

Vol. XVII. No. 11

## THE FINNISH MARKET REVIEW.

THEE MONEY MAARKIET.
The uncertainty that has been felt for some time on the large markets abroad has, of course, affected economic expectations in Finland, too, to some extent, but its influence has chiefly been limited to the Stock Exchange and our industrial activity is as lively as ever, seeing that all the big enterprises still have plenty of orders in hand. Owing to seasonal causes the money market showed a slight tendency to tighten in October. In view of the easy cash position of the banks this tendency did not, however, acquire more than a symptomatic importance.

The total credits granted by the Joint Stock banks which had risen already in September by 140.3 million marks, rose still further in October, viz., by 108.7 millions. Last year the combined increase during these months was only 35.2 million marks. At the end of October the total credits granted by the Joint Stock banks amounted to $8,515.7$ million marks, having risen by no less than $1,092.0$ millions during the past twelve months. Seeing that the total deposits in the Joint Stock banks on the other hand have increased during the same period by altogether $1,248.3$ million marks, the margin of deposits over credits is, however, still greater than it was a year ago. The total deposits amounted to $9,714.4$ million marks at the end of October, 1937, as against 8,466.1 millions twelve months earlier and the biggest group of deposits, i.e., time deposits due to the public,
represented $6,721.0$ and $6,060.2$ million marks at the respective dates. - In this connection it may be mentioned that deposits in the Savings banks have shown a parallel development and have risen from $5,586.3$ millions at the end of October, 1936, to $6,578.9$ million marks a year later.

The unusually heavy imports in October caused a reduction of the credit balances held by the Joint Stock banks abroad from 507.8 to 376.8 million marks. As their foreign indebtedness nevertheless decreased at the same time, their net credit balances declined by $117.7 \mathrm{mil}-$ lion marks in all during the month under review, the corresponding reduction last year being 107.3 million marks.

The note circulation of the Bank of Finland as a rule reaches its peak for the year during the early spring or just before Christmas. This year the maximum attained on the last day of April was surpassed already on October 30th, when the note circulation rose to $2,019.6 \mathrm{mil}-$ lion marks and we may therefore expect it to grow still further, when retail trade expands at Christmas time. How lively the circulation in the country is at present is evident not only from the fact that the amount of notes in circulation at the end of October was about 460 millions higher this year than last year, but also from the clearing operations at the Bank of Finland, the total value of which was 800 millions larger in October, 1937, than in the corresponding month in 1936.

Owing to heavy withdrawals from the current accounts in the Bank of Finland during October its total liabilities payable on demand decreased in spite of the expanding note circulation. Under such circumstances the note reserve increased from 460.5 to 577.6 million marks, although the demand for foreign currency caused a slight reduction in the Bank's credit balances with its foreign correspondents, viz., from $2,048.7$ to $2,029.0$ million marks. The cover percentage which a year ago had declined to 74.68 was 80.87 per cent again at the end of October, 1937, having stood at 85.83 two years ago. The credits granted by the Central Bank have not undergone any changes of importance; during the last three months they have been some tens of millions above or below 1,000 million marks. According to the statement of November 15th they amounted to $1,008.3$ million marks as against 919.5 millions at the corresponding date in 1936. Among other changes during the first fortnight in November we may mention that the Joint Stock banks again placed considerable funds on their current accounts in the Bank of Finland, whose total liabilities payable on demand thus increased by 73.0 million marks, whereas the note reserve declined by 45.2 millions.

The weakening of prices for several big staple articles abroad has also been registered by the series of indices $(1926=100)$ for our articles of import and export. The former has dropped 3 points to 108 from the maximum attained during the current year and the latter correspondingly 6 points to 120. The Finnish wholesale price index $(1926=100)$, however, again remained unchanged at 104 in October and the cost of living index $\quad(1935=100)$ which is subject to a normal seasonal rise in the autumn, rose from 108 in September to 109 in October.

## TRADE AND INDUSTRTY.

The influence of the former rising tendency of prices is still felt in our foreign trade. Although the volume of exports in October
was slightly smaller in 1937 than in 1936, their value amounted to 999.1 million marks this year as against 794.3 millions during the corresponding month a year ago. For the whole period January-October exports showed a rise in value of 29 per cent as against an increase in volume of only 7 per cent. This development is exemplified by the fact that, whereas during the current year so far only 838,000 standards of sawn timber have been shipped as compared to 960,100 standard during the same time last year, the income from this class of exports has this year already surpassed last year's figure by about 400 million marks.

In regard to imports, which amounted to 944.0 million marks for the month under review, a considerable quantitative increase has enhanced the rise in their value. Thus for the period January-October their volume had risen by 25 per cent and their value by 49 per cent in comparison with conditions last year. The outcome of this development has been that imports which for many years have lagged behind exports, have now attained almost the same level as the latter. For the past ten months of the current year the volume index of imports is 182 and of exports 184 ( $1926=$ 100), whereas the value of imports totals $7,630.2$ and the value of exports $7,669.5 \mathrm{mil}-$ lion marks. In the balance of trade there is thus only a slight surplus of exports of $\mathbf{3 9 . 3}$ million marks.

By the middle of November timber sales from Finland for this year's shipment were estimated at about 950,000 standards of sawn goods, the corresponding figure for last year being 967,000 standards. Of the 55,000 standards that still remain of the 1937 quota sellers will probably retain part until the next shipping season.

## THiE LABOUR MAARKET.

The labour market remains good. Lumber work which provides an ample supply of employment has already been started in Northern Finland.

## CONTENTS OF THE TABLES.

## I. MONEY MARKET.

Bank of Finland:
Weekly Statement.

