was slightly more. Exports still seem to be the factor governing the course of development. The first-quarter value of exports was 63800 million marks, an increase by 16.8 per cent on the corresponding figure for 1960. The rise was principally due to the favourable conditions for paper exports.

Imports have increased more than exports, and consequently the trade balance has remained adverse. During January-March, the value of imports was 89100 million marks, or 17.4 per cent more than one year earlier, the increase being most marked in investment goods. The deficit in the balance of trade amounted to 25000 million marks by the end of March, exceeding last year's corresponding deficit by 4000 million. However, forecasts concerning exports and imports suggest that the rate of growth of imports will fall off more than that of exports.

During 1960, total demand had grown more rapidly than production; this growth had been particularly marked in respect of investment goods, consumer demand remaining more even. This tendency still prevailed during the first quarter of 1961, with the continuation of the investment boom. An indication of this is that in February the
output of investment goods was 13 per cent in excess of the output in February 1960, whereas the corresponding advance in consumer goods output was 6 per cent. As for the course of development during the remaining months of the year, it seems probable that the rise in investment will slow down, but the rise in consumption will remain approximately unchanged. A steady course of consumption is suggested, for instance, by the increase in the level of earnings by some 7 per cent from January 1960 to January 1961. The growth rate of consumption is indicated by the retail trade turnover, for which the January-February value index was 11 per cent higher than one year earlier.

An outstanding feature of the present situation is a tendency of total demand to adapt itself to production. This, together with the fact that the pressure of costs has been comparatively slight of late, as is evidenced by wages per production unit, has kept prices stable. According to the index figures, both wholesale prices and consumer prices were unchanged from December to March, to which development the favourable course of import prices also contributed. The building cost index rose less than 2 per cent during these months, the rise being mainly occasioned by higher wages.

The money supply has largely followed the general course of economic activity, so that practically no change has occurred in the liquidity of the community in comparison with the latter half of 1960 .

May 23, 1961.

## EXPLANATIONS RELATING TO THE STATISTICAL SECTION

## BANK OF FLNLAND

Page 3. The items of the statement of the Bank of Finland are described in Monthly Bulletin No. 10, 1955, p. 25.

Page 4. Other foreign assets $=$ Foreign bills + Foreign bonds + Prepayments for exports. Other foreign liabilities $=$ Mark accounts of holders abroad + Long-term foreign liabilities.

Page 5. Treasury bills and bonds; up to August 1953, bills, and thereafter Treasury bond loan + Treasury bill covering certain IMF and IBRD accounts (included in Other claims). Trade and industry, Other advances $=$ Inland bills in foreign currency + Cheque accounts (assets) + Other claims excl. Treasury's IMF and IBRD bill, Prepayments for exports and Advances for stand-by stocks. Liabilities $=$ Other short-term liabilities + Other cheque accounts + Deposits against import licences (in 1955-56) - Account of the Mortgage Bank of Finland Oy. - Diagrams. Left: Net claims on other than banks $=$ Net foreign assets + Net claims on the Treasury + Net claims on the public + Finnish bonds + Finnish coin - Equalisation accounts = Notes in circulation + Bank's own funds - Net claims on the banks.

## DEPOSITS BY THE PUBLIC- <br> ADVANCES TO THE PUBLIC

Commercial bank and mortgage bank figures obtained from the official bank statistics, savings bank figures from the Central Statistical Office, other figures from the respective credit institutions or their central banks.

Page 6. Cheque accounts in all credit institutions relates to commercial banks, savings banks, co-operative credit societies, and mortgage banks. Term deposits in all credit institutions includes a small amount of deposits in mortgage banks. Indextied deposits, high-interest deposits and tax - concession accounts are included in term deposits.

Page 7. Money supply $=$ Finnish notes and coins in circulation - Finnish notes and coins held by the banks + Cheque accounts of the public + Postal giro accounts of the public.

## STATE FINANCES

Page 8. Official monthly figures adjusted by the Bank o, Finland Institure for Economic Research. Revenue and expenditure ${ }^{\text {E }}$ All extra-budgetary funds are included, and figures are reported on a payment basis. - Annual figures will be published in separate articles, Debt: Index-tied bond loans are given at their nominal values. Cash debt (net) = net debt to the Bank of Finland plus short-term debt to the Post Office Savings Bank minus cash holdings (net) of State departments. In principle, the change in this item = surplus (deficit) in the table on revenue and expenditure. The small divergence is due to the fact that the adjustment the of monthly figures is not as accurate as that of the annual (December) figures. Diagram. The 12-month totals are plotted to the last month of the respective periods.

## FOREIGN TRADE

Pages 9-12. Figures supplied by the Board of Customs. The unit value indexes (p. 9): The indexes are calculated first according to the Laspeyres formula but at the end of each
year adjustments are made according to the Fisher formula, and the level of the quarterly indexes is corrected so that their arithmetic mean equals the annual index. Thus the series above and below the line are not fully comparable. Seasonal variations are not eliminated. Terms of trade: the ratio of export indexes to import indexes. Foreign trade by countries (p. 12): imports by countries of purchase, exports by countries of sale.

## PRICE INDEXES

Page 13. Wholesale price index and Building cost index calculated by the Central Statistical Office. Cost of living index and Consumer price index calculated by the Ministry for Social Affairs.

## PRODUCTION - INTERNAL TRADE WORK CESSATIONS

Page 14. Index of industrial production calculated by the Gentral Statistical Office. The grouping by branches of industry is in accordance with the international nomenclature (ISIC). The weight of each group represents the ratio of its value added to the total value added of industrial production in 1954. Monthly figures are unadjusted for seasonal variations. Commodities according to use: investment goods weight 12.7 , other producer goods weight 54.6 and consumer goods weight 32.7. Special manufacturing indexes: wood industry ISIC no. 25, weight 8.6, paper industry no. 27, weight 8.6, metal industry nos. 34-38, weight 25.4, and other manufactures nos. 20-24, 26, 28-33, 39, weight 44.9. Commercial timber fellings calculated by the Ministry of Communications and Public Works. Milk received by dairies calculated by the Board of Agriculture. Figures cover about $50-60 \%$ of the total milk production. The share of the dairies having grown over the last few years, this series does not correctly reflect the development of total milk production during a prolonged period. Wholesale trade volume index, calculated by the Ministry of Finance. Based on sales statistics compiled by the daily Uusi Suomi, covering about $50 \%$ of all internal wholesale trade. Price fluctuations have been eliminated by means of the revised wholesale price index. Diagram. Left: Index of productive aetivity calculated by the periodical Mercator. It comprises all sectors of the economy. Annual averages are revised according to national income figures.

## BUILDING - WAGES — EMPLOYMENT — TRANSPORT

Page 15. Building figures supplied by the Central Statistical Office. Index of salary and wage earners' earnings calculated by the Central Statistical Office. Beginning 1957, the weights employed are determined according to the structure of total earnings in 1957; for 1954-1956, the weights are in accordance with earnings in 195I. Railway figures supplied by the Board of Railways. Shipping figures supplied by the Shipping Board. Employment and unemployment figures supplied by the Labour Research Bureau of the Ministry of Communications and Public Works, both based on the labour force sample survey. Employment represents the estimated average number of days worked. (See article in No. 10, 1960 of this Bulletin.) Diagram. Number of persons unemployed for at least one week during each month.

## SYMBOLS USED

## SOME PARTICULARS ABOUT FINLAND

## FORM OF GOVERNMENT

From 1154 to 1809 Finiand formed a part of the kingdom of Sweden. It then became an autonomous Grand Duchy connected with Russia until December 6, 1917, the date of Finland's declaration of independence. The republican constitution was adopted in 1919. The legislative power of the country is vested in the Diet and the President. The highest executive power is held by the President, elected for a period of 6 years. The President for the current period, March 1, 1956, to March I, 1962, is Urho Kekkonen.