${ }^{\text {2 }}$ ) According to data supplied by the Treasury. Internal loans are given at their nominal value and foreign loans in Finnish currency according to the rates ruling on the dates of the issue of the loans. - ${ }^{2}$ ) Calculated as follows; the ontstanding amounts of both internal and foreign loans have been converted into Swiss Francs at the monthly average rates of exchange of the respective currencies. From September, 1936, the amounts have been converted into Swiss Francs of former gold value, in order to eliminate the influence of fluctuating currencies.

* Preliminary figures subject to minor alterations.

Tables 22-29 according to Finnish Official Statistics I, A, Forelgn Trade of Finland. Monthly Beports.
The term imports covers all imported goods which are placed on the market either immediately after importation or after storage. Exports covers all goods exported from the open market, including re-exports. Goods are declared to the Customs by their owner, who must at the same time state the value of the goods as calculated at the frontiers of the country.

* Preliminary figures subject to minor alterations.

Calculated by the Central Statistical Office. The first group of indices refers to prices of goods appearing in local wholesale trade in Finland, whereas the indices for imported and exported goods refer to foreign trade prices. An indirect weighting has been applied. each class of goods being represented by the number of commodities corresponding to the calculated importance of this class in wholesale trade. The averages are arithmetical ones.

# CERTAIN PARTICULARS ABOUT FINLAND. 

## 1. FORM OF GOVERNMENT.

Finland formed a part of the lingdom of Sweden from 1154 to 1809; from 1809 it was an autonomous Grand Duchy connected with Rassia up to December 6th, 1917, when Finland declared its independence, which was acknowledged by all the Powers including Soviet Russia. It became a repubic in 1919. The legislative power of the country is vested in the Diet and the President. The shighest executive power is held by the President chosen for a period of 6 years. The present President Kyosti Kallio is elected for the term March 1st, 1937, to March 1st, 1943.

The Diet, composed of 200 members, is elected by universal suffrage. The proportions of the different parties in the Diet elected in 1936 are as follows:

Number
:Social-Democratic party ........................................ 83
Agrarian party .................................................... 53
iswedish party .................................................... 21
Unionist party .................................................. 20
Patriotic National Movement's party ...... .................... 14
Progressive party ............................................... 7
small farmers' party
People's party

## 2. LAND.

THE AREA (exoluding lake Laatokka) is 382,801 square kilometres $=147,761$ square miles (Great Britain's area is $89,047 \mathrm{sq} . \mathrm{m}$. and Italy's area $117,982 \mathrm{sq} . \mathrm{m}$. ). Of the total area $9.0 \%$ are inland waters. On an average $11.8 \%$ of the land in the South of Finland is cultivated, $1.1 \%$ in the North, $6.6 \%$ of the whole land. Of the land area 25.3 mill. ha ( 62.5 mill. acres) or $73.6 \%$ are covered by forests.

THE AVERAGE THMPERATURE in the coldest month is in s. Finland $-3^{\circ}$ to $-8^{\circ} \mathrm{C}$., in Lapland $-12^{\circ}$ to $-14^{\circ} \mathrm{C}$. and during the warmest month $+16^{\circ}$ to $+17^{\circ}$ and $+12^{\circ}$ to $+14^{\circ} \mathrm{C}$. resp. The average temperature in Helsinki (Helsingfors) is +4.60 (In Oslo $+5.4^{\circ}$, In Montreal $+5.4^{\circ}$, in Moscow $+3.6^{\circ}$ ). The ground is covered by snow in the South for about 110 days, in Central Finland for about 150 days, in Lapland about 200 days.

## 3. POPULATION.

NOMBER OF INHABITANTS (1935): 3.8 millions (of whom 0.2 million emigrants). Sweden (1935) 6.2, Switzerland (1935) 4.2, Denmark (1932) 3.6 and Norway (1933) 2.9 millions.

DENSITY OF POPULATION (1835): In South-Fimand 18.6, In North-Finland 2.6 and in the whole country an average of 10.9 mphabitants to the square kilometre.

DISTRIBUTION (1035): 79.4 \% of the population inhabit the country, $20.6 \%$ the towns and urban districts. The largest towns are (1985): Helsinki (Helsingfors), the capital, 277,771 inhabitants, Viipurl (Wiborg) 72,755, Turku (Åbo) 69,953, Tampere (Tammerfors) $59,832$.

OCCUPATION (1930): agriculture $59.6 \%$, industry and manual labour $16.8 \%$, commerce $4.8 \%$, transport $3.8 \%$, other occapations $15.5 \%$.

LANGUAGE (1930): Finnish speaking $89.4 \%$, Swedish speaking $10.1 \%$, others $0.5 \%$.

RELIGION (1935): Lutheran $96.1 \%$, Greek-Orthodox $1.8 \%$ others $2.1 \%$.

EDUCATION (1930): Amongat persons over 15 years of age ondy $0.9 \%$ are lliterate. There are three universities founded in 1640, 1917 and 1920.

INCREASE OF POPULATION (1935): Birtha $18.5 \%$, deathe $12.0 \%$ (in France in $193315.8 \%$ and in England in $103312.3 \%$ mo), natural increase $6.5 \%$.

## 4. TRADE AND COMMUNICATIONS.

FOREST RESOURCES. The growing stock of the forests is 1,620 million $\mathrm{m}^{8}$ ( 57,214 million cuble feet). The merchantable timber
(measuring 20 cm at breast height $=6 \mathrm{in}$. at a height of 18 ft .) amounts to 1,557 million trees. Of this number pine is represented by $60.7 \%$, spruce by $28.1 \%$, the conifers thus constltuting $88.8 \%$
 trees. The annual increment is 44.4 million $\mathrm{m}^{3}(1,568$ million cub.ft.). The annual fellings according to earlier calculations are 40 million $\mathrm{m}^{3}$ ( 1,413 million cub. ft.).