The Diet, comprising 200 members, is elected by universal suffrage for a period of 4 years. The number of seats of the different parties in the Diet elected in 1958 are as follows: People's Democrats 50, Agrarians 47, Sotial Democrats 37, Conservatives 29, Swedish Party 14, Social Democratic League 14, Finnish People's Party (liberal) 8 and Finnish Small Farmers' Party I.

## LAND

THE AREA is 337000 square kilometres (Great Britain's area is $245000 \mathrm{sq} . \mathrm{km}$ and Italy's area $301000 \mathrm{sq} . \mathrm{km}$ ). Of the total, inland waters form $9.4 \%$. On an average $13.9 \%$ of the land in the South of Finland is cultivated (1950), $1.9 \%$ in the North and $8.0 \%$ of the land as a whole. Of the land area 21.8 mill. ha ( 53.9 mill. acres), or $71.6 \%$, are covered by forests.

OWNERSHIP OF LAND (1950): The total land area was distributed among different classes of owners approximately as follows: private $56.9 \%$ State $35.0 \%$, joint stock companies etc. $6.4 \%$, communes $1.7 \%$.

## POPULATION

NUMBER OF INHABITANTS (1959): 4.4 million. Sweden 7.4, Switzerland 5.2, Denmark 4.5 and Norway 3.6 million.

DENSITY OF POPULATION (1959): In South Finland 24.7, in North Finland 4.0 and in the whole country an average of 54.5 inhabitants to the square kilometre.

DISTRIBUTION BY ARBA (1959): $62.4 \%$ of the population inhabit the rural areas, $37.6 \%$ towns and urban districts The largest towns are: Helsinki (Helsingfors), the capital, 454192 inhabitants, Tampere (Tammerfors) 123 686, Turku (Abo) 122240.

OCCUPATIONS (1950): Agriculture and forestry $42 \%$, industry $29 \%$, commerce $7 \%$, transport and communications $6 \%$, services $9 \%$, other economic activities I \%, economically inactive persons $6 \%$.

LANGUAGE (1950): Finnish speaking 91.1 \%, Swedish speaking $8.6 \%$, others $0.3 \%$.

EDUCATION (1960): Practically all persons over is years of age are literate. There are 5 'universities (the oldest founded in 1640), 7 colleges of university standard, and 2 teachers' training colleges, besides teacher-training departments in two of the universities.

INCREASE OF POPULATION (1959): births $18.9 \%$, deaths $8.8 \%$ increase $9.4 \%$. Deaths in France $11.2 \%$ and in Great Britain $11.7 \%$.

## TRADE AND COMMUNICATIONS

NATIONAL INCOME ( 1959 , in thousand million marks): Gross domestic product at market prices $\mathbf{r} 260$ (excl. repairs and maintenance). Net domestic product at factor cost, by industrial origin: agriculture 121 ( $12 \%$ ), forestry and fishing 87 ( $9 \%$ ), manufacturing 312 ( $3 \mathrm{I} \%$ ), construction 103 ( $10 \%$ ), transport and communications $8 \mathrm{I}(8 \%)$, commerce, banking and insurance 127 ( $12 \%$ ), general government 124 ( $x 2 \%$ ), other services 65 ( $6 \%$ ), total 1020 . Index of real domestic product 106 ( $1957=100$ ).

FOREST RESOURCES (1951-1953): The growing stock comprised I 493 million of solid cu. m incl. bark ( 52660 million cu. ft), of which pine $43.7 \%$ and spruce $\mathbf{3 5 . 7} \%$, the rest $20.6 \%$ being leaf-trees, chiefly birch. Of the growing stock, ro 900 million $\mathrm{cu} . \mathrm{ft}, 58.0 \%$ of them pine, was up to the standard required for logs. The annual growth is 46 million solid $\mathrm{cu} . \mathrm{m}$ green wood excl. batk ( 620 mill. $\mathbf{c u} . \mathrm{ft}$ ). The total removal in 1954 calculated according to the use of wood was 45 million cu. m ( 589 million cu. ft.)

AGRICULTURE (1959): Cultivated land 2.6 million hectares of which holdings of less than 5 ha amount to $17 \%$, 5 to is ha $48 \%$, 15 to 50 ha $30 \%$ and more than 50 ha $5 \%$. Number of holdings 388000 , of which 184000 are of more than 5 ha. Index of agricultural production 98 for 1958 ( $1954=100$ ). Measure of self-sufficiency in the crop year 1958/59: bread cereals $52 \%$, animal products $120 \%$.

INDUSTRY (1958): Gross value of industrial production 966000 mill. marks, number of workers 295000 , administrative employees 59000 , motive power (2958) 2.8 mill. HP. Index of industrial production 113 for 1958 ( $1954=100$ ).

RAILWAYS (Jan. $\mathrm{I}_{3}$ 1961): Length 6388 km , of which 6314 km are State and 74 km private railways. The gauge of State railways 1.524 m .

MERCHANT FLEET (March 3I, 196I): Steamers 208 (302 393 gross reg. tons), motor vessels 223 ( 488008 gross reg. tons), sailing vessels with auxiliary engines 8 I ( 803 gross reg. tons). Total 512 ( 799204 gross reg. tons).

MOTOR VEHICLBS (Dec. 31, 1960): Private cars 173000 , lorries and delivery vans 65600 , buses 5800 , others 2 100. Total 256900.

AIR TRAFFIC: (Dec. 3r, 1960) Number of aircraft in scheduled traffic 23, other aircraft 93. In 1960, 550000 passengers were carried by the two Finnish companies; over 228 million passenger kilometres and 4.I million ton kilometres of freight and mail were transported.

## FINANCE AND BANKING

CURRENCY. Since 1860 , Finiand has had its own monetary system. From 1877 until 1914 the country was on the gold standard, and returned to it in 1926. Since 1931 , the redemption of bank notes in gold has been suspended. The currency unit is the mark (Finnish markka). Its official par value is 320 marks per one U.S. dollar. Finland has been a member of the International Monetary Fund since 1948.

MUNICIPAL FINANCES. In the finance accounts for 1958 expenditure amounted to 173143 mill. marks. Total revenue was 168199 million, of which income from taxation 86041 million. The municipal income tax (non-progressive) averaged $11.64 \%$ of the ratepayers' taxable income.

THE CENTRAL BANK. The Bank of Finland functions under the guarantee and supervision of the Diet. Its Board of Management is appointed by the President of the Republic; the Bank Supervisors, nine in number, are elected by the Diet. The Bank has a head office in Helsinki and 13 branch offices in other towns.

OTHER CREDIT INSTITUTIONS (Dec. 31, 1960). There are two big and three small commercial banks with in all 599 offices, 390 savings banks, 537 cooperative credit sosieties and their central bank, six mortgage societies, and the Post Office Savings Bank. The savings departments of the cooperative stores accepr deposits from the public.

RATES OF INTEREST (Jan. I, 1961). Bank of Finland discount rates 6-7 $1 / 2 \%$. Other credit institutions: term deposits $41 / 2 \%$ ( 12 months' deposits $5 \%$, index-tied deposits $31 / 2-4 \%$ ) and sight deposits in savings banks and cooperative credit societies $1 / 2 \%$; highest lending rate $8 \%$.

## CUTTING POSSIBILITIES AND PROSPECTIVE UTILIZATION OF WOOD IN FINLAND

BY<br>KULLERVO KUUSELA, D. For.

According to the results of the Third National Forest Inventory (1951-53), since the Second Inventory (1936-38) the mean growing stock volume of the forests in Finland had increased by 8 per cent and the mean growth by 14 per cent. Many tree stands needed silvicultural cuttings which were estimated to produce a large quantity of small size timber suitable for the pulp and paper industry. Consequently, measures designed to provide new industrial capacity commenced in about 1958. Investments comprise more than 120000 million marks. It is estimated that the future capacity will consume 40-50 per cent more pulpwood than was the case before 1958. Apart from this, the provincial industrialization boards are planning the construction of four or five more pulp mills in different parts of the country. In view of the vastly increasing demand for pulpwood, future cutting possibilities now constitute one of the main topics of discussion in Finnish forestry circles. Many cutting budgets have been prepared, and the importance of the allowable cut has also been realised in domestic polities.