AGRICULTURE (1935): Cultivated land 2.2 milition hectars, divided as follows: area under cultivation $0.3-10$ hectars $33.4 \%$, $10-50$ ha $52.1 \%, 50-100$ ha $8.4 \%$, over 100 ha $6.1 \%$. Cultivated land is divided between the different kinds of crops as follows: $50.5 \%$ hay, 18.7 \% oats, 9.6 \% rye, 5.1 \% bariey, 3.3 \% potatoes $12.8 \%$ other. The number of dairies in 1935 amounted to 593.

OWNERSHIP OF LAND. The land area is distributed among different classes of owners approximately as follows: private $52.1 \%$, State $39.7 \%$, Joint Stock Companies $6.5 \%$, communities $1.7 \%$. (INDUSTRY (1935): Number of industrial concerns 3,917 hands 174,310 , gross value of products of industry 13,929 million marks.

LENGTH OF RALLWAYS (1936): 5,757 km, of which 5,501 km State railways and 256 km private. The gange is 1.524 m .

COMMERCIAL FLEENT (1937): Steamships 557 (291,104 reg. tons net), motor vessels 172 ( 19,080 reg. tons net), salling ships 137 (38,702 reg. tons net). Total 866 (348,886 reg. tons net).

## 5. FINANCE AND BANKING.

CURRENCY. Since 1860 Finland has its own monetary system. From 1877 up to the Great War the currency maintained its stable gold value and after the disturbances caused by the war Finland has again from January 1st, 1926, a gold standard. The unit of currency is the mark (Finnish markka* $=100$ pennis). According to the monetary law of December 21st, 1925, agold coin of 100 marks' value shall contain $3^{16} / 19$ grams of fine gold. Since October 12th, 1931, the redemption of bank notes in gold is, however suspended.

STATE FINANCES. According to the finance accounts for 1936 the State revenue was $4,870.3$ million marks of which $\mathbf{3 , 7 2 5 . 2}$ million marks were current revenue, and State expenditure 4,861.6 million marks, of which $2,983.6$ million marks were current expenditure. The principal sources of revenue were as follows: State property and undertakings (net) 358.3, direct taxes 619.8, indirect taxes 2,020.1, stamp duty 199.1, charges 102.6, interest and dividends 284.8 and capital revenue $1,145.1$. The value of State property in 1922 was estimated at $11,150.6$ million marks. For Public Debt see table 19 in this issue.

MUNICIPAL FINANCES. According to the Budget for 1987 expenditure amounted to 1,081 .1 million marks. Income from taxation was calculated at 548.6 million marks, taxed income at $6,547.5$ million marks. The municipal income tax (non-progressive) averaged $8.4 \%$ of the ratepayers' income.

THE BANK OF ISSUE. The Bank of Finland, (founded in 1811) is a State Bank. Its head-office is in Holsinki (Helsingfors) with branches in Turku (Abo), Pori (Björneborg), Vaasa (Vasa), Oulu (Uleiborg), Kuopio, Joensuu, Sortavala, Vlipuri (Wiborg), Mikkeli (S:t Michel), Tampere (Tammerfors), Hämeenlinna (Tavastehus), Jyvăskylă and Kotka.

THE JOINT STOCK BANKS (1937): Number 9, possess 467 oftices, where all kinds of banking business is transacted. Including all banks, there is one banking establishment per 7,200 inhabitanta.

The largest banks are: Kansallis-Osake-Pankki, Ab. Nordiska Föreningsbanken and Helsingfors Aktiebank, all with head offices In the capital.

OTHER BANKS (1937): Mortgage banks 5 , Savings bankd 482, Co-operative Credit Societies 1.191 and a Central Bank for the latter.

# THE FINNISH MERCHANT FLEET. 

BY<br>HARRY ALLENIUS, M. A:<br>head of the statistical department of the board of navigation.

Only 2-5 per cent of Finland's imports and exports go overland. Similarly to the other Northern countries, Sweden, Norway and Denmark, Finland occupies an insular position geographically as regards communications and therefore requires means of communication by sea and a merchant fleet.

## HISTORICAL DEVELOPMENT.

The Finnish merchant fleet can look back on centuries of traditions. Such natural conditions as an ample supply of forests for ship's timber and the seafaring nature of the coastal population were favourable from the beginning in this respect.

A critical phase set in for the Finnish merchant fleet, as for shipping in general, in the 1870 's and 1880's, when steamers seriously began to displace sailing vessels. Finnish shipping was at first unable to cope with this position, chiefly for want of capital. As the shipping trade entailed considerable risks and other trades were advancing rapidly, capital was invested in other, apparently less risky ventures.

It can be considered that at the beginning of the 1890 's steamers definitely took their place in the Finnish merchant service. The development of the number of ships displayed a rising tendency again, after having tended downwards for many years, and a new period began. The regular steamship lines were developed and the foundations were laid for Finland's excellent fleet of State ice-breakers. As specially constructed, "ice-strengthened"
steamers began to be employed for navigation through the ice, winter traffic was assured, so that shipping could go on throughout the year. This tendency continued until the outbreak of the war. During the war and in the first postwar years the tonnage varied very greatly for obvious reasons. In 1925, however, a change set in and the development once more displayed an upward tendency which has become more and more pronounced from year to year.

## THE FLNNISH MERCHANT FLEET IN 1937.

On July 1st, 1937, the Finnish merchant fleet consisted of seagoing vessels, i.e., steamers. and motorships of 100 gross tons or more and sailing vessels of 100 net tons or more, in the following numbers: 292 steamers of 480,000 gross tons, 51 motorships (including sailing vessels with auxiliary machinery) of 26,000 gross tons and 45 sailing vessels of 43,000 gross tons or altogether 549,000 gross tons. Since 1925 the tonnage has grown by about 114 per cent. The increase has been largest in regard to steamer tonnage, less in the case of motorships. This increase occurred partly during the years of depression. As the Finnish merchant fleet was not affected to any great extent by the depression - no tonnage was laid up in Finland-owing partly to the state of the foreign exchanges and partly to lower working costs in certain respects, the position had obviously to be taken advantage of, as the price of second-hand tonnage had fallen to an unprecedented degree. Yet too much importance should not be ascribed to-

the growth during the depression, this development having started much earlier and having continued up to the present. During the first nine months of this year a further 75,000 gross tons have been added to the Finnish merchant fleet, representing about 14 per cent of the total fleet at the end of last year. The present supply of vessels is equal to 153 gross tons per 1,000 inhabitants.