The timber situation before 1958 is presented in Table 1. The total annual drain from the growing stock from 1955-57 is estimated to have been 45.5 mill. cu. m , solid measure, excluding bark. The saw timber (that used in saw and plywood mills, for constructional purposes, and exported) comprised 13.7 mill. cu. m, pulpwood (mechanical or chemical)
and similar products (mining timber and wood for hardboard and chipboard mills) 14.1 million, fuel wood 13.4 million and waste wood 4.3 mill. cu.m.

The major portion of the waste wood consisted of logging residues, 3.2 mill. cu. m, including actual logging waste, trees felled in regeneration areas, and in the cleaning of seedling and sapling stands. This amount is especially large in north Finland, where lowquality, partly decayed trees are numerous and the demand for low-quality and small size timber suitable for the sulphate process is negligible. Mortality accounts for 1 mill. cu. $m$, and the floating loss the rest of the waste wood.

The annual use of wood in 1955-57 was broken down as follows:

|  | Mill. cu. m |
| :---: | :---: |
| Exports of round timber | 4.5 |
| Raw material of domestic industry | 20.9 |
| Fuelwood for industry | 1.1 |
| Traffic | 1.2 |
| Home use of farming population | 5.8 |
| Home use of other rural population | 4.5 |
| Use in towns and urban districts | 2.3 |
| Other | 0.9 |
|  | 41.2 |

The figures for exports of round timber (mainly pulpwood and mining timber), and wood used for domestic purposes other than industrial were appreciably large.

The increase in the demand for pulpwood caused by the new capacity under construction is estimated at 5.4 mill. cu. m in 1963. Added to the drain before 1958, this gives

1. ANNUAL DRAIN IN 1955-57, ESTIMATED DRAIN IN 1963 AND ALLOWABLE CUT IN 1963-72

Estimates in mill.cu.m solid measure excl. bark

Annual drain in 1955-57
45.5 mill.cu.m

|  |
| :---: |
| Estimated drain <br> in 1963 <br> on completion of <br> new capacity <br> 51 mill.cu. $m$ |

51 mill. cu. m as the possible cut in 1963.
Estimated for the whole country the allowable cut is 47 mill. cu. m, which exceeds the estimate of the present timber growth by 1 mill. cu. m. Maintenance of the allowable cut on a sustained basis requires a considerable intensification of silviculture. But the danger of over-cutting cannot be averted by silvicultural works alone, but with gradual improvement in the methods employed in practical forestry, particularly those of 250000 farm forest owners. The structure of utilization must also be changed. The share of other uses will be decreased, and the proportion of industrial wood increased. The growing demand for pulpwood provides a challenge; forestry must be developed towards a more economical and integrated use of wood. The prospective timber budget is outlined in Table 2.

As regards timber input, there is the allowable cut of 47 mill. cu. m, of which pine: comprises 17 mill. cu. m, spruce 16 mill. cu. m and deciduous species 14 mill. cu. m . Furthermore, some quantities of round timber. may be imported. During the last years sawtimber has been imported from the Soviet Union, and there is a plan to build a large saw mill in east Finland using timber from abroad. It is proposed that the sawingresidues of this mill will be used in a new pulp mill. The north Finnish saw mills havealso bought timber from Sweden. Despite this, imports play a negligible role in the prospective timber budget.

The large proportion of deciduous species. and waste wood is a conspicuous feature in the allowable cut. The growth of the deciduous species is 24 per cent of the total growth (the growth of birch is 20.4 per cent,
the remainder coming from aspen and alder) but their proportion amounts to 29 per cent of the planned cut. This is a result of the most recent tendency in silviculture to replace the low-quality deciduous stands by new ones of coniferous species. An additional aim in silviculture is that of regenerating the over-mature and under-productive tree stands, especially in north Finland. A change from thinnings and selective cuttings to purposeful regeneration cuttings tends to increase the drain on small size and lowquality trees, and the amount of waste wood cannot be reduced at once.

The proportion of saw timber in the allowable cut is 14.1 mill. cu. m, which is little greater than in the previous cut. From the viewpoint of sawmilling, the age structure of the growing stock is favourable, as the bulk of the present tree stands are at an age of $60-90$ years. The mills, at least in south Finland, can select their raw material and if it appears desirable the low-quality logs can be used for pulp. The future of the plywood mills is less promising. In the main, they have consumed birch logs, and the selective cutting of the best birch trees has resulted in marked deterioration of the birch stands.

The amount of normal size pine and spruce pulpwood (down to the limiting top diameter of 8 cm ) is 12.0 mill. cu. m, which is much less than the prospective demand. The shortage can be compensated by a reduction in exports and the limiting top diameter of the pulpwood, and by an increase in the use of deciduous species. The export of round timber has played an important role in foreign trade and in the price policy of the forest owners. It can be reduced but not abandoned. In the budget, it is estimated at 3.0 mill. cu. m in 1963. During the last two years, it has been $4-5$ mill. cu. m .

The small size pulpwood (diameter 5-8 cm ) is given at 2 mill. cu. m in the budget. The Committee of Forest Planning has esti-
mated its use to be 1.5 mill. cu. m in 1963. The use of small size pulpwood can increase gradually. An adjustment period is needed on the part of the industry, and a part of the small size timber must be drawn from the present proportion of fuel wood.

The possibilities of increasing the use of birch and aspen for pulp are also problematic. In 1955-57, their use amounted to 0.3 mill. cu.m and is at present about 1.0 mill. cu.m. The Committee of Forest Planning estimates it to be 1.8 mill. cu.m in 1963-72. The pressure of future demand for pulpwood may considerably increase the actual use above this estimate. In the budget (Table 2) the amount of deciduous pulpwood is 3.5 mill. cu.m.

The total of pulpwood and similar wood comprises 17.5 mill. cu.m in the prospective budget. If 2.5 mill. $\mathrm{cu} . \mathrm{m}$ of this is exported, and if the increase in use of small size timber and deciduous species is less than expected, a danger exists of over-cutting pine and spruce. The use of low-quality saw logs and saw mill residues, along with imports of round timber for pulp, may decrease this danger but cannot eliminate it totally.

The use of fuel wood is expected to decrease from the past 13.4 mill. cu.m to 11.2 mill. cu.m. Because a great deal of timber of small size, outside the industrial demand, has been used as fuel, a form of consumption encouraged by the Government's policy, and as the wood can economically be replaced by imported fuel, the reduction seems to be feasible.

Maintenance of the drain of 47 mill. cu.m on a sustained basis requires a radical change in current silviculture. The majority of the tree stands in south Finland have been established during the last hundred years on the abandoned fields of shifting cultivation and burnt-over areas. For the last fifty years, these stands have been in the stage of their greatest and most valuable growth. There

A total of 2.5 mill.cu.m of saw mill residues and low-quality logs from the saw timber output is estimated to be used in pulp mills.

Exports of round timber 3.0 mill.cu.m, of which pulpwood 2.5 mill. cu.m.
has been no urgent need to regenerate them, and the natural regeneration caused by the invasion of spruce into the pine and birch stands on burnt-over sites has kept the forests in a satisfactory growing condition. As a rule, the owners harvest their forests by means of thinnings and selective cutting. Much work has to be done before regeneration cuttings and artificial regeneration are considered necessary in Finnish forestry.
According to the silvicultural programme
prepared for the ten years 1963-72 by the Committee of Forest Planning, the new seedling stands established annually will cover 210000 hectares. The total area of :seedling stands in 1953 was less than this annual target. The area of artificial regeneration will be 122000 hectares (the actual achievement in 1959 comprised 62700 hectares), the area of silvicultural works in young stands 196000 hectares ( 142000 in 1959) and the area of swamp drainage

121000 hectares ( 105000 in 1959). The present heavy thinnings in young and middleaged stands will be abandoned, and the bulk of future removal made by means of regeneration cuttings.