Calculated according to the tonnage per 1,000 inhabitants, Finland is at present eighth of all seafaring nations.

## COMPOSITLION OF THE MERCHANT FLEETT.

A great increase has, however, not only been made in the Finnish merchant fleet, but a complete revolution has occurred in the mutual position of the different classes of ships. To illustrate this we give the following table which indicates the proportion of the different classes of ships in 1925 and 1937. For the sake of comparison the corresponding proportion of the merchant fleets of the world in 1937 is added.

|  | Finland |  | All merchant fleets |
| :---: | :---: | :---: | :---: |
|  | $\begin{gathered} 1925 \\ \text { Per cent } \end{gathered}$ | $\begin{gathered} 1037 \\ \text { Per cent } \end{gathered}$ | $\begin{gathered} 1937 \\ \text { Per cent } \end{gathered}$ |
| Steamers | 64.2 | 87.5 | 77.8 |
| Motorships .... |  |  |  |
| Sailing vessels with auxiliary machinery | 6.5 | 4.7 | 20.7 |
| Sailing ships | 29.3 | 7.8 | 1.5 |
|  | 100.0 | 100.0 | 100.0 |

At present the tonnage driven by steam is 87.5 per cent as against 64.2 per cent in 1925. The tonnage of sailing vessels is now 7.8 per cent in comparison with 29.3 per cent in 1925. In comparing these figures with the fleets of the world we are struck by the small proportion of motor-driven vessels and the comparatively large proportion of sailing vessels. The fact that motorships have so far attained such a small extent in Finland is, no doubt, principally due to regular overseas shipping not having been embarked on yet to any great extent. Besides, the ice conditions along the coasts of Finland during the winter have probably also played their part. In regard to the large proportion of sailing vessels we need only refer to the Ahvenanmaa (Åland) overseas sailing fleet which is supposed to be the largest in the world and has played an important part in carrying wheat from Australia to England. This sailing fleet has been greatly reduced, however, in recent years, chiefly by ships being sold abroad.

## AGE OF THE MERCHANT FLEET.

As the newly purchased ships have mostly consisted of old tonnage, it follows that the average age of our merchant fleet must be high. According to the latest information only about 6.8 per cent of our merchant fleet
represents ships that are 10 years old or less. The rest are older. The proportions vary slightly for the different classes of ships. Steamers and sailing vessels, for instance, do not come up to this percentage, while the proportion of motorships is larger. For the merchant fleets of the world the corresponding proportion is 26.5 per cent. This high average age of the Finnish merchant fleet is a circumstance that deserves special attention. At the same time it should be pointed out that Finnish exports consist mostly of mass products, the transport of which does not call for particularly fast ships, and that Finnish shipowners in general maintain their vessels with great care. Too great importance should therefore not be attached to the age of the ships, although newer tonnage as a rule necessitates lower working costs and supplies greater carrying capacity.

## SHIARIE OF THE MERGOHIANT FLEEBT IN FOREIGN TRADE.

The share of our merchant fleet in carrying foreign trade has increased with its own growth. In 193639 per cent of the total cargoes were carried in Finnish ships, calculated in tons by weight. As Finland's total foreign trade in 1936 amounted to about 11 million tons of goods, the merchant fleet represented about 43 reg. tons per 1,000 tons of goods. There is an appreciable difference in regard to the share of Finnish tonnage in imports and exports. While its share in imports is in the neighbourhood of 48 per cent, it only amounts to about 35 per cent in the case of exports. In regard to the main classes of goods the share of Finnish tonnage records comparatively level figures in the case of imports. For instance, 52 per cent of piecegoods, 51 per cent of coal and coke and 53 per cent of grain were imported in Finnish vessels during 1936. In regard to exports the case is different. Though 43 per cent of paper and pulp and 33 per cent of sawn timber were exported in Finnish ships, their share in the exports of
pitprops was 23 per cent and of pulpwood only 8 per cent. On the other hand 65 per cent of the piecegoods exports were carried by Finnish ships. The share of Finnish tonnage therefore seems to be larger in the case of more valuable cargo.

The division of the number of passengers between Finnish and foreign ships is more favourable than cargo traffic. In 193648,200 , or 50.0 per cent of all arriving travellers and 48,700 , or 51.9 per cent of all departing travellers availed themselves of Finnish vessels.

## GROAS EARNINGGS OF THE MERICHANT FLIEET.

Particulars of the gross freights earned by the Finnish merchant fleet have been available since 1918. From that year shipowners are bound to supply information of the gross freights earned by their vessels. Gross freights have increased at the same time as the merchant fleet developed and already ten years ago they exceeded 500 million marks. Their growth is illustrated by the following figures:-

|  | Mill. mks. |
| :---: | :---: |
| 1920 | 426 |
| 1925 | 399 |
| 1930 | 506 |
| 1935 | 738 |
| 1936 | 810 |

These figures include home shipping. For making up the balance of payments it is important to establish the relation between the amounts of gross freights and the expenditure of shipping. companies abroad. For this purpose, of course, the amount of earnings in foreign trade is compared with the shipping companies' expenditure abroad. In Finland it is calculated that the country benefits to the extent of 65 per cent of the gross freights. This proportion exceeds the Swedish and Norwegian calculations, their percentage being about 50 per cent, but this is due to the fact that the Finnish merchant fleet does not engage in overseas trade to the same extent as the Norwegian and Swedish ones. According to this method of calculation we obtain the following items for the income in the balance of payments:-

|  | Mill. mks. |
| :---: | :---: |
| 1920 | 200 |
| 1925 | 170 |
| 1930 | 240 |
| 1935 | 41.0 |
| 1936 | 460 |

In 1936 this item of income was nearly $21 / 2$ times as large as in 1920. After exports, shipping freights represent the largest item of income in the balance of payments - although the difference between them is considerable.
The largest amount of freight was obtained from goods cargoes which amounted approximately to 85 per cent in general, time loading charters which amounted to 6-8 per cent and passenger fares which represented about 6 per cent, the rest consisting of receipts for carrying mails etc.

Freights are distributed among different classes of shipping in such a way that in recent years about 13 per cent referred to home shipping, 65 per cent to voyages between Finnish and foreign ports and 22 per cent to voyages between foreign ports exclusively.

## regulan steamiship lines.

The efforts that were visible in shipping during the period immediately preceding the war in some countries, especially in Scandinavia, for facilitating their exports and the importation of raw materials and articles of consumption by establishing lines of ocean-going steamers of their
own and in this way becoming independent of middlemen, began to gain ground in Finland immediately after the Great War. The new conditions created after the war, when the loss of the Russian market forced our industry to find fresh foreign markets, contributed towards this. In 1926 the Finland-South America Line was opened. Traffic on this line is now maintained by 11 steamers with an average of 7,000 dwt. In 1936 the Finland-North America Line was established, on which from next year 2 new diesel motor vessels of 6,000 tons each are to run.

Since last century regular European traffic has been maintained by Finnish steamship companies with the Baltic countries, countries on the Atlantic coast and with Spanish, French and Italian ports on the Mediterranean. A year or two ago these lines were extended to the Levant. In 193621.8 per cent of the Finnish merchant fleet were engaged in regular shipping lines to foreign ports. It need scarcely be added that goods are carried to all parts of the world by transhipping them in European ports to the ships of foreign shipping companies.

## SHIPBUILIDING.

During the past ten years the Finnish shipbuilding industry has enjoyed a period of considerable expansion. Thanks to orders of
gunboats, submarines etc. for the Navy the shipbuilding industry has been able to modernise and extend its works, so that they can fulfil severe demands. During the last few years this industry which has built merchant ships, ice-breakers, floating docks etc., has experienced a new boom that has resulted in further modernisation, so that vessels of up to $\mathbf{1 5 , 0 0 0}$ tons can now be constructed. At the present time about $35,000 \mathrm{dwt}$ are under construction or contracted for at Finnish shipyards, including, in addition to the two motorships of 6,000 tons for the Finland-North America Line, two 7,300 tonners for the Finland-South America Line and two motorships for the Polish State etc. Special mention should be made of an ice-breaker with diesel-electrical machinery ordered by the Finnish State at a cost of 40 million marks. This is the third big ice-breaker to be built at Finnish shipyards. - The largest shipyards are situated at Turku (Åbo) and Helsinki (Helsingfors).

## THE SHHIPPING LOAN FUND.

The above remarks will have shown that the Finnish merchant fleet is going through a phase of active development. Its tonnage has grown appreciably and during the last few years a period of modernising has set in. These results have been achieved without any direct
support whatever from the State. Of the most important seafaring countries only Sweden, Norway and Denmark receive no direct subsidies for their merchant fleets. At the same time State funds are in existence, e.g., the shipping loan fund established in Sweden in 1903, mortgage funds for shipping companies etc. In 1928 a law was passed in Finland for establishing a shipping loan fund. So far, however, no money has been set aside for this, but in the budget estimates for 1938 the Government proposes that 20 million marks should be assigned to this fund and there is reason to believe that this motion will be passed by the Diet. The amount is small, indeed, in comparison with the requirements, but by this means a way has been opened that should give a further impetus to the development of our merchant fleet. Sweden affords an example of the significance of such a fund, when it is sufficiently large and rationally managed. Thanks to grants from the shipping loan fund Swedish shipping lines have been created, especially overseas lines, that have now attained such an extent that they engirdle the whole earth and are in contact with all spheres of production and consumption of any importance. This is distinct evidence of what a Government can achieve, not by means of subsidies; but by means of a reasonable lending policy.

# FINNISH MILLING AND GRAIN GROWING. 

## EARLY DEVELOPMENT OF THE MILLING IN:DUSTRY.

In olden times corn was ground in Finland with simple millstones worked by hand either at home or in windmills, but in the course of time the grinding of corn for payment with one or more pairs of stones or so-called tollmills was started in more densely populated areas along the rivers. Later, especially in the middle and in the latter half of last century, flourmills worked by steam were established in the larger centres of population which ground the farmers' corn at a certain rate of payment and engaged only partly in milling corn for sale. Many of these mills ground barley and oats besides rye. The largest of them developed by degrees into flourmills that ground corn for sale, improving their methods and turning out rye, barley and oaten flour, as well as barley meal and oatmeal for their own account. In this way commercial flourmills were founded.

When a more general change began from natural economy to money economy and the numbers of those engaged in industry increased, the larger business houses began to buy up grain in their neighbourhood and to import rye, principally from Russia, and supply flour to the population. In this way commercial flourmills were first established in those communes, in the vicinity of which at any rate certain quantities of local corn could be bought. or to which it was easy to import corn by sea. Consequently the oldest of the flourmills existing at present were started in Vaasa (Vasa), which obtained corn from the South-Ostro-
bothnian plains, Turku (Åbo), which drew its supplies of raw materials from the corn-growing areas of South-Western Finland, Helsinki (Helsingfors) to which corn was brought at that time from the large estates of South Finland, and Viipuri (Viborg) to which corn could easily be delivered by water from St. Petersburg. These four places have for ages been the milling centres of the country, though Helsinki to some extent lost its importance in this respect after becoming Finland's largest importing centre. During the last few years, however, it has again attained an important position as an actual milling centre, besides which new mills have been established in its neighbourhood.