Alongside the silvicultural works, timber extraction conditions will be markedly improved. A permanent demand for all kinds of timber products is a prerequisite for intensive silviculture. This calls for new forest roads, improved float-ways, and increased local use for wood. Local use of low-quality and small size timber is an important aim in the projects for building new pulp mills in the eastern and northern parts of the country. From the viewpoint of more balanced demand all over the country, improved transportation conditions are needed. At present, the forests in south Finland and in other areas suitable for marketing are subjected to heavy cuttings, and at the same time a great deal of timber decays and is lost in remote areas.

The growing pulp and paper industry will create much progress in Finnish forestry. Large areas which have to date been outside the demand for low-quality and small size timber will be affected by improved market
conditions and intensive silviculture. The growing of trees will become increasingly remunerative. But the prospects are not only favourable. The drain exceeds the growth, and nothing points to an appreciable underestimation of the latter, as has occurred in the past. A continuous supply of industrial wood can be guaranteed only by intensified silviculture.
The natural growing conditions and the opportunities afforded by silvicultural technique are not the limiting factor. Very intensive silviculture, with artificial regeneration, could maintain the allowable cut of 50 mill. cu.m, or even more, on a sustained basis. The crucial problem involves the attitudes and reactions of the 250000 owners of the farm forests and other small lots which produce 75 per cent of the total cut. The future development depends on whether they, and the governmental administrators, realize the importance of silviculture; whether they realize that the modern forest industry is built on large capital expenditure, and consequently demands above all continuity of policy and a guaranteed production of its raw material.

## ITEMS

EFTA-Finland Association. On May 16, 1961, the Diet passed three Government propositions, presented on April 5, concerning the agreement between Finland and EFTA. These related to the creation of an association between Finland and the member states of EFTA, and certain provisions of the EFTA Convention; certain provisions of the agreement on Customs matters between Finland and the USSR; and an Act concerning the safeguarding of Finland's foreign trade.

The first Act confirms the validity of the agreement of March 27, 1961, between Finland and the EFTA countries; of the provisions, applicable to Finland, of the Convention of January 4, 1960, establishing the European Free Trade Association; and of the agreement of March 23, 1961, between Finland and Denmark concerning trade in agricultural products.
By the terms of the EFTA-Finland agreement, : free trade area is created in which Finland has, in general, the same rights and
responsibilities in relation to the EFTA countries as these have in relation to each other. Further, Finland is granted certain concessions regarding, for instance, the reduction of rates of duty on some products of the home market industry; the bilateral trade with some Eastern Bloc countries; and the protection of agriculture. The agreement has been submitted for ratification to the parliaments concerned and is expected to come into force on July 1, 1961. This agreement, the EFTA Convention and the agreement between Finland and Denmark concerning trade in agricultural products together constitute a whole.

By passing the second Act, the Diet approved the agreement concerning Customs matters of November 24, 1960, between Finland and the USSR. This agreement secured the USSR certain strictly specified Customs benefits. Finland undertakes to reduce her Customs duties on imports from the USSR in the same way and at the same speed as on imports from the EFTA countries. By 1970, the duties on the commodities concerned will be completely abolished. The agreement ensures the prerequisites for maintaining and increasing trade with the USSR; it comes into force on the
day of the exchange of ratification documents.

The third Act, which relates to the safeguarding of foreign trade, will be valid from July 1, 1961 to the end of 1969. It provides for restrictions of imports, exports and payments necessary for the fulfilment of obligations connected with the agreements between Finland and the USSR, the EFTAFinland agreement, and the trade agreements between Finland and one or more other countries, and for purposes designed to safeguard foreign trade. It is laid down that the products listed in Annex II of the EFTA-Finland agreement may be imported only with authority. These products, mainly fuels and artificial fertilisers, are of fundamental importance in trade with the USSR, and their importation from other countries is restricted for reasons of balance of payments. Further, import and export restrictions may be introduced if the fulfilment of obligations incurred through trade agreements with one or more other countries so requires, or, insofar as it is necessary within the framework of existing agreements, in order to maintain employment, or for balance of payments considerations.