When the Saimaa (Saima) canal was opened, a brisk foreign trade developed in Eastern Finland, chiefly with St. Petersburg. The ships of merchants who did business in the towns on the Saimaa lake system carried farm produce and firewood there and brought back ground or unground grain. Flourmills were then established in Kuopio, Joensuu, Mikkeli (St. Michel) and Savonlinna (Nyslott). The small ones also ground the farmers' own corn. The mills of that time ground almost exclusively rye, barley and oats, besides which they also made oatmeal and barley meal for the farmers of the neighbourhood.

Although there was no duty levied on ground or unground corn, the commercial mills of that day proved fairly successful until the 1890's, but the expansion of grain growing overseas
and the introduction of various export premiums in countries supplying grain to Finland began to affect the position of our milling industry. Owing to low prices local corn disappeared entirely from the market and on many farms foreign corn was consumed during part of the year. Several flourmills came to grief, others carried on a miserable existence, if they were not connected with large business enterprises and had not already gained an assured position in the market. Only those mills that had from the beginning sold good quality products in good sacks under their own trade marks were able to survive without heavy losses.

In view of such circumstances it is not surprising that there were only 23 commercial flourmills in this country in 1912. They used foreign grain exclusively. The value of their output amounted to 13.3 million marks which is equivalent to about 135 million marks in our present currency. Owing to foreign competition and the absence of protective duties for agriculture and the milling industry, imports of grain in 1913 amounted to 196 million kg of rye flour and 65.6 million kg of rye, 118.4 million kg of wheaten flour and wheat meal and only 0.4 million kg of unground wheat, 2.1 million kg of barley meal, about 15 million kg of various meal and considerable quantities of barley and oats. The imports of rye and rye flour, if the flour is converted into rye, were approximately equal to the local rye crop, and scarcely one quarter of the imports consisted of unground rye. In the case of wheat Finland was almost entirely dependent on imports. Of the barley required quite 10 per cent and of oats 6 per cent were imported.

When the war broke out, Finland had to subsist exclusively on the Russian market and local production. The supply of flour became more difficult and the packing deteriorated. Private households began to consume grain more sparingly and private people began to establish mills for grinding rye and producing meal, as it was to some extent easier to secure unground corn than flour and meal.

## THE COURSE OF DEVELOPMENT DURILNG FINTIAND'S ITNDEPENDENCE.

During the War of Independence and the preceding period of disturbance the agricultural output in Finland was considerably reduced and grain imports in 1917 and especially in 1918 were exceedingly small, there being an actual shortage of grain for food. On the establishment of peace food control was introduced for a time and the feeding of the population was carried out by employing the large flourmills, so that the smaller mills had little to do. At the same time duties were introduced for the protection of local grain growing and of the milling industry.

When normal conditions were re-established in regard to production and imports, and control was abolished, there were still only 52 commercial flourmills in the country in 1923 which consumed 27.6 million marks' worth of home-grown grain and 258.7 million marks' worth of foreign grain. As some of the mills had been established on an insecure financial basis, their number was reduced to 47 in 1928 with an output of 388 million marks in value or nearly three times as much as before the Great War. In 1931, when grain imports were exceptionally small, there were only 39 commercial mills still working, but for the greater part they were on a sound basis and about one-third of the raw materials they used were home-grown, mostly rye, oats and barley.

## THE GROWTH OF SELF-SUPPORT AND ITS CONSEQUENOES.

The capital crisis that began in August, 1928, and the subsequent severe economic depression forced this country to resort to self-sufficiency more than before, which, in conjunction with the enterprise of farmers and Government support, has exerted a favourable influence on the increase of grain growing and the development of the milling industry. In addition to greater tariff protection compulsory mixing of homegrown grain with foreign grain was introduced
at the beginning of 1931, this still remaining in force, though the proportions have varied according to the harvest and its quality.

In order to illustrate the increase in homegrown grain during the last few decades it should be mentioned that the wheat crop in Finland, which averaged 4,726 tons annually in 1911-15, increased to 20,116 tons in 1921 -25 and to 68,458 tons in 1931-35. For 1936 the wheat crop amounted to 143,118 tons and for the current year to 172,000 tons according to preliminary estimates. Our rye crop averaged 259,603 tons in 1911-15, 287,457 tons ten years later, 352,333 tons another ten years later, 308,231 tons last year and 414,000 tons this year according to preliminary estimates, this year's crop being larger than ever before. The barley crop was 102,588 tons annually on an average for $1911-15,125,884$ tons ten years later, 179,520 tons ten years after that and 185,131 tons last year. As regards oats the crop averaged 356,933 tons in 1911-15, 501,196 tons in 1921-25, 671,976 tons in 1931-35 and 692,475 tons last year. The oats crop was largest, 776,340 tons, in 1934.

The extension of wheat growing and the greater supply of home-grown corn caused the milling industry to flourish. Many of the rye and groats mills established departments for milling wheat and new wheat mills were started, such as the Turku Wheat Mill. The Oooperative Wholesale Association and the Finnish Co-operative Wholesale Society established large flourmills of their own, in which, in addition to wheat, rye is ground and various kinds of meal are manufactured. The retailers had already established their own milling company at Kotka.

## THE EXTENSION OF THE SOWN AREA.

We see from the figures quoted above that the wheat crop has grown 36-fold from 1911 -15 to 1937 , the rye crop 59 per cent, the barley crop 80 per cent up to 1936 and the oats crop 97 per cent. The increased crops are
partly due to the extension of the sown area and partly to a larger crop being obtained per hectare, as is shown later on.

From 1910 to 1935 the wheat area increased from 3,159 to $60,550 \mathrm{ha}$. The area under rye was $239,159 \mathrm{ha}$ in 1910 and 241,848 in 1935, so that the increase was exceedingly small. In 1930 the rye area was only $208,386 \mathrm{ha}$. The area under barley has grown during 25 years from 110,430 to 127,365 ha or about 12 per cent and the area under oats from 379,476 to 470,971 ha or 18 per cent. During the ten years from 1910 to 1920 the sown area did not increase except in the case of wheat and slightly of barley. The wheat area in 1920 was 8,754 ha or 177 per cent larger than in 1910.

## THHE INCREASE OF YIELD PER HECTARE.

Rising costs and unfavourable prices forced farmers to aim at a greater yield by means of better methods of cultivation and to improve the quality of their produce by experimental work, in order that the milling industry should use home-grown corn on a larger scale than formerly. In the latter respect the central agricultural organisations have been in close touch with the Association of Finnish Flourmills. The State Grain Stores have also participated closely in supplying grain for sale and improving its quality. As a result of the combined efforts of the farmers, their central organisations, the merchants and the owners of flourmills the crop per hectare has increased very satisfactorily.

The increase in the crops of different kinds of grain per hectare is illustrated by the following table:-

|  | Autumn wheat |  | Spring wheat | Ryy | Barley | Oats |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kllogrammes |  |  |  |  |  |  |
| 1906-10 |  | 1,114 |  | 1,129 | 1,025 | 1,018 |
| 1911-15 |  | 1,246 |  | 1,028 | 948 | 966 |
| 1916-20 |  | 994 |  | 936 | 913 | 911 |
| 1921-25 |  | 1,389 |  | 1,228 | 1,139 | 1,170 |
| 1926-30 |  | 1,567 |  | 1,383 | 1,307 | 1,320 |
| 1931-35 |  | 1,711 |  | 1,528 | 1,421 | 1,454 |
| 1934 | 1,761 |  | 1,772 | 1,602 | 1,586 | 11,636 |
| 1935 | 1,842 |  | 1,523 | 1,445 | 1,303 | 1,293 |
| 1936 | 1,846 |  | 1,640 | 1,324 | 1,428 | 1,540 |
| 1937 | 1,987 |  | 1,691 | 1,712 | 1,326 | 1,476 |

The falling off during 1916-20 was due to the Great War. After that the crop per hectare increased up to 1931-35 by 71 per cent in the case of wheat, 63 per cent in the case of rye, 56 per cent in the case of barley and 64 per cent in the case of oats.

For the sake of comparison it should be mentioned that in Soviet Russia, the home of collective farming, the average crop per hectare was to be $1,050 \mathrm{~kg}$ this year according to plan. In general the large corn growing countries, such as the United States, Canada, the Argentine and Australia, yield a smaller average crop per hectare than Finland. As a rule this raries between 700 and $1,000 \mathrm{~kg}$.

## THE RELATION OF THE HIARVEST TO TMPOR'TS.

The figures we have given do not, however, adequately illustrate the great work that has been performed by the agricultural producers and the milling industry. Not only have imports been reduced in consequence of it by substituting home-grown produce, but the composition of imports has been changed entirely. We have already mentioned the imports in 1913. In 1922 imports of rye flour had dropped to 15.4 million kg and imports of rye to 100.7 millions. Since then rye imports were largest in 1928, when they amounted to 165.7 million kg , but imports of rye flour at the same time were only 6.3 million kg . In 1931 rye imports were below 30 million kg and have fluctuated since, reaching their lowest point, 26.4 million kg , in 1935. During these years only about $300-1,600$ tons of rye flour have been imported annually. Formerly only a few hundred tons of unground wheat were imported yearly, but when the first wheat flourmills were started in 1931, a figure of 12.8 million kg of unground wheat appeared in the import statistics. In spite of local wheat growing having increased, imports of wheat have grown and already exceeded 73 million kg last year. Imports of wheat flour, which amounted to 128.8 million kg in 1928, have decreased since then, the figure for last year being only 26.1 million kg .

Imports of wheat meal fluctuated formerly between 4 and $61 / 2$ million kg , but they also fell off to 1.6 million kg last year.

Before the war a great deal of barley was imported, but since Finland became independent such imports have not, as a rule, exceeded $21 / 2$ million kg. During the last two years malting barley chiefly has been imported to the extent of a couple of million kg. Barley meal has not been imported at all in recent years. Imports of oats have varied, but have generally been smaller than before the war, excepting last year, when 30 million kg of oats, principally for seed, were imported owing to the poor quality of the harvest in 1935. In 1928 10.7 million kg of oatmeal were still imported, but in recent years imports have been very small. Rice meal was imported in 1928 to the extent of 18 million kg and unground rice to the extent of close on 2 million kg , but since then there has been a great change. Last year 14.2 million kg of crude rice and only 1.4 million kg of rice meal were imported. Finland now has three rice mills.

In order to illustrate the increased measure of self-sufficiency we give parallel figures below for the harvest and imports for several years, flour being converted into grain. According to the method of calculation used by the Board of Agriculture 100 kg of grain are equal to 98 kg of unsifted flour and 70 kg of sifted flour both in wheat and rye, 60 kg of flour and mealed barley and 50 kg of flour and mealed oats. The following table illustrates the pro-portions:-

|  | Crop | Imports | Crop | Imports |
| :---: | :---: | :---: | :---: | :---: |
|  | Wheat Tons |  | $\begin{aligned} & \text { Rye } \\ & \text { Tons } \end{aligned}$ |  |
| 1911-13 | 3,849 | 152,665 | 254,222 | 260,020 |
| 1932 | 40,354 | 109,445 | 329,355 | 72,331 |
| 1933 | 66,961 | 113,825 | 372,694 | 51,828 |
| 1934 | 89,265 | 121,442 | 394,850 | 41,135 |
| 1935 | 119,217 | 109,223 | 349,519 | 28,28: |
| 1936 | 143,118 | 112,756 | 308,231 | 67,464 |
|  | $\begin{gathered} \text { Barley } \\ \text { Tons } \end{gathered}$ |  | Oats Tons |  |
| 1911-13 | 105,172 | 11,330 | 364,320 | 30,558 |
| 1932 | 178,919 | 578 | '669,462 | 2,703 |
| 1983 | 178,525 | 1,975 | 635,576 | 18,166 |
| 1934 | 206,641 | 1,200 | 776,340 | 14,050 |
| 1935 | 165,933 | 2,3184 | 608,913 | 6,348 |
| 1936 | 185,213 | 2,448 | '692,533 | 30,167 |

## THE OUTPUT AND PRODUCTIVE CAPACITY OF THE FLOURMMLLS.

In 1929 large quantities of ground and unground grain were still imported. The value of the output of the 43 commercial flourmills was 242.9 million marks, of which only 39.7 millions represented the share of home-grown corn. During the depression and the subsequent period of prosperity wheat mills were established in particular, so that in 1935 there were 54 actual commercial flourmills. The value of their output amounted to 581.9 million marks, of which the share of home-grown corn represented 184.8 millions. The output of the different products during 1933-35 was as follows:-

|  | 1933 | 1934 | 1935 |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| Rye flour and sifted rye | 80,274 | 68,339 | 79,752 |
| Wheat flour | 32,472 | 38,840 | 61,284 |
| Oatmeal | 10,933 | 14,631 | 11,979 |
| Rice meal | 9,244 | 10,406 | 10,361 |
| Bran | 28,505 | 26,419 | 30,611 |
| Mixed foods | 16,379 | 14,720 | 14,971 |

Our large flourmills are up-to-date in technical equipment and can easily grind much larger quantities than at present. If the output of the flourmills is compared with the crop and the imports, it will be seen that only a part of the grain consumed in the country is ground by the commercial flourmills. The greater part of the grain is ground either in domestic mills or in small toll-mills, of which there are over a thousand in various parts of the country. Some of them have been adapted recently for grinding wheat.

## MEASURES FOR TMPROVING THE QUALITY OF GRAIN.

During recent years, when even the rural districts have gone over more and more to money economy, the supply of home-grown grain to the commercial flourmills has grown in importance. Tradesmen and co-operative societies have assisted in this respect. As the flourmills put forward certain demands regarding the cleanliness, water contents, weight etc. of grain, agricultural organisations as well as tradesmen act as good advisers to the farmers. The leading flourmills are in close touch through their own organisation with the Central Union of Agricultural Producers, the State Grain Stores and the Ministry of Agriculture. The object of them all is the improvement of the quality, cleanliness and baking properties of the grain. As a result of this combined labour, too, certain minimum demands have been drawn up for each kind of grain, so that we should soon achieve a standardisation of cereal produce. Various research institutions are endeavouring to develop suitable, fertile qualities of grain and have succeeded in establishing many types that yield good results in baking thanks to their fertility, protein contents and high binding quality. The large flourmills try to maintain the quality of their products, at the same time as they increase the proportion of home-grown grain in the milling industry.

## ITEMS.

Redemption of notes in gold. The Bank of Finland has, in accordance with a statute of November 12th, 1937, been authorised to continue to set aside the stipulations contained in clause 1. of paragraph 8 of its regulations until the end of 1938. Thus the Bank will be released from having to redeem its notes in gold during next year, this having now been the case for the past six years.

New internal State loan. On November 1st, 1937, the Finnish Treasury issued a new bond loan of 150 million marks bearing 4 per cent interest for a period of 30 years, the right of redemption, however, coming into force already in 1942. The new State bonds of 100,000 Finnish marks each in value are to be transferred to various State funds.

Result of the State timber auctions. In order to supplement the information given in the September issue of this Bulletin concerning the State timber auctions this autumn, it should be mentioned that according to the final information concerning the negotiations $12,968,000$ cub. ft. of standing timber and $14,733,000$ cub. ft. of timber for delivery were offered for sale from the State forests. The average price per cub. ft. was Fmk. 5: 93 for standing timber and Fmk. 7:93 for timber for delivery; last year the corresponding prices were Fmk. 4: 44 and Fmk. 5: 69 respectively.

The supply of water-power in the country. Some time ago the management of the Imatra Water Power Station decided to acquire a further generator, the sixth, with a capacity of 32,000 HP. The machinery has now been installed and the total capacity of the Imatra Power Station has thus increased from 140,000 to $172,000 \mathrm{HP}$.
In this connection it may be mentioned that the large woodworking combine in Eastern Finland, Enso-Gutzeit Oy., has decided to erect a new power station at the Vallinkoski rapids in the river Vuoksen. The preliminary work has already been started.

The building trade. The marked economic activity that has been a salient feature of Finnish business conditions in general of late, has spread especially during the current year to the building of dwellings in the towns, too. The building trade suffered fairly heavily from the crisis in the late 1920's and in the process of economic recovery since 1931 the resumption of building operations in the towns has been very slow. Towards the end of 1936, however, the cyclical improvement in economic conditions had reached the point, when a markedly growing interest in future building plans was felt, and during 1937 such enterprise has become more and more frequent.

In order to illustrate this tendency we give below a table showing the building activity in the capital only, as regular statistical data

| concerning this branch of activity are not compiled elsewhere. The table refers to the | Whole year | Houses built 1000 cub.metres | Buildings under construction Namber | Plans for buildings approved 1000 cub.metres |

## THE BANK OF FINLAND MONTHLY BULLETIN

is sent free of charge to anyone wishing to receive it. Finnish booksellers are, however, allowed to sell it at a price'of 2 marks per copy. Back numbers are also willingly supplied. Should extracts from the Bulletin be printed, the source should be stated. Correspondence with regard to the Bulletin should be addressed to the Bank of Finland, Statistical Department, Helsinki (Helsingfors), Finland.
